Designed by Mr. Edwin Lutyens to span the Liffey in Dublin and house a picture collection donated by Sir Hugh Lane.

A NOVEL ART GALLERY FOR DUBLIN

ONE OF DUBLIN'S most artistic friends, a son of Ireland too, proposes to dower the old city on the Liffey with a building that will duplicate the charm of the Ponte Vecchio in Florence. Dublin is struggling with the question whether she wishes or not to be dowered, and if so, whether the proposal embodies the method that will please her best. People who know Dublin declare the donor hasn't the easiest task on his hands. He is Sir Hugh Lane, founder of the Modern Gallery of Art, where the collection of modern pictures is said to be unexcelled outside of Paris. Many of these were his gift; some were placed there on loan. It has been necessary to find new quarters, so he proposes a gallery in the form of a bridge to span the river Liffey and replace an ugly iron structure.

Funds for the enterprise were secured by lectures given by Lady Gregory when she was last in this country with the Abbey Players. To cap all that Sir Hugh Lane has done for art in Dublin, he now proposes to give a fine collection of pictures by Corot, Claude Lorraine, Manet, Degas, Sargent, and other masters old and new to the city on condition that it will accept his plan of an art gallery to house the treasures. Mr. Clement Shorter, of the London *Sphere*, calls it "one of the most magnificent proposals that has ever been set before a great corporation." But—

"Those that know Dublin, as I do, will understand that there are many clashing forces in that historic city, and that the Dubliner, like the rest of his race, is a critic first of all. Some there are who say that the bridge will spoil the Liffey, but a look at . . . Mr. Lutyens's design will answer that criticism. Others say that Mr. Lutyens is not an Irishman, and an Irish architect must be employed in these days of Celtic renaissance. But the Dubliner forgets that in accepting the masterpieces of art by Frenchmen, Englishmen, Americans, and other nationalities that are in Sir Hugh Lane's collection he has already allowed a breath of happy inconsistency, and the question of the architect is on all fours with the artists. Besides, Mr. Lutyens, an Englishman, born in London of Dutch origin, had an Irish mother, and his father worked for years as an artist in Dublin.

"Dublin has not had a great building for a hundred years. Here is a golden opportunity on the threshold of a new era. The Dublin Corporation has already committed itself to a vote of £22,000 out of the estimated cost of £43,000, £11,000 has been subscribed, and Sir Hugh Lane and his committee have guaranteed to find the rest of the money. Let me therefore entreat my Dublin friends not to forego this golden opportunity of adding one more to the glories of their beautiful city. They have accepted Sir Hugh Lane's generous gift of pictures for the Municipal Art Gallery, which I have visited with such keen pleasure. Let them not turn their backs upon this greater and still more generous gift which will add to the joy with which all of us who are strangers visit Dublin."

SPEAKING LATIN—Teachers of Latin and Greek occasionally attempt to add a conversational flavor to their subjects by speaking to their classes in the dead tongue. One wonders if, outside their carefully prepared questions and answers, they could match some of the boys who astonished the meeting of the Association for the Reform of Latin Teaching recently held in Cambridge, England. What was seen there, according to the London *Daily News*, "has a significance which stultified the angry disputes ranging round modern or classical education." Thus:

"When a youngster assumes the place of his Latin master at the desk, takes up Virgil, gives (in Latin) a brief résumé of the last lesson, and then (still in that language) conducts boys of his own age through the next lesson, while a congress of about 200 teachers watches him intently, and he shows little sign of nerves, then it must be said the advocates of the 'direct method' have made a good case. That has taken place here this week. That boy was not 'displayed,' it must be understood. He was not precocious. He was merely a bright lad, whose place might have been taken by a number of the other boys present.

"This Summer School of Latin . . . has brought visitors from several over-sea cities. One professor here represents the Swiss Board of Education; another is from Cape Colony; and a third comes from Columbia University, New York. . . . . .

"There have been several Latin plays during the Congress, one, 'Via Oppea,' by Miss E. Ryle, being so slyly modern that some professors might have objected, only it had a sound historic base. It concerned those women of Rome who took to militancy to get rid of an objectionable law which Cato declared should stand, and, as history shows, actually obtained their desire."

RELIGION AND SOCIAL SERVICE

SIR OLIVER LODGE'S AID TO FAITH

IT IS NOT so much Sir Oliver Lodge's assertion of his belief in the persistence of human personality beyond bodily death that has imprest all classes of people. What marks his presidential address to the British Association as "worthy to rank with the very best of its predecessors"—as the London *Times* puts it—is its protest against arrogance. This utterance follows his review of "the whole standpoint of science toward the things invisible which its function is to search out and in some measure to understand." *The Times* contrasts this occasion with that of thirty-nine years ago when the address was given by John Tyndall, the famous physicist, at Belfast. "Science was then engaged in asserting its claims against a dogmatic theology, and perhaps some overassertion was a necessary part of the phase, but overassertion there certainly was. The public presently woke up to find that they had only exchanged one priesthood for another, and that the new dogmas were more arrogant than the old." In his address Sir Oliver besought his fellow scientists "not to fall into the old mistake of thinking that ours is the only way of exploring the multifarious depths of the universe, and that all others are worthless and mistaken. The universe is a larger thing than we have any conception of, and no one method of search will exhaust its treasures." He concluded with this:

"Men and brethren, we are trustees of the truth of the physical universe as scientifically explored; let us be faithful to our trust. Genuine religion has its roots deep down in the heart of humanity and in the reality of things. It is not surprizing that by our methods we fail to grasp it; the actions of the Deity make no appeal to any special sense, only a universal appeal; and our methods are, as we know, incompetent to detect complete uniformity. There is a principle of relativity here, and unless we encounter flaw or jar or change, nothing in us responds; we are deaf and blind, therefore, to the immanent grandeur around us, unless we have insight enough to appreciate the whole, and to recognize in the woven fabric of existence, flowing steadily from the loom in an infinite progress toward perfection, the ever-growing garment of a transcendent God."

FAMOUS SCIENTISTS AT THE BRITISH ASSOCIATION GATHERING.

Those standing are (from the reader's left) Prof. Robert W. Wood (America), Professor Lorenz (Austria), Dr. Arrhenius (Sweden). Those seated are Sir Oliver Lodge, President (England), Mme. Curie (France), Prof. Gilbert Barling (England).

The London *Standard* reports that throughout England "the address is viewed with much satisfaction by clergymen and ministers, who regard it as a strong aid to faith in an age tending toward skepticism." One "dignitary of the Church of England" is quoted to this effect:

"The address is very welcome after the blank materialism of Professor Schäfer's paper last year. Of course, it makes no real difference what the scientists say. We listen to them with entire respect when they speak as scientists, but we have no special veneration for their pronouncements when they travel beyond the boundaries of their researches. This Professor Schäfer did in one direction, and, it must be admitted, Sir Oliver Lodge has done the same in another. His personal convictions have no relevance in a purely scientific discussion. But all the same the general tenor of his address, counseling, as it does, abstention from the rash generalizations and the wholesale negations in which a certain class of scientists still loves to indulge, is exceedingly welcome. I do not think that the mere fact that a distinguished man of science confesses his faith in the continuity of consciousness after death is likely to have any great effect on the thoughtful mind. Those who are convinced will feel no great reinforcement in their belief; those who doubt will continue to doubt. It is not a simple question of evidence and credibility. But all Churchmen will recognize that such an admission is likely to have an influence on the shallower kind of skepticism which is very largely a matter of fashion and prejudice. Many people who would have stoned Galileo sneered at religion under the influence of Huxley and others. Their faith will perhaps revive if scientific opinion shows an altered and more tolerant tone. But all this, of course, leaves the great question where it was."

The Rev. F. B. Meyer is quoted as saying:

"How remarkable it is that, at a time when it is supposed that religion is losing its hold on the modern world, a man of the eminence of Sir Oliver Lodge in the scientific world should dare to affirm that religion has its roots deep down in the reality of things, and that there are facts which transcend our methods

of scientific demonstration. It is one of the great utterances of our time, and is destined to be historic."

Another well-known non-conformist, the Rev. R. J. Campbell, regards the reference to life after death as "only one valuable point in Sir Oliver Lodge's general argument, a train of reasoning of the greatest value for the future of scientific and religious thought":

"A new and most important step has been taken in the rapprochement of science and religion which is steadily going on. I hope much from the labor of men like the late Frederick Myers, Sir Oliver Lodge himself, and Sir W. F. Barrett in psychical research. Indeed, it is not too much to say that these men and their coadjutors have already added much valuable knowledge to experimental psychology. Whether they will succeed in establishing to the satisfaction of the scientific world generally the fact of individual survival after death remains to be seen. I believe they will, and I shall rejoice when they do. A great many people, even scientists, misunderstand Sir Oliver Lodge. They say he has the habit of plunging and arriving at premature conclusions, and so on. As a matter of fact, I know no more careful and cautious and accurate man in the whole field of science to-day."

In this country, especially with the religious press, the fame of the British Association is not a blinding light to independent expression. *The Christian Intelligencer* (New York) feels that "the Christian, at least, does not need the assurance or instruction of the British Association for the Advancement of Science, nor its eminent president, as to the reality of the continuity of life, nor of that other world into which we pass from this vestibule of our short and imperfect life." No—

"A thousand proofs, as convincing as those of the surgical and scientific laboratory would be, but which appeal not to the material but the spiritual perceptions of mankind, will convince men of the coming ages, as they have convinced those of the past, that life is continuous and that the character of the life which we now live, its aims, its aspirations, its endeavors, and its faith, will largely determine the life into which we pass 'when this mortal shall have put on immortality.' As to the communication of the dead with the living, that is another matter, but one to be as little settled as the other by the crude and fantastic experiments of the spiritualist."

The Churchman (New York) sees rather more sympathetically the contribution of the scientist to the sum of human faith:

"However unsatisfactory from the Christian point of view it must be to treat the essentials of man's personality on the basis of the phenomena that are investigated by the Society for Psychical Research, it can not be denied that to minds steeped in physical science there is no other door open to persuasion. There is nothing exalting or inspiring in the trivialities of spiritism or of occultism. Yet even those instinctively out of sympathy with such avenues of approach to religion can agree with Sir Oliver when he says that occurrences recorded as occult can be examined and reduced to order by the methods of science carefully and persistently applied. There will be less general agreement with his statement that already the facts so examined have demonstrated that memory and affection are not limited to that association with matter by which alone they can manifest themselves here and now, and that personality persists beyond bodily death."

The Catholic Standard and Times (Philadelphia) doubts if the British Association looks to the right source for its light on these matters:

"A body of thinking men honestly seeking for light, we may concede, but not always wisely; for its annual assemblies are not opened with prayer for guidance, as sober gatherings of men professing to have met for the high purpose of helping the world's struggle toward the light of truth ought in all humility to be, because the very fact that they do so assemble is a confession of man's dependence on a higher power."

The Jewish Exponent (Philadelphia) observes:

"It is, of course, true that in matters that are not the subject of observation and experiment, and that can not be determined by known facts and the reasoning based upon them, even the ablest and strongest thinkers are not in a position to speak with authority. An eminent scientist because of his ability in that sphere does not necessarily possess any especial faculty for deciding whether conscious personal life continues after death. He can believe that it does and state the reasons for his faith with greater force and cogency than the ordinary every-day man. The significance of his belief lies in the fact that one who is accustomed to weigh all problems in the light of reason finds it possible to accept the teachings of religion on the subject of immortality without hesitation or question. 'Genuine religion,' the eminent and clear-headed president earnestly asserted, 'has its roots deep down in the heart of humanity and in the reality of things. It is not surprizing that by our methods we fail to grasp it. The actions of the Deity make no appeal to any special sense, only a universal appeal, and our methods are, as we know, incompetent to detect complete uniformity.' And yet he asserts 'our studies do not exhaust the universe, and if we dogmatize in a negative direction and say that we can reduce everything to physics and chemistry, we gibbet ourselves as ludicrously narrow pedants and are falling far short of the richness and fulness of our human birthright.' Far different is this view from the materialism of a Haeckel or a Jacques Loeb. And yet who can doubt that, notwithstanding the fact that Sir Oliver Lodge does not prove the persistence of personality after death, because he can not, he does state a conclusion that is reasonable and almost universal, and much more in accord with the probabilities than the cold, hard, and hopeless theories of the materialists?"

MINDING THE CHILDREN'S READING

LET FATHERS NEGLECT their ledgers and mothers their cook-books, if need be, but let them not dare neglect to ascertain the kind of books their children are reading. This admonition of *The Continent* (Chicago) may sound, at first, like one more of the many kinds of censorship with which we are threatened, but the writer thinks that "at the present moment this problem is peculiarly serious," for "recent realization of the importance of telling boys and girls the truth about the wicked world they are going out into is being appropriated for polite apology by sin-gloating vultures in a startling proportion of late books and magazines." The apology of the writers that they "are showing your sons and daughters the temptations they must avoid," *The Continent* calls "foully false," even asserting that the writers are "not caring at all for right and wrong." This is the duty for the parent:

"Grant that it is not practicable, even if it seemed wise, for father or mother to scan beforehand every book or magazine read by their growing boys and girls; yet this much is possible:

"*In every home with children the father or the mother should have definitely appraised in advance the temper and tendency of every author whom the children are allowed to follow and every periodical laid before them on the family reading-table.*

"As for any adviser whom either children or parents consult about reading, the parents should make themselves fully aware that the teacher or librarian so trusted holds by the same ideals of character as they themselves cherish for their children.

"In this way parents may not indeed foresee the exact words and clauses the children are to read, but they will assure themselves of the right effect of their reading on their lives. It is like sending a boy or girl away in company with a high-minded friend. One does not know what the friend will say to the child, but he does know that the child will come back nobler for the association.

"This signifies, of course, that it is not specific terms and incidents which matter so much in young folks' reading. The thing of consequence is the view of life to which they are introduced—whether they are shown the spirit mastering the flesh or the flesh stamping out the spirit."

Not to seem too straight-laced, *The Continent* meets the view of some that "any book is immoral that exhibits the presence of gross sin in the world." The theory of shielding the young, it sees, "is as futile as the attempt of the Indian king to protect his princely son from hearing of death." Going on:

"Before any youth is out of his teens he should have read what

will make him know the location at least of the direst pitfalls that await his feet in manhood. Young women, too, should be similarly afforded the defense of a sufficient knowledge.

"But both should have read the shuddering truth from authors who abhor the sin they tell of—who are bent on making visible its hideousness, deceit, and ruinous consequences—who write to warn. The most damning and damnable note in literature is that accent of curiosity which pricks on the reader to look a little closer at what ought instanter to repel him.

"The slender, almost imperceptible thread of curious interest to know a little more is a tiny snare, but there is strength enough in it to strangle a conscience to death and haul stout young feet into unescapable quagmires.

"Just once to find an author toying with that subtle scarlet tangle of temptation is reason enough for forbidding any of his volumes entrance into the home thereafter.

"And just once or twice to find a magazine printing stories stained with that mark is reason enough for ceasing patronage of it. Very artistic and all that! But art can't atone for making evil alluring—or even interesting. Honest writing makes vice repulsive. Moreover, it does not omit to make purity attractive."

THE FOE WITHIN THE FOLD

THE MOST DANGEROUS enemies of the Christian Church would not ordinarily be sought within the fold, as the saying is, and yet that is just where they are found and noted by the Rev. Frederick Lynch, D.D., of *The Christian Work* (Undenominational, New York). Foes the Church has always had to face, Dr. Lynch reminds us, and she has "met them and triumphed," even when they appeared in the great minds of Voltaire, Rousseau, Gibbon, Shelley, Hume, and others. These were "avowed and open enemies," whom she need fear little, as she need little fear Socialism in this day. Nor is "the world," or those that follow after its lusts a serious menace to the Church, because such people neither support nor attack the Church. "They simply ignore it," we are told, except "to seek its offices at marriage and at the death of their loved ones." Who, then, are the worst foes of the Church and those who will bring about its collapse, if such an event were possible to conceive? They are the members of the Church themselves and, "above all, its shepherds and pastors," which forthright accusation Dr. Lynch sustains as follows:

"Our churches are full of ministers who have no particular sense of the divine origin and nature of the Church they lead and serve, no particular love for it, or awe in its wondrous presence, and often no conception of its transforming progress through the ages, or of its divine capacity to work miracles to-day. As a result of this their congregations have no love for it, attend its services as one habit or duty among many others, apologize to their friends for their connection with it, conceive of it as one society making claims upon them among many others, and feel none of that wondering awe in its presence, and none of that overmastering love and devotion for it that one sees in a St. Paul, an Augustine, a Bernard, a Newman, or a Phillips Brooks."

Speaking from an experience and observation of twenty years, during which time he has been watching the churches "with anxious eyes," Dr. Lynch anticipates any charge of exaggeration in the foregoing statement, and goes on to say:

"We have watched the sermon topics in the papers, and have seen year after year go by and certain pastors never once preach on the Church. We have seen institution after institution spring up and draw men into such passionate devotion as they never evinced toward their Church—pastors saying nothing. We have seen one organization and society after another rise; settlements, institutes, all sorts of things to do the work the Church should do, and making great claims—and the pastors still quiet. We have seen great groups of children come to the Sunday-school as infants, spend fifteen years, and at twenty leave the Sunday-school (not to enter the Church), and during all that time not one word said to them by the pastor of the one divine institution of the world, the one society that has made their civilization and given them their homes, books, and schools, the one thing that persists unchanging while everything else has changed, the one house where God dwells, not exclusively, but, as it were, where his hearthstone is, his foyer, his meeting-place with his children, his chosen vessel wherein he offers them the water and bread of life. We have quietly sounded the members of a big congregation and found they knew absolutely nothing about the wondrous, miraculous history of the Christian Church, except the little they learned when they studied the Acts of the Apostles as children. And we doubt if the average congregation could do better."

But Dr. Lynch does not ask that his word alone be taken for the soundness of this contention; he offers by way of additional testimony, from lectures on "The Building of the Church," delivered before Yale Divinity School, these words of the Rev. Charles E. Jefferson, D.D.:

"Many preachers are thinking little about the Church, and others are thinking about it mistakenly. The very word 'Church' is in many pulpits tabooed. There are clergymen who preach no longer about the Church. Their favorite theme is the 'Kingdom of God.' An influential American theologian, in a valuable treatise on theology, picks up the word 'Church' only to drop it, using in its place 'the Christian people.' . . . When those who sit in the seats of the mighty speak after this fashion, it is not to be wondered at that men lower down begin to think of the Church with a slackened interest and to speak of it with a diminished enthusiasm. The Church has, to many Christians, become an object to be apologized for, and has ceased to be an institution to be sacrificed for and loved."

While disclaiming to be "unduly pessimistic," Dr. Lynch confesses that he "can not fail to see that the Church is losing its hold upon many, both among the masses and the cultured of the world," wherefore he issues this warning to the leaders of the Church:

"Unless we who are its bishops, priests, and ministers magnify it before the people, we shall lose increasing numbers. For many great and powerful organizations are asking the allegiance of the people, and making great claims for themselves. None of them can make the claims the Church can; but that does not matter, so long as they make their lesser claims and the Church makes none. We believe that all that is necessary to win the love and adoration and service of the great majorities of our communities, both of young and old, is simply to tell them the truth about her, so that every soul in the community shall know, and, before the non-churchgoing community, to make those claims one has absolute right to make for the Christian Church. Make just the claims Paul made, namely, that Jesus Christ divinely instituted the Church to be his representative in the world and imparted to it all the powers he himself exercised upon earth, including the forgiveness of sins, the salvation of souls, and the giving of eternal life. He appointed the Church to be what he was, say what he said, do what he did, and to continue to effect what he accomplished."

Such is the "apostolic conception" of the Church, Dr. Lynch points out, which has always "worked its wonders when it was true to its nature," but will "pass out of existence if it begins to think of itself as simply one religious society or reform agency among many others." Then, remarking the irony of the fact that it remained for a philosopher, Prof. Josiah Royce, to remind the ministers "that the one Christian doctrine which is based on universal experience is Paul's doctrine of the Church," Dr. Lynch adds a final word:

"There is nothing more suicidal to the minister than to fail to magnify the Church to the Pauline proportions. It is the Church which makes the minister, and not the minister who makes the Church. Take the Church away, and what influence would the minister have, or through what would he exercise his influence? It is to the manifold increase of his powers to build up the Church and make it as powerful and resplendent as he can. It is through the Church he shall save the people, and through the Church that they shall become Christ's. Let us also be careful how we praise the kingdom at the expense of the Church. Wherever there is even a little of the kingdom you will find that there was a very big Church back of it. Even those who have left the Church to serve the kingdom got their inspiration and ideal in the Church. The kingdom will amount to very little a century hence if the Church becomes weak and powerless. There will be neither men nor money forthcoming for philanthropy or reform when worship ceases and the Church abrogates her special and divine calling as the vicar of Christ."

REVIEWS OF NEW BOOKS

TREVELYAN'S LIFE OF JOHN BRIGHT—OUR CIVIL WAR*

Reviewed for THE LITERARY DIGEST by
E. S. NADAL

THE American reader of Mr. G. M. Trevelyan's "Life of John Bright" will naturally turn first to the chapter on Bright's relation to our Civil War. This opens with a bit of history which will be new to most readers. The biographer skilfully begins the chapter by quoting entire a proclamation of Lincoln's, in which the name of Bright is mentioned. One Alfred Rubery, a youth of twenty years, had been engaged in a plot to seize a vessel in the harbor of San Francisco with the purpose of using her as a privateer against American commerce. For this he had been sentenced to ten years' imprisonment and to pay a fine of $10,000. The judge who tried him and the two U. S. Senators from California reported that there was great indignation at this crime on the part of the people of California, but that the people would be satisfied with the pardon of the man, if the pardon was granted at the request of John Bright, "who is a true friend of their country."

Accordingly, Lincoln issued a proclamation, which, like everything that came from his hands, brings before us the image of our illustrious and greatly loved friend, for a personal friend Lincoln is to all of us. The proclamation sets forth that "whereas the said Alfred Rubery is of the immature age of twenty years, and whereas the said Alfred Rubery is a subject of Great Britain, and his pardon is desired by John Bright, now therefore be it known that I, Abraham Lincoln, etc., etc., these and divers other considerations me thereunto moving, and especially as a public mark of the esteem held by the United States for the high character and steady friendship of the said John Bright, do hereby, etc., etc." It is a quaint document, such as could hardly come from the government of any other great country in the world. The incident shows American kindness and American simplicity. The document is all the more interesting, if, as I suppose to be the case, the matter had to be referred to John Bright before the pardon was issued. But, indeed, John Bright owed quite as much to this country as we did to him. It was the victory of the Union in our Civil War which made the success of Bright's later years. His brother-in-law, Mr. Leatham, once told me—"It was the success of the Union which was undoubtedly the cause of the long lease of power into which the English Liberals came in 1868." It was at this period that the electoral reforms came which Bright had most at heart.

In the way of contribution of new matter to the history of the English relations to ourselves during the Civil War, there is not much in this chapter. The chapter consists mainly of extracts from Bright's letters, written at that time, and there are some moving quotations from his speeches. There is an autograph of a resolution drawn up by Lincoln to be introduced at English public meetings, in which Lincoln embodied his ideas of what such resolutions should contain, and which is written with his wisdom and tact and with that interesting carelessness of expression which was one of his characteristics. It was sent by Sumner to Bright in April, 1863.

The chapter records also the steady loyalty of the English operatives in the face of the sufferings inflicted on them by our war. This story, which Bright was fond of telling, is worth repeating. At the time of the cotton famine in Lancashire, which was the result of our blockade, a cotton had been introduced from India called "Shoorat," which was found hard to work. The Lancashire operatives were very religious people, and at their prayer-meetings many prayers were offered up that cotton might be sent to them. One man prayed as follows: "O, Lord, we beseech thee to send us cotton, but, O Lord, not Shoorat." At this time the majority of the laboring population of Lancashire was supported by the charity of their neighbors, who were themselves pretty hard hit. Bright, in a letter to a friend in this country, said: "If a few cargoes of flour could come, say 50,000 barrels, as a gift from persons in your Northern States to the Lancashire workmen, it would have a prodigious effect in your favor." This advice was taken, and three large ships were loaded with flour and sent to Liverpool. An employee of Bright Brothers told Mr. Trevelyan that a barrel from the American gift stood long afterward in the mill at Rochdale.

Bright was the unwearied and incessant peacemaker between the two countries at this time. He says in a letter to an American friend, September, 1863: "You will hear by mail that the ironclad rams are detained by Government. I suppose the changed position of your affairs has helped our Foreign Office to the decision they have come to." In a later letter he says—and who can read the honest words without a sentiment of gratitude: "But what a miserable thing to see our friendliness and our justice depending on your strength. When you seemed weak and staggering under the weight of the insurrection, the Prime Minister and his law officer continued to insult you; when you are strong and the revolt is staggering under your blows, they speak gently and pay you compliments. This statesmanship is very low morality. I despise it from my heart." In his capacity as peacemaker he writes to an American friend that the order had been issued for the detention of the *Alabama* before she got away. Just how she got away would be an interesting subject of inquiry. Perhaps a clerk who had charge of the papers had arranged to take his girl to Richmond, and thought they could wait for a few hours. It is so history is made. It is scarcely possible that our legation could have been remiss, tho those were very busy days at that office. Lord John Russell was pretty old and needed continual stirring up, but I don't think he can be accused of wishing to have the ship get away. If the reader will look at that very interesting book, the "Life of James M. Mason," Confederate agent in London, by his daughter, Miss Virginia Mason, he will find that Mr. Mason was as much dissatisfied with Lord John Russell as Mr. Adams was.

A chapter or two is given to each of the important phases of Bright's career. Of course, the most famous and important part of Bright's life was his fight for the abolition of the corn laws, and of that there is a full account. There are chapters given to his opposition to the Crimean War and to his relation to the Factory Acts. His resistance to the reforms proposed by Lord Shaftesbury is no doubt that part of Bright's life upon which a biographer would dwell with the least satisfaction. Mr. G. W. E. Russell says, in a late magazine article, that Shaftesbury regarded Bright as the bitterest and most malignant foe he had to contend with, declaring that even Cobden was better. Mr. Trevelyan says that Bright never opposed legislation on behalf of children in the factories. The reader will be glad to hear this, for I think the general impression is that he did oppose the shortening of hours for children. Mr. Trevelyan suggests that the bitterness of Bright's opposition to Shaftesbury was due to his belief that Shaftesbury and his aristocratic associates should have begun with the relief of their own particular chattel, the agricultural laborer. Bright did not oppose the limitation of the hours of the factory hands to ten, which he thought were long enough, but he considered that the reform should come by arrangement between the factory hands and manufacturers rather than by legislation, a position which does not seem consistent with his oft exprest view that one class can not be trusted to legislate for another. We can easily credit the claim made on behalf of Bright that the operatives in his factory were well treated. We are told that the strap for beating children which hung in most British factories was not used in Bright's factory. This suggests a pretty unpleasant state of things elsewhere. The most disgusting thing I ever saw, when I lived in the Southern States before the war, was the beating with a cowhide by an overseer of a boy who was at work in the building of a parsonage. I may add that it was the only time I ever saw a slave struck, tho I dare say there was plenty of it done. It is not easy to see that the condition of the children in the English factories was much to be preferred to that of negro children under that institution of slavery which Bright justly abhorred.

I have left myself little room in which to speak of Bright as a personality and of his mind and genius. He always said of himself that he was an uneducated man. This fact, if it be a fact, does not appear in the

---

least in his speeches, in which there is never a deviation from good taste. The uniform good taste of these utterances, however, may have been the result of his sincerity and simplicity—qualities which are powerful antiseptics against vulgarity and bad taste. He had no Greek or Latin, and seems to have had a contempt for these languages, and no doubt would have agreed with Cobden that a boy was to be pitied who knew where the Ilisus was and knew nothing about the Mississippi. Mr. Trevelyan tells us that he grew sulky under the long Latin quotations of his great controversial antagonist, Robert Lowe. I have heard with delight and envy those Latin quotations of Lowe's in the House of Commons. The striking-looking old man, whose fine appearance was perhaps assisted by the fact that he was nearly blind, would repeat, in a very resonant and characteristic voice, I should say, nearly thirty lines of a Latin poet, Bernal Osborne, the House jester, calling out "Translate."

Bright must have lost something by not having had that liberal education of which he did not approve. We have a feeling that he was somewhat narrow and limited. The two men, Bright and Lowe, were present one evening in different parts of the hall at a lecture by Artemus Ward, our most original and delightful humorist. Some one who was present on this occasion has described the effect of the lecture upon the two men. Bright's face would now and then relax into a smile, but usually his handsome and refined features wore a puzzled expression. I can understand that Ward's humor might have been a little outside the ideas and sympathies of a plain British manufacturer. But Bob Lowe, the scholar, with the broad outlook of a liberally educated man, for whom the key of culture had unlocked so many departments of life, and who was a stranger to scarcely any form of literary excellence, throughout the entire hour rolled in his chair with laughter. And then, of course, Lowe was a man of natural humor.

Bright had a handsome face, the features delicately chiseled and highly nervous. By the way, he considered that an orator should be clean-shaven, I suppose, because an audience can better see the play of the features. I have heard Bright speak in the House of Commons, but it was after he had become an old man. It is from the reading of the speeches he made when he was in his prime, rather than from what I have myself heard from his lips, that I can understand and am prepared to accept what Lord Salisbury said in the House of Lords of Bright's oratory: "He was the greatest master of English oratory that this generation has produced, or, I may say, several generations back. I have met men who have heard Pitt and Fox and in whose opinion their eloquence at its best was inferior to the finest efforts of John Bright." But I should not accept this view, if Lord Salisbury meant to include American oratory, Webster, for instance.

What imprest me most about him when I met him was his gentleness and simplicity. I met him often enough to have something interesting to tell about him and regret that I have not more to tell. I dined one evening in his company at a house in Kensington. In the smoking-room after the dinner it had been agreed that certain of us should walk back to Pall Mall, a distance of perhaps a mile and half. Bright, with several others of his own age, was standing at the door ready to start, when one of them proposed that we should be moving. I happened at the moment to be talking with some other people in the hall. Bright said, "Sha'n't we wait for the young gentleman?"—the young gentleman being myself,—a slight enough incident, but it showed kindness and thoughtfulness. He called one day to say good-by to a young woman connected with our Legation in London who was about to return to this country. She told him she had enjoyed her London life and her position in the Legation and was sorry to go back. John Bright shook his head over that. He could not understand how people could be sorry to go to their own country.

I have written this far without a word of thanks to Mr. George Macaulay Trevelyan, to whose skill, knowledge, good feeling, and literary ability we owe this valuable and most satisfactory record of the life of a good and great man.

TRAVEL AND DESCRIPTION

Wallace, Harold Frank. The Big Game of Central and Western China. 8vo, pp. 318. New York: Duffield & Company. $4 net.

This is the work of a scientific naturalist, as well as of an enthusiastic hunter, a man who heard the call of the wild and can prefer the unturned hillside and the untracked forest to the land disfigured by cultivation. It is in this spirit that Mr. Wallace disagrees with Chesterton's dictum, "It is not only nonsense, but blasphemy, to say that man has spoiled the country." "In a wild hill-country," says Mr. Wallace, cultivation is baleful, and it was in such a country that this writer found his hunting-ground. Here it was he stalked the takin, that rare animal which seems like a magnified specimen of the Rocky Mountain goat, and is of a bright yellow color, as this writer says, "the Golden Fleece reincarnated."

The route of the author's journey was from Shanghai and civilized eastern China, up to Omsk, with its semibarbarous tribes. Strange people, strange beasts, and strange scenes are described with the graphic style of a practised and graceful pen. The book breaks distinctly new ground, is profusely illustrated, and furnished with maps. There are several appendixes showing field measurements, an estimate of expenses, and tables of stages and distances. A new and fascinating field of sport and observation is thus opened up, and we believe that many will be eager to follow in the footprints of this daring stalker and zoologist.

Lukach, Harry Charles. The Fringe of the East: A Journey Through Past and Present Provinces of Turkey. 8vo, pp. xiv-273. London and New York: Macmillan Co. $4 net.

A chatty volume this, following in its narrative a journey that takes in the most famous Greek monasteries, especially that of Mt. Athos, passes to Rhodes, through Cyprus, then to Jerusalem, through Judea, Samaria, and Galilee, past snowy Hermon to Damascus, the Lebanon, and the Euphrates. Matters new and old—present conditions, bits of out-of-the-way history, legends Mohammedan and Christian, folk-lore, and the gossip of the shop, the steamboat, and the caravan—are mingled in interesting and generally instructive fashion. The author's interests are wide. Architecture, archeology, monasticism, ecclesiastical politics, history, the origins and characteristics of obscure sects like the Samaritans, the Druses, and that queer people the Nosairiyeh, traces of Saracen and Crusader, all have a part in the volume.

The author is no novice, and his English flows easily. The camera was called in to add vividness to description, and most of the seventy-seven illustrations are of fair quality. Macmillan's imprint guarantees the typography. A fair index completes the volume. The book is instructive and entertaining. The task of dealing with even so shopworn a subject as Jerusalem is quite well mastered in the two chapters devoted to it. The mysteries and absurdities of Turkish government are humorously set forth. Only now and then will the specialist detect a slight slip in historical statement.

Shelley, Henry C. Royal Castles of England. 8vo, pp. 349. Boston: L. C. Page & Company. $3.

It was a very good idea to give this account of the fortresses which from the days of William the Conqueror were either the homes of English sovereigns or have been intimately connected with their history. It has been said that to learn the history of a country we must visit it and examine its monuments. This is especially true of England, in which it is sometimes difficult to interest children, who are too often inclined to think that history begins with Bunker Hill, or, at least, with Columbus. A work like the one before us, written with full knowledge and profusely illustrated, is sure to interest the intelligent reader, young or old. We do not like to criticize a work which has been so admirably done, but we regret to see that the old Sussex fortress of Bramber on the Arun is not mentioned. It would be of importance in connection with the history of King John, with whose name it is associated in a very characteristic story or legend. In the very interesting account of Charles I.'s imprisonment in Hunt Castle we find no reference to the beautiful story of Baring Gould's, the "Trumpeter of Hunt Castle"—a supernatural visitant who watched over the last days of the "Martyr Monarch." But the work is rich enough without these details.

Sommerville, Frankfort. The Spirit of Paris. Pp. 165. London: Adam and Charles Black.

All kinds of books have been written on Paris—witty, instructive, superficial, descriptive, sentimental, and historical books; but this aims at being something entirely different. Throughout its pages we encounter that "impalpable, champagny something that makes Paris attractive to so many different kinds of people." The author, with the help of some very beautiful illustrations by eminent artists, describes Paris and the Parisians, their theaters and cafés, their gallantry, and their sports, always making a distinction between the real Paris and the one that visitors see and know. He pays a glowing tribute to the French woman, her tact, her constant effort to please, her taste in dress, and her general versatility. Women in France "have made greater strides in taking their places beside men than they have in many other countries." The real Parisienne is a very beautiful, attractive, and resourceful woman, with a deep-seated respect for the family.

The different chapters on amusements, fêtes, artists, neighborhoods, living, and

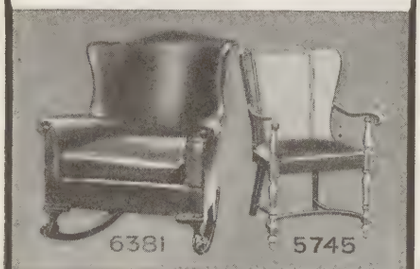
How to Choose Upholstered Furniture

In choosing Upholstered Furniture for your Living Room, Library, Reception Room, Music Room, Bedroom, Hall or other rooms in your home, a harmonious selection can be made from the Karpen Free Book of Information, sent on request.

Hundreds of pieces are shown therein and the Karpen methods of construction explained. Period styles and all other accepted forms of furniture design are shown and described. It contains a fund of valuable general information which every householder needs as a guide to intelligent furniture selection.

Karpen Guaranteed Upholstered Furniture



could not possibly be made of more durable materials nor more trustworthy in construction. In beauty the designs are unsurpassed.

When you buy an article bearing the Karpen trade-mark you may be sure that it will give you absolute satisfaction or your money will be refunded.

You cannot be sure of this if what you buy does not bear the maker's name. You will ward off disappointments by insisting on being shown Karpen Furniture and refusing to accept substitutes.

Write for our Book "2" and ask for the name of the Karpen dealer in your town.

REVIEWS OF NEW BOOKS

(*Continued from page* 584)

dressing, are filled with pertinent comments on every-day scenes and events, and give evidence of a seeing eye and an understanding mind. Paris the gay, even the "naughty," lures us on, Paris the originator of styles and the master of culinary perfection. All love her and enjoy reading of her endless fascinations, even of the serious ways in which French art has affected America. This is a thoroughly enjoyable, charming book.

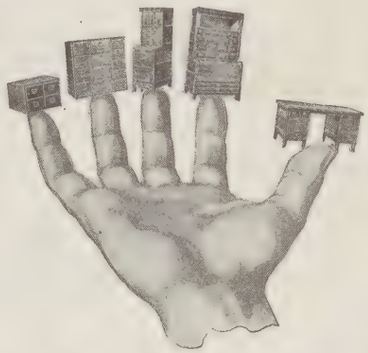
Maurel, André. Little Cities of Italy. Translated by Helen Gerard. Illustrated. Pp. 475. New York: G. P. Putnam's Sons. $2.50.

The Frenchman's love for Italy is that of consanguinity. André Maurel, as novelist and journalist, literary critic, and connoisseur in painting, sculpture, and architecture, stands among the most distinguished of classical-bred, yet modern, Frenchmen of letters. The present volume is a companion to the first one by this author already presented in English. In it the author describes Milan, Pavia, Piacenza, Parma, Modena, Bologna, Ferrara, Ravenna, Rimini, Pesaro, Urbino, Perugia, Assisi, Spello, Montefalco, Orvieto, and Viterbo, giving to the reader, whose usual idea of Italy is bounded by Rome, Florence, Pisa, Naples, and Genoa, new ideas of the alluring possibilities of Italian travel and the wonderful beauties of nature and art to be looked for in this charming country. The reader who gets the greatest good and pleasure out of this volume will be the one who is familiar with Italy's history, both secular and ecclesiastic, for M. Maurel discusses all sides of a city's development with an intimate familiarity that presupposes the same knowledge on the part of his readers. He touches on the physical charms of a city, its architecture, its art treasures, and all the famous personages that history has associated with different cities. He employs the figure of personification to an unusual degree and makes even inert structures alive to our mental vision. His choice of words and form of description are unique, especially in describing scenery where his mastery of language is compelling. "Italy is so abounding in treasures! The more you visit her, the more her masterpieces increase. You are in despair of ever knowing them all, yet the consolation of your departure is to vow that you will find the others next time."

Winter, Nevin O. The Russian Empire of To-Day and Yesterday. Pp. 476. Boston: L. C. Page & Company. $3.

Whether the cause be fear or ignorance no one seems to know, but of all the great powers of the world Russia is one of the most interesting and least often visited. The reader of this exhaustive and comprehensive work will be stimulated not only to the acquisition of knowledge concerning this great and unique country, but inspired to make Russia one of the objective points for his plan of travel. He will find intense enjoyment in its accounts of the physical charms, the past and present history, the people, customs, and development of the Russian country and inhabitants. A map, profuse illustrations, and a careful and complete analysis of all desirable details

(*Continued on page* 588)



For Businesses That Grow

Shrewd business men fill present needs but with a keen eye for future expansion. By preparing for more business, they deserve more and have more.

Such far-seeing men give the preference to Browne-Morse filing equipment, which completely fills that two-fold demand of urgent present and probable future. In Browne-Morse cabinets you can have exactly what you require today. Yet it will never need replacing—Browne-Morse equipment is built to last. As for tomorrow, no matter how much or in what direction your business develops, you can always supply your needs from the Browne-Morse line—no matter what you have to file, there's a section built purposely for it.

Browne-Morse Cabinets

Browne-Morse Quality Cabinets are a revelation of the craftsman's skill. Scrupulous exactness in details, choicest materials, ingenious devices for smooth, noiseless action—these are a few of the many features that appeal to men who prefer the best. Other grades suit other requirements; but all maintain Browne-Morse reputation and standards.

Write for our free literature on filing cabinets. Let us tell you, too, about the famous "Desk with Brains."

Sidd Suspenders

The Invention of the Age

The most comfortable suspenders ever worn, no rubber or leather to rot. The elasticity of the **Ball Bearing Springs** will outlast any three pairs of elastic suspenders. The only suspenders that can be cleansed without injury. Will not slip off the shoulders.

Ask your dealer for them, 50c. and 75c. a pair.
If dealer cannot supply you, enclose price to factory.
SIDNEY SUSPENDER COMPANY, B-3, Attleboro, Mass.

MADE BY A SPECIALIST

EVERY maker, we suppose, is producing the best car he knows how to build.

Yet no two makes are alike, and no two makes are of equal value. Some one maker knows better than any other maker how to produce small, cheap cars. Some one maker knows better than any other maker how to produce superb electric cars. And Alexander Winton knows better than any other maker how to produce the world's finest six-cylinder car.

Specialists Lead the World

There's nothing accidental about it. It isn't luck or genius, but hard work, concentration, and experience. We live in an age of specialists. Specialists lead the world, and easily outdistance the straddlers, the floppers, the men who do not know their own minds well enough to stick to ***some one thing.***

Cars That Don't Make Good

It's so in every profession, every business, and especially in the complicated automobile business, where a single mistake can ruin a season's output. That's why some cars are up one year and down the next. Also, that's why so many makers are forced to announce sweeping changes from year to year.

How can you expect excellence in the car of any maker who switches and revises and discards his models so rapidly that he never has a chance to perfect any one of them? What sort of specialist is he? How can he hope to equal the Winton Six, which has been the ***sole*** product of the great Winton factory for seven consecutive years?

WINTON SIX

Long stroke motor, left drive, center control, electric lights, self-starter, finest mohair top, easily handled curtains, rain-vision glass front, best Warner speedometer, Waltham eight-day clock, Klaxon electric horn, tire carriers, four-cylinder tire pump, demountable rims, full set of tools, German silver radiator, metal parts nickel finished. Fully equipped, **$3250**

One Maker's Method

Mr. Winton never tried to make more cars than any other maker. He never tried to see how many different models he could make. He did not flop around from one thing to another, trying to monopolize the entire automobile market. But, on the contrary, for longer than seven years, he has devoted himself to a single object—the perfection of one six-cylinder car, the Winton Six.

The Result is Excellence

That's what has made Alexander Winton the world's most experienced six-cylinder specialist, and the Winton Six the world's standard six-cylinder car. No wonder the Winton Six won high-grade demand away from four-cylinder cars. No wonder the Winton Six holds the world's lowest repair expense record. No wonder it is a car of exceptional beauty and of goodness that stays good. For it is the one car in the world that has been most thoroughly proved, developed, and perfected—the most satisfying car that money can buy.

REVIEWS OF NEW BOOKS

(*Continued from page* 586)

give instructive as well as pleasurable reading. Altho the book is bulky to be used as a guide-book, a traveler in Russia will find it invaluable in suggestions. We read understandingly of the modern beauties of St. Petersburg, its architecture and art; the historical associations of Moscow; and have an engrossing narrative of Polish, Finnish, and Jewish activities in connection with and opposition to autocratic government. Even historically, nothing is omitted in illustration of the greatness of Peter, Catherine, and Alexander, and in explaining the inheritance of the present ruler, his problems and difficulties, as well as the suggestive beginnings of representative government. It is in agriculture and education, the two most essential subjects in a country like Russia, that the nation "lags farthest behind." The Russian peasant is not inferior to any other class, but his talents are undeveloped.

Underwood, John J. Alaska: An Empire in the Making. Pp. 440. New York: Dodd, Mead & Company. $2 net.

The writer of this highly interesting volume is a trained newspaper man and magazine writer. After fourteen years of almost constant residence in Alaska, he has brought together his fund of acquired information, hoping "that it would serve not only as a guide for tourists and sightseers who visit the northern wonderland, but also that it may contain matters of interest to the stock-raiser, the farmer, the miner, the prospector, and the investor." Only adjectives in the superlative would fittingly describe this book, dealing as it does with a country which should be of absorbing interest to every loyal and progressive American. Mr. Underwood puts before his readers glowing and graphic word-pictures of the massive grandeur and picturesque beauties of Alaskan scenery, with its dominant note of "bigness." He traces by map and pictures the different routes available and the fascinations of the trip, but he also states fairly the drawbacks and dangers of Alaskan travel. When we have read his account of the tremendous possibilities in this latest American acquisition, the potential wealth and countless opportunities for American ingenuity, we feel that the traveler and the investor have both neglected and ignored a fertile field.

Wavell, A. J. B. A Modern Pilgrim in Mecca. Pp. 343. Boston: Small, Maynard & Company. $2.80.

There have been so few Europeans to make the pilgrimage to Mecca and to penetrate the real Arab country that such a book as this will make an unusual appeal. The greater part of it, however, contains a description of religious customs and festivals whose real spirit is not understood by the reader. A question of casuistry arises as to the author's pretending conversion to a religion with which he had no sympathy. In making the journey he here describes his whole life had to be a pretense, but, remembering that he thereby injured no one else, and that his own life would have been forfeit had his disguise been penetrated, we can enjoy an exhaustive description of a unique and

(*Continued on page* 590)

The Fastest Way To Protect Checks

A low price for this high-grade machine is made possible by our splendid organization with 14 years' experience in Protectograph development, a factory output of over 400 Protectographs daily; and because we are content with a reasonable and moderate profit. Write for sample checks showing the beautiful work of this new Protectograph.

This new Protectograph Check-Writer "shreds" the full amount, *in two indelible colors*, protecting it at the same time.

Pays for itself over and over in saving of time.

Positive protection by the famous Protectograph method against the busy check raisers who secure millions of dollars yearly by "raising" the amounts of genuine checks.

This is the fastest system of writing ever thought of—a complete word at each stroke—fast as the hands can move.

Each word is written out in full—each letter cut into shreds and heavy ink forced through the shreds under pressure—the famous Protectograph principle (patented) which has stood the test for 14 years on the world's bank accounts.

The work of this new Protectograph is beautifully clear and legible. Denominations are written in red; amounts in blue—separating dollars and cents by colors so that mistakes are impossible.

The business world knows the Protectograph—over 200,000 in use. Used by nearly all leading banks, by U. S. Government disbursing offices, public institutions and business houses large and small throughout the world. Many of the first Protectographs built 12 to 14 years ago are still in active service. We have never made a charge to any original purchaser for ordinary repairs or replacements.

This new member of the Protectograph family is worthy of the name. It is wonderfully simple and durable. Nothing to wear out or break. Fully guaranteed with the tried-out Protectograph guarantee of satisfaction.

Easily understood and easy to operate. Anyone can save time, right at the start, in writing checks with the Protectograph Check-Writer. Tests show that the saving of time, even with an inexperienced operator, is fully 25 per cent., as compared with any other system of writing and protecting checks. Its speed, with practice, is unlimited.

Saves its own cost in saving of time and labor, and then—keeps right on saving with no expense for upkeep.

The Protectograph Check-Writer is *not an expensive machine.* While it was built regardless of expense in every detail, we have fixed a price so low that every individual bank depositor is a possible purchaser. Our splendid organization now building and selling over 400 machines a day enables us to sell the Protectograph Check-Writer at barely half the price we estimated when it was first designed.

Write us for samples of the work. With them, we will send reproductions of checks that have been raised and confidential information about check raising. We ask you, in writing us, to use the coupon and attach it to your business stationery, because the banks expect us not to furnish this information except to responsible business men who are entitled to know the dangers of signing unprotected checks. The only way to prove this danger to you, is to show you just what has happened to other business men who "took a chance."

The New Protectograph Check-Writer

We will send the new book, entitled "What Burns Says," giving the great detective's warning to the Bankers' Associations, in which he tells the bankers about new and startling schemes of forgers to obtain your genuine checks. This book shows actual reproductions of raised checks, illustrating the points made by Mr. Burns. It proves by his experience in dealing with these "crooks" how hard it is to avoid having a check stolen and raised, either by professionals or trusted employees.

Check raising is going on every day, everywhere. Checks are passed from hand to hand and altered beyond recognition by experts and amateurs. Any check you write can be raised in some way. See "What Burns Says" about it.

Mail this coupon with your letterhead for confidential information.

famous pilgrimage and acquire some valuable information about the costumes and customs of an Eastern people, the war in the Yemen between Turks and Arabs, personal estimates of the Turkish character, and a realization of the vastness of the Ottoman influence. The records of the writer's adventures and every-day experiences during his travels in disguise, his capture and release, make thrilling and exciting reading.

GOLDWIN SMITH'S LETTERS

Haultain, Arnold [Editor]. Goldwin Smith's Correspondence. 8vo, pp. 540. New York: Duffield & Company. $4.50.

Goldwin Smith owes most of his significance as a scholar, statesman, and historian to the fact that he loved to break new ground and foster the spirit of liberalism and emancipation from the obsolete in a new country. He was a distinguished alumnus of Oxford and an accomplished teacher of history there, but he preferred to take work at the newly founded college of Cornell, where he left an enviable reputation for kindliness and learning on his removal to Toronto. At Cornell "Goldie" became the most popular man in the faculty. At Toronto he may justly be called the founder of the higher journalism of Canada. His devotion to Canada was great, for when he was offered the Mastership of University College, one of the prizes of English educational honor, he declined the post. Writing to a friend who inquired about this matter, he says, "My work is in Canada," and to Canada he devoted most of his ripest years. He founded *The Bystander*, a brilliant review of world politics, but eventually dropt it for *The Week*, of which popular and more miscellaneous periodical he appointed C. G. D. Roberts editor. On this point he writes:

"I have just published the last number of *The Bystander*. It makes way for *The Week*, a weekly paper of which I am part proprietor, but of which the editor will be Mr. Roberts. I wanted unbroken leisure for other things. Also I grow lazy with advancing years. This house is considered one of the most venerable antiquities in Canada, and it is only a few years order than I am. [Mr. Smith was born in 1823 and dates this letter 1883.] So I have a right to shift my load to the shoulders of Mr. Roberts.'

Mr. Goldwin Smith was an ardent annexationist, but he differed from Lecky in his theory of historic development. He believed that Canada would some day become a part of the United States, not by the mechanical process of natural law, but by the work of some individual like Sir John Macdonald, who carried Confederation over all obstacles. He thought that reciprocity was a step toward the union of the United States and the Dominion. In 1904 he wrote to Frederic Harrison:

"The election of Roosevelt, which I now believe to be almost certain, will be a disaster. He will carry the United States, if he can, with imperialism and partnership with the great robber powers."

Imperialism he detested, and freely

criticized English political leaders such as Chamberlain. The English Government he denounced as government by faction, and feared that the United States was rapidly slipping into the same groove.

These letters are those of a man who thinks for himself and can express his convictions in clear and forcible language. A better or more suggestive comment on the main events of the latter half of the past century can not be obtained. The words of Frederic Harrison are true:

"Anything Goldwin Smith wrote for publication or of serious purpose is worth careful consideration—and that whether one agrees with his conclusion or not."

GERALD STANLEY LEE'S STUDY OF CROWDS

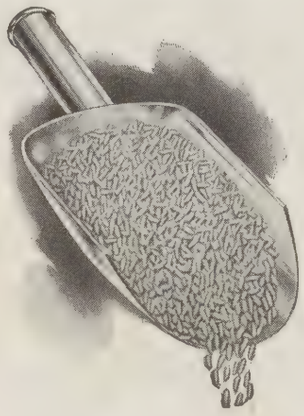
Lee, Gerald Stanley. Crowds: A Moving Picture of Democracy. Cloth, pp. x–561. New York: Doubleday, Page & Co. $1.35 net.

From the infancy of the world to its present adolescent state there have always been those who have asked "Why?" and "Whither?" A few thought they knew. Still fewer have said so, tho our own day has many such. Mr. Gerald Stanley Lee is one of them. He believes "that even if he is quite unimportant, any man to-day who, in some public place like a book, shall paint the picture of his heart's desire, who shall throw up, as upon a screen where all men may see them, his most immediate and most pressing ideals, would perform an important service." Indeed, his most pointed criticism of his fellow interpreters is that they depict what he does not want. Says he:

"I knew already, with an almost despairing distinctness, nearly all these things I did not want, and it has not helped me, . . . having John Galsworthy out photographing them day after day, so that I merely did not want them harder. And Mr. Wells's measles and children's diseases, too. I knew already I did not want them. And Mr. Shaw's entire, heroic, almost noble collection of things he does not want does not supply me, nor could it supply any other man with the furniture to make a world with. . . . After all, what single piece of furniture is there that George Bernard Shaw, living with his great attic of not-things all around him, is able to offer me for one single warm, lighted room to keep my thought in? Nor has he furnished me with one thing which I would care to sit down in my little room and think of—looking into the cold, perfect hygienic ashes he has left upon my hearth."

Thus hastily decamping from Mr. Shaw's attic, the author starts out to seek a really desirable world. After many chapter-headings he finds the way. It is not a new one, to be sure, but it has been often completely overlooked and ignored. Yet it is indeed new, for more and more are finding it all the time. Whether Mr. Lee's book proves a good guide-post or not will depend much on the effects of his scintillations on the reader. Really sometimes he is altogether too clever—even to saying the smart thing for the smart thing's sake. But it pays to advertise, and flashing electric signs is an approved modern method. Armed with smoked goggles, one may well venture unto the brilliance and gain much inspiration and conviction.

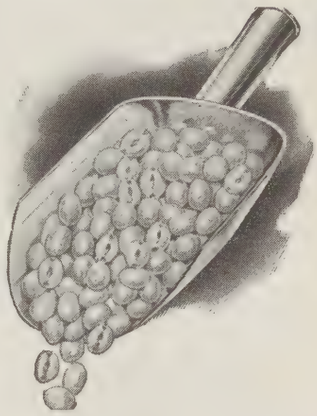
GREAT BEAR SPRING WATER
50c per case of 6 glass stoppered bottles



At 9 a.m.

The wheat or rice kernels are sealed up in mammoth guns. Then the guns are revolved for sixty minutes in a heat of 550 degrees.

Each grain consists of a hundred million granules. Inside each granule is a trifle of moisture which this heat turns to steam. Then we are ready to blast those granules to pieces by a hundred million steam explosions.



At 10 a.m.

The guns are shot. The steam in each granule explodes. The grains are puffed to eight times normal size. And each grain is filled with a myriad cells, surrounded by thin, toasted walls.

That is Prof. Anderson's process for making these whole grains wholly digestible. And that is something which was never done before.

Puffed Wheat, 10c Puffed Rice, 15c

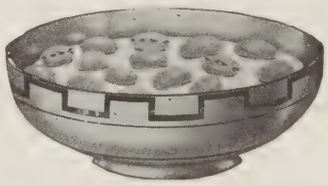
Except in Extreme West

At 7 a.m.

Countless people every morning serve these Puffed Grains with cream and sugar, or mix them with any fruit.

They have grains that are crisp and porous, bubble-like and thin. Grains that melt at a touch of the teeth. Grains that taste like toasted nuts.

They have the most enticing cereals ever brought to the morning table.



At 7 p.m.

These grains are served in many a home like crackers in bowls of milk.

The Puffed Grains float. They are crisp and inviting. They are four times as porous as bread. And ease of digestion makes them ideal bedtime dishes.

Forty million dishes are now served every month in delightful ways like these. Do your folks get their share?

The BELL Tailors OF NEW YORK TRADE MARK

$20 SUIT or OVERCOAT made to order $13.50

SEND FOR OUR HANDSOME FALL STYLE BOOK
IT'S ABSOLUTELY FREE OF ALL COST

IT IS illustrated with the newest and smartest New York Styles. It contains 72 samples of the finest woolens. It explains the Bell System of selling and includes Dress Chart and other valuable information for the men who desire to be well dressed.

This catalog is our only salesman. You cannot purchase our clothes in any store, nor have we any agents to bother you or force you to buy. You sell yourself and save the profits we would have to pay an agent to sell you.

Through this method of saving and because of the style, service and satisfaction our clothes have always given their wearers, we have built up the largest, direct, mail-order custom tailoring business in the world.

Along with this style book we send you a simple measuring outfit with which you or any member of your family can take your measure as expertly as any custom tailor. We guarantee to fit and give perfect satisfaction or return your money. There's no speculation.

STYLE BOOK AND 72 SAMPLES FREE

At $13.50 we offer what is probably the greatest clothing value ever made, for we have specialized and devoted years of effort to produce a suit at this price that any man would be proud to wear.

Its value is at least $20.00 and it is only due to the tremendous buying power of this vast organization, and the methods of selling employed, that we are able to quote the low price of $13.50.

Sum it up and you won't fail to send for our Fall Catalog;—think of it, a handsome style book that costs you nothing—we even prepay the postage. An opportunity to purchase clothes direct from New York—made to your measure by the finest custom tailors in any one of the latest and most aristocratic styles. A chance to save a third on your Clothing and the surety of absolute satisfaction.

For remember, the guarantee that goes with every suit says—it must live up to every claim we make or you are under no obligation to keep it.

We refer you to Dun's, Bradstreet's, N.Y. Banks or to any of our customers as to our responsibility and fair dealing.

CURRENT POETRY

NOT all look forward with eagerness to the day when, as Tennyson wrote, "the kindly earth shall slumber, lapped in universal law." The advocates of universal peace have sound logic on their side, but logic sometimes goes for nothing when nations are embittered. Perhaps, too, the cynical old world regards rather skeptically the formal and spectacular propaganda of the crusade against war. But the peace advocates are surely acting with wisdom when they convert those ancient celebrants of Mars, the poets. Mr. Alfred Noyes has described battles with vigor and skill, but he has written with even greater skill and vigor against the cause of battles. To a recent issue of the London *Daily Mail* he contributes the moving verses we quote below. It may be objected that "seas of slaughter" are not necessarily "obscene"—Gettysburg was a "sea of slaughter"—and that the warring legions can not fairly be said to be "thigh-deep in shame." But Mr. Noyes is not a historian; he is a poet. And he has written a poem so passionate, so vivid, that not even war's apologists can fail to appreciate its force.

The Litany of War

BY ALFRED NOYES

I

Sandalphon, whose white wings to heaven upbear
  The weight of human prayer,
Stood silent in the still eternal Light
  Of God, one dreadful night.
His wings were clogged with blood and foul with mire,
  His body seared with fire.
"Hast thou no word for Me?" the Master said.
  The angel sank his head:

II

"Word from the nations of the East and West,"
  He moaned, "that blood is best.
The patriot prayers of either half of earth,
  Hear Thou, and judge their worth.
Out of the obscene seas of slaughter, hear,
  First, the first nation's prayer:
O God, deliver Thy people. Let Thy sword
  Destroy our enemies, Lord!

III

"Pure as the first, as passionate in trust
  That their own cause is just;
Puppets as fond in those dark hands of greed;
  As fervent in their creed;
As blindly moved, as utterly betrayed,
  As urgent for Thine aid;
Out of the obscene seas of slaughter, hear
  The second nation's prayer:
O God, deliver Thy people. Let Thy sword
  Destroy our enemies, Lord.

IV

"Over their slaughtered children, one great cry
  From either enemy!
From either host, thigh-deep in filth and shame,
  One prayer, one and the same;
Out of the obscene seas of slaughter, hear,
  From East and West, one prayer:
O God deliver Thy people. Let Thy sword
  Destroy our enemies, Lord."

V

Then, on the Cross of His creative pain,
  God bowed His head again.
Then, East and West, over all seas and lands,
  Outstretched His pierced hands.
"And yet," Sandalphon whispered, "men deny
  The Eternal Calvary!"

That translations of poetry are unsatisfactory is a platitude. Still, there is always a certain charm in one poet's rendering of another. Arthur Symons's renderings of Baudelaire and Verlaine are exquisite. Prof. John Erskine gives (in *The Columbia Monthly*) his versions of two poems of Auguste Angellier. The mood of the first is admirably exprest. The second has something of the spirit and of the epigrammatic quality that distinguishes Heine's brief and bitter lyrics.

Translations from Auguste Angellier

By John Erskine

I

Ocean, O sad unbounded ocean, under
The tremulous watch of the infinite starhost
Rolling thy long lament of surge and thunder
When in thy heavenward reaches thou art lost;

O sky, O sad unbounded sky, that over
The lamentation of the myriad tide
Dost of thy tear-bright stars the gaze uncover
Save where long veils of mist the ocean hide:

Ye who for thousands upon thousand years
Through spaces never empty of affright
Yearn each to yield your souls up, by the doom
Of love so vast, time can not find it room—

I think my poor, scant, human heart this night
Holds in it all your moanings, all your tears.

II

On the old bridge the green moss covers
  And the brown lichen gnaws its way,
Whispered once, low-voiced, two lovers:
  And we were they!

He tenderly toward her leaning,
  His patient faith, his passion high
Pleaded—all his true heart's meaning:
  And he was I!

She paled and faltered at the choice;
  Trembling, but not with fear, she drew
As one who hears a far-off voice:
  And she was you!

On the old bridge, as then, so now
  Two lovers whisper secretly.
He pleads, and she believes, his vow:
  They—not we!

Here is a poem which only Richard Le Gallienne could write—tender, sincere, passionate; of craftsmanship so true and delicate that it seems absolutely spontaneous. The idea of the poem is beautiful, and the two concluding lines surely are poetry of a high sort. We quote from *The Smart Set*.

Desiderium

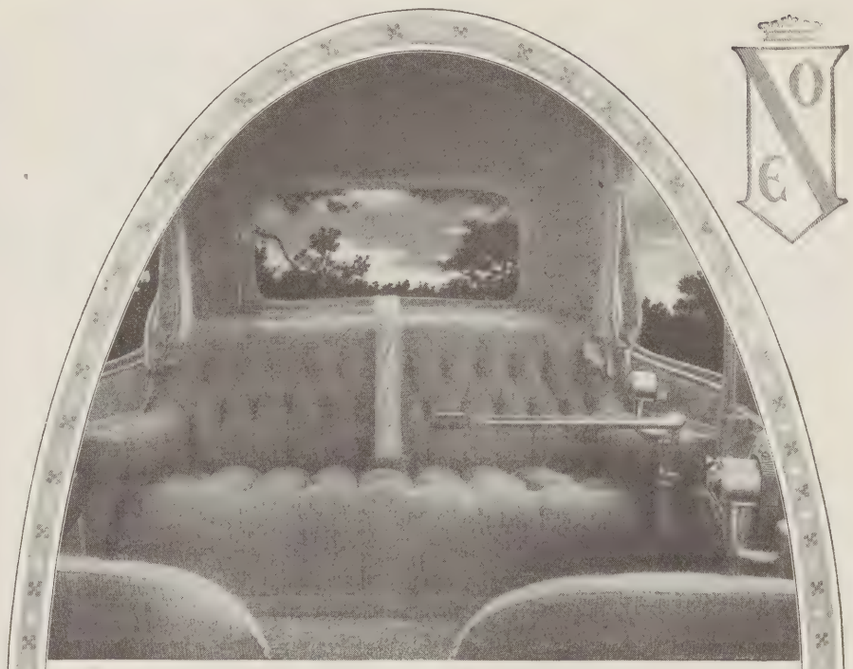
By Richard Le Gallienne

Face in the tomb, that lies so still,
  May I draw near,
And watch you sleep and love you,
  Without word or tear?

You smile, your eyelids flicker;
  Shall I tell
How the world goes that lost you?
  Shall I tell?

Ah, love, lift not your eyelids;
  'Tis the same
Old story that we laughed at,
  Still the same.

We knew it, you and I,
  We knew it all:
Still is the small the great,
  The great the small;



COMFORT!

The Keynote of Ohio Electric Construction

Driving Comfort—magnetic (disc) control; magnetic brake, absolutely eliminating skidding; double drive from both front and rear seat; extra-wide doors, with patented safety catch; full width rear seat; external brakes—cannot freeze up and afford a sure grip at all times.

Physical Comfort—big, deep, luxurious upholstery that embodies the utmost in ease and softness.

Artistic Comfort—a grace of line and beauty of finish that have made these exclusive Viennese models the envied cars on every boulevard.

Most of the features which distinguish the Ohio are patented and exclusive. You should examine them at the nearest Ohio showroom. Descriptive literature on request.

Don't Throw Away Old Tires—Save $50 to $200 a Year

Durable Treads are guaranteed 5,000 miles without puncture, but by actual test they have made tires run 12,000 miles without puncture or blowout, on the roughest roads in the world, in the Rocky Mountain district.

This is why 20,000 American Motorists already use them; and why their sales have increased 917% in a single year.

Instead of throwing away your tires when they become worn and cut, cover them with Durable Treads—get 5,000 miles more service from them—save on tires your entire yearly cost of gasoline and oil.

They are a positive non-skid protection also. They will stop a car dead, while going at high speed, *on a wet asphalt street covered with a layer of mud and wet leaves!*

Durable Treads

See Them At Our Expense—Special Discount Offer

If Durable Treads are not represented in your locality, we will give you special discount, equal to the full dealer's profit.

We will make Treads specially to the measure of your tires, ship at our expense, give full privilege of examination, and you can ship them back at our expense—if they don't sell themselves to you! Not a penny's expense to you; absolutely no risk or obligation.

Send for our book, "10,000 Miles on One Set of Tires"—it tells the whole wonderful Durable Tread story—explains minutely their construction—tells what they have done for others. A copy of our 5,000-mile guarantee will also be sent. Tear out the coupon, before you turn the page and forget.

Still the cold lie quenches
The flaming truth,
And still embattled age
Wars against youth.

Yet I believe still in the ever-living God
That fills your grave with perfume,
Writing your name in violets across the sod,
Shielding your holy face from hail and snow;
And, tho the withered stay, the lovely go.
No transitory wrong or wrath of things
Shatters the faith—that each slow minute brings
That meadow nearer to us where your feet
Shall flutter near me like white butterflies—
That meadow where immortal lovers meet,
Gazing forever in immortal eyes.

PERSONAL GLIMPSES

NEW YORK'S TWO-FISTED PRIEST

THE man who has "had more fights, harder fights, and has 'licked' more persons in the last six years than any other man in New York" is not a prize-fighter, or a gangster, or even a policeman, according to a writer in the New York *Press*, but a priest of the Catholic Church. He is the Rev. Philip J. McGrath, of St. Peter's Union Mission for Seamen on West Street, the down-town North River water-front. Father McGrath does not fight because he likes it, but because he found that the water-front people are not the kind that can be persuaded to be good. "As long as they know that I am master here they will be good, and then being good will become a habit with them," is the way Father McGrath explained it to the reporter. Father McGrath, we learn, came to West Street from a rural parish. But he was young, carried his 200 pounds easily, and had learned to fight as a boy in the East Side "Gas House District." The priest's story of his first fight shows why he turned from meekness to militancy. He had been about three months in the parish, and was returning late one night from a visit to a sick woman when he saw across the street "a lad of mine" in a doorway with a sailor. To quote Father McGrath as reported by his interviewer:

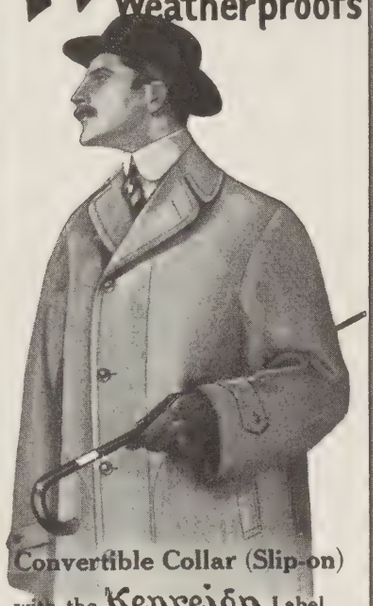
The lad had one hand at the drunken sailor's throat and the other in the sailor's pocket. The sailor was evidently not in condition to protect himself and I went over.

"What are you doing?" I asked.

"What the —— do you want to know for? Go to ——" was the rejoinder.

I'm Irish, you know. It had been several years since I had been told to travel in that direction. So right there was where I lost my timidity. All the prowess I had had in the days when I had roughed it with the boys in the Gas House District came back to me. I gave that fellow a left hook on the jaw and down he went. Then his pal, who had been on the lookout, came over to help him and I used my walking-stick on that pal with telling effect. Somebody saw a priest fighting with the two men and ran for the police. But by the time the police got there the fight was over. Those two men, who were brothers, went

Kenyon Weatherproofs



Convertible Collar (Slip-on) with the Kenreign Label

The most comfortable, general service model ever designed in a Slip-on. Can be buttoned to the neck in Military fashion on the few occasions necessary, but is generally worn as shown in the picture. Chafing at the neck, and collar stains, are eliminated.

A Kenreign Weatherproof will not fall apart; the rubber will not soften nor will it grow hard and stiff, making the garment useless. You are protected from these defects by the Kenreign label.

Kenreign Slip-on Coats are made in all suitable shades and styles for men and women. Prices range from $5.00 to $45.00.

Sold by reliable dealers everywhere.

HOW TO GET A POSITION, AND HOW TO KEEP IT

A new book, very plain and sensible by an experienced man who has placed hundreds. PRICE 54 CENTS.

FUNK & WAGNALLS COMPANY, - NEW YORK

very quietly to the station-house in Charles Street, and they were sent up the river.

It seems that fight was the turning-point of my life, and also of the lives of many people along this water-front. From that time on there has seldom been a week that I have not been in a mix-up of some kind. But every time I had a fight I felt I had removed some evil influence from this locality.

Father McGrath doesn't tell of all his fights. Of one of the few that *The Press* representative heard of from his lips, this account of a battle against a saloon gang is most interesting:

My fight against greatest odds was in a saloon not many blocks from here, in West Street. I was walking out one night with a young man of the neighborhood. There are several young men in this neighborhood who have come to the conclusion that some night I am going to go up against a gang of men who will be more than a match for me. So they have constituted themselves my guardians. If they have an idea that I am on my way to tackle some particularly tough proposition they come along, whether I say so or not. They're good boys and they can fight if they have to. But I generally try to do all of the fighting myself.

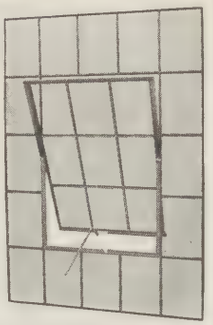
Well, as I was saying, one of these young men and myself were walking along West Street. As we reached this saloon—certainly not, we were going past it—we heard an uproar and men shouting: "Give it to him!" "Let him have another!" I looked under the curtain and saw the room crowded with struggling men. I gave the young man my police whistle and told him to make himself heard. He did. While my young friend was giving the alarm I pounded on the door. A man opened it part of the way and when he saw me he leered: "Git away from here. Yer can't git in here." Before the lad could close the door I had pushed him aside and was in the saloon. There were about sixty of the lads and they had one lad down on the floor, unconscious, and they were kicking and stamping on him. He was terribly cut and he died later. He could have been saved, but at the hospital he was merely bandaged up and then sent away. The lads had broken heavy beer-glasses and had used the handles with the jagged pieces attached as weapons.

I started to make my way to the unconscious lad's side, but his assailants turned on me. I backed up against the wall and started in with my night-stick. We had quite a merry time cracking heads, my escort and I, for a few minutes until two policemen came. When they entered the door one of them saw me and called, "Keep it up, Father; we'll reach you in a minute." "Better clean this place out," I replied. Well, all four of us got to work in earnest and I'll bet you never saw so many men go through so small a door in so short a time in your life. We had a merry time in court the next morning, too. The population of "the Island" was materially increased by that episode.

Much of Father McGrath's work is, of course, accomplished without fighting, and he tells of the amateur concerts at the mission, of working with the courts, of

Contrast Cost of *Artificial* Lighting With The *Daylight* From

Fenestra
SOLID STEEL WINDOWS



"The most carefully made metal filament lamp of this 20th century has a luminous efficiency of only about one and one-tenth per cent."

Waldemar Kaempffert, the famous authority on physics, says this in a recent issue of the Outlook.

Gentlemen:—
Attached find bill as follows:
For *light* delivered . . . $ 1.15 5
For *heat* delivered . . . 103.84 5
Total $105.00 0

We anticipate your objections to paying for heat not ordered, but regret to say it is unavoidable with artificial lighting.

Smithville Light and Power Co.

Fenestra
Solid Steel Windows

No light bills rendered. No meters installed. 100% Lighting Efficiency. Half-week more daylight per month. Fireproof walls and ventilation. No maintenance or repairs. Reduced accidents and mistakes. Maximum production. Health and vigor of employees.

Cost—No greater than wood sash.

Here is practical, scientific *proof* of the advantage of Fenestra-lighted walls over any known illuminant—for economy as well as increased factory production, efficiency and health of the workers.

As the water power of Niagara is harnessed for man's benefit, so Fenestra Windows transfer the power of the sun and insure to man light-service, *free*.

Our latest catalog "V," and interesting booklets, give all needed proof of Fenestra insurance-value and endurance, with no repairs or maintenance cost. Write for these or ask for a list of prominent Fenestrated plants in your vicinity.

watching the recreation-pier, of sending girls home. But the fights seem to be a necessary part of this priest's labors. As he explains it in our final quotation from his story:

I have so many fights because I go out into the streets to look after sailors, who, like all other children, need to be looked after. In looking for my charges I come across conditions that must be remedied. I remedy them. I have never been whipt in a fight since it became necessary for me to assume the rôle of "militant churchman," as you term it, and I believe that this is because I have always been fighting for the right.

Because I am master in this neighborhood my people respect me and trust me, and I am able to do good. Why, every year I send home to the wives and mothers of sailors at least $12,000. Hardly a day passes that I do not receive a letter from abroad from a mother or a wife asking me to find the missing sailor laddie. Often I do. The young boys in this neighborhood are growing into better men, I believe, because the Church takes an interest in them. I have their respect because I can thrash any of them. The clean-living the Church is teaching them is having its effect. The tone of this community is being elevated, and in a few years it will give the police less trouble than any other section of New York. You may call me the "fighting priest" or whatever else you like. I fight because fighting is the one thing necessary here just now. When fighting is no longer necessary I will do no more fighting.

CARLYLE'S TIP

WHILE on his visit to Ecclefechan, Carlyle's home town, the Rev. J. A. S. Wilson met one of its present inhabitants whose memory goes back to the days when Carlyle himself might be seen in the little Scottish village. Tammas Garthwaite, as Mr. Wilson informs us in his account of the Ecclefechan visit in a recent number of *The Saturday Review* (London), was one of those who could proudly say that they "knew Carlyle." "Tam was terrible dour," admitted his admirer and fellow townsman—but perhaps it would be as well to take the story as it is given:

I was proceeding leisurely up the main street, when I spied a little old man carrying a pail of calves' meat in each hand. He was smoking a short cutty pipe.

"Would you be so kind as to direct me to Carlyle's grave?" I asked.

"Just come alang wi' me," he said, without deigning to look at me, and continuing at a slow pace across the broad road.

We exchanged brief observations on the weather, then he asked:

"Are you a lover o' Tam's books?"

I admitted that I was.

Presently he continued: "Ye ken, I'm a Tam tae! Yon's my wee bit shop—'Thomas Garthwaite, Tailor and Clothier.'"

"Did you know Carlyle, Tom?" I asked, suddenly.

"Ken Tam! Ay, fine that. My father

Plymouth Furs

From the forests of the Northwest and Canada, trappers and hunters send us their finest and most lustrous pelts.

These gorgeous pelts fashioned by expert furriers into novel and exclusive models have made "Plymouth Furs" the standard high grade furs of America. They are sold direct to the customer only, because in that way we can sell at lower prices.

Portfolio H Free

If you will advise us the kind of furs you are considering, we will send you Portfolio H containing a special selection of exquisite photographs of the actual furs. These photographs will greatly simplify selections.

Repairs and Renovations at Reasonable Rates.

20c

Stamps or Coin
For Miniature Bottle

Only 20 cents brings you the fragrance of a thousand blossoms. A miniature bottle of the rarest perfume made. So delicate and exquisite—*it is impossible even to imagine the delightfulness of this perfume until you get its amazing odor.* The freshness of dew-covered blossoms. Unquestionably the most perfect perfume ever produced. Made without alcohol. The actual fragrance of the flowers themselves.

Exact Size Regular $1.50 Bottle

Rieger's Flower Drops
Trade Mark Registered

On this offer we give you an opportunity to secure our famous miniature bottle of Flower-Drops—any one of these odors, Lily of the Valley, Violet or Rose only 20 cents. We are making this offer so that you may see how exquisite is this flower perfume. The acme of elegance. A wonderfully subtle fragrance that lingers in the memory. *Different from any perfume you have ever known.*

LARGER BOTTLE OFFER
If you wish the larger bottle shown here in handsome hand-turned case, long glass stopper, send $1.50, check, stamps or money-order—or call at your dealer. Money back if you are not pleased. Odors, Lily of the Valley, Rose, Violet.

Write Today

To take advantage of this 20 cent miniature bottle offer merely state in a letter "send me miniature bottle," name odor you want and enclose 20 cents, stamps or coin. Send name of your dealer.

Paul Rieger, Paris — 2377 First St., San Francisco — New York — San Francisco

made a' his claes, an' I used to gang to the house for orders."

"What sort of a man was Carlyle himself?"

"Weel, I never likit Tam nearly so muckle as his brother, the doctor. Tam was terrible dour!

"I mind one day, when I was a boy," he said, "I had gone up to the farm for orders and was talkin' to Mistress Carlyle at the foot o' the stairs. All of a sudden I heard a deep voice from over the banisters —just as tho it cam' oot frae a big drum, 'Little Garthwaite!' I ran up-stairs to his room. The door was open, so I knocked and went in. Tam was busy writin', wi' his back to me. I waited a minute or twa. Then, as he took no notice, I gi'ed a wee bit 'hoast' [cough]. As he paid no attention I gi'ed another yin, a little louder this time. But still he kept writin' awa'. So, at last, in fair desperation, I kicked the wainscot. Up jumped Tam!

"'Oh, it's you, is it?' says he.

"Then he told me he wanted twa waistcoats, an' a pair o' breeks. Afore I went awa' he put his hand into his pocket and placed a coin in my hand. I wished him 'Guid mornin'!' an', as I went down-stairs, kept turnin' ower the money in my pocket. Half a crown! My conscience! You can just imagine how a laddie felt on having so muckle pocket-money! But when I got out o' sicht o' the house an' took it oot frae ma pocket, what do you think it was Tam had gi'en me? A penny!"

A POLICEMAN'S "ADVENTURES IN FRIENDLINESS"

THE bad policeman, the bully, or the grafter has been so much to the fore in newspaper stories of late that a sympathetic account of one "cop" who was loved and respected by all who knew him, and especially by the people who lived on his beat, comes to us as a grateful relief. Andrew J. Hamilton, of Baltimore, declares Peter Clark Macfarlane in *Collier's Weekly*, is truly a "successful cop." "Suppose your policeman to be a man of keen intelligence, quick sympathy, and kindly heart," with an irreproachable private character; "add to the authority of a right life the more tangible power of a policeman's star," then keep him upon one beat twenty years, while every day adds its opportunity for close contact with human life, and ask yourself, suggests Mr. Macfarlane, if there are not possibilities for a successful career. Here is the brief statement of the facts of the Baltimore policeman's life:

At twenty-nine years of age Andrew J. Hamilton, young, vigorous, and ambitious, with dark hair and mustache, with blue, hopeful eyes, donned a patrolman's uniform and walked out upon a beat in the Eastern Police District of Baltimore. He had deliberately chosen a policeman's career. He knew that civilization requires policemen. He was brave and clean and loyal. He was unimpeachably honest. He expected to shirk no duty and he expected the character of his service to be

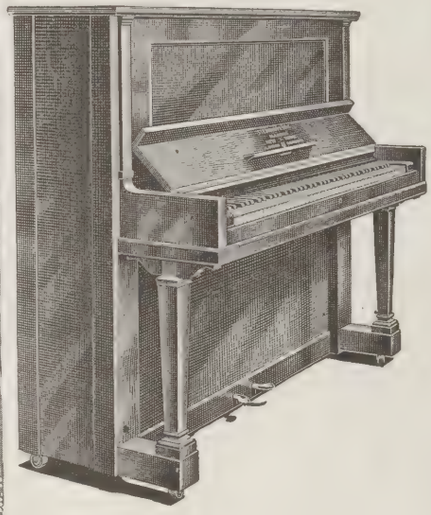
STEINWAY



MASTER musicians, past and present, have achieved their greatest successes upon Steinway Pianos.

The Steinway of half a century ago was the preferred instrument of the "maestro," because of its mechanical perfection and its melodious sweetness, sonority and power of tone.

The Steinway of today is an even greater musical marvel—and every Steinway Piano is a Steinway in all the attributes implied by that name.

The name of the Steinway dealer nearest you, together with illustrated literature, will be sent upon request and mention of this magazine.

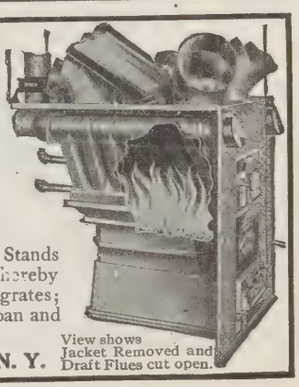
Subway Express Station at the Door

INTENSE Distributed Draft Warm Air FURNACE

Not warmed-over air but warm air that has moisture and oxygen

Real heating economy is realized when you heat your home most comfortably and healthfully **and save fuel.** The INTENSE Furnace is made on a new principle of distributing draft through two rows of flues directly above the fire which means quick heating and no waste of heat units. **A patented check draft permits absolute control of fire.** The INTENSE burns any fuel and gets the most heat out of it. Made of cast iron and is practically indestructible. Stands only 51 inches high, permitting it to be installed in low cellars, thereby insuring proper elevation of heating pipes. Has revolving duplex grates; self-cleaning flues; simple hot water attachment; portable ash pan and other features explained fully in *literature sent free on request.*



View shows Jacket Removed and Draft Flues cut open.

INVESTMENTS AND FINANCE

SMALLER EXPRESS EARNINGS AND THE PARCEL POST

REPORTS of four leading express companies, for the fiscal year, recently completed, show marked reductions in their surpluses, due to higher operating costs and the parcel-post competition. The additional cost of operating is attributed to reforms in accounting and in general practises as forced upon the companies by the Interstate Commerce Commission. Competition by the parcel post has been in force since January 1 of this year.

Final figures are at hand for eleven months only, the remaining month being estimated. The four companies are expected to show for the full year the following earnings on capitalization:

	Capital Stock	Div. Rate	Per Cent. Earned 1913	1912	1911
Adams	$12,000,000	12%	10.41%	15.64%	23.54%
Amer.	18,000,000	12%	11.44%	15.80%	23.10%
U. S.	10,000,000	....	2.12%	2.33%	7.51%
Wells F.	23,964,400	10%	12.50%	14.36%	14.50%

The declines in earnings available for dividends occurred in spite of the substantial gains in gross operating revenue made by all four companies. In each case, however, says *The Wall Street Journal*, the gain achieved in gross was more than offset by greater expenses, particularly in the cost of conducting transportation. Following is a table showing the gross receipts and operating revenue of the four companies for this year and last:

	*1913	1912	Increase
Adams Express:			
Tot. oper. rec.	$35,292,000	$34,191,955	$1,100,000
Exp. priv. debit.	18,624,000	17,833,972	792,000
Total oper. rev.	16,668,000	16,357,983	310,000
American Express:			
Tot. oper. rec.	$47,814,000	$43,714,874	$4,100,000
Exp. priv. debit.	23,588,000	21,076,806	2,512,000
Tot. oper. rev.	24,526,000	22,638,068	1,888,000
United States Express:			
Tot. oper. rec.	$21,726,500	$21,131,508	$595,000
Exp. priv. debit.	10,487,000	9,927,777	560,700
Tot. oper. rev.	11,239,500	11,203,731	36,000
Wells, Fargo & Co:			
Tot. oper. rec.	$35,250,000	$32,465,971	$2,787,000
Exp. priv. debit.	17,021,000	15,439,708	1,581,000
Tot. oper. rev.	18,229,000	17,026,262	1,200,000

*Estimated.

Another table shows the increase in operating expenses, the decline in net after taxes, and the decline in surplus after dividends:

	1913	1912	Changes
Adams Express:

Dividends.	2,396,440	2,396,440	.....
Surplus.	606,560	1,045,234	Dec. 438,674

* Deficit

As to the effect of the parcel-post competition, it is estimated by the companies that their operations during the six months in which such competition occurred affected operating revenue to the extent of between 8 and 10 per cent. This was a loss of roughly between $5,600,000 and $7,000,000, in a total operating revenue of $70,663,000. The estimate is at best only an approximate one, or such as the companies found it convenient to make, without installing a special check system on this class of competitive business.

In these circumstances, the New York *Times Annalist* is not surprized that the stock market should have recorded heavy declines in express stocks; nor does it wonder that the officials of the companies have emitted "a succession of wails." After living "secure in a confidence grounded on three generations of privilege and monopoly," they have met from legal quarters "a series of very hard blows."

The writer, however, does not regard the situation as ultimately very serious for the companies. Defeated as they seem to have been, their present situation "may be merely a reverse of fortune that will become a victory." Their state has, in fact, become no worse than was that of the railroads after the rulings of ten years ago in respect to rebates, passes, and methods of keeping account. Nor is it more gloomy or complicated than was that of the Standard Oil, American Tobacco, or Union Pacific companies, all of which used the consequences of defeat "as a means to greater prosperity and security."

One "very noticeable result" of the parcel-post competition has already been seen in an increase in the internal efficiency of the express companies. Leaks and wastes have been reduced, and costs, earnings, and profits have been analyzed and scrutinized as never before. Moreover, the very needs of the company have impelled it to secure new business or enter new fields of activity. The writer believes that the same public demand which has brought in the parcel post has also "opened for the express service new and larger fields." He says in detail on this point:

"The demand for an expedited freight service, from each point to all points, is insistent. It is a service for which shippers will gladly pay an extra freight charge, but only in cases of extreme urgency can they afford to pay the usual express charges, which are for this purpose prohibitive. On the other hand, the railroad freight service can not be expanded to render this sort of fast service on a freight-revenue basis.

"The express companies have in this condition an opportunity that is little short of golden. They can develop a service which for present purposes may be termed 'express-freight' service.

"Under the usual contract between the railroads and the express companies the railroads receive from 35 to 55 per cent. of the gross express receipts, but the express companies agree not to transport freight at 'freight' rates, but only under a stipulated 'express' rate, this rate being in certain multiples of the first-class freight rate.

As a result of this proviso of the contracts, any freight which is shipped through the express company yields to the railroad, through the railroad's percentage of the express company's charges, a revenue equal to and usually greater than the railroad's charges would be for first-class freight.

"The express companies are almost ideally equipped to carry such shipments. Their entire organization is a structure for quick handling of many small shipments. Their employees at stations and on wagons are of a character distinctly superior to the 'hands' who truck freight at a pier or freight house. With their messenger service on railroad-cars, losses and thefts should almost disappear.

"In some such manner the express companies may avoid the annihilation they pretend to fear. Not only will they save themselves, and develop a business of growing revenues, despite new forms of competition, but the most evident result will be that they will by this means re-intrench themselves as an indispensable factor in the American business world. A very brief investigation or inquiry among those affected by the proposed 'express-freight' service will reveal the eager desire for such a service. More than merely revealing that desire, such a canvass will give direction to the appeals of business houses, which have begged the railroads for just such a freight service, with advanced rates to secure expedition."

THE BEEF SUPPLY A BURNING QUESTION

A banker in Washington who for many years was connected with the cattle business and has long "known every phase of it" is quoted by *The Wall Street Journal* as having said a few weeks ago that "the best means of increasing our supply of beef is becoming every hour a more pressing question." With this as a text, the writer in *The Journal* cites the strange indifference of the public to this pressing question. When beef was abundant, no more thought was taken of its conservation than was taken of big game. Both were so plentiful that it seemed unnecessary to protect the supply.

But prices for beef finally began to rise. Consumers felt the pinch and believed the blame rested with the packers, or the "trust." While this abuse, says the writer, "may not have been amiss, it diverted attention from the prime cause." That cause lay in the fact that homesteaders for years had been "drawing a constantly narrowing circle around the range steer, who is now making his last stand in the semiarid region." Meanwhile, farms are not producing beef. The following statistics are presented by *The Journal* to show how the supply declined in recent years:

Jan. 1	All Cattle	Exclusive of Dairy Cows	Population
1913....	56,527,000	36,030,000	96,496,000
1912....	57,899,000	37,200,000	95,410,000
1911....	60,502,000	39,679,000	93,793,000
1907....	72,534,000	51,566,000	87,321,000

Steers form the main supply of beef, and these of all ages never constitute more than one-third of the second column. Reducing the supply of cattle to a per capita basis, the proportion is:

	Per Capita for all Cattle	Per Capita Exclusive of Dairy Cows
1913.....	0.586	0.374
1912.....	0.607	0.389
1911.....	0.645	0.423
1907.....	0.831	0.594

Reduced to percentages, these statistics show that, between January 1, 1912, and

"Standard" GUARANTEED PLUMBING FIXTURES

THE influence of the bathroom upon the health of every member of the family—makes the selection of the proper fixtures imperative. Because of their sanitary perfection "Standard" *Guaranteed Plumbing Fixtures* have brought health and comfort to millions of American homes—and their installation should be insisted upon.

"Modern Bathrooms"—Everyone who is planning to build should send for a copy of "Modern Bathrooms"—100 pages in color. It shows practical, modern bathrooms at costs ranging from $78.00 to $600.00 with prices of each fixture in detail. Floor plans, ideas for decoration, tiling, accessories, together with model equipment for kitchens and laundries, are also shown. Sent free.

Genuine "Standard" fixtures for the Home and for Schools, Office Buildings, Public Institutions, etc., are identified by the Green and Gold Label, with the exception of one brand of baths bearing the Red and Black Label, which while of the first quality of manufacture, have a slightly thinner enameling, and thus meet the requirements of those who demand "Standard" quality at less expense. All "Standard" fixtures, with care, will last a lifetime. And no fixture is genuine *unless it bears the guarantee label.* In order to avoid substitution of inferior fixtures, specify "Standard" goods in writing (not verbally) and make sure that you get them.

Byron Tyler, Food Spec'list, 71 Syndicate Bldg., Kas. City, Mo.

January 1, 1913, animals, exclusive of dairy cows, decreased 11.5 per cent. and that between 1907 and 1913 the decrease was 27 per cent. As to prices, it appears that between 1906 and 1913 fat cattle in Chicago increased 50.9 per cent., and, of course, the wholesale price of drest beef kept pace with the price for fat cattle. The writer contends that the problem of our beef supply in the future "must be worked out in our own borders," and that "the sooner we realize the fact [the better it will be for us."

Much will perhaps be expected from the free entry of cattle and beef, but the writer believes these expectations will be disappointed. Figures for imports from Argentina indicate that 8,000,000 pounds may come from that country in a year. but the writer finds this fact "good only as far as it goes, since it only averages 1¼ ounces a year for each person." Argentina has 20,000,000 head of cattle only, and the herd in that country has not increased in the past four years. In Europe this demand fairly equals the European supply. Canada has only 6,800,000 head, and of these 35 per cent. are dairy cows. Such facts show that there is "a world-wide shortage of cattle." Taking off the tariff may help to check the upward trend of prices, but it "can not solve the question of supply."

A LIMIT TO THE GOLD OUTPUT

Writers in several periodicals are discussing ominous signs, in more than one quarter, that a limit has been reached in the output of gold from mines. The high rate of production in late years has been owing mainly to the Transvaal output, and this is believed now to have reached its maximum. J. R. Finlay says in the New York *Times Annalist* that, outside the Transvaal, he does not know of "a single important district which is in a position to increase its output substantially." In our country, "practically all districts are either decidedly on the decline, or are doing well to hold their own." Indeed, for some years the American output has been "about stationary," and would have declined, had not the established mines been reenforced by new discoveries, or by outputs as by-products of other metals. With no further discoveries, Mr. Finlay believes the production will at once decline; in other words, that it is now at its maximum. For a number of years there have been no important new districts, most discoveries being in the nature of a reopening of old mines. Engineers looking for new mines are beginning to be somewhat discouraged. What results may come from the possible finding of improved processes Mr. Finlay would not undertake to say.

Since his article was prepared the Director of the Mint has announced that in 1912 production in this country, as compared with 1911, decreased $3,438,500. During the three years ending in 1911 it had been nearly stationary. Australian mines in recent years have also been losing ground. Indeed, throughout the world, including South Africa, what little increase there has been in five years has been "comparatively small." "Holland," writing in *The Wall Street Journal*, says on this subject:

"The Director of the Mint states that out

Shave Quickly with- LATHERKREEM

No Soap
No Brush
No Water

Apply LatherKreem to your face lightly with the tips of two fingers. Draw your razor across the skin "once over" and the resulting smooth satiny appearance will delight you. Soothing, antiseptic. No burning, smarting or chafing.

John Wanamaker

NEW YORK

of the Alaska fields between seventeen million and eighteen million dollars' worth of gold was mined in 1912. But for Alaska we should have made a comparatively poor showing this year. California, Colorado, and Nevada seem to hold their own as gold-producing States, California still maintaining preeminence with a production of $20,000,000, with Colorado pressing very close with a little under $19,000,000. The gold production reported from Alabama, Georgia, North Carolina, South Carolina, and Tennessee represents the auriferous streaks stretching all along the Appalachian range. And these ores by and by may be even more profitably worked than they have been in the past. Alabama's production is $16,000, but if that State can produce that amount of gold when so little attention is paid to that industry in that State it should produce more when attention is directed toward it. Georgia and South Carolina produced practically the same, $10,000. These figures, however, represent potential wealth in precious metals along the Appalachian range, the best illustration of which is the gold production of North Carolina, which is approximately $150,000. The chances are that some day we shall secure a large annual production of gold from the Philippines, the archipelago having produced in 1912 approximately $500,000 worth of gold."

FOOD PRICES IN DIFFERENT CITIES

Investigations carried on for the Bureau of Labor in Washington have resulted in a showing that the cost of living on June 15 was approximately 60 per cent. higher than the average cost between 1890 and 1900. The latter period, however—at least in the years 1893 to 1899—comprized a time of abnormally low prices, due to wide-spread depression. The figures, however, for the present year show that an increase of more than 3 per cent. has occurred over last year, and an increase of nearly 15 per cent. since two years ago.

Fourteen articles of food were investigated. All except sugar showed a marked advance. Bacon increased more than all others—128 per cent. Other notable advances were: pork chops, 111 per cent.; round steak, 102.5; smoked ham, 84; hens, 76.8; sirloin steak, 75.2; rib roast, 75; lard, 66.5; cornmeal, 57.3; potatoes, 44.4; butter, 41.3; eggs, 40.8; milk, 38.4, and flour, 28.6. The Bureau gives the prices which prevailed in six leading Eastern cities, when the variations were in some instances considerable. Following is the list:

Sirloin Steak—Baltimore, 20 to 24; Boston, 33 to 40; Cleveland, 22 to 26; New York, 24 to 28; Philadelphia, 28 to 30; Washington, 25 to 28.

Round Steak—Baltimore, 20 to 24; Boston, 30 to 35; Cleveland, 20 to 23; New York, 26 to 28; Philadelphia, 24 to 28; Washington, 22 to 25.

Rib Roast—Baltimore, 16 to 22; Boston, 22 to 25; Cleveland, 15 to 22; New York, 20 to 26; Philadelphia, 20 to 25; Washington, 18 to 25.

Chuck Roast—Baltimore, 14 to 17; Boston, 15 to 18; Cleveland, 16 to 18; New York, 14 to 20; Philadelphia, 16 to 20; Washington, 15 to 26.

Pork Chops—Baltimore, 18 to 20; Boston, 22 to 23; Cleveland, 20 to 22; New York, 20 to 24; Philadelphia, 18 to 22; Washington, 20 to 23.

Bacon—Baltimore, 22 to 28; Boston, 22 to 30; Cleveland, 26 to 32; New York, 22 to 28; Philadelphia, 25 to 30; Washington, 26 to 28.

A New Quality In Tobacco

Just a year ago Stag was first put on the market, and it proved an instant Sensation.

For years, smokers had been waiting and longing for the tobacco of PERFECT FLAVOR.

Stag took the wonderful Burley leaf, found new perfections in it, and gave the world a tobacco whose fragrance and flavor touched new heights.

This is why a Stag Smoker smiles when you talk to him about other tobaccos. Or he replies, in the words of the immortal Kipling:

"When you've heard old Stag a-callin'
"Then you don't heed nothin' else."

This is the ONE GREATEST QUALITY ever possessed by any tobacco.

How I Get My Business

In a game of golf, at the finish of a hole where from drive to put, no matter how hard you try, you can't hit the ball, or if you do, with the perversity of inanimate things it delights in finding a hiding place in long grass or soft sand—your figures are double, your feelings are warm, and your opponent offers you a cigar.

Next morning you meet him on the train and ask for another one of those cigars—and "Where do you get them?"

My name and address are written on the margin of a newspaper with the remark—"You'll be surprised when you get the bill."

I receive an order from a new and desirable customer for "A hundred of the cigars that Mr.—— smokes."

"I *was* surprised when I got that cigar bill. I expected it would be $10, but it was only $5"—was the remark of my new customer when he again met his golf opponent.

Much of my new business comes in this way.

If no one has offered YOU one of my cigars, let me be your "friend." Try them at my expense.

My Offer is: I will, upon request, send fifty Shivers' Panatelas, on approval, to a reader of *The Literary Digest*, express prepaid. You may smoke ten cigars and return the remaining forty at my expense and no charge for the ten smoked if you are not pleased with them; if you are pleased with them and keep them, you agree to remit the price, $2.50, within ten days.

The filler of my Panatela is all Havana—the wrapper is genuine Sumatra.

Besides my Panatela I make other cigars. Among the others is the Shivers' Club Special, a cigar identical with the Panatela in everything but shape. It is shorter and fatter and has a larger burning surface. It is preferred by some who are not partial to the Panatela shape. I sell it on the same terms as I offer the Panatela, or I will take orders for both. Write me, mention the cigar you prefer, Panatela or Club Special, or order fifty of each if you wish.

Shivers' Panatela
EXACT SIZE AND SHAPE

In ordering, please use business stationery or give reference and state whether you prefer mild, medium or strong cigars.

is to the ears what glasses are to the eyes. Invisible, comfortable, weightless and harmless. Anyone can adjust it." Over one hundred thousand sold. Write for booklet and testimonials.

THE MORLEY CO., Dept. 772, Perry Bldg., Phila.

Lard—Baltimore, 14½ to 16; Boston, 15 to 17; Cleveland, 15 to 18; New York, 15 to 17; Philadelphia, 15 to 18; Washington, 14 to 15.

Eggs—Baltimore, 24 to 28; Boston, 31 to 37; Cleveland, 26 to 29; New York, 30 to 42; Philadelphia, 26 to 30; Washington, 24 to 25.

Flour—Baltimore, 74 to 80; Boston, 85 to 100; Cleveland, 65 to 90; New York, 73 to 80; Philadelphia, 80; Washington, 80 to 100.

Butter—Baltimore, 34 to 42; Boston, 31 to 37; Cleveland, 34 to 38; New York, 33 to 37; Philadelphia, 36 to 40; Washington, 37 to 38.

These figures show changes in articles of food only. The cost of living, however, relates not only to food, but to clothing, head covering, and footwear. Following are prices connected with these items in living cost which have come down from the year 1883: muslin, 22 cents a yard; eggs, 40 cents a dozen; overcoat (ready-made), $30; suit of clothes (to order), $45; derby hat, $4; shoes (ready-made), $6; silk hat, $8; trousers (to order), $14. These are prices which prevailed in New York at good but not high-priced shops.

TWELVE YEARS OF ERIE

Mr. Underwood, of the Erie Railroad, completed, on June 30, his twelfth year as president. The occasion gave opportunity to a writer in *The Wall Street Journal* to point out the extraordinary changes that have been brought about in the Erie's condition during that time. Twelve years ago the road was "a streak of rust"; it is now in Class A of standard trunk lines. The Erie will shortly be a double-track line from New York to Chicago, this change having been imperative to the road if it was to handle all the business that would come to it. The Erie's gross income since 1901 has increased 60 per cent.; its increase in freight traffic has been 51 per cent., and its increase in "train-load" 53 per cent. Surplus over all fixt charges, taxes, etc., in the year just closed, was $8,105,000; in 1901 it was only $2,800,000. Following are other items in a summary of the work done to improve the road:

"The then existing streak of rust extending from New York to Chicago was first replaced with a new track. Next attention was directed to getting some cars and locomotives which, when started on their journey, were reasonably certain of getting to their destination before going to pieces. This was done by degrees. The next thing was to get more traffic. This also was done by degrees. Everything was done by degrees. The process was so gradual that few who were acquainted with the Old Erie realized the change that was taking place until one day about a year ago it was announced that the Erie Railroad had decided to double-track its entire line between New York and Chicago. This is now being done at a cost of $20,000,000, and will be completed by December 1, next, at the latest.

"When this improvement is completed there will be no Old Erie. The Erie's grades, track, cars, power, and facilities will be on a par with any of the Eastern trunk lines. It will be a New Erie. The only thing old about the road will be its president—old in railroad experience, but not so far gone in years—and with no less of energy. Here is what his experience and energy have accomplished for the Erie in

THE ROOT OF THE TROUBLE—GOING TOO FAR "ON TICK"

Louis A. Lamb contributes to *Investments* a drastic article dealing with the causes of commercial and financial troubles in recent years. As he sees these causes, extravaganee has been the chief. Extravagance has been the fault not only of individuals but of nations, cities, and corporations. They "have been trying to strike a balance with 20 shillings spent and only 19 shillings of current revenue."

Great nations are chief among offenders. Several of them now have debts roughly estimated at $42,000,000,000, the interest on which requires nearly $1,700,000,000 a year. With annual revenues of about $11,600,000,000 the governments of these countries expend about $11,700,000,000, so that their combined deficits amount to about $100,000,000 a year. That clearly is extravagance; compared with it individuals in the mass probably do not present a parallel. Mr. Lamb, in the course of his article, says further:

"The trouble is Civilization. The trouble is that the expansive nature of human ambitions, once given a glimpse of 'things more excellent,' outruns any possible material container.

"In the old days comfort was a mode of sinful indulgence—a bond of attachment to things temporal and mundane—to be frowned on as diverting attention from the holy felicity of heaven. Education, except as an avenue to holy orders, was *de trop*, except for the rich. Sanitation was luxury and a substantial act of unfaith in the wisdom and mercy of Providence. Fine apparel was a mode of deifying the flesh and exalting temporal appearances to the prejudice of eternal interests. Ornate houses, *meubles*, art objects, equipages, Persian rugs, Sheraton, Chippendale, Adam, Boullé—all devices to center the mind on earth—were not to be thought of except by the favored few.

"Civilization is the matter. Everybody the world around has had a taste of modernism and demands more. Instead of regarding work as the end of life, most people regard pleasure as the prime object. Labor used to be the theme of poets, and contentment the 'far-off ideal.' Now leisure is the ideal and discontent the universal passion of mankind.

"Having tasted the sweets of 'tinned music,' as they say in the Kongo hinterland, everybody wants a phonograph or a player-piano—on the instalment plan if the house will not stand an immediate draft. Having in view the careless ease of city nights, youth deserts the farm and troops to store, factory, or selling force. To live by one's wits is honorific. To live by muscle is to concede inferiority. 'White-collar' jobs are in request. Farm labor is as scarce as the austere faith of Plymouth Rock.

"Saving was a cardinal virtue when Ben Franklin was alive. It was supposed to have some correspondence with sterling character. To-day, with most people, it is only a necessity—a bitter compulsion to stave off possible want between 'jobs' or to meet 'payments' on some extravagant purchase.

"It is not fashionable to speak of re-

This Gun can't "go off"

YOUR COLT won't fire until you want it. When cocked the COLT is automatically locked against accidental discharge. Locks itself. Doesn't depend on you to make it safe. When you purposely pull the trigger—you automatically press in the grip safety (see circle) and your COLT shoots. That's why

The Colt Automatic
Fires first shot first

You don't have to bother your head about "safety" devices—you don't have to even think—without one second's hesitation you simply grab your COLT and shoot—quickly—instantly. The COLT is the finest steel watchdog—it rests safely as far as you are concerned, but keeps its weather eye open day and night, instantly ready for the other fellow.

Don't be stalled off the COLT if you want the best gun—it costs you no more.

FACIAL EXERCISE

Restores Youthful Beauty

Real compelling beauty comes only in nature's way. Let me teach you how you can, in your own home, restore as well as preserve youthful contour and expression; remove all wrinkles caused by sagging muscles; make the complexion as fresh as in girlhood (through invigorated circulation), and make a flabby withered neck firm and fresh, **without** massage, vibration, plasters or any external treatment. These can neither restore youthful appearance nor prevent marks of age.

My System both Restores and Prevents

I have been teaching it for thirteen years and have many pupils of national prominence in this and foreign countries. Write today for my new booklet, "**Facial Exercise,**" which fully describes my system and my new Supplementary Beauty Course, FREE.

KATHRYN MURRAY
Dept. 1310 **209 State Street, Chicago**

ligion as an economic factor; but, fashionable or not, no honest observer can gainsay the fact that the decay of faith among men has contributed not a little to the 'trouble' of which we are speaking. So long as mankind in general had faith in a personal God, belief in future rewards, and assurance of final salvation through divine grace, there were powerful checks in the way of reckless living, wild borrowing, insane spending, and blind determinism in conduct. Having lost the fine flower and potency of ancient faiths, the populace—the proletariat of the world—has taken resort in socialism, radicalism, syndicalism, unionism as the only agencies by which the ills of materialistic living and thinking may be corrected. Unfaith and envy are sisters, and revolutionary ideas are cousins-german to both.

"As long as great masses of mankind want certain things—whether for pleasure, or profit, or gain, or loss makes no difference—there will be daring *entrepreneurs* to supply those things. Alert men will get rich, and combine, and employ their massed brains and money to augment their power. Regulation of popular desires, individual self-control, repression of personal extravagance, common-sense living, are the urgent needs rather than regulation of industry, corporate wealth, and business activity.

"The trouble is this: All the world wants things beyond its immediate purchasing power, and it has mortgaged the future so recklessly that lenders are aghast and decline to make further loans except at ruinous premiums.

"We have learned, lately, that luxuries must be paid for. It is impossible, without creating public debts, to have fine schools, grand cities, superdreadnoughts, splendid armies, spectacular wars (with moving-picture men in the van), unlimited water supplies, irrigating dams, Panama Canals, brick pavements, free golf links, tennis-courts in every park, and orchestral music *al fresco* gratis. It is impossible, without enlisting new capital and credit resources, to have an unfailing supply of all luxuries and new necessities one sees advertised in the magazines. If the people want automobiles they must pay the charges on the capital invested in motor plants—they must pay more for shoe-leather—they must pay more for gasoline—they must expect to pay more in an endless chain for every luxury they indulge in. The whole range of 'supply and demand' is involved.

"The people everywhere have been insanely desirous of thousands of excellent things provided by the gods of science, technology, industry, and advertising. The populace has been deliriously anxious to taste the sweets of leisure, luxury, and pleasure. In general, the masses have gone as far as possible to obtain these baubles. Public administration has followed the same urge, borrowing at a reckless rate and paying pawnbrokers' interest. Corporations have done the same. There had to be an end somewhere.

"At last the world woke up to the fact that it had drawn down to the danger-line all the liquid capital left by wars, calamities, and extravagance.

"Enforced liquidation was the only remedy. It has been in progress for months. Everybody hopes it is nearing an end. Great hardship has been forced upon many people, but hardship was the penalty the world had to pay for trying to go too far 'on tick.' Let's slow down for a while and save a dollar or two. A period of Ben Franklin thrift will work wonders."

Tillie'll Wait.—Tillie Clinger says she means to do her Christmas shopping rather early, but not until the Underwood tariff has got in its hooks.—*Dallas News.*

Largest Makers of Shower Baths in the World.

GET HOLSTEIN COW'S MILK FOR YOUR BABY

Perhaps you cannot nurse your baby. Then take the precaution to use clean fresh Holstein Milk, the nearest substitute for breast milk. Then you will have every right to expect your baby to make rapid progress, and establish a strong constitution.

In Holstein milk, as in human milk, the cream or fat is divided into minute particles or globules less than half the size of those in ordinary milk. So when Holstein milk reaches the stomach it acts just as human milk does. The curds formed are small, soft, flaky and easy to digest. In common milk, on the contrary, the curds formed are large and heavy, and show a tendency to stick together in a solid mass.

Holstein cows have long been famous for their size, health and strength, so it is not surprising that their milk proves to be the most wholesome.

Holstein milk costs no more than common milk. If your milkman cannot supply you, send us his name and we will help you to secure some.

Write for our free booklet, "The Story of Holstein Milk."

PERSONAL GLIMPSES

(*Continued from page* 597)

recognized. He had not a doubt of winning promotion. Down the road a little way he saw a sergeant's stripes awaiting him, and beyond that the bars of the lieutenant and the captain.

"But now, after thirty years, his hair is gray, his mustache is white, the blue of his eye has even faded a little, and he still patrols a beat. Promotion has never come. He knows now it will not come. He will walk a beat till death or disability overtakes him. He began at $18 a week; now he gets $20.

Yet the man "feels that he has made a success of life." He has, according to the writer in *Collier's*, and it is because he has made the most of his "vast and recurring opportunities for adventures in friendliness," during these thirty years, the last twenty of which have been spent upon one beat. Now, first of all, we are told, "Officer Hamilton stands forth among the people of his district as a stern disciplinarian."

The city ordinances must be obeyed. The grocer that piles his goods on the sidewalk, the teamster that unhitches his wagon in the street, the householder that does not clear his snow off within the allotted time, is made to feel the immediate hand of the law. But the hand of Hamilton, while rigorously insistent, is gentle, yet with a gentleness not to be misapprehended. The people learned long ago that if they mistook the softness of his manner they might find themselves most politely, to be sure, but also most unescapably arrested; they would be haled into court; they would see their mild-mannered, soft-spoken policeman going on the witness-stand against them with a few mild apologetic sentences, and the judge on the bench paying more attention to those carefully chosen words of Officer Hamilton than to the most powerful oaths of a hundred men.

But it must not be supposed that Hamilton is an "arresting" officer; he seldom finds it necessary. As one man at headquarters told me, "He has hardly a case in six months." That, however, is because of the built-up moral influence of years. People know what will go and what will not with Officer Hamilton. He no longer needs police courts. He is a walking arbiter of the law. He dispenses justice as he patrols his beat. His frowns are fines, his displeasure is a penance. What he demands the people render. Besides, he makes himself a personal friend, a big brother, a gentle godfather, even a spiritual adviser to the folk upon his post.

When a wife comes to him demanding the arrest of the husband who has abused her, Officer Hamilton in that soft, persuasive, Southern accent of which he is such a master, is very likely to dissuade her.

"Why, Mis' Sue, what's the use of that?" he may say. "You will have to pay his fine anyway. Besides, I certainly am surprized at Tom. He must have been drinkin'. You let me talk to him. I'll give that boy a goin' over that he won't forget."

Mrs. Sue would usually be persuaded. . . . . .

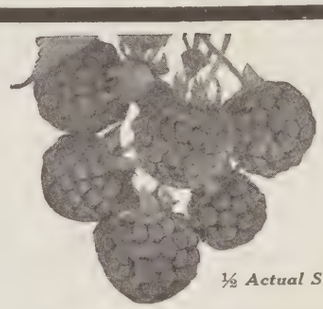
Hardy English Walnut Orchards

Are a Commercial Success in Zero Climates

Rochester grown—close to the 45th parallel of latitude, ***with temperature way below zero*** at times—***only strong rugged trees can survive—the only kind you can plant with safety. Hardier than Peach trees.*** Cultivation, harvesting and maintenance are easy and inexpensive.

FOR THE LAWN

—the acclimated English Walnut is unmatched, with its smooth, light gray bark, luxuriant, dark green foliage, lofty symmetrical growth. ***Plant an English Walnut Orchard this Fall.***



½ *Actual Size*

St. Regis Everbearing

The Raspberry for the Million and the Millionaire. "There's Millions In It."

St. Regis produces continuously *from June to Nov.*—heavy crops of large, luscious, sugary berries of bright crimson. ***Bears first season planted.***

Its summer and autumn crops do not consist of a few scattered berries, but good to heavy pickings all the time. One party who had a small patch, ½ an acre, picked and shipped from it ***two to three pickings each week for four months*** and his profits were enormous.

Grows successfully in any soil—endures without injury heat, drought and severest cold.

Our 64-page Catalog and Planting Guide, with "Successful Nut Culture In The North"—Mailed FREE on request.

Getting a Start In Business

The Oliver Typewriter Company is establishing new Local Agencies in all parts of the United States and Canada, where territory is not already taken.

At each of these points some bright fellow will be given the opportunity of his life to create for himself a permanent, profitable business.

The lack of sales experience is no handicap. The Company gives successful applicants a thorough training, which includes a course in The Oliver School of Practical Salesmanship. We coach them *individually*.

Young men who have recently graduated from colleges and universities are eligible for these Local Agencies.

Bankers, business and professional men, or their employes, with time to spare, can handle the work.

The OLIVER Typewriter

The Standard Visible Writer

The Oliver Typewriter is now the big seller everywhere. "The Little Giant of the Typewriter World" has so many strong features that it is useless to attempt a detailed description here.

The Oliver's new and exclusive Printype—the type that *prints real print*—has won universal acclaim.

We Share Profits

No manufacturing concern gives its sales organization a more liberal share of its earnings than The Oliver Typewriter Company.

We pay out many thousands of dollars every month to Oliver Local Agents.

Each Local Agent is given exclusive control of the sale of all new Oliver Typewriters in his territory. This gives our men a double *incentive* to earnest work—a *liberal profit* on every sale and a chance to *build for the future*.

Local Agents are authorized to sell The Oliver Typewriter on the "17-Cents-a-Day" Plan, and even have the privilege of paying for their sample outfits on the same basis.

Applicants who are qualified for these positions can start at once.

Full particulars of the Local Agency proposition, the "17-Cents-a-Day" Plan, together with Catolog and specimen Printype letter, mailed on request. Address *Agency Department*,

E. J. Lander & Co. Grand Forks, N. D.

It is humanity like this which has won the officer the place he holds in the esteem of the people. Women talk to him about their husbands; fathers consult him about their sons; girls who are in trouble and young men who have involved themselves dangerously make him their confidant. He has saved many a heart and many a home from breaking. He has united lovers and protected the honor of proud homes that to this hour do not even dream of the service rendered.

The district is a peculiar one in that the well-to-do, the middle classes, and the very poor are all represented in it. Officer Hamilton accepts the poor as his particular charge. They have more need of an angel in blue and brass. He knows every case of sickness on his post, and knows, too, if that or accident is likely to be accompanied by want. He has connections that tap the sources of charitable supply, and often is able to bring relief or prevent suffering and hardship to the people in his alleys. On Christmas Day he is likely to spend the whole morning tramping here and there with baskets of provisions, unable to enjoy his own Christmas dinner until he knows others are having theirs.

But it is the children, according to Mr. Macfarlane, that are Policeman Hamilton's especial care. "He is called 'The Children's Friend' policeman. He knows all of them, the well-fed ones on the avenues, and the pinched, starved faces that grow thick as cobbles in the alleys." About ten years ago, he began taking a few of the most uncared-for children for a country outing. So successful were these affairs that they developed into annual picnics, at which over a hundred youngsters frolic under the white-mustached policeman's care. And—

These picnics have become a means of discipline in the district. Officer Hamilton doesn't like dirt or disorder, soiled faces, or unnecessarily ragged clothes. The children know it, and they all want to win his favor. For him to say: "Don't do that-a-way, Buddy; I won't take you on the picnic if you do," is enough to insure that Buddy will stop shying rocks at Mrs. Brown's cat, or attaching tinware to Towser's tail, or teasing his little sister, or whatever other mischief juvenile depravity may have been brewing at the moment. And the influence upon Susie and her small misdemeanors is just as great.

Finally, there is the example of Policeman Hamilton's quiet, courageous, Christian life:

His family lives on the edge of the post. That family life is a model to all. He is the kind of father that these waifs of the alley would like their fathers to be, the kind of husband that the wives of the tenements would like their husbands to pattern after.

Down at the Eastern District Police Station they boasted to me that Officer Hamilton was a Christian, a member in high standing of the Methodist Church in Post No. 1, and that it was being such a good Christian that made him such a good policeman. . . . . .

And they particularly warned me against

$25 to $75 Less— Long Time To Pay

supposing Officer Hamilton to be of the mollycoddling sort. Incident after incident illustrative of high courage was related, going far back in the memory of the older men, and coming right down to three days before, when, just out of the hospital and back upon his beat, because of the unanimous insistence of the people to see him once more, tho with the strictest injunctions from Lieutenant Hurley to step to a box and call for help at the least sign of trouble, he had torn his operation wound open in a tussle with a drunken sailor.

Discretion demanded that the officer should not invite a contest of strength which, in his condition, might end fatally; but Andrew J. Hamilton, fifty-nine years old, with a hole in his side big enough to throw a baseball through, was cock of his walk or he was nothing. Courage is courage with him, and cowardice is cowardice. He wrestled the fighting-mad sailor to the signal-box, rang for the wagon, and stood by, white and resolute, till he had sent in his man, and then—collapsed.

This merely to show that our policeman, tho loved by children and cried over by mothers, is not a mollycoddle—unless you would consider it mollycoddlish that the very next morning he dragged himself down to police court and, hearing the judge impose a fine of $25 upon the sailor, pleaded with him to reduce it to $5 instead, which was done, and that thereupon the sailor, twisting his cap in hand, approached the officer, thanked him, apologized for the trouble caused and injury done, and departed his friend for life.

THE VAGRANT POTATO-PICKERS

IN the Kaw Valley, in Eastern Kansas, the temperature during the potato-digging season, which is just past, gets so high that only two classes of people can stay in the fields a whole day at a time. These are the native farmers and their families and the hoboes who drift from one part of the country to another when high wages are offered to laborers. Hundreds of Kansas City men went to the potato fields this season, but most of them retreated to town in less than twenty-four hours. When the thermometer registers 100 in the shade, it seems to be 200 in the sand and loam dust of the Kaw Valley. The tenderfoot from the city feels his back roasting in the sun, and shimmering heat rising from the ground makes him dizzy. Usually about two hours in the fields is enough for him. But the hardened tramp does not flinch; he is trained to it. The story is told in the Kansas City *Star:*

The farmer along the river valley needs no information on the subject of strikes. He has tried all kinds in the last week. First, when he starts in the morning there is a man with a four-horse team running the digger. He belongs in the neighborhood, so he doesn't count. Then comes a line-up of twelve to sixteen pickers. One family is working, father, mother, daughter, and a half-grown boy. They will stay all day, heat or no heat. They belong in the valley.

Next in reliability are the hoboes. They

How To Be Happy and Efficient, and Live Long Despite A WEAK HEART and Hardened Blood-Vessels

The Heart and Blood-Vessels

Their Care and Cure, and the General Management of the Body

By I. H. HIRSCHFELD, M.D.

In this new book is told the really interesting story of the heart, and how to lead a happy and efficient life even when it is sick and the blood-vessels are hardened. The author, a prominent physician, discusses the correct management of the body in regard to work, play, sleep, food, sex, climate, and the different values in life, and shows the way by which to reconstruct one's system after it has been mismanaged.

"Nothing like it has appeared for supplementing the wide work of human conservation," says the *News*, Chicago.

"This book should be an aid to humanity in general."—*News-Tribune*, Detroit.

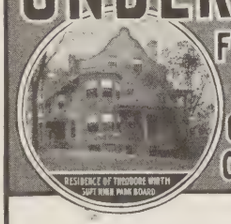
UNDERFEED



FURNACE OR BOILER
CUTS YOUR 1/2 to 2/3 COAL BILL

HOMES like this of Mr. Theodore Wirth, Superintendent of Park Commissioners, Minneapolis, Minn., are kept warm as toast in zero weather by the Underfeed. "My Underfeed Boiler," he writes, "is the most economical I could have installed. During the last very cold winter I burned only 18 tons of soft coal screenings at $4 per ton, for my 15 rooms. Hard coal would have cost more than double the amount." To add emphasis to his recommendation he said: "The three Minneapolis park buildings heated by the Underfeed have given *very good* satisfaction."

Write TODAY for FREE Book fully describing

THE PECK Williamson Underfeed FURNACES BOILERS

More than 25,000 Underfeeds are *saving* big money for American and Canadian home owners. Let us send you names of users in your neighborhood and FREE Book.

Saves $2 to $3 a Ton on Coal.
Smoke and Gases are Consumed.
All Heat is Fully Utilized.

The Underfeed requires *least* attention. Perfect combustion does away with clinkers. Few ashes. Easily operated.

You can make your own next winter pleasanter and *save money* by installing an Underfeed NOW. Send rough sketch or blue print of your floors and basement and we will forward FREE Heating Plans and Estimate of cost. Cut out Coupon TODAY for FREE warm air furnace or steam and hot water boiler book.

Funk & Wagnalls Company, 354 Fourth Ave., New York

PERSONAL POWER By Keith J. Thomas

A cool and logical analysis of the question of personal success. The author explains processes of mental development and gives ideas for the discovery and enlargement of natural talents. Throughout the book he suggests the pleasures of life, of hope, of friendship, and all the enjoyments to be derived from culture and wisdom.

"Mr. Thomas's suggestive book avoids the error common to books of its kind, most of which acknowledge no limit to the possibilities of any man who is convinced of his own powers. He shows how to develop the natural talents, explains the uses of failure, and suggests the best ways in which to make sure of the pleasures of life."—*The New York Times.*

Octavo, cloth, over 300 pages. $1.75 net; postpaid $1.85
FUNK & WAGNALLS COMPANY, 354-360 Fourth Ave., New York

live out of doors. They don't work very many days in the year and they don't seem to suffer from the heat. The chances are that the three or four hoboes will be on hand at night. Then there is the group that just arrived from Kansas City last night. Some of them are union men out of work, others have been working indoors. A crew ought to dig, pick, and load a car of potatoes in a day. Probably the owner has sold it for delivery that night. Part of his force wants to know, and pretty soon some one finds that is the fact. The machine goes down one row and back the next. The women and children begin to pick. A tough-looking hobo bends to the work, but the city men sit down. The boss hurries to that part of the field. The men have concluded that he is not paying enough for that class of work and want another cent per sack. Sometimes the boss says, "On your way if you don't like the wages," but more likely he debates the matter with them. Everything stops for a half-hour, and probably by that time they are back to work.

About ten o'clock some young chap who probably has worked in an office in Kansas City drops his bucket and starts for the shade. He rests a few minutes, then tells the boss he wants his pay. It is too hot for him. There is nothing to do but pay him and catch the next man who comes along the road to take his place. There is more trouble at noon, and in the afternoon, one, two, three, or four go to the shade.

But through it all the picker hobo goes on with little complaint of heat or conditions. The fellows who pick potatoes in Kansas every year are of a different tribe from the harvest hands. These men start on the Texas Gulf coast in March and pick strawberries. When the strawberry season is over in Texas they work north into Oklahoma and from there to the Missouri strawberry fields around Springfield and Joplin. After they have picked strawberries in three States they move into Kansas, and if it is too early to dig potatoes they work at anything they can find to do until the potato season begins.

Next month they will go to the Dakotas and help harvest the late potatoes. Then they will help thrash or go east and pick apples, and winter will find them back in Texas picking a little cotton perhaps.

CANADA'S GUN-AND-HAMMER MAN

IF there be "geologists, and geologists—the quick and the dead," as Mr. John V. Borne observes in the current *Canada Monthly* (London, Ont.), he is apparently justified in calling J. B. Tyrrell one "of the quick kind." For Mr. Borne follows up this assertion by relating how this geologist who "does not forget to be a man," has "taken his hammer into regions where it was useless without a gun, a defense against starvation." First of all, we are reminded, J. B. Tyrrell "has given us more scientific information about the Canadian West and Northwest than any other one man living or dead." In fifteen years he "traveled over 35,000 miles of previously uninspected ground between Lake Winnipeg and the Rocky Mountains." He was "the first real explorer of the western shore

Ambassadors of Friendship

If Huyler's are your ambassadors, they will truly represent you, and honor the one to whom they give pleasure. They are the choice of America's only aristocracy—the aristocracy of good taste—which is found in every community.

Huyler's
Bonbons Chocolates

Each piece of Huyler's is a masterpiece of flavor. Nuts and fruits imprisoned in chocolate, toothsome nougat, smooth creams, bonbons dainty as flowers—in a word, Huyler's. If ever a new deliciousness in candy is found, you may count on finding it in a box of Huyler's.

Huyler's Bonbons and Chocolates and many other sweet things from Huyler's are sold by Huyler's sales agents (leading druggists everywhere) in United States and Canada. If there should be no sales agent near you, please write us.

THE RISE OF THE DEMOCRACY
By JOSEPH CLAYTON

Mr. Clayton presents the history of democracy from its inception in primitive tribal communities to its consummation in enfranchisement and representative government. He shows the march of the people in the struggle against absolutism, and utters a word of warning against the dangers of democracy. The book ends with a note of optimism, discussing the achievements and possibilities of democratic power.

of Hudson Bay." From him came the first surveys of the Manitoba Lake, the first information regarding the Saskatchewan coal deposits. Canadian readers are bound to be interested in the account of Mr. Tyrrell's contributions to the knowledge of their great western country. He was an influence in the settlement of Manitoba and the adjoining territories, for he could tell of his explorations and discoveries "in two languages—the scientific and the popular." Our readers in this country, however, may prefer to turn from Geologist Tyrrell to the man, the shrewd, practical explorer, "who can handle a canoe and operate a gun with the best of his kind."

The story of Mr. Tyrrell's trip in 1893 from Edmonton by way of Lake Athabasca to Lake Dubawnt, over to the Chesterfield River on Hudson Bay and along the western shore of the bay to Fort Churchill, is characteristic. In the party led by J. B. Tyrrell and his brother were three Indian brothers the eldest of whom, Pierre French, was declared by Mr. Tyrrell to be "the greatest canoeman in the world." The first task was to persuade the Indians to go into the northern country despite their fears that the Eskimos would eat them. The geologist found that overcoming an Indian's superstition is sometimes as difficult as making a balky horse pull. To quote:

On the 10th of August, 1893, the Tyrrell expedition found itself on Dubawnt Lake up against a great wall of ice and upon an apparently immovable field of the same terrible material. As far as they could judge, they had struck ramparts of

The Noiseless Flushing of the Siwelclo Frees You From Embarrassment

—the embarrassment your old-style closet has been inflicting upon you for years. Its noisy flushings are not necessary to thorough sanitation. The noiseless Siwelclo proves that, for it flushes perfectly, and its deep water seal prevents any passage of sewer gas. When properly installed a Siwelclo closet cannot be heard outside of its immediate environment.

Siwelclo Closets are made of Vitreous China, with a surface that is hard, durable and as impervious to grease and dirt as the best china plate in your pantry. The Trenton Potteries Co. Vitreous China is glazed at a temperature 1,000 degrees higher than any other material could stand.

For all bathroom, kitchen and laundry fixtures there is nothing else so sanitary and satisfactory as The Trenton Potteries Co. Vitreous China and Solid Porcelain. Whether you plan to build or remodel, you will do well to consult your architect and plumber about them.

Write for our free illustrated booklet No. S 13, "Bathrooms of Character." You will find it full of valuable suggestions.

Use Oxide of Zinc Paints

MONEY cannot be saved by economizing on paint. Such "saving" always results in multiplied expense for repairs.

Keep your property sound and sightly by the liberal use of good paint at proper intervals.

Good paint inevitably means Oxide of Zinc paint.

THE NEW JERSEY ZINC COMPANY
55 Wall Street, New York

We do not make paint; but will mail to any address a list of manufacturers of Oxide of Zinc Paints.

The Finest Resort Hotel In the World has been built at Sunset Mountain, Asheville N. C.

Open all the Year
Absolutely Fireproof

Mr. E. W. Grove, of St. Louis, Mo., has built at Asheville, N. C., the finest resort hotel in the world —Grove Park Inn. Built by hand of the great boulders of Sunset Mountain, it is full of rest and comfort and wholesomeness. The front lawn is the hundred-acre eighteen-hole golf links of the Asheville Country Club, and with it sixty acres belonging to the hotel.

The purest water obtainable is piped seventeen miles from the slopes of Mount Mitchell, over 6000 feet altitude.

Biltmore milk and cream exclusively, supplied from 200 registered Jerseys on the estate of Mr. Geo. W. Vanderbilt. It is doubtful if this famous dairy is equaled in the world.

Four hundred one-piece rugs were made at Aubusson, France. Seven hundred pieces of furniture and over 600 lighting fixtures of solid copper were made by hand by the Roycrofters.

The plumbing material is the finest that has ever been placed in any hotel in the world. The bath tubs and fixtures are all solid porcelain. No pipes visible anywhere. No radiators to be seen—all placed in recesses under windows. No electric bulbs visible.

For the golfers there are lockers and shower bath rooms with a forty foot swimming pool that is not excelled by the finest clubs in existence, and the players are less than 100 yards distant when on the links.

Mr. Wm. S. Kenney, formerly manager of the Mount Washington Hotel, at Bretton Woods, N. H., is manager of the Inn.

Especially available for northern guests in the Spring, Fall and Winter, going and returning from farther southern resorts, or for an all Winter resort. Persons with any form of tubercular trouble will not be received at the Inn.

Rates— American Plan— $5.00 a day upward.

Reached by the Southern Railway.

the Arctic. There was none to tell them what lay beyond, and tho they supposed this frigid field was only a phenomenon, it was mighty discouraging to come across it and to have absolutely no knowledge of how far it extended; they were dependent upon their rifles for sustenance, and there was nothing with which to make fires. Night turned them to the shelter of the tent, and there was not even the howl of the discontented wolf to give them a sense of company in a deserted field. They slept on the prospect, and in the morning found that, by portaging a short distance, they could reach a lake of water, which might or might not take them out of this extraordinary pen of ice.

Before very long they were paddling along easily, and I do not think Mr. Tyrrell has since seen so big a wall of ice as that which blocked his way in those August days.

Coming down the coast of Hudson Bay from Chesterfield Inlet, the mouth of Corbett Inlet had to be crossed; the season was getting late, and when the north shore of the Inlet was reached a ferocious storm made a crossing impossible for three days; the winter trip began and the canoes were started across the perilous waters. Half-way over, a howler from the north prest upon them and, in a temperature several degrees below freezing, the luckless paddlers were at the mercy of waves, which splashed so freely into the canoe that the man in the middle had all he could do, by persistent bailing, to keep the craft afloat. There seemed no hope of survival; but they held on until the southern shore was approached, and there, for three hundred yards from the land, the scene was one mass of boiling foam, through which, for a long time it was impossible to see a landing-place.

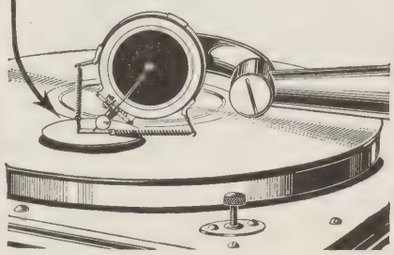
At last Pierre French discerned a channel between two high rocks, behind which was smooth water, and by great good mercy the three canoes were brought into that grateful haven and finally were beached.

The tempest lasted five days, during which time only one gull fell to the leader's gun.

When it cleared, the season was dangerously late, and food was pitifully scarce. The fowl had all but disappeared. Deer along the bleak shore were scarce as angels. One white bear obligingly came within deadly gunshot. For the rest, there were drifting ice, tides that went far out into the Bay, snow-laden winds, freezing spray, and lengthening darkness to make the prospect of starvation terribly real. If the weather in that region were as bad as it is supposed to be, Tyrrell and his men must have perished. Still they came down the coast until mid-October, in Peterboro canoes. Their strength declined. Two of them collapsed. But the leader was imperturbable, optimistic, and resourceful all the time. They cached one canoe, the geological specimens, and even the precious camera—all of which were brought to Fort Churchill the next year by Eskimos; and the camera is a good worker yet. Thirty miles from Churchill the last paddling was done. Two men walked to the Fort, and brought succor to the Indian canoeman, whose feet were frozen so that he could not walk. When the Tyrrell brothers reached the Hudson Bay Company's store and saw a

"MASTERPHONE"

A Perfect Clarifier for Talking Machines



A Simple Device Instantly Attached to Any Sound Box Without Tools

The Masterphone—Clarifies, Articulates and Magnifies—eliminates the mechanical tone and greatly reduces the scratch.

Reproduces all the artist put into the record. Brings out detail never heard before.

A fine needle is used with the Masterphone which greatly increases the life of your records. The reproduction is clear and true.

pailful of candy, they discarded discretion, ate five pounds of the stuff—and went out comfortable, as unashamed as children.

THE SPICE OF LIFE

So Does Credit.—Money honks.—*Life.*

Unavoidable.—"Have you been able to meet all the demands of your creditors?"

"Meet them? I haven't been able to avoid them."—*Buffalo Express.*

Never Quit.—"In the old days doctors used to bleed patients for most of the diseases."

"They still do, my boy; they still do."—*Detroit Free Press.*

Just a Hint.—They had scrambled through the first dance on the program and he was leading her back to a seat.

"I could die dancing, couldn't you?" he asked.

"No," she replied. "There are pleasanter ways than being trampled to death."—*Cincinnati Enquirer.*

Legal Procedure.—The Sinner had been weighed in the balance and found wanting.

Whereupon the attorneys for the Sinner filed a motion for a new trial on the ground that the scales were out of order.—*Cincinnati Enquirer.*

Necessarily Healthy.—"Yes," said Mr. Bliggins, "my wife had hay-fever as usual this year, and my daughter had brain-fag from overstudy, and my son had insomnia."

"And wasn't there anything the matter with you?"

"No. There isn't any ailment that you can cure by going down-town every day and working on the books."—*Washington Star.*

Ready for Practise.—PROFESSOR—"If a person in good health, but who imagined himself sick, should send for you, what would you do?"

MEDICAL STUDENT—"Give him something to make him sick, and then administer an antidote."

PROFESSOR—"Don't waste any more time here; hang out your shingle."—*New York Weekly.*

He Shone Once.—THESPIS—"When were you a leading man?"

FOYER—"When the company had to walk back from Chicago."—*Brooklyn Life.*

Even.—FIRST AUTHOR—"That *Carper* is a beastly sheet; it says you have put a lot of trash in your recent book of poems."

SECOND AUTHOR—"Yes, and it says that you have put a lot of yourself into your recent novel."—*Brooklyn Life.*

Black Hand Ensign.—In the spring of '85 a reporter for *The Arkansas Traveler* died. The day after the funeral a visitor to the office found the editor and his staff talking about their late associate.

"It has been a sad loss, friends," the visitor said, "a sad loss, indeed." He sighed and looked about the room. "Ah, I am pleased to see," he went on, "that you commemorate the melancholy event by hanging up crape."

Opie Read frowned. "Crape," he said. "Where do you see any crape?"

"Over there," said the visitor, pointing.

"Crape be durned," said Read. "That isn't crape. That's the office towel."—*Los Angeles Express.*

Trade Mark

New Edge on an Old Saw.—" The pen is mightier than the sword," said the ready-made philosopher.

" I don't quite see how the adage applies to current conditions," commented the man with a practical mind.

" It probably refers to the fact that the sword as now worn is entirely harmless, while a fountain pen can explode in a way that will ruin a forty-five dollar suit of clothes in five seconds."—*Washington Star.*

Exquisite.—The present London Academy exhibition, with its fine Sargent portraits, recalls a story of this famous artist. At a banquet a young girl whom he knew very well said to him:

" Oh, Mr. Sargent, I saw your latest painting, and kissed it because it was so much like you."

" And did it kiss you in return? "

" Why, no."

" Then," said Mr. Sargent, " it was not like me."—*London Standard.*

Irish Retort.—A pompous physician who was inclined to criticize others was watching a stone-mason build a fence for his neighbor, and thought the mason was using too much mortar. He said:

" Jim, mortar covers up a good many mistakes, does it not? "

" Yes, doctor," replied the mason, " and so does the spade."—*Sacred Heart Review.*

The Other Way.—MRS. SOURSPITE—" When I gave you that solemn warning against marrying, I said that some day you would regret it. That time will come, mark my words ! "

MRS. NEWED—" The time has come."

MRS. SOURSPITE (gleefully)—" I thought so ! Then you regret your marriage? "

MRS. NEWED—" Oh, no ! I regret the warning you gave me. It kept me from marrying for nearly a year."—*Puck.*

Disquieting.—" Mama, why did you marry papa? "

" So you've begun to wonder, too? "—*Detroit Free Press.*

Nearly Always.—WILLIE—" Paw, what is luck? "

PAW—" Luck is what makes the other fellow successful, my son."—*Cincinnati Enquirer.*

WARNING

Fraudulent persons, representing themselves as agents of publishers of popular periodicals, are at work in various parts of the country. We urge our readers to pay no money for periodical subscriptions to strangers, even tho they show printed matter purporting to authorize them to represent publishers, especially when cut rates and bonuses are offered. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect your community is being swindled, notify the Chief of Police and the publishers, and arrange another interview at which the proper action can be taken.

CURRENT EVENTS

Foreign

September 18.—Provisional President Huerta calls on Gen. Felix Diaz to return to Mexico from his European mission.

The Executive Committee of the National Union of Railway Men, meeting at London, refuses to call a national strike in support of the transport workers of Dublin.

September 20.—The strike of the railroad men in the British Isles is practically brought to an end.

Twenty thousand Italians, including many Garibaldian veterans, celebrate the anniversary of the capture of Rome in 1870 by the Italian troops.

The leader of the revolutionists in Santo Domingo promises to end the revolt against President Bordas.

Secretary Bryan signs treaties putting into effect his peace proposals between the United States and Panama and Guatemala.

September 21.—Thirty-five civilians and seven policemen are taken to hospitals after strike riots in Dublin.

Provisional President Huerta issues a declaration to the people of Mexico, in which he says the Government has no candidate for the Presidency and will show no favoritism.

September 22.—The airman, Noel, makes a world's record at Hendon, England, by carrying seven passengers in an aeroplane.

The International Congress on Alcoholism, at which American organizations are represented, opens in Milan.

September 24.—Foreign Minister Frederico Gamboa is nominated for President of Mexico by the Catholic party leaders. Gen. Eugenio Rascon is the Vice-Presidential nominee.

Domestic

WASHINGTON

September 18.—The House, after adopting an amendment affirming the gold standard of value, finally passes the Administration Currency Bill by a vote of 285 to 85.

Committees to conduct the national Republican Congressional campaign in 1914 are appointed by Representative Frank P. Woods, of Iowa, chairman of the National Republican Campaign Committee.

President Wilson nominates ex-Governor J. W. Folk, of Missouri, to be Solicitor for the Department of State.

September 19.—The House Committee on Labor decides to make a favorable report early in the winter on the Mann Bill authorizing the creation of a Bureau of Labor Safety.

September 20.—Slavery in the Philippines is described by W. H. Phipps, auditor for the islands, in a report to Secretary of War Garrison.

Chairman Jones, of the House Insular Committee, denies reports of Filipino slavery, and charges that Republican officials are venting their animus on the islanders.

GENERAL

September 19.—Massachusetts riflemen break the world's record to win the Sadler trophy at Sea Girt range in New Jersey.

September 20.—Francis Ouimet, the Brooklyn amateur, defeats Harry Vardon and Edward Ray, the English professionals, in the play-off of the tie for the open golf championship of the United States.

September 23.—Governor Fielder, Democrat; ex-Gov. E. C. Stokes, Republican, and Everett Colby, Progressive, are nominated for Governor of New Jersey by their respective parties.

September 24.—The Industrial Welfare Commission of Oregon fixes a minimum wage of $9.25 a week for adult women clerks, eight hours and twenty minutes the maximum day's work, and fifty hours for a week, and makes 6 P.M. the latest hour at which any woman may be employed in a store.

The St. Louis Conference of the Methodist Church, South, condemns the acceptance by the trustees of Vanderbilt University of a Carnegie endowment of $1,000,000 for the benefit of the medical department. The church officials object to Mr. Carnegie's stipulation that the medical school be placed under non-sectarian control. The dispute between the trustees and the Board of Bishops is to be settled by the Tennessee Supreme Court.

Master Salesmen

There are nine men in this office whose salaries aggregate $227,000 per year.

Those are pay-roll salaries, paid month by month—not the profits of ownership.

A dozen others are highly-paid men. Our total payroll exceeds $40,000 per month.

This seems the only way to give you in print any fair gauge of their calibre.

Just Salesmen

These men are just highly-trained, masterly salesmen. They devote their whole time to selling goods for our clients.

They expend about six million dollars per year on printed salesmanship. Their sales exceed, probably, $150,000,000 per year.

They carry tremendous responsibilities, and are paid in accordance with them.

They meet in print tens of millions of buyers. The sales of hundreds of products depend on their ability.

There are very few men whom one dares trust with such vast undertakings. So these rare men stand today among the most highly-paid men in business.

Our Business Is to Get Them

Our success and efficiency lie in getting these men, in training and developing.

We pay more than most advertisers can afford for such service. Then, through our commissions, the expense is divided.

We supply experience such as no single business can offer. Here these men deal with the selling problems of hundreds of big concerns.

And here, above all, they work in co-operation. They aid each other—mass their ideas. From three to ten of these men combine their abilities on every undertaking.

There lies the vital value of an Advertising Agency. All else is merely routine. The rare thing, and the all-important, is compelling salesmanship-in-print.

Beyond the product itself, ninety-nine per cent of an advertising success lies in the salesmanship.

What They Do

These men are not mere writers. One is simply a scheme man, who works out countless clever ways to get quick introduction.

One's an expert in merchandising. He aids distribution—gets dealers on our clients' side.

One, who never writes copy, knows human nature well. His word is almost final on the best forms of appeal.

One is known as "the wizard of mail order advertising," but attempts almost nothing else.

One is an artist—C. Everett Johnson—selected by us after years of searching as the leader of all in Commercial Art.

And one is Claude C. Hopkins, who, for 28 years and in scores of lines, has broken all records in writing copy that sells.

Our success comes in combining these talents according to the client's needs.

The Wonderful Results

Our clients themselves will gladly tell you what these men have done. For this part of our story we shall refer you to them.

Among them are numbered some of the largest concerns, some of the ablest men in business.

They will tell you how sales have doubled over and over. How investments have multiplied in value.

They will tell you how small advertising expenditures have grown into hundreds of thousands.

And scores will acknowledge that they never could have done what has been done, without us.

The Crux of the Agency Question

Among the best Agencies commissions are similar. One service costs about the same as another.

The whole question centers on, Who can sell most for the money? And that is best decided by the men and their records.

Advertising success, like all commercial success, lies in getting right men behind you. We claim in this line to have the ablest corps that was ever brought together.

We solicit a chance to prove it.

"The Wedding"

LOZIER

"The Choice of Men Who Know"

A NEW SERIES SIX

THE new series Lozier Six is now ready for delivery. It combines all the characteristics—reserve power, flexibility, elegance, comfort—that for six years have kept the Lozier in the predominating position among six-cylinder cars.

There are no mechanical changes in the motor for none are needed. The engineers who have designed and built the wonderful Lozier motor for six years long ago brought it past the experimental stage. However, a number of important innovations and refinements have been added that make this new series Lozier even more comfortable and more convenient than any that have preceded it. For example—

THE ONE-MAN TOP

Lozier is the first to provide a top that can be operated by the driver unassisted. Loosen two thumb screws and throw the top back—no straps to bother with—no braces to obstruct the view from the front seat.

ABSOLUTE QUIET—A 300 POUND DECREASE IN WEIGHT

Our new ball-bearing axle is lighter in construction and absolutely silent.

By our new method of suspension and drive we have eliminated the torque tube, radius rods and cross member in the frame. This method is now accepted as standard practice in France; in fact, the first five cars to finish in this year's Grand Prix were examples of this same type of construction. These two new features have actually brought about a three hundred pound decrease in the weight of the car, with a corresponding increase in speed and power, and a radical saving in gasoline and oil consumption.

Absolute quiet is further assured by the adoption of cloth timing gears—made up of layer upon layer of cloth, pressed into steel-like hardness. They run with the smooth, quiet action of rubbing your hand across satin. But even more important than this is the fact that they insure *permanent quiet*. At ten thousand miles they are as quiet as at the first.

The new crowned fenders accentuate the sweeping streamlines of the body, adding to the handsome appearance of the car. And the Lozier has always been acknowledged the most distinguished looking car either in this country or in Europe.

ADDED CONVENIENCE, MORE COMFORT

Several conveniences have been added—a Kellogg tire pump, a bottom ventilating one-hand operated windshield—electric light dimmers placed in the headlights to be used for city driving where strong searchlights are prohibited, or as service lights when the car is idle: the running boards are illuminated by a reflecting aperture in the side lights—an exclusive Lozier feature.

For increased comfort we add an extra broad foot rail and the front axles are equipped with special rebound dampers. The car and its occupants are safeguarded by chain-tread, non-skid tires in the rear.

There is no need to enumerate the other equipment which has been a part of the Lozier Six from the first. It is enough to say that on this Lozier you will find every article of equipment that has been proven worthy of a place on a highgrade car, from the electric lighting and starting device (Gray & Davis) down to the jack and the tool kit. We believe that no other car in the world is as completely equipped.

Of course you will want to ride in this car, perhaps drive it, before you decide on your new car. Ask us to arrange an appointment with your nearest dealer.

LOZIER MOTOR COMPANY, Detroit, Mich., U. S. A.

Packard Motor Trucks

We are the largest motor truck manufacturers in the world.

We are not assemblers—we actually make our goods. We stand behind our goods. We would not make what we could not stand back of.

We sold $4,000,000 worth of Packard trucks in the last year.

Our permanent success depends upon what our patrons say of our vehicles.

ASK THE MAN WHO OWNS ONE

In the motor trucks and cars built by the Packard Motor Car Company, no measure shall be used except the standard of such perfection as the art affords.

It is a hard, mechanical fight to make a perfect truck. Evolution is the process. Packard motor vehicles are a logical development, based on fourteen years of engineering progress.

The carrying of merchandise at minimum cost is the essence of truck efficiency. We know our business—it is to do your hauling in the cheapest and most satisfactory manner.

Packard trucks are built in five sizes—two, three, four, five and six tons. We can supply the type of body to meet your requirements.

Packard trucks are used in 172 lines of trade.

THE SOUL

By J. W. Corey, M.D. 40 years' Study and Research. THERE IS NOTHING LIKE IT IN THE WORLD. The Soul is no longer a mystery. Its organ has been discovered and can be developed with mathematical exactness. Scientific, interesting and attractive. Transforms Man into Superman. It is the first scientific Text-book on the Soul ever published. Do you know anything about the Soul? If not, you can know if you desire to know. It is happiness, peace and joy to those who do know. The Soul is as superior to the Mind as the Sun is to the Moon. The Soul soars, the Mind grovels. Doctors, Lawyers, Preachers, Teachers, Psychologists, Sociologists and general readers should have a copy for reference. It solves life's problems. The Soul keeps us young. Good paper; Clear type; 12 chapters; Silk cloth binding; Gold letters. Booksellers and Librarians say it is first class. The Soul should be well clothed. Can be consulted with profit every day. $1.00 Postpaid. Prospectus 2 cents. **Order Now.** Money back if not as described.

THE UNIVERSITY OF CHICAGO PRESS, Chicago, Illinois

The Tower of Babel is Still Standing

DO you realize that 4000 years after this most wonderful of all towers was built by the ancients (according to the Book of Genesis about 2400 B. C.) its seven stages still rise high above the plains near the site of Babylon? Until a few years ago it had been known as the Mound of Birs Nimrud when Sir Henry Rawlinson discovered in one of the stages the inscribed cylinders which made the identification possible. Other expeditions uncovered many of the thousands of curiously interesting records and documents contained in the great work—

The Library of Original Sources

now for the first time available to the general public. **By taking over the *entire unsold edition* from the publishers we secured it at an *absolutely unheard of reduction.*** So ***now*** we can offer a few sets to Literary Digest readers at an

Extraordinary Bargain

Send us the attached coupon *at once* and we will tell you how to get the Library on *easy monthly payments,* and mail you FREE a book of rare documents showing inscriptions of the Ancients. Remember there are only a limited number of sets, so act quickly. Mail the coupon NOW. You assume no obligation. No salesman will call. The book is FREE.

THIS MARVELLOUS WORK is revolutionizing modern thought. It's turning upside down old notions and ideas. It gives the authoritative, rock-bottom sources of our knowledge on ALL SUBJECTS OF HUMAN INTEREST from the earliest civilization DOWN TO TO-DAY—the inside facts which the average person has never even heard of.

Over 100 RESEARCH SPECIALISTS spent ten years gathering the contents of this great work. Ancient and remote and forgotten civilizations in all parts of the globe were uncovered, and age-buried hieroglyphics on monuments, tablets, sun-baked bricks and palimpsests yielded their secrets; untiring workers ransacked the hidden literature of every age, ancient, mediæval and modern, to find the "original documents" that shaped the civilizations and influenced the thought and life of the world. Nothing like it has ever been attempted or thought of before. You'll be amazed at the wealth of information this unique library contains.

DO YOU KNOW that the old Egyptians, 5000 years B. C., had a Bible which they called the "Book of the Dead"?—Do you know that the Assyrian sacred literature gives the story of the Creation?—Do you know that books and newspapers were printed in Asia thousands of years before printing was invented by Gutenberg?—Did YOU ever read Columbus' personal log of his great voyage—filled with strange happenings and ominous forebodings? Do you know that there occurred in Mediæval England a great Socialistic protest—the first of its kind ever known? Do you know by what unique process Harvey demonstrated that the blood does not stand still in the veins, as everyone then thought? Do you know who Machiavelli was, or what world-famous treatise he wrote.

YOU'LL FIND THEM ALL — and thousands of others equally as curious and important—in The Library of Original Sources. Every document is in the exact words of the original, translated; every contribution is from the actual eyewitness or person who took part; every idea is in the words of the thinker, investigator, discoverer or inventor.

JACK LONDON SAYS: "It is a whole library in itself. I certainly never could spare these books from my shelves."

10 sumptuous, massive volumes, bound in rich, deep red Morocco; full-page illustrations, pure silk head-bands, printed in large, clear type on hand-made paper, gold tops—a triumph of the bookmaker's art.

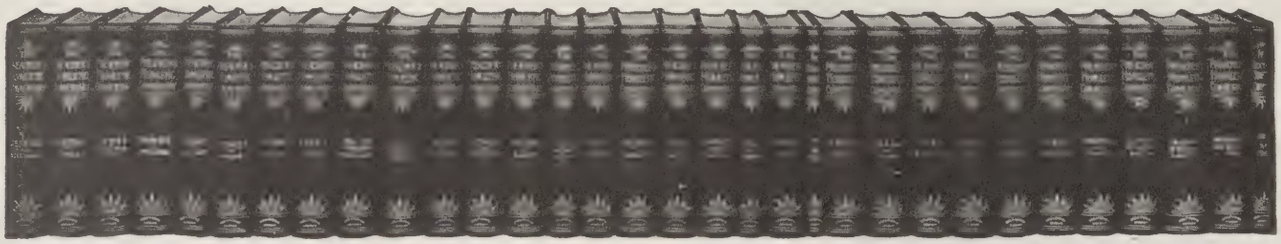
THE PREACHER'S COMPLETE

HOMILETIC COMMENTARY



32 Large Octavo Volumes 18,000 Pages

THIS colossal work has become recognized throughout the world as one of the greatest and most reliable libraries for preachers. Every verse in the entire Bible that can be of any possible usefulness in the preparation of a sermon is fully and authoritatively treated. The work reflects a stupendous amount of research by scholars of all creeds and denominations.

A Vast Treasure-House. ITS ADVANTAGES IN BRIEF:

IT BRINGS TO THE PREACHER'S ATTENTION thousands of texts heretofore almost wholly overlooked in the pulpit. Spurgeon, in his *Commenting and Commentaries*, says: "We have next to nothing on Kings." In the Homiletic Commentary we have on Kings alone 743 treatments of texts. The same is true of other books, as Jeremiah. A flow of new light in the way of exposition, critical notes, illustrations, etc., is poured in upon these neglected texts, and additional light is thrown upon old texts.

IT IS THE ONLY COMMENTARY in any language that supplies a sermonic treatment of homiletic suggestion on every paragraph and verse of both the Old and New Testaments, that can be used to advantage as the text to a sermon.

IT CONCENTRATES THE LIGHT of all ages and of all countries on the text.

IT IS WHOLLY FREE FROM DENOMINATIONAL BIAS, strictly evangelical. Says Dr. Alexander Scott: "It exalts the Saviour; it is an invaluable boon to hard-worked clergymen. Its fulness is astonishing."

IT SUGGESTS THOUSANDS of meaty themes for sermons; also a world of illustrations.

THE INDEXES are very full and valuable. "Useful on almost any subject along homiletical lines," as an eminent critic says.

IT THROWS GREAT LIGHT upon the present controversies over the Old Testament. In this respect, especially, nothing could be more timely or helpful than this wonderful commentary.

THE COMMENTARY IS WHOLLY IN ENGLISH, avoiding Hebrew and Greek, except in the critical notes.

Over 250,000 volumes have been sold in America alone. That shows how successful this work has been. We have only a few sets now to dispose of at half-price.

250,000 VOLUMES ALREADY SOLD

At Nearly Half Off

Save $41.50!

ONLY FEW SETS LEFT

President J. W. Bashford: "The Commentary is full of nuggets of gold. The volumes do more than reveal splendid materials for sermons. They *inspire the preacher to independent thinking.*"

Consider These Points

- Covers completely both the Old and the New Testaments.
- Unquestionably the most widely used Homiletic Commentary.
- Over 250,000 volumes already sold in America.
- Thirty-two large, handsome volumes—18,000 clear pages.
- A work you will use and prize during a lifetime.
- The most Eminent Preachers are enthusiastic over it.
- Heretofore beyond the reach of all but the few.
- Now sent, free of expense, for examination at home.
- Can be owned at a cost of less than 50 cents weekly.
- Saves time consulting many books—the best research is here.
- It illumines practically every paragraph and verse in the entire Bible.
- Best of all—"IT INSPIRES to independent thinking."

EXAMINE AT YOUR HOME AND DECIDE—Act Promptly

Why hesitate? Here is by long odds the most important series of Homiletical Books you can put on your shelves. Great preachers are fairly enthusiastic over it. It is a work you MUST have and WILL have some day. Why not own it at once? We will send the WHOLE work in 32 volumes to you without a dollar's expense and let you pay us in small monthly instalments. Surely it's worth 50 cents a week to have in your library such a mighty help and great time-saver. One week will convince you of that, and we will let you keep it five days and prepare a sermon by its use.

Let Emerson Train You

IT IS now possible for you to be trained at your home by Harrington Emerson, the best known of all Efficiency Experts.

You can get by mail the same training that you would get in Mr. Emerson's offices, where he supervises the work of forty highly skilled specialists.

The whole story of the Emerson Method of Efficiency has been condensed into 24 Lessons, so that you can acquire an Efficiency Education without leaving your home or giving up your present occupation.

Every student will receive personal attention. Write at once for "The Story of Emerson" and the Plan of Payment.

Almost everybody needs this Course and almost everybody can afford it. Write today.

Emerson Institute of Efficiency

Harrington Emerson is the man who first made Efficiency famous. It was he who SHOWED the railroads HOW they could save a million dollars a day.

He is the most highly paid of all Efficiency Experts, and is consequently the best fitted to train others. As the head of the new EMERSON INSTITUTE OF EFFICIENCY, he will personally supervise the whole course of instruction.

$2,000 a Month

In the last 20 years, Mr. Emerson has trained scores of men. Every one of these men is now drawing a high salary. One of them is receiving $2,000 a month.

Every great corporation is demanding men who understand the principles of Efficiency.

There are more BIG JOBS than BIG MEN. Never before has there been such an opportunity for a man who is ambitious and persistent, and who prepares himself for a Big Job.

This course of 24 Lessons will save you years of preparation. It will give you the results of 40 years' experience. IT IS A SHORT-CUT TO BUSINESS SUCCESS.

VOL. XLVII., No. 15 NEW YORK, OCTOBER 11, 1913 WHOLE NUMBER 1225

TOPICS OF THE DAY

WHAT THE NEW TARIFF IS EXPECTED TO DO

THE MOST REMARKABLE THING about the new Tariff Law, in the opinion of more than one observer, is the calmness with which it is received by those very interests which only a few months ago were proclaiming frantically that its passage would be the signal for chaos and disaster in the world of American industries. The case of these manufacturers reminds one editor of the man who, falling into a river, struggled and cried piteously for help until at the suggestion of an old fisherman he stood up—and found that the water was only three feet deep. There was surprize in many quarters at the smoothness with which the bill forged its way through the Senate, long considered the stronghold of the protected interests. But even greater astonishment followed when the new law finally slid from the ways without causing a perceptible ripple in the waters of American business. The country, remarks a Democratic editor, is emerging from its "protective hypnotism."

It is claimed by the Administration, according to the Washington correspondent of the Chicago *Tribune* (Prog.), that the Simmons-Underwood Law fulfils four of the party's pledges, namely: "Tariff reform, reduction in the high cost of living, campaign against the trusts (in that duties have been taken off many trust-made articles), and the income tax." The same correspondent notes that the Democratic party "has emerged from the tariff struggle intact and harmonious, with the opposition still divided." And he adds the following concise items of information:

"The new law imposes an average *ad valorem* rate of from 27 to 29 per cent. The average for the Aldrich Law was 40.12 per cent.

"The income-tax feature of the bill is expected to net some $83,000,000. It will call for a tax on net incomes of unmarried persons of $3,000 and upward and on net incomes of married persons living together, where the wife or husband is dependent, of $4,000 and upward.

"Expert estimates indicate a surplus of $16,000,000 over all expenditures at the end of the present fiscal year."

A saving to consumers of $1,000,000,000 a year is predicted by Mr. Underwood as a result of the new schedules. The free list alone, we are told, "should save approximately $500,000,000 annually." While these estimates are flouted by some Republican critics, and are admitted by Democratic organs to partake of the uncertainty attaching to all estimates, there seems to be a wide-spread inclination to agree with the New York *Times* (Ind. Dem.) that, other things being equal, the reduction of the tariff will reduce the cost of living. Says *The Times:*

"It will bring in more competition in the supply of the necessaries of life, and the logical, practical, direct tendency of increased competition in these necessaries must be to bring down their cost. If that result does not follow, it will be the duty of the Government to find out why it does not follow and to take action accordingly.

"The necessaries of life in our country fall under three heads: food, clothing, and shelter. To the great mass of our people, to all but an insignificant fraction, these are not only necessaries, but the purchase of them absorbs nearly the whole of the income from wages, salary, or the profits of relatively small trading and industry. On practically all the articles under these three heads the protective tariff has levied duties, mostly very heavy duties, for the purpose and with the effect of striking out competition from abroad and enabling home dealers to exact higher prices. The Underwood tariff reduces or removes these duties. Its purpose is, and its effect will tend to be, to increase competition and bring down prices. At the same time, by reducing or removing the duties on the materials of manufacture, the new tariff will permit home industries to meet foreign competition, and this also will tend to lower the level of prices to the consumer."

Not only will the new tariff reduce prices, declares Mr. Bryan, but it will also increase wages, production, imports, and the consumer's purchasing power. He is quoted by a correspondent as saying:

"I believe it will increase production by reducing prices. In the case of woolen goods, it will also improve the quality. People can hereafter wear woolen goods who have heretofore worn shoddy clothing. . . . If the reduction in the tariff results in the lowering of prices, as I believe it will, it will create a larger demand, and this larger demand for products will create a larger demand for labor. And the tendency will be to increase wages rather than lowering them. . . . . .

"Imports are likely to increase, but an increase in imports is entirely consistent with an increased demand for local products also. If, for instance, you decrease prices one-third, that one-third will not be entirely saved to consumers. They are likely to buy more, as stated, so that the net result will be that consumers will save a part of the reduction, while their increased purchases will be distributed over both imports and local manufactures. It is not a mathematical problem in which percentages can be stated with accuracy. One can only speak of the forces that will operate, and then make an estimate of the relative influence of these forces."

A canvass of the leading New York merchants by *The Herald*

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

Entered at the New York Post-office as Second-class Matter.

elicited such statements as the following: "When the tariff revision becomes fully operative, there will be a general reduction of from five to ten per cent. in the retail price of the better grades of women's apparel." "There will be a substantial reduction in the retail price of men's overcoats and suits of a high grade, and a marked improvement in the quality of materials used in the manufacture of garments of lower prices."

Far from convinced that the savings demonstrable on paper will be discoverable when we seek them in our pocket-books, the Washington *Times* (Prog.) draws the following slightly ironical picture of the consumer saving money at every turn under the new tariff, from the time he rises from his bed to the time he leaves the breakfast-table:

"As you emerge from your blankets (duty reduced 5 per cent. under the new tariff), and dash across the rug (reduced 25.44 per cent.), or the linoleum (reduced 17 per cent.), to the bath-

CRANK HER UP, UNCLE SAM!

—Rogers in the New York *Herald*.

room (tiles reduced 2½ cents a square foot), you are entitled to know that you may use the bath brick with more than your usual abandon, for it is about to be 20 per cent. lower in the list. Your perfumed toilet soap is treated almost as kindly by Mr. Underwood and his colleagues. Your towels are to come in 15 per cent. cheaper. The alcohol for your rub-down, now taxed 20 per cent., is to be admitted free. Thirty-seven per cent. has been knocked off the duty on razors.

"After you have donned your clothing (reduced variously from 10 to 74 per cent.), please contemplate the savings which must come, if the tariff tinkers speak truly, to your breakfast-table when the new schedule is in force. Ten per cent. on the table-cloth, a cent a pound on prunes—these are no mean trifles for you, who expect to lay something aside for old age as soon as the robber tariff is reduced.

"Your coffee is now on the free list, and will stay there. But if you use chocolate, rise and cheer, for it is to be reduced 13 per cent. Fresh eggs are coming in at 5 cents less a dozen and the pepper and salt to go with them will be reduced respectively 1½ cents and one mill a pound. The duty on wheat for your rolls is chopped 25 cents a bushel; on your oatmeal, 1 cent a pound. Potatoes are to rush from foreign fields at 25 cents less a bushel. Imported lamb will come to your table—if the wicked middle-man doesn't wrong you—at a quarter less than it comes now. If you are importing cream for your coffee (most of us don't) it is going to be knocked down 5 cents a gallon.

"Doesn't it stun you, the very prospect of all the money you are going to save? Light your pipe (27 per cent. reduction), and dream of the wealth the new tariff will pile up for you, maybe. You have only finished breakfast and yet the figures are delightfully opulent.

"But will your breakfast a year from to-day be really cheaper, according to your market accounts, than it is this morning? That will be the test of the tariff so far as the ordinary householder is concerned. Well, we shall see."

But in case the new tariff should not immediately reduce the cost of living and make everybody comfortable and happy, the Baltimore *Sun* (Dem.) reminds us that "the Democratic party did not promise to perform miracles, and the monopoly and business evils which have been fostered and promoted by Republican policy and favoritism for generations are not to be removed in a day." To which the Republican Boston *Transcript* retorts that "the people in general will probably find that they have no more money to spend under the Simmons-Underwood tariff than they had under its predecessor, while those thrown out of work by the embarrassment of industries will have a good deal less." Representative Sereno E. Payne, father of the tariff replaced by the present measure, also predicts that "all the small reductions in tariff will be absorbed at the wharf and will never reach the consumer," and that American commerce and industry will suffer a disastrous setback under the new law.

On the latter point there can be no more interesting witness than President William M. Wood, of the American Woolen Company, who assured the Tariff Board in 1911 that no change could be made in the wool schedule, the keystone of the protection arch, without shaking American industry to its very foundations. Instead of lamenting the changes that have been made despite his warning, Mr. Wood now declares himself relieved that tariff uncertainty is ended. He is quoted as saying:

"I am not enthusiastic over the Underwood Bill; still free wool is of inestimable value to the clothmaker. It will give him a wide field for the employment of his manipulating ability and will be a helpful advantage.

"Even tho the protection appears very slender, we shall make the best of an inevitable situation, and it is believed that eventually, after adjustment to the new condition of things, with economy the American Woolen Company will be able to compete successfully with similar manufacturers abroad. The mills making fine fancy goods will find the problem more difficult.

"I am very anxious to get at the enemy. This long and exasperating delay by Congress has had a damaging effect upon the industry this year."

These calm words move the New York *Evening Post* (Ind.) to remark:

"It would be cruel to place over against these calm assurances by Mr. Wood the alarmed protests and dire predictions that were made, when the wool schedules were pending, in the name of the American Woolen Company and others in the wool manufacture. One sees now that all this was a kind of inherited and professional fear. The manufacturers simply felt bound to cry out before they were hurt. They had been doing it for generations."

As for the cotton industry, President E. F. Greene, of the National Association of Cotton Manufacturers, takes a less hopeful view:

"Frankly, the best-informed manufacturers do not feel that they know just what the effect will be. Naturally, they look with alarm on any such radical change as is being made, but possibly the high efficiency of our mills and the comparative proximity of the markets may enable us to compete successfully with the foreigner, but, in any event, it is certain that competition from abroad will be much keener and a very serious factor with which to reckon. If in spite of this competition we are able to operate successfully, and by that I mean continue to pay fair wages and earn a reasonable return on the capital invested and do so over a period of years, we can not complain. What I fear most is that the worst will not come at once. The mills of Europe are, as a whole, fairly well employed, particularly in England, on cotton goods, and it may be true that the American mills can continue to do business at a moderate profit in spite of increased importations, but when the business is deprest abroad the *ad valorem* tariff will fail to give the same protection as with high prices at the very time when the American mills need protection most. It is then that I fear trouble."

WILD ANIMALS HE HAS MET.

Discussing the probable effects of the new rates on our various industries, the New York *Commercial* (Com.) says in part:

"It seems unlikely that the beet-sugar industry can live in competition with free sugar from Cuba, and the same is true of the cane-sugar industry of Louisiana.

"Free wool will probably put an end to sheep-raising for the production of wool in the Rocky Mountains."

WHY CURRENCY REFORM WAITS

AS THE TARIFF LEAVES the center of the legislative stage at Washington, currency reform enters. With less than two months before the date for the opening of the regular session of Congress, Washington correspondents report a very natural desire on the part of many members of Congress to rush the Currency Bill through, or else to postpone action upon it until the next session. But either road to a vacation for the tired sojourner in Washington would seem to be blocked. The President, we read, stands firm for the passage of the Glass Bill before adjournment, while the many objections and suggested amendments to the bill stand in the way of speedy action, and Senators Hitchcock (Neb.), O'Gorman (N. Y.), and Reed (Mo.), of the majority representation on the Senate Banking and Currency Committee, are insistent upon prolonged hearings for the consideration of all these points. Chairman Glass, of the House Committee which framed the bill, informs the New York *Evening Post* that he has not the slightest doubt that it will be on the statute-books before the end of the present session. Similar confidence is said to emanate from the White House. There should be no adjournment until currency reform has been added to tariff reform, declare the New York *World* (Dem.) and Cleveland *Plain Dealer* (Dem.), and the Atlanta *Journal* (Dem.) is another paper to express its hopes "that this bill will be prest to enactment before the present session of Congress adjourns," and, it adds, "indications are that it will be." Yet quite contrary indications are seen by the Chicago *Inter Ocean* (Rep.), which, taking Senator James H. Lewis (Dem., Ill.) as an authority, asserts its confidence that there will be no currency legislation during the present session. The New York *Times* (Ind. Dem.) agrees with the Chicago daily that final action should be postponed "until the regular session, in order that the bill may be made better." It its opinion,

"The risks and the danger of proceeding to enactment with a measure admitted to be defective, and as to which nobody can now foresee how little or how great would be the trouble it would cause, are far too serious to be incurred on partizan or any other grounds. It is all too plain that the House passed this bill before it had taken time to learn what a banking and currency bill should be. We trust that the Senate will not act with like haste and with a like want of understanding."

A brief statement of what the present critics of the Glass Bill find most amiss in it appears in the New York *Wall Street Journal.* We read:

"Three fundamental defects of the bill still stand out in bold relief against its other features. These are the proposal to split up the financial resources of the country into twelve Federal reserve banks; the political control over currency issues which Mr. Bryan has foisted upon the measure; and the failure to provide adequately for maintaining the value of the 2 per cent. bonds now on deposit to secure circulation. The decided disinclination of the country banks to enter the new system might make it impossible to create twelve Federal reserve banks, with the capital of $5,000,000 each required by the bill, even if fixing the number arbitrarily at twelve were on other grounds desirable.

"The failure to protect the value of the 2 per cent. bonds is of serious importance to the country banker, who faces the likelihood of being compelled to throw on the market, at 75 or 80, securities for which he paid par or more, in order to escape from the trap which the bill has set for him. It is a shabby and inequitable proposition, even if within the law, that a charter originally granted for twenty years should be canceled on one year's notice, without fault on the part of the grantee, unless he complies with conditions both novel and onerous.

"The bill must be radically corrected in at least these particulars, or it is capable of causing grave disturbance to the financial equilibrium of the country."

But, as the New York *World* sees it, these objections concern themselves with "details of the machinery needed to apply the principles agreed upon":

"There is disagreement over the number of central reserve

banks which should be provided, but no disagreement that such banks should be provided in some number. There is disagreement over the composition of the Central Reserve Board, but no disagreement now that the Government should have the final deciding voice in that board. There is disagreement whether bank membership in the new system should be voluntary or compulsory, but no disagreement that most or all of the national banks must be drawn into it in one way or another.

"Now the question is: Are these quarrels over details to be allowed to defeat agreement on principles of action? Are they to be allowed to delay action? If they can not be settled now at the extra session, when the attention of Congress and of the country is focused upon this subject, how are they to be settled at a future regular session having other business forced upon it?"

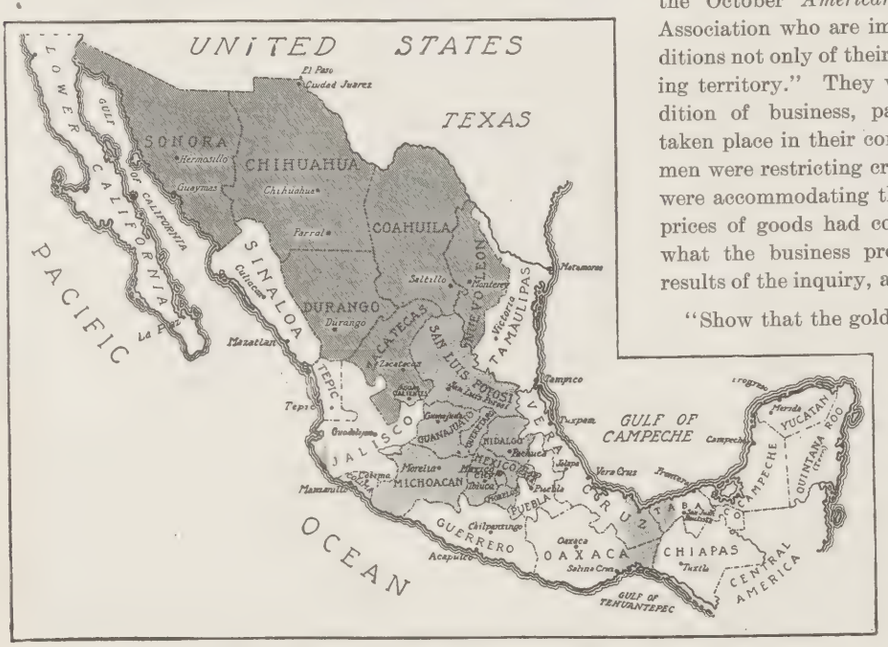
Nobody, as the New York *Journal of Commerce* observes, considers the measure perfect as it stands; neither the President nor Congressional party leaders "take the ground that there shall be no further changes. On certain points which they deem essential they are insistent, but there is still a chance for amendment to reconcile differences and meet objections which are shown to be well founded." Yet, continues *The Journal of Commerce:*

"The Administration is confronted with a dilemma. It has proceeded so far that it can not abandon its ground without weakening its position before the people. On the other hand, it can not afford to force through a measure, if it has the power to do so, which will not work successfully in practise. If it should be enacted and justify to any serious extent the predictions of its opponents, it would ruin the prestige of this Administration and destroy the chance of the party responsible for it of a continuance in power for another term. If now the matter can be treated calmly and soberly, and sufficiently without partizan bias to bring together those who put the interests and safety of the nation above considerations of party triumph or disaster in the immediate future, the bill may be put in a form to invite the support needed for its enactment without regard to party lines. It is a case where patriotism and public spirit should prevail over the contentions of party politics."

Yet this daily's Washington correspondent admits that the Senators in charge of the bill must consider the party problem involved in the banking problem. Indeed, he explains, it is a "very serious party matter":

"In the House the bill has been indorsed by caucus of the party by an overwhelming vote, while in the open House discussion the measure has received Republican support, about forty voting in its behalf without any bargain or inducement of any kind. If the Banking and Currency Committee in the Senate were to report the bill unfavorably in view of the pronounced action of the lower chamber and the known attitude of the President, it would amount to a repudiation of Mr. Wilson's leadership, and to a direct breach between those who thus acted and the head of the party—the present Executive. Moreover, it would involve a direct breach between the recalcitrant Senators and Mr. Bryan, the recognized head of the radical wing of the party. As Mr. Bryan has supported the bill, the radicals would be left under the necessity of defending their own conduct and organizing an ultraradical wing 'more royalist than the king himself.' . . . Under present conditions the alternative presented is that of either going over the head of the Banking and Currency Committee of the Senate or letting it go over the head of the representatives of the party in the lower House, who are supposed to be quite as close to the people as are members of the upper chamber.

"The alternative to throwing the bill directly into a Democratic Senate caucus is that of amending it and reporting it. President Wilson has never said that he would not accept any amendments to the bill; on the contrary, he has said he wanted all the amendments he could get if they would improve it. The trouble lies in the fact that the amendments he is willing to accept are not the amendments that some members of the banking committee are disposed to urge. Moreover, a close analysis of the membership of the banking committee shows that it is divided into three groups instead of two. One group favors the reporting of the bill somewhat as it stands; a second favors the amending of the bill into a more 'conservative' form, supposed to be more acceptable to the banks; the third group wants to introduce unsound legal-tender-note ideas. While, therefore, it is possible for the opponents of the bill theoretically to prevent it being reported, it does not as yet appear that any one group has the votes to amend it."



WHAT REVOLUTIONS MEAN TO BUSINESS.

This map shows how business has suffered from the disorders that have been going on in Mexico for the past three years. The States where it has been seriously affected are heavily shaded. Where there has been less interference with trade the shading is lighter, while the areas in white show where it has been affected only by the general disturbance of the financial status of the country.

BUSINESS HOPES IN MEXICO

SO MUCH has been heard of the injury to business caused by the disorder in Mexico that an attempt to set forth the actual extent of the damage done is most welcome. United States consular officers have, of course, made reports regarding various localities, but it has remained for the National Association of Manufacturers to conduct an investigation covering practically the entire country. The work was done, we read in the October *American Industries*, by correspondents of the Association who are impartial residents "familiar with the conditions not only of their immediate localities, but of the surrounding territory." They were asked to report on the present condition of business, particularly "what business failures had taken place in their communities; to what extent local business men were restricting credit, and to what degree foreign creditors were accommodating their debtors; whether the increase in the prices of goods had corresponded to the rise in exchange, and what the business prospects were for the near future." The results of the inquiry, according to the organ of the Association.

"Show that the gold resources do not permit the Government to maintain the Mexican peso at its former exchange value. Prices have risen and the markets are uncertain. Credit has been seriously disturbed. The Mexican Government is making headway in restoring normal conditions, but needs money to accomplish this purpose."

The consensus of opinion regarding the remedy for the situation, among the greater part of the Association's correspondents, who are "prominent banking houses, lawyers, merchants, and agents of American and European manufacturers," is stated as follows in *American Industries:*

"If the Mexican Government could

secure the necessary financial assistance, the internal troubles would quickly disappear and business would resume its normal, prosperous condition. The failure of the Administration to secure recognition from the United States has delayed the strengthening of credit and put a premium upon disorder."

The part of Mexico in which business has suffered most is, as would be expected, the block of larger states in the north which have been the scene of most of the revolutionary operations, namely: Chihuahua, Coahuila, Nuevo Leon, Sonora, Durango, and Zacatecas. The states in which business is disturbed, but not so seriously as in the territory above noted, are said to be: Mexico (and the Federal District), Aguascalientes, Guanajuato, Hidalgo, San Luis Potosi, Tlaxcala, Queretaro, Morelos, Michoacan, and the Isthmus of Tehuantepec. A glance at the accompanying diagram makes clear just what this means.

Of course, it is inconceivable, admits the Indianapolis *News*, "that farming, mining, or manufacturing could flourish where revolutions are bred and nourished and where brigandage flourishes unpunished." But, continues *The News*, optimistically:

"There are indications of a change for the better. The attitude of Huerta and his aids is more conciliating, and it would not take a great time—under the protection of an able and just administration—for Mexico's business to recuperate. Mexico was on the edge of a tremendous business revival when Porfirio Diaz was driven from the country. The latter years of his administration were given over to development. And even now, in the regions along the seacoast, where the rebellion has not been serious, commerce and trade are increasing at an encouraging rate. In the interior of the Acapulco district the fighting has left its scars, but at the port business is expanding. The same is true of the Yucatan region and, in a degree, of the northern ports, such as Vera Cruz. The United States is Mexico's best customer, and it will be a happy day for Mexico when the Government realizes that the United States desires only peace and progress for its neighbor. With a trustworthy Administration Mexico ought to advance more rapidly than ever before."

Making mention of Mexico's rich natural endowments and the millions invested there by Americans and other non-Mexicans, the St. Louis *Globe Democrat*, less hopeful than its Indianapolis contemporary, goes on to remark that "it is losing some of the improvements it already possesses, and repelling the interest it excites in the minds of the energetic and well-equipped for large undertakings." Further:

"If the United States owned Mexico, its advance and significance in the world would be phenomenal. But this country has no designs upon our neighbor. We voluntarily gave up Cuba and its rich possibilities in order that its people might work out their own destiny. Cuba would be annexed if a majority of its people asked it. Mexico is in a similar position. There is no reason to suppose that it would be turned away if its people generally and clearly manifested a wish to come into the greatest of republics. But the policy of non-intervention is so strongly fixt that, in the opinion of many, it falls short of the minimum assertion of international rights. Americans across the border find that their country is a monitor rather than protector, and has managed them into an anomalous position, adding to their losses instead of insisting on their reparation. Meantime, what are the Mexicans doing to each other and their domain, one that is scarcely surpassed in what it might become? They are destroying even irrigation works, which is simply fiendish, an operation like taking soil from arable land and casting it into the sea. Years are passing along with Mexico in this turmoil of destructiveness and ruin. The logic of such continued conditions is that some unexpected event or events will force a solution."

Copyrighted by Harris & Ewing.

HE WOULD SEND THE WORKERS WHERE THE WORK IS.

Joseph E. Ransdell, junior Senator from Louisiana, who takes the lead in the latest movement for directing our immigration Southward.

TO SEND IMMIGRANTS SOUTH

TOO MANY IMMIGRANTS in one part of the country and not enough in another might seem to point to a solution about as evident as water running downhill, and an association of Southern men have started plans to put the surplus of workers where there is a surplus of work. The South's need for more capital and more labor to develop its fertile lands, its "mines of iron, coal, salt, sulfur, and deposits of petroleum and great timber forests," has long been recognized and often been urged. So, too, has the advisability of distributing our immigrants over the country, instead of assembling them in a few Eastern cities. Yet papers both North and South, while welcoming the newest agency established to accomplish these ends, point out rather freely the difficulties to be encountered. Senator Ransdell, of Louisiana, and other prominent Southerners have taken the lead in the organization of the Mississippi Valley Immigration Association, which will try to divert European immigration from Northern to Southern ports. Delegates from Louisiana, Mississippi, Arkansas, Texas, and Alabama, "all interested in finding a labor supply for public works in Southern States, have," as the New York *Evening Sun* notes, "already met with and consulted with representatives of the Federal Immigration Department and of various railroad and steamship lines on the pressing subject of immigration and labor in the South." Pressure is to be brought, we are informed, upon the transatlantic steamship companies to get them "to land immigrants at New Orleans as a center of most advantageous distribution." *The Evening Sun* comments editorially:

"The wiser counselors of the Mississippi Valley Immigration Association will probably try to avoid in their own district some of the new problems which have developed in Northern States. They must show rather clearly what necessity exists for the reception of unassimilable groups of foreign-born laborers who are quick to take advantage of American laws that work to their own advantage, but are wholly without any conception of the duties of citizens to the State which affords them such opportunity."

In New Orleans, the Southern city chiefly to be affected, *The Times-Democrat* and *The Picayune* favor the plan of Senator Ransdell and his associates. Yet the latter is not without its misgivings, when it considers the conditions in the congested slums of Northern cities inhabited by immigrants, and observes:

"We want, above all things, farm laborers, but from the way the newcomers from southern Europe congregate and crowd in the cities, it is plain that they will not go to the country districts, and can not be depended on to do farm work, and therefore they are added to the population that must be fed and will not assist in the task of growing the food.

"If the experience of the last decade with immigration is any indication of what is to follow, it is plain that the task of feeding our population will become every year more difficult."

If the Mississippi Valley Immigration Association can offer "such inducements as will bring only desirables to their sections," then, in the opinion of the Chattanooga *Times*, "they may do a great service to the South." But, it continues:

"If they are simply going to invite all who may want to

come, we doubt if they are going to better their conditions. There is no doubt the South is the most inviting field for the right sort of immigration. The wide areas of untilled lands ought to be an alluring attraction to the practical farmer and husbandman; the field of industry is opening up ample opportunity for the skilled mechanic and the industrious artizan, but it would seem to be a by no means sure blessing, this attempt to mix up the foreign day-laborers with the negro populations of these Southern States.

"If the negro isn't efficient, it is largely chargeable to his environments and his treatment. We dare say that if the negro were given the consideration these foreign white men will demand and receive, he would become the most valuable laboring asset of which any quarter of the Union may boast.

"A society for reforming the methods of working the negro might prove of wonderful service to the South and continue the issue of immigration as dependent upon the quality and desirability of the applicant."

DRINK, DRUGS, AND SUDDEN DEATH

THE VISION of sudden death in Harriston, Mississippi, in the early morning of September 28, when two young drug-crazed negroes were lynched after they had "shot up the town," killing nine other men of both races and wounding seventeen, brought from the Northern press no shuddering exclamations over the Southern sin of lynching, nor did the "race-riot" headlines of one day's news go uncorrected on the next day's editorial page. "The part played by the white men who became victims was devoid of race unfairness, wholly an attempt to vindicate public order," says the Brooklyn *Eagle;* and "even the lynching, performed in the presence of a company of non-interference militia, was free from any doubt as to the identity of the negroes hanged, and was free from brutality save in the hanging." The people of the vicinity of Harriston are, in the St. Louis *Globe Democrat's* opinion, "entitled to still greater praise for the self-restraint and sense of justice they displayed." For the press, North and South, agree in attributing the killings in Harriston "to mania resulting from the abuse of cocain," and it is the prevalence of the drug habit among Southern negroes that chiefly engages editorial attention. We read, for instance, in the New York *Sun:*

"That the use of drugs is general and constantly increasing among the negroes of the South has long been known, and it is asserted on seemingly respectable authority that indulgence in this vice is particularly prevalent where prohibition obtains. . . . . .

"The liquor trade in the Southern States had characteristics of unspeakable vileness and criminality, which drove thousands of respectable men not opposed to the sale of decent liquor under respectable conditions into the ranks of the 'drys.' When drink was made inconvenient to obtain, the drug venders found a rich field. Their wares are peddled in many forms, and the effects they produce on their victims are even worse than those chargeable to alcohol. Various schemes to keep the mixtures containing the drugs out of the hands of any except medical men and pharmacists have been suggested, but none of them has met with particular success either in the South or in the North."

Race antagonism is ever present in Southern communities, *The Sun* reminds us, and "men low enough to furnish drink and drugs, regardless of the consequences, are found in every community." Laws, it adds, "may easily be passed, but how are they to be effectively enforced?" Yet it is to law that the Southern press turn. To quote the New Orleans *Picayune:*

"Such outbreaks as occurred at Harriston are always possible in every part of the country where the negroes are numerous. The great majority of the colored people are peaceable enough, but there is a small element capable of attempting any sort of crime when crazed by drink or cocain. How best to deal with this dangerous element is a problem not easily solved, but it ought to be possible to stop the sale of habit-forming drugs to negroes by imposing heavy penalties on all persons caught in such traffic."

All through the South, declares the Washington *Times,* "drugs and drugged liquors are bootlegged through dry communities, to the depraved elements of society, and constantly are inciting to such crazy crimes," and it concludes:

"State and national legislation alike are absolutely necessary to end the horribly demoralizing traffic in drugs and worse-than-whisky liquors that are sold constantly in increasing quantities."

DIRECTORS AND WRECKS

AFTER THE DISASTER on the New Haven Railroad at North Haven, in which twenty-one persons were killed, the coroner's inquest placed the blame upon the engineer of the telescoping train, and the flagman and conductor of the train which was telescoped. Now the Interstate Commerce Commission, while not exonerating these employees, extends the arraignment to include the men higher up as well, publishing in its report the names of the road's directors as the men whose negligence was responsible for the lack of discipline which caused the wreck. In a passage which, according to the Baltimore *Sun,* "strikes at the very heart of the responsibility for this and many similar disasters," the Commission says:

"The directors assumed to dispose of their whole responsibility of this subject by a vote depositing it in bulk upon the president, and thereafter, as far as appears from the records, made no further inquiry and took no further action, altho a quick succession of these disasters continued.

"This typifies the whole situation. They assumed the vote was self-enforcing.

"Directors by law are not mere figureheads, nor are their duties confined to the mere direction of the finances of a corporation. The duty of safeguarding against the hazards inhering in this business can not be divested from themselves by a mere vote delegating it upon another, unless there is an exercise of the legal standard of care and diligence in supervision to ascertain and know that it is performed."

After tracing the cause of the wreck to "man-failure" all along the line, from directors to trainmen, the Commission urges the immediate adoption of "an adequate system of supervision which will give those in authority definite and positive information as to whether or not safety requirements and rules are observed." To quote further from the Commission's report:

"The direct cause of this accident was the failure of Flagman Murray properly to protect his train, the failure of Engineman Miller properly to control the speed of his train in order that he could bring it to a stop before passing automatic signal No. 23, and the failure of Conductor Adams to make certain that his train was properly protected. An additional cause was the failure of Engineman Wands to bring his train to a stop, as required by the rules, before passing automatic signal No. 23, which was in the stop position.

"While this accident was directly due to failure of employees properly to perform their duties, the signal system in use was entirely inadequate safely to direct and govern the movement of the large volume of traffic over this line, and there was a deplorable lack of supervision on the part of operating officers; on this account the conditions which led up to this accident were possible."

Noting that there has been in the past "too great a tendency on the part of boards of directors of banks, of transportation lines, and other great corporations to shirk the attention to details intimately connected with the properties which were placed in their care by the shareholders," the New York *Herald* goes on to say:

"We believe that the time is past when directors can shirk and avoid blame for such breakdowns of management as have so frequently occurred in great properties, causing loss of millions of dollars to depcsitors in the case of banks and causing the loss of lives of passengers or employees in the case of railroads. They should direct or resign. Soon they will discover that they *must.*"

Citing facts to show the negligence of the New Haven

directors in the enforcement of discipline, the New York *Times* reminds us that—

"In the thirty-two months that record a long series of New Haven Railroad disasters, the report says, there were 153 convictions of enginemen running past signals and 101 cases of improper flagging. These are offenses each of which, according to Vice-President Whaley, constitutes the 'worst crime a railroad man can commit.' There is no adequate punishment for this capital crime except dismissal. But only twenty-nine enginemen were discharged and twenty-seven flagmen dismissed. At the recent hearing before the Commission there was concurrent testimony that running past signals was a frequent daily occurrence and not usually reported. Yet the directors, who on October 17 last ordered the president to make a searching investigation into the competency of engineers employed by the road, and to leave nothing undone which, in his judgment and that of his associates, would conduce to greater safety in operation of the railroad, never thereafter called upon the officials of the road for a report presenting the results of their investigation. Instead, disaster followed disaster in quick succession, and the road's officials continued to let off men found guilty of the worst of railroad crimes.

"The charge is prest home, and deservedly. Ultimately, the directors of a railroad are responsible for its discipline, especially the discipline that assures safety to the traveling public."

All agree, however, that whatever the negligence of the New Haven directors in the past, they are now awakening to a sense of their responsibility. Thus we read in the Brooklyn *Eagle:*

"After the Stamford wreck the directors of the road dropt the president under whose administration most of its disasters have been achieved, and replaced him by a railroad man of good reputation in the West. The new man had not warmed his office chair before the Wallingford wreck hit him, as fruit of the old system which the Interstate Commission denounces. Since that wreck he has subdivided the superintendence so as to secure closer contact between the men and the superintendents, and so that the latter may have an opportunity to have a more intimate knowledge of the operation of the sections for which they are responsible, and he has secured a large appropriation for a modern signal system on this very section where the wreck happened.

"But even if the New Haven no longer needs this official chastisement, the attitude of the Interstate Commission is no less significant or promising. It means in future to secure safety of operation on the railroads as well as reasonable rates, and there is little likelihood that Congress will refuse to confer the power to make its supervision in that direction effective."

A NEW TYPE OF RAILROAD DIRECTOR.

The mere presence of President Hadley, of Yale, on the directorate of the New Haven Railroad, says the New York *Evening Post*, "gives positive assurance to the public that there is already an end to many of the evils that have brought that road to such bad times."

The New Haven board is at last vigorously at work, declares the New York *Evening Post*, which cites as evidence "the selection of Howard Elliott as the new president, the choice of President Hadley, of Yale, as a director, and the firm stand taken by the management in its new and excellent rules for engineers, which place fitness above seniority, contrary to union protests." The same paper, after congratulating the New Haven on having acquired a new type of director in the person of President Hadley, "a delegate from the conscience and character of New England," goes on to say:

"No one can associate Mr. Hadley with the Mellen methods of doing business. Nobody could, for instance, conceive of President Hadley's remaining a minute on the New Haven board if there were any further effort to increase the capitalization of the railroad for ventures wholly extraneous to legitimate railroading. . . . . .

"We can hardly think of anything more potent the New Haven could have done to rehabilitate itself in popular esteem than to give the public the guaranty of Mr. Hadley's presence in the directorate.

"But there is even more to this selection than appears on its face. Is it not time that railroads generally were broadening their boards of directors? The outcry against the interlocking directorates is not merely due to the enormous powers wielded by sixteen men, but is based a good deal upon the fact that these men are all of a type. Our railroads are in largest part directed by bankers, men of great means, residing in the large centers of population. Skilful as these men are in raising large sums for their roads, the fact remains that your average Wall Street or State Street banker too often sees just the length of his nose, and no further. Even in matters within their special ken they are astoundingly narrow, and too often they are interested solely in the dividend side of railroading. . . . . .

"The interlocking directorate is bound to go, if only to end the abuse of buying from the manufacturing concerns with which the directors are connected. But the exclusive money-baron board must go also; our railroad directorates must come to be nearly a cross-section of those whose interests, economic, social, or otherwise, are bound up with those of our transportation lines."

Still another side of the problem of making railroads safe was emphasized by President Elliott, of the New Haven, in an address given last week before the Boston Chamber of Commerce. Unless the Federal and State Commissions permit an advance in rates, he says, the roads can not get the money necessary for improvements making for greater safety. He said in part:

"If we are to continue to have privately owned railroads supervised and regulated by Government authority, and if we are to avoid ownership by the Government, the owners and users of the railroads must all work together.

"The policy of the Government, national and State, during the last twenty-five years, seems to have been to decide rate questions in the great majority of cases in such a way that rates were rarely advanced and generally were reduced, and to introduce rules, regulations, and methods that increased expenses. I want to make a plea that, coupled with restraint and control, there should be protection to the owners of the securities.

"The Commissions, both State and national, naturally feel the great pressure of the millions of users of the railroads for reduced rates and increased facilities. But if the rates continue to decline, or even remain on the present level, and if expenses are increased by higher wages and cost of materials, and by the introduction of different appliances and facilities more rapidly than the roads can obtain money, then there is but one result for some of the railroads of the United States—and that is bankruptcy. This will naturally be preceded by a desperate effort on the part of the management to postpone that evil day as long as possible by stopping every improvement and betterment that can be stopt."

CARRIERS FOR CARRYING

COMMON CARRIERS must stick to their carrying, is the thought which runs through newspaper comment on the action of the Pennsylvania Railroad in divesting itself of its anthracite properties and its holdings in the Cambria Steel Company. The Pennsylvania quits the coal trade, so it is understood in Philadelphia, "to avert government prosecution." For, as a New York *Times* dispatch points out, "altho the Federal authorities have not taken any action against the Pennsylvania, the fact that other roads have been made the defendants in suits has led to the belief that such action might be started." In its decision, the dispatch continues, "the Pennsylvania is following the lead of the Lehigh Valley and the Lackawanna, both of which companies have disposed of their security holdings in anthracite-mining companies." No reason for taking action at the present time appears in the brief statement issued from the offices of the Pennsylvania in Philadelphia. It reads:

"The president of the Pennsylvania Railroad announces that the Board of Directors has decided to sell its security holdings in the anthracite-coal companies which have been attached to its system for nearly forty years. The Susquehanna Coal Company is the principal operating company and selling agency for these companies."

The Springfield *Republican*, remembering the Pennsylvania's earlier disposal of heavy holdings of Baltimore & Ohio for Southern Pacific securities, sees clearly the disposition "to get clear of government suits for violation of the Antitrust Law and the commodities clause of the Hepburn Railroad Act," and an evident "purpose to confine the company's business to transportation, where it belongs." Of course, *The Republican* remarks,

"It is open to the Pennsylvania company now to imitate some other coal roads and try to evade the laws by legal legerdemain in reorganizing the coal company with its stock held by stockholders of the railroad company in their capacity as individuals; but nothing of that sort of chicane will be attempted if the company is aiming in good faith to get away from the clutches of the Government."

The Pennsylvania's coal holdings are comparatively small, notes the Indianapolis *News*, embracing "about 17,000 acres, with a mining output of about 10 per cent. of the average annual trade." Other papers estimate the worth of the Pennsylvania's holdings of coal-company securities at between $8,000,000 and $9,000,000. *The News* considers "the decision of the Pennsylvania to rid itself of coal incumbrances" a "commendable" one. And it goes on to say a word against our railroads' extra-railroad activities:

"Nine-tenths of the evils of the anthracite situation have come from the control of producing properties by the carriers.

"Strictly speaking, common carriers should be common carriers and nothing more. An exception would be activities designed to facilitate the operation of the road itself. But it is another matter when a railroad goes into another business. To own a coal-mine and to ship the product over its own lines to terminal markets also under control gives a common carrier powers to which it is not entitled. And yet this is the power which the great coal-carrying and coal-mining railroads of the East have exercised for years. The anthracite monopoly has been attacked by the Government from several different angles. Some of the suits have been unsuccessful. But others have gained important points. It is encouraging to see a railroad voluntarily relinquishing its hold on such disputed properties."

FOREIGN COMMENT

THE BABY BALKAN KINGDOM

THE OUTBREAK of hostilities between Servia and Albania, in which the Servians have been getting the worst of it, is the Balkan way of telling the world that a new kingdom has arrived. Austria, Italy, Russia, and Greece are all showing a strong interest in it in ways that resemble the wolf's interest in Little Red Riding-Hood, and altogether the future seems to hold many elements of discord. So far, Albania is a kingdom without a king. Half Christian and half Mohammedan, the main question concerns the faith of the ruler, a question so acute that some favor a division of her territory into Northern and Southern Albania. Austria, which claims a protectorate over the Catholic churches of the country, desires the enthronement of a Christian prince, while Russia favors the neutralization of this district of the Balkans by leaving it nominally under the government of Turkey, which would of course mean Moslem rule. At first the Russian press opposed Albanian independence, but now have swung around into strong support of it—a remarkable shift whose reasons we find stated thus in the *Novoye Vremya* (St. Petersburg):

MORE TROUBLE COMING.

DEATH—"Their peace treaties look to me like preparations for more wars."
—*Courrier Européen* (Paris).

"Of course, it would have been better if no artificial Albania had been created: a final liquidation of this part of the Turkish legacy would have been the only right way out of the existing situation. But it has been decided to create Albania. . . . She will be called to life. We think that Slav (and, consequently, also Russian) interests dictate this thesis: if there must be Albania, she must be independent.

"To this end she must first of all be integral. Our Roman correspondent reports that the Italian press have begun a systematic campaign in favor of opposing Southern Albania to Northern Albania. Against this idea Russian diplomacy must fight with all its resources. . . . In dimensions Albania will be smaller than San Marino, Monaco, and Montenegro. Under such conditions to assume that that 'State' can yet be divided into two parts, Southern and Northern, and that those two parts may be antagonistic, means purposely to condemn the new child of Europe to an immediate, inglorious downfall. Albania must be integral. We think that it will not be difficult to insist upon this point of view, because the Triple Alliance has more than once declared its intention to erect a strong government which would be capable of existence. . . . . .

"The second question concerning the political future of Albania consists in the following: The Austrian project . . . assumes that one of the Western-European pretenders will be appointed the head of the Albanian Government. The opposite point of view is that there should be preserved in Albania the nominal authority of the Sultan, and that supreme power should be entrusted into the hands of a Turkish governor-general. Of these two projects preference, in our opinion, ought to be given to the second one. Even in the very best case (and the very best case we would consider when that pretender neither by his extraction nor by his enthronement should in any way be obliged to Austria or Italy), a foreign pretender on the Albanian throne will be inclined to such European forms of life as will necessarily compel Albania to follow more and more the neighboring representatives of Western culture, both in the sense of carrying on public works and—what is particularly important—in the sense of getting money. The appearance of a Turkish vali chosen by Europe will help Albania preserve a strictly national physiognomy which will accord with the circumstances and suit the lean pocket of the new State."

But even with a Turkish governor-general at its head, Albania will not be free, the *Novoye Vremya* fears:

"The fact is that Austria appropriates to herself one very important privilege in Western Turkey, which may interfere with the proper functions of the future Albanian Government, if it will be reserved. That privilege is called a protectorate over the Turkish Catholics. . . . It is beyond doubt that diplomacy can show the necessity of abrogating the right of protectorate. For as long as that right remains in force Austria will have the possibility of interfering at every moment with the affairs of a government in which there will be almost as many Catholic subjects as Mussulmans. . . . It can not be permitted that the Austrian Government should enjoy special privileges which will not be granted to the other great Powers."

The question of an Albanian loan is another cause for uneasiness on the part of the *Novoye Vremya*. Albania has no regular income as yet, and for several years must exist on loans. Vienna suggests an Italo-Austrian guaranty, and Russia might say they are welcome to guarantee such a flimsy risk if they wish—

"But such an attitude would be near-sighted. There must be no special legal status for the Powers of the Triple Alliance in the sphere of Albanian loans. For such a status will turn, in course of time, into armed intervention."

The *Russkiya Vyedomosti* (Moscow) remarks that a chapter of political confusion is opened with Albania's independence:

"'Independent' Albania—the last stake of Austrian politics in the Balkans—must become a source of international conflicts. Belgrade can not reconcile itself to it for long. Since Servia . . . will not get a wholly convenient exit to the Ægean Sea, and the promised outlet to the Adriatic does not satisfy her, Servian efforts to seize a part of the Adriatic coast will continue. Further, the question whether Albania is at all capable of independent existence raises very grave doubts. But if it will be spelled 'Albanian Government' and pronounced 'Ballplatz' (the street in Vienna where the government offices are located), such an arrangement will hardly be to the liking of any one but Austria herself. Italy, of course, will endeavor to limit Austrian influence to the northern part of Albania, and to acquire a similar position in the southern part for herself. Thus even the division of Albania into spheres of influence is not impossible, or, at any rate, the struggle between the two Allies over the eastern coast of the Adriatic will become more intense. Then, in the question of the southern boundary of Albania the Greek and Italian interests clash; and as French diplomacy is seemingly inclined to support the Greek claims, it will be necessary to admit that there may arise in the near future serious friction among all the Mediterranean Powers on account of Albania."—*Translations made for* THE LITERARY DIGEST.

MEXICO AS A WARNING TO CHINA

CHINA MUST LEARN a lesson from the fate of Mexico and take care that she does not fall under the domination of a dictator like Porfirio Diaz, says a paper said to be edited by the secretary of Sun Yat-Sen. This warning is given by *The Republican Advocate* (Shanghai) to the adherents of Yuan Shi-kai, who is accused of attempting to reduce China to a position which will end in anarchy and "a whirlpool of disorder." The Administration of Diaz was much praised. He erected splendid works; he forced the Mexicans into a condition of quiet submission, but while "nominally a republic, a free election in Mexico was almost unknown." Diaz certainly "opened a new

"WOULD-ROW" WILSON.

PERPLEXED NOVICE—"Gosh! I wonder what I do next?"

—*Financial Times* (London).

volume in Mexico's history; he placed the country on the map of the world." But when he left Mexico, there followed "slaughter, confusion, and years of warfare." Yuan Shi-kai is a replica of Diaz, we are told, "a man of brute force." To quote further:

"Fate sometimes plays strange tricks, and one of the strangest is, perhaps, the turn of the wheel which has placed many officials in positions for which their previous training has not fitted them. Yuan Shi-kai, as the head of the Republic, is naturally an outstanding example. He is a novice in the ways of democracies, and temperamentally inclines to become the dictator. This is what any one might have foretold from a study of his career and the opposition he has aroused from the democrats of China is equally natural and might as easily have been foreseen. But it comes to us as a shock to find a section of the foreign press, the writers in which are supposed to know history, or at least the history of current events, advocating a dictatorship as the best thing for China. The foreign press would have preferred constitutional monarchy. This, it sees, is impossible; so it backs Yuan as dictator."

But Mexico, continues this writer, is a standing warning to China, altho no bigger than a mere province of the dominion administered by the Government of Yuan. On this point *The Republican Advocate* enlarges as follows:

"Is it necessary to point the moral and to outline the lesson for China? Yuan is 55, and he is not robust. He can not rule as Diaz did for a lengthened period. He may effect a truce, and bludgeon China into quietness for a period, but is a shortened dictatorship in China more likely to succeed than a prolonged dictatorship in Mexico, especially as in Mexico the sweep of education is small compared with its influence in China? Those who would like to see Yuan a dictator overlook the fact that new sap is rising in the old China trunk. It pushed the withered Manchu leaves from the tree in 1911. Can it be ignored in 1913? Would it not be for the ultimate welfare of every one that there should be a thoroughly representative conference, held somewhere outside the sphere of political influences, in which every question can be properly thrashed out, and lines of co-operation laid down for the future? We were in too great a hurry in effecting peace in 1911. A little patience, a little tact, might have saved the country from the present trouble.

"If, on the contrary, Yuan is allowed to follow Diaz and by superior force silence all opposition, China will soon follow Mexico and become a bloody amphitheater of internecine strife, and, inasmuch as China is bigger and more enlightened, the warfare will be the more bitter and prolonged. America's Civil War lasted nearly five years. There are forces in China which can not be knocked into insensibility, and the older generation who have had most of their experience under the Manchus will do well to take these new forces into account, otherwise China will become a porcelain vase that has been dashed to the ground."

RUSSIAN GRIEF AT OUR MEXICAN POLICY

OUR HARSH TREATMENT of the provisional Mexican Government is viewed with deep sorrow by the semi-official organ of the Government that is absorbing Mongolia and northern Persia and has a large military force on the border of Asiatic Turkey awaiting eventualities. The *Novoye Vremya* (St. Petersburg) suspects that our intentions are not of the best, and warns us that Japan may take a hand, a point on which it should speak with authority, in view of Russia's disastrous attempt to encroach upon Manchuria and Korea. Our refusal to recognize Huerta looks like "foolish affectation," says this mouthpiece of the Government that refuses to recognize the Chinese Republic, and it clearly suspects that we are trying to drive Mexico into a corner with the idea of tying her up, picking her pocket, and eventually annexing her territory. "When a government, at the beginning of an official act, strongly emphasizes its friendship, unselfishness, and disinterestedness," gravely remarks this organ of the Russian bureaucrats, "one involuntarily looks for some trick at the end of such an act. And there is such a trick in President Wilson's message." Reading further we find that "the disinterestedness and non-intervention of the United States find expression in the message of President Wilson in that the United States, first, dictates to the Mexican Government what it should do with the revolutionists and, secondly, orders a 'free' election in a way that the voters will not be free to elect as president the most popular man—Huerta." Having thus proved to its entire satisfaction that the United States is pursuing a crafty and selfish policy, the *Novoye Vremya*, after recounting the experiences of Mexico within the last few months, goes on to say:

"The fact that all European, South American, and Asiatic countries have long recognized the government of Huerta can be considered as the best proof that Huerta has ably conducted the governmental affairs of Mexico. Only the United States has assumed a peculiar position. While refusing to recognize Huerta, it has until now confined itself to the energetic support of the rebels concentrated in the North with money, men, and ammunition. The message of President Wilson reveals the game of the United States. It not only demands that an armistice should be concluded with the revolutionists who are almost crusht by Huerta, but even insists categorically that Huerta should not be a candidate for president in the coming election. It is not in vain that the Western European press permitted themselves to express the supposition that the United States openly take the side of Mexican anarchy.

"How the relations between Mexico and the United States will settle themselves in the near future is, of course, impossible to foretell. It may be presumed, not very advantageously for Mexico, for there is too great a disproportion of strength between the richest and most powerful Republic and those perpetually rebellious Latin countries which have such an ineradicable passion for military pronunciamentos."

Europe, however, has enough complications of its own to trouble with Mexico, thinks this writer. Mexico is bound to fall into the hands of the United States unless Asia comes to the rescue. So we read:

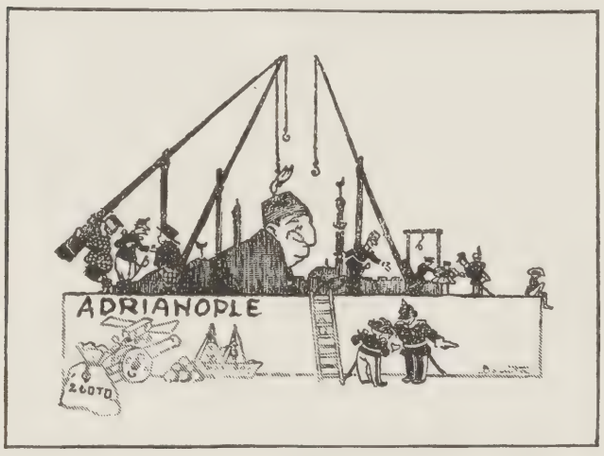
"The whole history of America so shapes itself that in the more or less near future the whole continent will fall under the unmasked protectorate of the Yankee. Europe will not interfere. None of the European Powers, either separately or jointly, will move a finger if the United States should, let us

say, even conquer Mexico altogether. The Old World has enough to do without it. The only external complication with which the United States has to reckon is—strange as it may seem—the possibility of Japan's intervention. Yet recently, at the invitation of Huerta, a special envoy of the Japanese Emperor visited Mexico. This envoy received the greatest honors; the newspapers not only in Mexico, but also in other Central American republics, seriously considered the desirability of organizing a defensive and offensive alliance of all those countries which are threatened by the Monroe doctrine. If Japan should come to their assistance, the United States, having an army of 79,000 men only, would, of course, find itself in a difficult situation. The project of a Central-American alliance under the hegemony of Japan is so far in the realm of indefinite political suppositions. But it can not be overlooked that the Mexicans, too, have sent a special envoy to Japan, and that the work is being pushed energetically.

"If all the facts above referred to are taken into consideration, it will appear that the struggle between Huerta and Madero can, under a certain combination of circumstances, prove of immediate interest to Russia. The sooner the Japanese are drawn into the abyss of American politics the more difficult will it be for them to work in China. And that will be a direct advantage to Russia."—*Translation made for* THE LITERARY DIGEST.

THE STRENGTH OF TURKEY IN ASIA

THE OBJECT of the Balkan War against Turkey was avowedly the expulsion of Islam from Europe. The Battle of Tours was to be repeated and the banner of the Crescent banished beyond the Hellespont. Ferdinand of Bulgaria had sworn to dash down the Mohammedan emblem from the dome of Santa Sophia and place the cross in its stead. We gather from the Turkish press that the Sultan and the Young Turks are satisfied that the Christian Crusade has proved to a large account a failure. The Turks have not been expelled from Europe. Constantinople and Adrianople still remain under Moslem sovereignty and Bulgaria has been driven back again into her mountain fastnesses. But part of the Asiatic domain of Mohammedanism is in danger, declares the *Ikdam*, a Constantinople journal of commanding influence and authority.



A HINT.

FIRST DIPLOMAT—"We can't get him out!"
2D, 3D, 4TH, ETC.—"We *can't* get him out!"
TURK—"A big loan, perhaps——."

—*Mucha* (Warsaw).

Eastern Anatolia, Arabia, Syria, and the coasts of Asia Minor are all eyed by the European Powers with covetous impatience. To quote the words of this organ:

"Putting aside all sentimentality and considering the question simply as true patriots, we must admit that in spite of their rivalry the Powers are determined to seize one day each its several portion of Turkey in Asia, and that they are ready to do this on the very first chance, but that they have not yet succeeded in meting out the several portions. Thus the Russians want eastern Anatolia, part of central Anatolia, and an outlet on the Mediterranean Sea at Alexandretta. The Germans dream of reaching out toward Mesopotamia with their Bagdad railroad and putting their hand on Adana and Palestine. The British covet Arabia; France wants Syria, and Italy seeks an opening on the coasts of Asia Minor."

THE AWAKENING.

BULGARIAN POODLE—"I certainly dreamed that sausage was between my teeth."

—*Kladderadatsch* (Berlin).

Turkey owes her present salvation in Asia to the mutual divisions and animosities of the Powers. It is, in fact, a case where thieves fall out and honest men get their rights. The various Governments that desire to grab the rich provinces of Asiatic Turkey can not agree as to the partition of the booty, we are told, and this is a safeguard to Turkey that she will be left for the present unmolested. The suspicions of this organ, however, indicate its fear of an early seizure of Turkey's Asiatic territory. And we read:

"But this partition is no easy matter. For the English will never consent to the Russians reaching the Mediterranean at Alexandretta; and the French and the Germans will not tolerate any dismemberment that seems to them to injure them by giving them less than their share. And so the Powers are agreed to-day not to touch Asiatic Turkey.

"But this sort of lease of life is contrary to the dignity of Ottomanism, and harmful both to its present and to its future. Turkey must, therefore, put all its pride in motion to escape from such a rivalry, and profit by it to wake up, rouse herself, and take a place by her own progress among the civilized nations, and so secure what rifles and cannon can never obtain for her, and escape from the disgrace of seeing herself reckoned among the future colonies of another State. What! Yes, we know it, and it is painful to us to repeat it.

"Asiatic Turkey is so vast, so varied, and so unexampled from every point of view that it is not enough to place it all under the same laws and the same administrative régime. This would make the question insoluble. As soon as we have assured a good measure of tranquillity, we must put reforms in operation there."

The strength of Turkey in Asia is of a twofold character. It is both religious and political. Mecca and Medina are of course centers of Turkish power under which religious and political authority are combined. But the very strongest tie that binds the Eastern peoples to Constantinople is that of faith in Allah and the Koran. It is recognized by the Turkish press that England in India, Russia in Persia, and Germany in Asiatic Turkey, with Bagdad as a central point, are menaces to the integrity of the Ottoman Empire. *The Orient* (Constantinople) plainly realizes the peril of the Turk in Asia. This paper knows that Islam has escaped like a bird out of the snare of the fowler in Europe, and, regarding Asia as comprehending a Moslem population of innumerable nationalities, advises the Turks to work together with the feeling that "United we stand, divided we fall."

A SOCIALIST WHO HATED VIOLENCE

AUGUST BEBEL, the great Socialist leader, leaves a not unworthy successor in Karl Liebknecht, who headed the agitation against the Krupp firm. But he left a greater legacy than this. He made Socialism into a solid and legitimate political party, fighting the cause of the proletariat and the labor classes in general in a way that reconciled every other party to its existence. Mr. Jaurès dwells on this point in a disparaging tone in his *Humanité* (Paris), but does not go so far as to agree with Professor Andler, of the Sorbonne, that under Bebel "German Social Democracy changed from blazing red to a pale pink, and its threats of bursting into acts of violence alarmed no one." The principal quality that went to make up Bebel's power in all German circles of political thought and theory was his patient self-restraint, founded on

THE GREAT AND THE SMALL.

The Conservative Berlin *Post* is the only organ that has assailed the memory of Bebel. —*Wahre Jacob* (Stuttgart).

patriotism and a wholesome horror of revolution and violence. This point is well put by Henry M. Hyndman, the able and eminent British Socialist, who writes as follows in *Justice* (London), an organ of Socialism:

"Consider what perfect discipline and ever-present self-restraint have been needed to hold back such forces as our party in Germany possesses from premature attack. Just think. Here are millions of men, all Social Democrats and all trained soldiers, waiting, waiting, waiting for 'The Day'! Such patience is magnificent, but it is also class war of the most formidable kind known to history. There will be no Commune of Paris disaster to commemorate in Germany. That I venture to predict with confidence. And that this is all so has been largely due to Bebel himself. Bebel was not a patient man. Marx once said to me: 'I have been impatient for so many years that I have learned to be patient now.' Bebel had passed through the same trying school. He was ever eager to go to the front; he longed for the hour of conflict; he smelled the battle from afar. But he would risk no defeat in order to gratify his own keen desire for action. He was content that the sons of his old pupils and comrades should tramp in solid masses over his grave to victory."

The petulant rage and violence which move the militant suffragists of England to seek for political power and what they claim to be their rights had no part in the attitude of Bebel and his closest followers, and, as Mr. Hyndman declares,

"None knew better than Bebel that revolt and rebellion are not social revolution—nay, that they may easily be, and often are, mere waves of reaction simulating an advance. The revolution for which German Social Democrats are preparing is a complete economic and ethical and social transformation from competition to cooperation, from domination to equality, from slavery to freedom. But this, infinitely the greatest triumph over himself and his surroundings that man ever achieved, can only be accomplished by a thorough and general and scientific comprehension of the causes which have brought society to the stage which it has reached, as well as of the inevitability of the great change that trained Socialists alone can handle to the advantage of all."

It is no wonder that in his own country, which breeds such men as Bismarck and Kaiser William, the character of Bebel is honored even by that section of the press that was opposed to his doctrines, and the Liberal *Vossische Zeitung* (Berlin), the organ of the steady bourgeoisie, says:

"Bebel was our adversary, but we must confess that this mortal enemy was an honest man. If we inquire into the secret of his success with the masses we shall find it in the fact that people believed he was an honest man."

"He was one of the most interesting of men," remarks the radical, but not Socialist, *Berliner Tageblatt*, "one of the most upright of spirits, one of the most gifted orators that the world has known." Bebel was opposed to Pan-Germanism and hated the dreams of expansion as a delusion. He always maintained that the greatest blunder Bismarck made was the annexation of Alsace-Lorraine, and he supported the protests of the Poles against Germanization. Yet the sentence of the Pan-Germanist *Taegliche Rundschau* (Berlin) on Bebel runs as follows:

"We have possibly been sometimes looked upon as Bebel's deadliest foes, but a figure such as his can not easily be effaced from the page of history which covers the last half century."

The Catholic party, as represented by the *Germania* (Berlin), seem to feel that Bebel has left his mantle to no one fit to wear it. As we read:

"No one exercised so great influence in popular politics as Bebel. No one who comes after can exercise an equal power. His death is a sore loss to his party in that they feel the want of his leadership, and intestine dissensions are likely to divide the party under the guidance of minds of second-rate caliber."

The leading Paris papers dwell with emphasis on the moderation of the dead Socialist chief, and in a sympathetic and lucid article the great *Journal des Débats* writes of a leader with whose political, social, and industrial ideals this organ of aristocratic and Conservative views could have little in common:

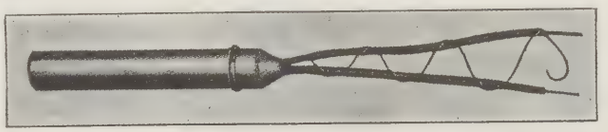
"The older he grew the more moderate he became. He opposed with might and main the general strike advocated by Karl Liebknecht and Rose Luxemburg. His ideas of the Monarchy and of the Army became gradually less uncompromising.

"What was Bebel's dearest wish was the democratization of German institutions. He was at the head of the movement which made for universal and equal suffrage in the election to the Prussian Diet. Germany, said Bebel, once a military and agricultural country, is on the way to become an industrial and commercial nation. New institutions should be furnished to this new nation. The Junkers, the squirearchy, should be stript of their monopoly of official posts, and the police régime of Prussia should cease to be all powerful. Justice should be equal for all. As for the Monarchy itself, Bebel had no fault to find with it. If William II. were contented with the prerogatives of a British sovereign he would find no more stanch supporter than August Bebel. We may remark among other things that Bebel had long ceased to oppose systematically the measures of the Government. At the prompting of their chief the Socialist party in the Reichstag on several occasions voted for such measures, and but for the Socialist vote the law granting a constitution to Alsace-Lorraine would never have been passed." —*Translations made for* THE LITERARY DIGEST.

SCIENCE AND INVENTION

FATAL PLAYTHINGS

ACCOUNTS OF CHILDREN killed or maimed as a result of playing with high explosives are getting too frequent in the papers. The odd but fascinating plaything found by the unsuspecting little one proves to be a dynamite cartridge or a blasting-cap full of fulminate, and the result is the loss of a hand or an eye, or even of a life. The danger of handling blasting-caps is especially great, as we are warned by Corliss Bulger, who contributes to *The Associated Sunday Magazines* an article entitled "Monkeying with the Buzz-saw"—a rather mild comparison, one would think. The following excerpts are from a reprint in *The Du Pont Magazine* (Wilmington, Del.):



NOT FOR BABIES—AN ELECTRIC FUSE.

"Modern powder-makers are lying awake nights thinking up ways of making dynamite safer and more insensitive. That is all very well; but, unfortunately, larger and stronger blasting-caps must be made to explode this dynamite, and more and more of them. Then some miner carries home a few caps in his overall pockets, his wife finds them when she goes through his pockets, and puts the caps on the kitchen shelf—and the first thing you know Willie or Heinie or Dominick or little Angelo has one and is making off with it, and pretty soon there is trouble in that household.

"There are lots of ways of getting crippled by exploding blasting-caps besides hitting them with a hammer and putting them in the fire. Extracting the contents with a pin distributes untold fingers; holding a lighted match under them or thrusting the flaming end into the cap gets immediate action. . . . Accidentally stepping on a cap will often spoil a perfectly good foot. Sparks, flame, heat, blows, friction—it's all the same to the cap to which they are applied.

"Boys often play in and around quarries on Sundays, and sometimes pick up stray caps and start to investigate them. It is the rarest thing that they ever do this without getting hurt. They perhaps know they are dangerous, and that a spark or a blow will explode them; but they do not realize how sensitive they are, how violent the explosion, or how the pieces of copper fly. Even the name is misleading in this respect. The word 'caps' suggests the paper caps used with toy pistols, and because the blasting-caps are called by this name it is natural to think that the two articles belong to the same family. They may; but they bear about the same resemblance to each other that a hungry, man-eating tiger does to the gentle pussy-cat.

"Over six hundred children have been hurt or perhaps crippled for life in the last five years from playing with blasting-caps. If this had happened at one time, what a howl would have gone up all over the world! But because the accidents are spread all over the country and happen at the rate of only about ten a month, nothing is done by the authorities. Indeed, nothing can be done except to educate the whole population to realize how dangerous these exceedingly useful things are when they are out of their proper place, and what a dreadful thing it is going through life crippled or blinded for want of a little care and knowledge.

"A blasting-cap is a copper shell about a quarter of an inch in diameter and an inch or two long, half full of fulminate of mercury. This fulminate is the most sensitive and about the most impulsive explosive in common use. Blasting-caps contain anywhere from 15 to 20 grains of it; primers for firearms cartridges usually contain not more than one grain. That's what the hammer or firing-pin of a gun or pistol hits to ignite the powder in the shell. A blasting-cap is meant to work the other way. The powder from the fuse ignites the fulminate in the blasting-cap, and it explodes with terrific force and detonates the dynamite. The explosion of the fulminate is so exceedingly quick that the flying particles of copper will imbed themselves in iron a foot away. They will blow a hole clean through a steel plate one-sixteenth of an inch thick. A box of caps will blow a beautiful square hole right through a two-inch oak panel. One cap will blow a child's hand off with the utmost certainty and dispatch. Lingg, one of the Chicago anarchists, committed suicide by biting a blasting-cap between his teeth.

"The point to be remembered is that when a blasting-cap goes off it does great damage locally. There is no escaping its effects. Among all the six hundred or more accidents reported from playing with blasting-caps, there are only two or three in which somebody was not hurt.

"Electric blasting-caps (fuses) are as strong as ordinary blasting-caps; but as the capsule or shell is sealed up with a sulfur plug through which the wires are carried down to the fulminate, not so many accidents occur in playing with them. They are generally dipt in dark-colored wax, and are not such attractive playthings as the bright copper blasting-caps; but 'they get there just the same.' Amateur electricians are earnestly advised to bury the electric cap a foot or two in the earth before trying to pass electric currents through the wires, and they had better not do it then. Don't open it up to see what's in it! Explosive manufacturers are not given to imparting trade secrets promiscuously; but they will gladly tell what's in the caps and how they are made rather than have you blow your hands off trying to find out for yourself.

"Don't carry caps around in your pockets! Don't take them home with you! Don't leave them where children can get at them! Don't monkey with them!"

WHY IT IS BAD FOR FINGERS: HOW IT IS MADE.

A, corrugation in copper shell, to hold in filling material; *B*, chamber containing explosive; *C*, insulated copper wires entering cap; *D*, bare wires penetrating charge; *E*, platinum wire connecting copper wires, heated by electric current; *F*, composition plug holding fuse wires in place; *G*, filling material. "Don't monkey with it!"

REVOLUTION AND THE HAIR TRADE

ONLY ONE COUNTRY exists on earth where there could conceivably be a connection between a change of government and the trade in human hair. That country is China. From a report on Chinese exports for the past year, published in *Daily Consular and Trade Reports* (Washington), we learn that the exportation of human hair has been greatly affected by the wholesale removal of cues consequent on the revolution. The hair crop has been enormously increased, with the usual consquences—a glut of the market and a fall in prices, with great increase in exportation. We read:

"The item of hair given in the table of exports comprizes only human hair, which has become an important product. There was a noticeable increase in the exportation of human hair in 1912 over that of 1911, altho a comparison of last year's figures with the average for the past five years shows a discrepancy much smaller than might have been expected, considering the peculiar circumstances of the past two years. A most vigorous cue-cutting campaign was waged in connection with the revolution. Those who were unwilling to discard the so-called 'badge of Manchu servitude' were deprived of it by force. This naturally caused the supply of human hair to become abnormal and prices accordingly fell, and as the demand at home was brisk the exports were greatly increased. Human-hair dealers in Szechwan, however, do not fare as well as the

dealers in other parts of China, as the hair from the province is much coarser than the human hair from Shanghai and other places. The native merchants also failed to sort the hair as carefully as they should have, and the different lengths became mixed. As a result of this the hair from Szechwan brought prices somewhat below the average. Some of the merchants also suffered in another way. They kept large quantities of the hair, waiting for a rise in price, but prices fell toward the end of the year as the demand at home diminished, and at the beginning of 1913 they had on hand a considerable amount of unsold stock. While there is a general impression that most Chinese have discarded the cue, this is far from being the case. Altho soldiers are posted at different city gates for the purpose of removing the cues of all persons who pass through, the country people for the most part still retain the cue, and the supply of human hair will doubtless be sufficient for many years to come."

INSECTS THAT CHEW TOBACCO

IS AN INSECT that uses tobacco as its daily food to be characterized as a friend or an enemy of the weed? *Cosmos* (Paris, August 7) heads an account of some of these creatures "Enemies of the Cigar," but if this is correct, man should surely be stigmatized as an enemy of mince pie, green corn, and other things that he delights to consume. These creatures love cigars dearly; they are the rivals, and possibly the enemies, of the human smokers whom they anticipate, altho antitobacconists would probably name them man's best friends on this account. There can be very little doubt of the feelings entertained about them by the dealers, for one species, the so-called "cigaret beetle," abundant in Cuba and the Philippines, ruined $10,000 worth of cigars in the city of Manila alone between 1909 and 1911. The facts in the article noted above were collected by Charles R. Jones for *The Philippine Journal of Science*. After describing the cigaret beetle and its larva, in which stage chiefly it is addicted to the tobacco habit, Mr. Jones tells how the grubs may be killed in tobacco and how it may be treated to prevent reinfection. Says *Cosmos:*

"For the destruction of the larvæ or the insects, Mr. Jones has tested with success fumigation with carbon disulfid or with prussic acid in a tight compartment; destruction was always complete after 24 to 36 hours. The aroma, the taste, and the combustible qualities of the tobacco are not modified by this treatment, and analysis has shown that the tobacco does not retain the compounds that have been employed for the fumigation, in particular the prussic acid. Another method is the use of steam in a drum, necessitating a final drying, or refrigeration, which must last four days.

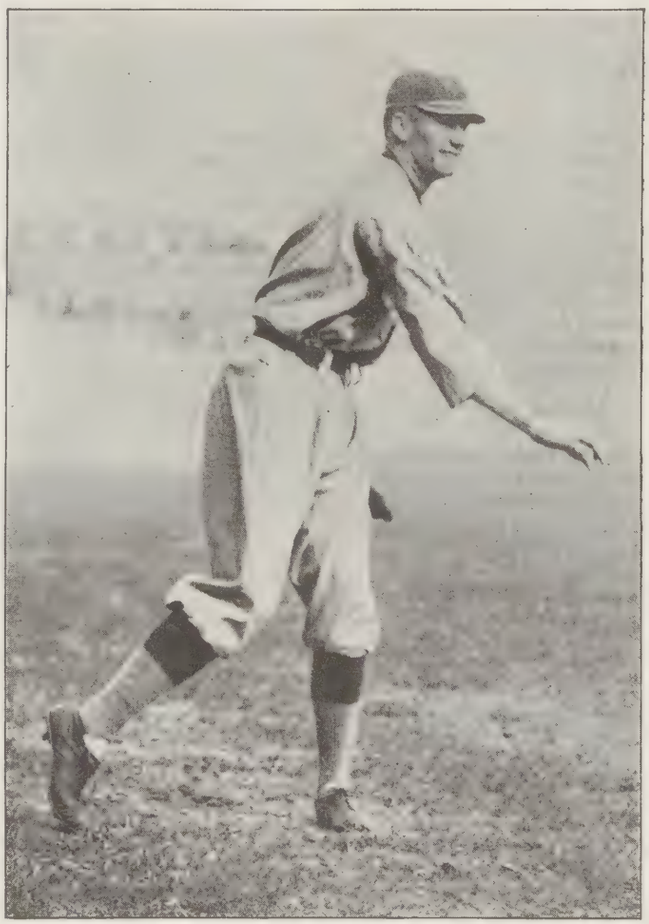
"To avoid reinfestation of the tobacco, it is necessary to protect the workrooms or packing-rooms against the entrance of the insects."—*Translation made for* THE LITERARY DIGEST.

THE SPEED OF A PITCHED BASEBALL

AN ELECTRICAL APPARATUS, constructed by a company of manufacturers in Bridgeport, Conn., to measure the velocity of rifle-bullets, was successfully used the other day, according to *The Journal-Courier* (New Haven, September 23) to obtain the speed of a baseball pitched by Walter Johnson and Nap Rucker, two professional high-speed pitchers. The test originated in a dispute regarding the speed of the two players, and the recording apparatus proved Johnson to be the swifter, his ball traveling for five yards at a velocity of 122 feet a second—about one-sixteenth the speed of a bullet from a high-power rifle. The way in which the apparatus was used is thus described in the New Haven paper:

"The two took turns at throwing the ball against the steel plate of the electrical recording machine. Nap was the first to take a shot at the plate. The ball left his hand with terrific force and bounded back like a flash. Then Johnson let one fly. The ball failed to hit the plate, but caromed off the corner of the wooden wall with a crash. By this time things were in readiness for the test.

"The pitchers had to fire the ball through a frame of wood about two feet square. Running from top to bottom were ten fine copper wires. These wires are first broken and record the time the ball leaves the wooden frame. Five yards away is a steel plate. This records the time the ball lands.



WALTER JOHNSON IN ACTION.

In a test he threw a ball 122 feet a second.

"Johnson may have good control on a ball-field, but the thin wires proved a problem to him at first. He had to throw the ball five times before he could break one of the wires. His first throw was calculated at 120 feet per second.

"Nap thought it was a cinch to break the wires, but he found out differently after his first try. The trouble was that he let go the ball before completing a full swing. This caused the sphere to go through the wooden frame about three inches from the outside wire. Nap took his second chance, but failed. On his third attempt he smashed two wires, and the tester recorded 106 feet per second.

"Johnson shifted his position for his second try and thought his gage was just right for the wires. But Walter missed again, and had to try three times before he was able to record his throw. This throw was one foot a second faster than his first.

"Rucker then had his second test, and his speed was also faster. The record for Nap's second attempt was 109 feet per second. Then Rucker tried a curve ball, but this proved too slow to record.

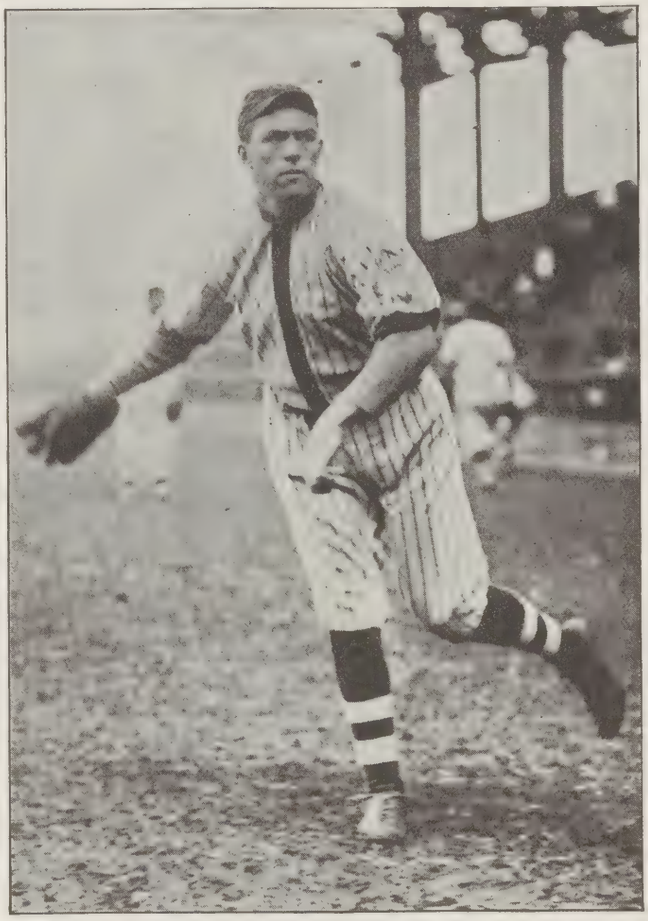
"In his last try Johnson made his best record, 122 feet a second. Rucker also had another chance and he increased his speed by four feet, the ball traveling at the rate of 113 feet a second.

"After the test Rucker said that Johnson had not thrown at his full speed, and that if he had, he could have thrown over 150 feet a second.

"The speed for the new Government .45 caliber automatic revolver is 800 feet per second. A high-power hunting-rifle, .35 caliber, autoloading, has a velocity of 2,000 feet per second."

SHOULD WE KILL WHEN WE CAN NOT CURE?

TO THIS QUESTION does the problem of euthanasia ultimately reduce, we are assured by an editorial writer in *American Medicine* (New York, August). Shall we put the incurable mercifully to rest? Who are "the incurable"? Can any man born of woman point them out definitely and conclusively? The writer of this editorial thinks not. Hence to administer euthanasia to a sufferer is always to run the risk of extinguishing a life that might have been saved. Condemnation of euthanasia, we are told, is necessary pretty often "because this criminal suggestion is made every little while by some rattle-brained writer who imagines that physicians should kill all they think they can not cure." He goes on:



NAP RUCKER WATCHING IT GO.

His speed was 113 feet a second.

"In the first place, the basic purpose of the medical profession is to prolong life, not to end it. We never can cure any one, that is, we can not put a sick man back to the exact condition he was in prior to his illness. Every sickness disturbs the delicate balance of functions permanently and reduces ability to resist the adversities of life. Our duty is to try to make him resist better and longer. Nor can we ever tell how long any one will live. Some cases which we confidently expect to live many years will suddenly collapse, and the most desperate, apparently moribund, cases may react and outlive those who would have administered euthanasia were it legal. The basic absurdity in the proposition is the assumption that any sick man ever believes that life is not worth the living. In a temporary delirium, one may pray for death and beg bystanders to kill him, but we must look on those statements as we do the suicidal mania of the insane. Life is always worth living, and tho some of us think we would prefer death to living as the submerged tenth, yet if adversity pushes us down with them, we still cling to life desperately. The plea that the physical suffering of the incurable is a reason for ending a life that might soon end itself is made only by those who do not know that when necessary the physician always relieves such pain, tho as a matter of fact, the end of life on earth is generally as painless and unconscious as its beginning, and the nearer we approach the end the less we dread it. The very old may long for the end, but will never hasten it. The whole proposition to administer euthanasia is, therefore, without a single justification, but emanates from hypersensitive souls who imagine agonies which never exist. Murders merely shorten life, and euthanasia is, therefore, but one form of murder. All these facts are so well known and have been published so often it is amazing that any one could seriously advocate the horrible suggestion. Perhaps we might emphasize the absurdity of it by mentioning the fact that it would never be possible for a jury of physicians to be positive that an agonizing early death is inevitable except in desperate injuries where the shock itself causes euthanasia. We trust there will be no further approvals of the proposition."

LUMINOUS BIRDS

STORIES OF BIRDS that glow or shine in the night are of great antiquity, and many of them doubtless belong to the realm of fancy or superstition. Pliny, the Roman naturalist, describes birds of this sort as existing in the Hercynian forest, and at various times throughout the Middle Ages similar tales appear. In 1555 Conrad Gessner published a book in Latin on luminous animals and plants—an odd mixture of fact and fiction. It now appears certain, however, that some birds have, at certain times, the property of phosphorescence, probably due, as is believed by naturalists, to the presence of luminous bacteria on their feathers. How these bacteria are picked up is another question, which seems not to have been satisfactorily answered. We quote from an article contributed to *Knowledge* (London, September) by Count L. de Sibour. Says this writer:

"That birds having the quality of luminosity have long existed seems a fact beyond dispute. Especially true is this in England. In 1907 Sir Digby Piggott called the attention of ornithologists to the appearance of luminous birds in Cambridge, and these unusual members of the feathered family had already been noticed by others in the same county. . . .

"It seems that as early as 1866, in the same county, Mr. J. A. Harvie-Brown had mentioned 'moving lights' frequently seen at night. But no special attention had been paid to these reports, as they were believed to have originated in the credulous minds of country folk.

"The more frequent apparitions in 1907 at last aroused the attention of naturalists, especially in France, where similar cases had been observed in the Vosges and in the Pyrenees.

"According to Sir Digby Piggott, a couple of luminous birds were seen near Twiford, Norfolk, in February, 1907, by a gamekeeper, who, having killed one, identified it as a common barn-owl (*Strix flammea*). In October, 1907, Mr. B. J. Purdy and Mr. Spencer saw another, which was seen again on the 19th and 22d of December. On the first occasion it seemed to have attained the maximum of luminosity, as the branches of the tree upon which it had perched were visible in the pale yellow glow. This light did not frighten the mice; for the bird was seen to drop upon them several times.

"The power of the light was that of a bicycle lamp seen three or four hundred yards off, and its strength diminished considerably when the bird's flight was in a direction away from the observer. This pointed to the inference that the luminosity was confined to the breast. . . . . .

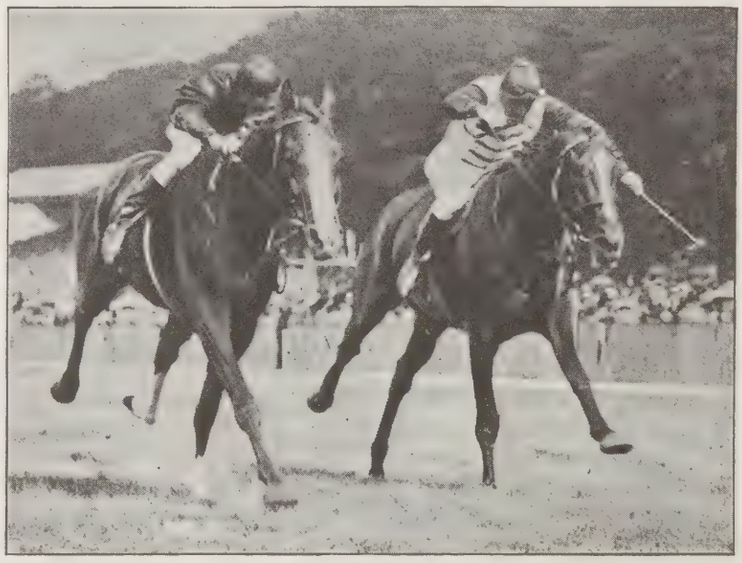
"The glow on the breast of the barn-owl is undoubtedly due to phosphorescence, and the molting of the feathers explains its sudden extinction.

"Two theories were given as to the origin of this unusual luminosity.

"Mr. Gurney, who had the opportunity of observing several specimens of these birds, thought it probable that the owls had been in contact with phosphorescent wood, and that phosphores-

cent bacteria had attached themselves to the feathers. This opinion at first was generally accepted, especially in Norfolk, where many birds had been seen, and was apparently confirmed when Lord Lindley announced that on his property there was a beech-tree showing a patch of phosphorescence eight inches square. It was therefore surmised that the birds had inhabited holes infested by this bacterium. The other theory was that dampness and uncleanliness of the covering of the breast had favored a sudden growth of luminous fungi peculiar to feathers. This explanation appears to have been more plausible; for in the contact theory it would seem that the wings and head, rather than the breast, would be likely to touch the sides of the hole. Yet these parts produced little or no light. Again, it would necessitate the bird being a tree-hole dweller, whereas similar cases have been observed on Canadian blue herons, for which this kind of life is impossible."

The phenomenon is not confined strictly to wild birds, we are told. Cases are also found among domestic pigeons. The fact that the light proceeds from the breast seems to be because the feathers are finer and thicker on that part of the body than on any other, except the neck. As the bird can not thoroughly clean it, it will retain germs and dust gathered in flight. The peculiar increase of light during flight is probably due to a chemical action of the air. It is well known that agitation of a medium containing phosphorescent particles intensifies their luminosity. To quote again:



NOT A CASE OF SUDDEN PARALYSIS.

Merely a mistaken attempt to picture motion at the wrong moment.

"The balance of argument is thus in favor of the fungi theory, and the latest observations of Señor Elorza in Spain are a confirmation of it. On several nights he saw a couple of luminous birds. Upon inquiry he was informed that they had been noticed for several years, that they lived in cliffs nearby, and that they disappeared in the month of May. The description given by him did not answer to that of the barn-owl, and it is to be supposed that we are in presence of another bird, one of nocturnal habits, offering a similar case of phosphorescence.

"It might be of interest to look back to the works of the earlier naturalists and note that several observers were aware of the existence of luminous birds. . . . In 1641, at Montpelier, in France, during a short period of famine, many fowls were brought to market. Several of these birds attracted wide attention by their unmistakable phosphorescence, and Henri de Bourbon, Prince de Condé, was called to admire them. A cock was killed 'who shone on all parts of his body with a remarkably strong light.' . . . The same year, at Montebello, according to the author, there was a hen which 'shone like a ball of white fire.' And Thomas Bartholin, comparing these two birds, ingenuously adds: 'It is a pity that the cock did not meet the hen; for we might then have obtained a breed of incandescent fowls.'"

ACTIVITY PICTURED THROUGH REST

THAT THE PROPER WAY to represent action of any kind pictorially is to depict the moving thing, not during motion, but at a point of rest, is asserted by H. L. Hollingsworth, of Columbia University, in *The Journal of Philosophy, Psychology, and Scientific Method* (New York, September 11). The reason for this, he says, is that the eye fixes easily on these resting stages and identifies the action with them, whereas the actual motions are too quick for it. Snap shots of postures assumed by a horse when trotting, for instance, appear ludicrous unless they are taken at a stage of comparative rest that the eye recognizes easily. Mr. Hollingsworth has condensed his observations in this regard into what he calls a "Law of the Resting-point." He says:

"An intrinsically interesting perception is that of a person, animal, machine, etc., in action, in the process of doing something. Much of the success of show-window demonstrations, street-vending, etc., depends on this intrinsic interest. The New York *Herald* has no better advertisement than the sight of its presses through the windows on Broadway. A barber stropping his razor, a mason using his trowel, a lather slapping in the nails, a gang of men unloading a piano, small boys pestering a pedler—anywhere, even in politics and the White House, an individual in action attracts attention.

"Similarly, pictures, sketches, photographs, or other representations of things in action are strongly attractive. But many attempts to portray or represent activity are flatly unsuccessful. The average newspaper photographer is the personification of such failure. The attitude presented is very likely to suggest inaction or pose rather than motion and lively activity. . . . . .

"The amateur usually makes the mistake of supposing that to suggest motion—let us say, the motion of a horse trotting—the foot of the animal should be represented in the middle of its course. Nothing is further from the truth. To suggest action effectively, the foot must be caught at one of the two resting-points—either at the initial point, before the beginning of the movement, or at the final point, midway between extension and return. To show it in the middle of its course suggests only pose, and stilted pose at that.

"Similarly, walking is best represented, not by a man with one foot in the air, but by one with both feet on the ground, the one having just completed its swing, the other just about to begin. A man striking a blow with his fist should be represented with the arm drawn back ready to strike or with the arm extended, the blow having been already launched, but never with it in a half-way position. It was thought that the introduction of moving pictures and cinematograph photography would be of great service to the painter and sculptor in catching their living subjects in the process of quick action and in thus enabling the preservation of these attitudes for reproduction with brush and chisel. But the expectation was all a false hope. No attitude represented action so vigorously as the resting-points with which we were already familiar.

"The only apparent exception to this rule is not a genuine one. It is to be found in some of the pictures called up in imagination when one listens to verbal descriptions of actions. Thus in the representations of 'an athlete hurdling a fence,' the actor may sometimes be thought of as in the middle of the leap. But this point will be seen to be the moment of suspension at the height of the leap, when the athlete is poised just above the fence. It is neither the initial nor the final point of rest, but a resting-point nevertheless.

"The explanation is simple. The perception of activity is a typical illustration of the process of interpreting a situation in the light of earlier experiences, associations, and memories. The eye can not see while it is itself in motion. Vision is achieved at points of rest, at least the clearest vision is. Because of difficulties of accommodation, adjustment, etc., our clear visions of moving objects come at the moments in which the objects are temporarily at rest. Only when objects are inactive or in attitudes of pose do we ordinarily get clear visual impressions of them in the middle of a conceivable course of movement."

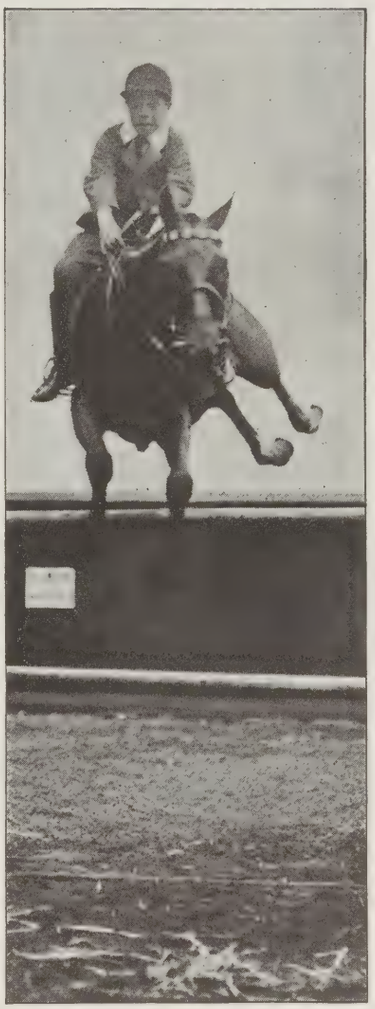
LIGHT AND SIGHT

WHAT IS THE BEST system of lighting, and what the best intensity of illumination, for good vision? Recent experiments bring out the interesting fact that the answer to this question depends on the purpose for which the eye is to be used. For close, sharp vision, where small detail must be recognized, very bright light is necessary, but this soon brings fatigue. Where it is desired to use the eye a long time, the brightness should be low—much lower than is usually considered necessary. Apparently a light bright enough for close work but not so bright as to fatigue the eye is as impossible a desideratum as the old lady's demand for "a very small Bible in very large type." The experiments just mentioned are those of Prof. C. E. Ferree, made on behalf of a committee of the American Medical Association appointed in 1911 to study this subject. The results so far obtained were described by him before the International Congress on School Hygiene held recently in Buffalo, N. Y. Our quotations are from a leading editorial in *The Electrical Review* (Chicago, September 6). Says this paper·

"Tests . . . have been carried out by Dr. Ferree under daylight and under three particular installations of artificial lighting, one of which is classed as direct, one as indirect, and one as semiindirect. The first tests were simply to compare the four conditions of lighting, and the results given are for a single intensity of illumination, which was made the same for each case—namely, two foot-candles. It has been found that at the end of a period of three hours, during which the eye has been used for reading under the specified lighting arrangements, the ability for sustained vision, or what is called by the author the efficiency of the eye, is little impaired in the case of daylight and of indirect illumination, whereas there is a considerable falling off for the other two artificial installations.

"In a second set of observations the intensity of illumination was varied under each of these systems. Here, again, the results were most favorable for daylight and almost as favorable with the indirect installation. With the installation which is designated as semiindirect it was found that the efficiency of the eye is well sustained only for a very small range of intensities; for either higher or lower illumination the decrease in efficiency at the end of the three-hour period is very marked. For the installations of direct lighting used, the efficiency was found to be low for all intensities, altho here again a maximum was found for a particular value of the intensity. The particular values of the intensity which were found to give the best results in ability for sustained vision are much below the values for which visual acuity is greatest, and are lower than are generally regarded as desirable for any close work. For the installations used by the author it is, therefore, to be concluded that the intensities necessary for close work would not be conducive to sustained vision.

"The results already obtained by Dr. Ferree are of great importance, and those interested in illumination will await with eagerness the extension of the test conditions to a large number of installations and to a large number of observers. The same or a similar criterion should be used by others having the necessary laboratory facilities, in carrying out experiments along similar and yet varied lines, since a very large amount of time will be necessary for a single observer to cover the wide field which is immediately opened up, and to multiply observations to an extent that will leave no room for doubt as to the reliability and universality of the results obtained."



THE PAUSE

At the top of the jump, when the best picture of motion is to be had.

X-RAYS AND RADIUM

THAT RADIUM and other radioactive substances give off Röntgen rays has been believed by physicists for some time, altho without strict proof. The type of radiation known as "gamma rays," emitted by these bodies, resembles the Röntgen radiation very closely, and their identity with that radiation is asserted in most text-books. Until recently, however, the exact nature of the *x*-ray itself was in dispute and it was not believed to be analogous to light, since no trace could be found of "interference," by which light, in common with all other wave-phenomena, is characterized. Very recently, as noted in these columns, the interference of *x*-rays has been observed and photographed, and it has thereby been proved that the *x*-ray is simply light of exceedingly small wave-length—smaller than the size of a molecule. If among the rays given off by radium there are really *x*-rays, these should therefore exhibit the same phenomena. Owing to the minute quantities of radium available it seemed at first impossible to put this to the test, but it has finally been done with success, as described in the *Revue Scientifique* (Paris, August 16). Says the writer, alluding at the outset to the identification of the *x*-rays with ultra-violet light:

"This important discovery suggested to Mr. Norman Shaw the idea of ascertaining whether radium rays manifested the same phenomena as *x*-rays. The difficulty of this kind of experiment, already notable in the case of the Röntgen rays, is here increased because of the fact that the source of the rays is necessarily of feeble intensity and that the length of the exposures, added to the effect of secondary radiations, risks fogging the plate.

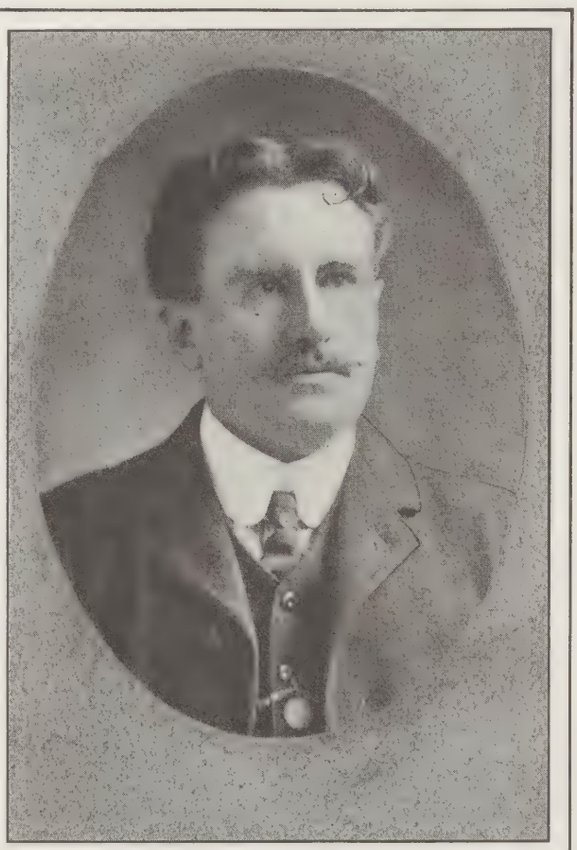
"Despite these difficulties, Mr. Shaw succeeded in obtaining, by exposures of one month, the photographic image of a bundle of gamma rays undergoing reflection, at grazing incidence, from crystalline plates of mica. In these conditions, upon the very clear image of the undeviated rays, are superposed regularly spaced patches corresponding to partial reflection. . . . The original negatives leave no doubt whatever regarding the formation of these reflected images.

"We may conclude from this, with Mr. Norman Shaw, the identity of nature between the gamma rays and the *x*-rays. Both are perturbations of periodic type, their wave-length being very much smaller than that of luminous perturbations. Furthermore, a comparative examination of the images of reflection given under the same conditions by gamma rays and *x*-rays enables us to evaluate approximately the ratio of their wave-lengths. It is found, conformably to the forecast suggested by the electrometric study of the rays, that the gamma rays are 'harder' than the Röntgen rays. . . . But the difference is not so great as might be supposed. The penetrating rays of radium have a wave-length probably not less than one-tenth, or at any rate one-hundredth, of that of the Röntgen rays. If we recollect that the latter itself is much smaller than molecular dimensions we see what extreme smallness we must assign, according to Mr. Shaw, to the wave-length of the gamma rays."—*Translation made for* THE LITERARY DIGEST.

LETTERS AND ART

O. HENRY IN NEW YORK

WHEN *Ainslee's Magazine* wished to herald "O. Henry" in their yearly prospectus, they wrote the author for something to fill out the "O" with. "With a courteous flourish of appreciation at the honor we were offering him in making him known to the world, he sent us 'Olivier,'" says Mr. Richard Duffy, who was then editor of that magazine. Not knowing his real name at that time, and anxious to introduce him to New York without any abbreviations, they did not suspect the whimsicality of his reply. It was one of his dominant traits, as Mr. Duffy shows us in his article in *The Bookman* (October) dealing with his New York life. It will be read with interest by the many admirers of O. Henry, some of whom may be curious as to the personality of William Sidney Porter. "His coming to New York with the resolution to 'write for bread,' as he said once in a mood of acrid humor, was . . . dramatic as is a whisper compared to a subdued tumult of voices":



O. HENRY AS HE FIRST CAME TO NEW YORK.

"To meet him for the first time," says Richard Duffy, "you felt his most notable quality to be reticence."

"As happens in these matters, whatever mind-picture Gilman Hall or I had formed of him from his letters, his handwriting, his stories, vanished before the impression of the actual man. He wore a dark suit of clothes, I recall, and a four-in-hand tie of bright color. He carried a black derby, high-crowned, and walked with a springy, noiseless step. To meet him for the first time you felt his most notable quality to be reticence, not a reticence of social timidity, but a reticence of deliberateness. If you also were observing, you would soon understand that his reticence proceeded from the fact that civilly yet masterfully he was taking in every item of the 'you' being presented to him to the accompaniment of convention's phrases and ideas, together with the 'you' behind this presentation. It was because he was able thus to assemble and sift all the multifarious elements of a personality with sleight-of-hand swiftness that you find him characterizing a person or a neighborhood in a sentence or two; and once I heard him characterize a list of editors he knew each in a phrase.

"On his first afternoon in New York we took him on our usual walk up-town from Duane Street to about Madison Square. That was a long walk for O. Henry, as any who knew him may witness. Another long one was when he walked about a mile over a fairly high hill with me on zigzag path through autumn woods. I showed him plains below us and hills stretching away so far and blue they looked like the illimitable sea from the deck of an ocean liner. But it was not until we approached the station from which we were to take the train back to New York that he showed the least sign of animation. 'What's the matter, Bill?' I asked. 'I thought you'd like to see some real country.' His answer was: 'Kunn'l, how kin you expeck me to appreciate the glories of nature when you walk me over a mounting like that an' I got new shoes on?' Then he stood on one foot and on the other, caressing each aching member for a second or two, and smiled with bashful knowingness so like him.

"It was one of his whimsical amusements, I must say here, to speak in a kind of country style of English, as tho the English language were an instrument he handled with hesitant unfamiliarity. Thus it happened that a woman who had written to him about his stories and asked if her 'lady friend' and she might meet him, informed him afterward: 'You mortified me nearly to death, you talked so ungrammatical!'

"To return to his first day in New York, on which for the only time he evinced a shade of astonishment or bewilderment, altho he always humorously profest his sense of insecurity as an outlander in the big town, Gilman Hall and I tried to interest him in noticing Morgan Robertson, who was passing near the corner of Sixth Avenue and Twenty-third Street princely drest in a frock coat and top hat. It was our intention to have him meet fellow craftsmen from the beginning. In his own way he came to know Morgan Robertson later, but that day he had eyes only for the elevated railroad, and, gazing at it, inquired of us, so that we doubted his seriousness, why people were not afraid to ride on such trains, as they might so easily fall into the street. Years later a train did fall partly off the track, it will be recalled, through a confusion of signals at the curve at Fifty-third Street and Ninth Avenue. He was not surprized, he told me, which made me remember that in our many roamings about town he would always ride in a surface-car or the subway, no matter what distance he had to go."

His new friends "never knew just where he stopt the first night in New York, beyond his statement that it was at a hotel not far from the ferry in a neighborhood of so much noise that he had not been able to sleep." It was thus that New York offered its first shelter to Robert Louis Stevenson, and the hotel in West Street was long a literary landmark. Mr. Duffy resumes:

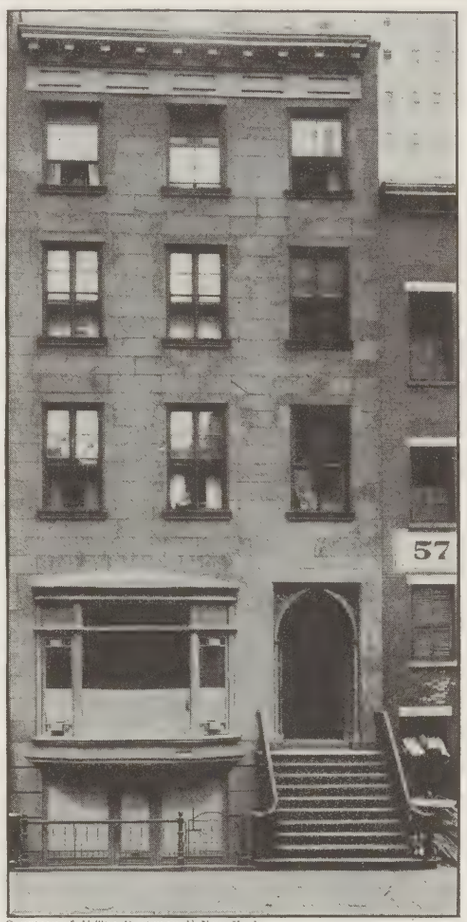
"I suppose we were voluminous with suggestions as to where he might care to live, because we felt we had some knowledge of the subject of board and lodging, and because he was the kind of man you'd give your best hat to on short acquaintance, if he needed a hat,—but also he was the kind of man who would get a hat for himself. Within about twenty-four hours he called at the office again to say that he had taken a large room in a French table-d'hôte hotel in Twenty-fourth Street, between Broadway and Sixth Avenue. Moreover, he brought us a story. In those days he was very prolific. He wrote not only stories, but occasional skits and light verse. In a single number of *Ainslee's*, as I remember, we had three short stories of his, one of which was signed 'O. Henry' and the other two with pseudonyms. Of the latter, 'While the Auto Waits' was picked out by several newspapers outside New York as an unusually clever short story. But as O. Henry naturally he appeared most fre-

quently, as frequently as monthly publication allows, for, to my best recollection, of the many stories we saw of his there were only three about which we said to him we would rather have another instead. Of these one is a variation on the legend of the Wandering Jew, the main personage of which is called *Mike O'Bader*. The second is laid in New Orleans, and is the fantasy of a man under the influence of absinthe, abounding in rhetorical color as gorgeous almost as De Quincey, but wholly obscured or outblazoned as to story by its color. The third pictured a scion of Louisiana's seigneur days, living 'remote, unfriended, and alone' in a country mansion of faded splendor; and this story was published in a magazine that I believe is no longer in print. The Wandering Jew story may be read in his collected works, but I don't know what has become of that weird New Orleans fantasy in which there was something of Edgar Allan Poe and of Lafcadio Hearn.

"I make no pretense at being a critic of O. Henry's work, but offer these data of literary biography as suggestive of the way the man found himself once he got to New York, and having his ship, as it were, cast from her moorings with a bound tiller on the crisscrossed, charted sea of fiction. Along about this time hove the *Brandur Magazine*, with Major Smith, of the Associated Press, who wanted O. Henry to write stories about the Southwest and was willing to pay five cents per word, the price he advertised he would pay for any short story in his view acceptable. As I heard at the time from general report, the *Brandur Magazine* was discontinued because Major Smith found it to be too great a burden in connection with his other business interests. O. Henry sold him several stories, and what is more, won the immediate personal interest of Major Smith, as he did with all his publishers. He sold stories to other magazines, and, as he told me, there came a day when he needed greatly a check of some months' promise from one of these magazines. Mellifluously, he narrated, the editor answered his request with the statement that he had instructed the treasurer to send the check, but apparently the treasurer had not sent it. Post-haste wrote O. Henry to the editor: 'Dear Mr.——: I should advise you to discharge that treasurer and engage one who will obey orders.'

"Still he lived in West Twenty-fourth Street, altho the place had no particular fascination for him. We used to see him every other day or so, at luncheon, at dinner, or in the evening. Various magazine editors began to look up O. Henry, which was a job somewhat akin to tracing a lost person. While his work was rapidly coming under general notice, he made no effort to push himself into general acquaintance; and all who knew him when he was actually somewhat of a celebrity should be able to say that it was about as easy to induce him to 'go anywhere' to meet somebody as it is to have a child take medicine. He was persuaded once to be the guest of a member of the Periodical Publishers' Association on a sail up the Hudson; but when the boat made a stop at Poughkeepsie, O. Henry slipt ashore and took the first train back to New York. Yet he was not unsociable, but a man that liked a few friends round him and who dreaded and avoided a so-called 'party' as he did a crowd in the subway."

Literary pilgrims may still see the house in Irving Place where O. Henry lived later. It is one of these old-fashioned dwellings that seem to presage destruction in a city where even modern structures stand in daily dread of demolition:



Courtesy of "The Bookman," New York.

WHERE O. HENRY WATCHED THE PASSING WORLD.

The large window of this house in Irving Place—"not far from old Wash. Irving's house," in his own phrase—was his watch-tower for human types.

"I follow his movings with his trunks, his bags, his books, a few, but books he read, and his pictures, likewise a few, that were original drawings presented to him, or some familiar printed picture that had caught his fancy, because in his movings you trace his life in New York. His next abiding-place was at 55 Irving Place, as he has said in a letter, 'a few doors from old Wash. Irving's house.' Here he had almost the entire parlor floor with a window large as a store front, opening only at the sides in long panels. At either one of these panels he would sit for hours watching the world go by along the street, not gazing idly, but noting, with penetrating eyes, men and women, making guesses at what they did for a living, and what fun they got out of it when they had earned it."

THE NEWSPAPER OF TO-MORROW

WHO WOULD LIKE his newspaper "put in" like gas or the telephone? "Laid on" is the expression of our English cousin, and since the suggestion comes from him, his phrase gains right of way. The editor of the London *Daily Chronicle*, Mr. Robert Donald, gave to the Conference of Journalists, assembled at York, England, his ideas of the newspaper of the future, and this proposition figured most prominently in his prophetic vision. Mr. Donald, tho a Scotsman, has seen newspaper service in New York, and his paper is often spoken of as being more American in type than any other London daily. His idea is that the newspaper of the future "will be handier in form, that its distribution will be far more perfect, and that its circulation will cover larger areas." In the London *Standard* we get a summary with comment of other features that he foresees:

"Aeroplanes will be used for long journeys, and papers will be carried by electric trains and motor-planes running on special tracks. There will be no distinction of morning and evening newspapers; editions will come out almost every hour of the day and night. News will be collected by wireless telephone, each reporter carrying a portable instrument in his pocket. But all this does not represent the ultimate stage of development. People may eventually become too lazy to read at all, or at least to read a formal newspaper. In that case news may be laid on to their houses like gas or water. The daily paper will go on printing itself in column form, like the tape-machines in a club lobby, while those who prefer it may have a talking-machine which proclaims the 'latest intelligence' to them while they are lounging in the garden or taking their ease in the smoking-room.

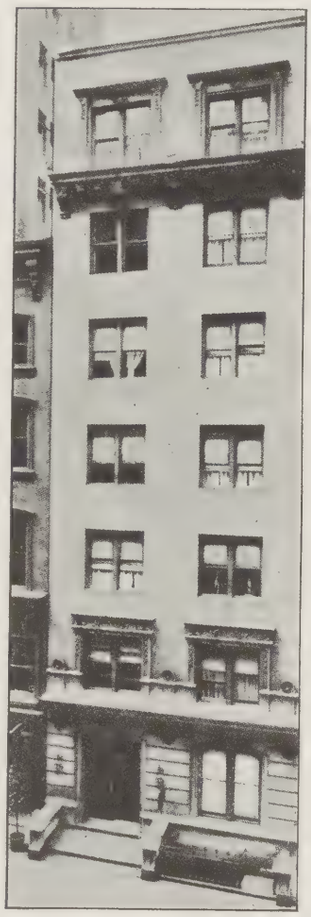
"All this may very well come to pass in the time of people yet living. Stranger changes have happened in the last twenty or thirty years. Yet we imagine that the older generation of newspaper readers would not take kindly to a column-printing or phonographic journal. It has not the friendliness of the printed sheet, and it also lacks the mysterious importance of type. A 'talked' newspaper, for example, would be dreadfully monotonous, unless the voices were properly diversified. The leading articles, of course, might be declaimed in gravely responsible tones; the sporting news in a jaunty, slangy style; the money article in staid business accents; and the fashions and society gossip in a brisk feminine chatter. But it is difficult to talk headlines, or to convey vocally to the reader the tremendously

significant effect of large type and wide spacing. High salaries would have to be paid for great elocutionary ability, or the spoken newspaper would be a very dull thing.

"And what about letters to the editor? What modest man would care to write to the *Daily Phonogram* his views on strap-hanging on the District Railway, or the Holiday Girl, if in two hours' time his contribution were liable to be roared back at him through the talking-machine in the presence of his family and the servants? And yet there must always be letters to the editor, for writing to newspapers is no accidental weakness, but a deep-seated human instinct. Mr. Donald's phonograph journal may arrive to fulfil certain purposes, but we feel confident that there will always be a large body of the public who will retain their love for the comfortable, old-fashioned newspaper which has accommodated itself lovingly to all the little habits and wants of civilized man."

BRAZIL'S GROWING LITERATURE

THE NEAR FUTURE may show to the world that Portugal has not only an absentee king, but an absentee literature. The center of its population has long since shifted to Brazil, where the language is spoken by twenty-five millions as against the six millions in the mother country. What is more natural then, points out a distinguished member of the Academy of Brazil, Mr. J. de Madiera y Albuquerque, than that the center of Portuguese literature should shift thither also. The future holds golden promises for Brazil's literary development, prophesies this patriotic Brazilian in *La Revue* (Paris), but the significant feature of its present output is the French influence. They have not yet come to know themselves as Brazilians. The people of this greatest of the South American republics, besides being predominantly Portuguese, show a marked intermixture of Indian, negro, and latterly Italian blood. This mingling of elements has necessarily complicated the psychological map upon which their literature is spread. Mr. de Madiera pauses to comment upon this part of his subject first:



O. HENRY'S LAST NEW YORK HOME.

It is a hotel in Twenty-sixth Street called "The Caledonia."

"The territory of Brazil was peopled by savages of different races, divided into an infinity of tribes, speaking many hundreds of dialects. Vestiges of great civilizations, as in Mexico or Peru, are nowhere found. . . . We have here a conquering people, at the ripest moment of their own history, undertaking the colonization of a new country in the precise century in which the Portuguese language possest a magnificent literature, which many writers, including Camoëns, had enriched with a host of works of every variety: poetry, drama, oratory, history, . . . and this people found only a race of excessively uncultivated Indians—hardly advanced beyond the age of stone. All these factors favored the triumph of the Portuguese . . . but, curiously enough, no one has ever been able to indicate in Brazilian literature just what elements are of Indian origin. . . . It is because the fusion was very intimate. The Indians had no literature; they could give only their temperament, their psychology, and this psychology is admirably allied to that of the Portuguese. . . . The majority of these Indians were rather sociable and indolent—one might almost say contemplative in character. They observed respect for the dead, to whom they gave suitable sepulture, but they had none of those barbarous, bloody, and grandiose ceremonies seen in Peru and Mexico. . . . All this tallies remarkably well with the psychology of the Portuguese, who are also a people gentle, believing, and contemplative."

The Portuguese character, it is pointed out, is utterly different from that of the proud, warlike, and arrogant Spaniards, being "marked, on the contrary, by a poetic dreaminess, sentimentality, and melancholy, with a tendency to dwell on the life after death."

The negro race has likewise added a considerable strain of its blood to that of the Brazilian populace, among whom there has been little of that prejudice against intermarriage which has prevented fusion in the United States.

For this reason the negroes are being rapidly absorbed into the population, and, like the Indians, tho they bring no definite vein of literature, they modify the psychology of the race, infusing into it qualities of "passivity and affection." In this connection Mr. de Madiera adds:

"The Indians have perhaps given [to the race] a part of their *insouciance*, the negroes a part of their sadness; but the negroes have also added much of their physical endurance, and the Indians the sole great sentiment which has always animated them: a savage love of liberty. No other sentiment is so deeply embedded in the Brazilian people. . . . . .

"The first literary figure properly belonging to us is that of Gregorio de Mattos, born at Bahia. The fact is very characteristic, because in him appears for the first time in Brazilian literature the sentiment which is habitually found in colonies: opposition to the mother country. It matters not if the sons of the country be of the same race as their dominators. This opposition appears anyway, either in the form of hatred or at least of *blague*. It is probable that France felt this inconvenience when it dominated Canada. There is no doubt of the fact as for the rest of America. . . . In the United States the English type was ridiculed . . . and in all of Spanish America the Spaniards of the motherland were the butts of wit, while in Brazil the Portuguese were spoken of in terms of contempt and ridicule. . . . This national sentiment of opposition to the colonizers was also manifested in the most important of the literary groups since formed, known as the 'school of Minas,' . . . composed of poets who dreamed of liberation. These poets, however, were bucolic rimers, tender makers of verses of love. Without speaking here of the tentative Brazilian revolution of 1789, it may merely be observed the first literary group of any importance was a hotbed of conspirators. Gregorio de Mattos attacked the colonizers by ridicule. . . . The school of Minas, on the contrary, conspired actively while composing bucolic and lyric verses of a gentle sentimentality. . . . Our first effort at revolution was largely organized by poets. That is always the case. Only, the poets whom one finds as the pioneers of nearly every literature sing the events of prehistoric story, traditions of primitive ages, epic and religious legends.

"Not so with us. The primary material was lacking. The Indians possest no literature which might furnish subjects of legend. That of the Portuguese was property of the adversary which the poets would not use. Brazilian literature, therefore, commences with a satiric poet aiming his wit at the Portuguese, and continues with lyricists chanting the eternal lyric subjects: nature and love."

But the beginning of the nineteenth century brought a change, according to the author, and the influence of France first began to be felt. When the army of Napoleon invaded Portugal, King John VI. fled to Brazil, and "the first great service which France rendered to our literature was to chase John VI. to our country," whereupon "Brazil became the only country in South America to possess the refinements of civilization due to the presence of a court."

"The King was dowered with no great intelligence. But he was a king. About him clustered the nobility: the nobility of blood and the nobility of the intellect. . . . Such persons could not remain idle. It was necessary for them to find occupations. And thus were founded in Brazil institutions of the *beaux arts* and of the sciences, as well as judicial courts. . . . The King, on arriving in Brazil, opened the ports to universal navigation. The English were the first to profit by this, but only for commerce. Almost immediately Brazil entered into relations with France, and from this moment it may be said that the history of Brazilian literature ceases to be autonomous; it becomes a chapter of French literature. If we take a list of the literary schools of France we need only to double each column to record the names of Brazilian writers. There are analogous divisions and subdivisions. . . . Romanticism has been very varied and very complex in France, as in Brazil; but one of the most curious manifestations of French romanticism has been its return to the medieval. It has sought therein themes for its poetry and its romances. This has put Brazilian literature into a position of cruel embarrassment, because Brazil has not had any Middle Ages. Brazil was discovered half a century after the end of that historical period!

"What was to be done, then? The litterateurs turned to the Indians. . . . Their prowess was chanted and romances were invented, some of which were very beautiful, and one, at least, almost a *chef-d'œuvre*. It is needless to remark that the psychology of the Indians in these poems and novels is about as true as that of the Japanese invented by Pierre Loti in 'Madame Chrysanthème,' and sung by Puccini in 'Madama Butterfly.'

". . . Brazil has had its romanticism, all its own; it has had its naturalism, its symbolism. It accepts always the French orientation. But always it adapts it to its own life, its own national sentiments."

The poet who first brought the romantic movement into Brazilian literature was the Vicomte de Araguaya, who occupied a diplomatic post at Paris. His poetry appeared between 1832 and 1836 under the name of Domingos de Magelhaes. The writer observes that, "like Chateaubriand, like De Vigny, like all his generation, he was subject to the influences which also influenced Hugo." He was a great admirer of Napoleon, and his famous ode to "Napoleon at Waterloo" was translated by a Belgian writer into French prose, from which we choose a portion to render into English.

"Waterloo! . . . Waterloo! . . . This name reveals a sublime lesson to Humanity! Here an ocean of dust, fire, and smoke swept the invincible army as of yore Vesuvius whelmed and buried Pompeii. . . . Here died Marengo's braves! Yet this hero of a thousand battles who held in his hands the destiny of kings, this hero who with the point of his sword traced upon the map the boundaries of nations, surrounded by his marshals, dictated his orders! Yes, here the genius of victories was present and measured the battle-field with his eagle's glance. . . . Naught perturbed him! The bullets which the enemy sent toward him by hundreds bent before him like lions tamed, and, daring not to touch him, plowed the turf at the feet of his charger. . . . For the last time he brandished his sword and hurled himself into the fray. His arm is the tempest; his sword the thunderbolt! But an omnipotent hand touches his breast. It is the Hand of the Lord, the invincible obstacle! 'Hold, Warrior! Mine is thy glory! Mine thy strength! Thou hast finished thy august mission! Thou art but human; halt thee!'"

At present, we are told, the field of journalism in Brazil is probably the one richest in talent. A striking fact to attest this statement is that French influence is still paramount, namely, that while there are 1,200,000 Italians among the population and only 10,000 French, the gross weight of the French books imported is more than eight times that of the Italian books brought in, which is explained by the circumstance that the latter are consumed only by Italian readers while the former find a market among Brazilians in general. Beyond all this, as it has already been pointed out, the center of Portuguese literature is inevitably shifting to Brazil, in order to supply with reading-matter the twenty-five million users of the language against six million left behind in the mother country. It is in the natural order of things that a rich development may be looked for in the future.

DAILY MENTAL GYMNASTICS

IN THESE DAYS when the slender figure for women—and also men—is the necessary endowment for success in the modern diversion of dancing, there are many men of forty who have gone back to the morning exercise of arms and legs. The mind is usually left quiescent at this time. But we find a "man of forty," Mr. Archibald Marshall, urging his middle-aged confrères to take up a little mental gymnastics as well. He has just learned by heart all the four books of the "Odes of Horace." They contain three thousand and sixty-two lines, and the effort was not formidable at all, he tells us; nor has he used a single minute over it that he could have employed otherwise. "It has been done little by little every day, and the great bulk of it has been done during the rather tiresome process of dressing in the morning." He learns from ten to twenty lines while shaving, and the rest of the time is taken up by repetition of lines learned before. In the London *Daily Mail* he gives his recipes:

"I have used, in this way, the half-hour or so devoted to bath, shaving, and dressing every morning for some years. I have learned something or other by heart; and there seems to be some sort of helpful influence in the unthinking processes one goes through which acts on the brain and makes it easier to cram it then than at other times. And perhaps the morning freshness has something to do with it too. I have never tried learning anything by heart while undressing at night, and feel it would be too much of an effort. Besides, a minute and a quarter is not long enough to learn anything in. But at the beginning of the day, whatever the effort may be, it is a pleasant one, provided one is interested in what one is learning.

"It is of no use to learn something by heart, just for the sake of it, altho there is some satisfaction in finishing a thing off completely. There are several odes of Horace, for instance, which I do not particularly want to remember, altho the great majority of them I do, which was the reason why I learned them. But it was just worth while adding the few to the many for the sake of the satisfaction of having got hold of them all.

"There is nobody who would not be the better off for learning certain things by heart; and there are some things that can *only* be learned by heart. You can not acquire them in any other way; or, at least, you can not acquire them to such useful purpose. The multiplication table is the best instance of this. It would be possible to reckon out any simple multiple every time you needed to do so; but, fortunately, the trouble gone through in early youth to get anything up to 'twelve times twelve' tripping off the tongue makes the effort unnecessary. One useful thing that might be done during the daily process of dressing would be to extend one's multiplication table, say, up to twenty times twenty. In practise this would save a large amount of time and trouble to those who are constantly dealing with figures. And I should think it would not be difficult to suggest other matters of calculation which could be simplified in a similar way.

"My own tastes and requirements being of a different nature, I can speak more of the pleasure to be gained from getting, by heart, favorite passages of poetry, or sometimes of prose. It is astonishing what one can do in this way in a comparatively short space of time. I think the 'Rubaiyat of Omar Khayyam' was the first long poem I learned by heart, many years ago. It contains 101 quatrains, which at the rate of three a day would take little more than a month to learn. Wordsworth's beautiful 'Ode on the Intimations of Immortality in Early Childhood' I learned in a week or so while staying in the Lake district, and there is a flavor about it which it would not have if I only read it occasionally. When one repeats poetry that one has got by heart, the scenes in which it was first learned rise up before one. That poem recalls to me the lovely view of lake and mountain from my open bedroom window in those far-off summer days, and contains something more of the spirit of Wordsworth in consequence.

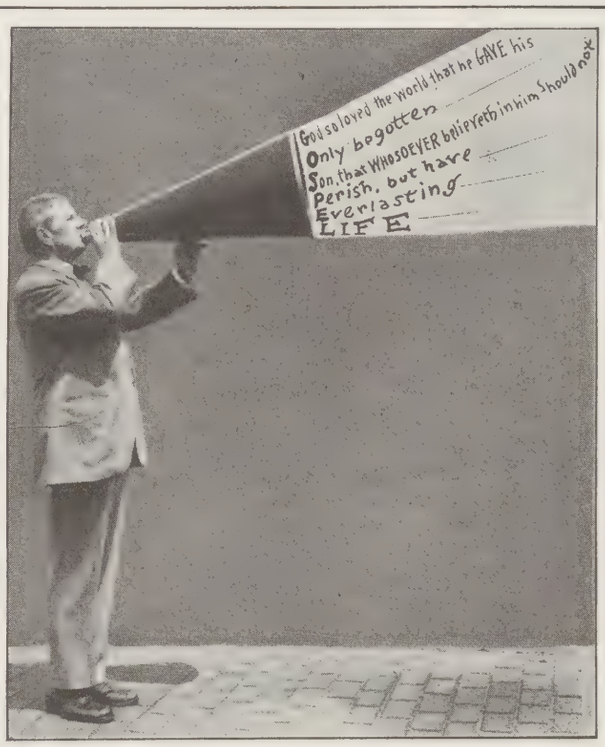
"Whatever of fine literature one has got by heart is a possession. One need never be dull, even in an enforced wait at a country railway station on a wet day, with nothing visible to entertain one but advertisements and time-tables. One carries a little library in one's mind and can dip into it where one pleases. . . .

"There are many things that can be profitably learned by heart besides poetry. I have sometimes occupied myself with words and phrases of a foreign language; I have learned leads at bridge; I have learned dates. Dates are really extraordinarily useful, in spite of the scorn sometimes thrown upon them."

RELIGION AND SOCIAL SERVICE

THE GOSPEL AT BRIGHTON BEACH

AN INTERESTING EXAMPLE of the Gospel in the open air was to be observed during the Sundays of June, July, and August at Brighton Beach, near New York. Open-air meetings have been held in many parts of the country, but this one at Brighton was so arranged as to offer a challenge to the thousands who crowd the great middle-class pleasure-resort. It was carried through by a business man, Mr. W. E. Stephens, "who believes in progressive Christianity and the great need of the Gospel of Christ for the floating masses of humanity." People told him his scheme was "chimerical,"



God so loved the world that he GAVE his
Only begotten
Son, that WHOSOEVER believeth in him should not
Perish, but have
Everlasting
LIFE

A NEW USE FOR THE MEGAPHONE AT BRIGHTON.

Mr. W. E. Stephens, who conducted summer Sunday services at the great Coney Island resort, announcing his text.

and "doomed to failure"; but for all that, Mr. Stephens persevered, selected a spot where three ways meet, "where three vast throngs converge," and got permission from the president of the Brooklyn Rapid Transit Company to preach the Gospel there on the lawn of the Brighton Beach Hotel. Fifty conversions were the harvest. The story, as printed in *The Christian Herald* (New York), goes on:

"At first the results seemed doubtful and some of the talks were addrest to the empty air; by perseverence and courage he soon began to produce an effect. A few stopt to listen, a few more tarried to hear, and soon there was a great crowd around the stand; others leaned upon the fence to hear what this 'babbler would say.' The place chosen for the open-air services proved to be an ideal spot, and the hours for holding them, from five to seven P.M., the most appropriate of all the day. The place is an irregular triangle in a corner of the lawn of the Brighton Beach Hotel. The great army of pleasure-seekers from Coney Island going north, the multitude from Brighton going south, and the immense audience from the Music Hall when the performance is over at five o'clock converge at this place chosen to fulfil the divine injunction, 'Go out quickly into the streets and lanes of the city,' and proclaim the Gospel of divine favor and love to the repentant sinner.

"The services from the beginning grew in popularity, increased in attendance, and deepened in interest. The numbers who stopt to hear grew astoundingly. On June 22 there were 5,005; June 29, 6,390; July 26, 8,487; August 3, 10,750; and on August 31 the astonishing number of 15,649. These figures are not estimates, but actual counts with an automatic register, operated by an experienced person, who was instructed to register only those who tarried to hear the message."

Mr. Stephens's helpers represented various walks of life:

"Among the speakers were Rev. William N. Richie, D.D., chaplain of U. S. Grant Post; Mr. George W. Carr, the evangelist; Mr. Will Houghton, actor, who, with his rich baritone voice and sharp Gospel thrusts, was a power for truth; Mr. Howard Richie, from the Moody Bible Institute; and the Rev. James F. Riggs, Jr., assistant pastor of the Lafayette Avenue Presbyterian Church. The singers were Mr. Ralph Duryea, who was also the organist; Mrs. Emma G. Singleton, a beautiful soprano soloist; and a thoroughly trained quartet, of which Miss E. T. Pell was leader; Miss B. Bedell, soprano; Miss E. Frost, alto; Mr. D. W. Bryant, tenor; Mr. E. Howard, basso. Another novel feature of these services was a little ten-year-old girl, Ruth Morgan, who possesses a phenomenal voice. Her little song, entitled 'Jesus Promised Me a Home Over There,' became the greatest favorite. Her fresh, pure voice simply captivated the audience.

"This work at first was supported principally by Mr. Stephens himself, but subsequently some friends, seeing the success attained and the great good being done, became patrons to the movement. Among these are: Mr. D. W. McWilliams, treasurer of the Manhattan Elevated Ry.; Mr. Clinton L. Rossiter, of the Brooklyn Trust Co.; Mr. L. W. Minford, a Wall Street coffee merchant; Mr. Cleveland H. Dodge; Mrs. Florence N. Latin; Mr. Frank Huyler; Mr. Henry Mackay; Mr. H. K. Twitchell, of the Chemical National Bank; Rev. David Gregg, D.D.; John T. Underwood, President Underwood Typewriter Co., and others."

SOCIALISM'S RELIGIOUS FAITH

PERHAPS it is the recent pronouncement of Sir Oliver Lodge concerning the religious change of front among scientists that has led Mr. and Mrs. Sidney Webb to outline their religious ideals. While they speak mainly for themselves they doubtless represent the Socialistic convictions of their following in England. They observe in direct contradiction to opinions exprest after Sir Oliver Lodge's address that "many of the most upright and vigorous minds of to-day regard with unmixed satisfaction the trend toward the avowed 'materialism' which set in about the middle of the nineteenth century." "Any faith in the possible communication of the individual human mind with a spiritual force that 'makes for righteousness,'" say these leaders of Socialism in England in their paper *The New Statesman* (London), "is regarded by them as a misleading and enervating superstition." This is not, however, the Socialist view of the matter. Indeed, we are assured that "Socialists take up anything but a 'secularist' or 'materialist' attitude toward life, and have a very real religious faith." There are many discriminations to make, however:

"They are, it is true, often out of sympathy with the Christian Churches of to-day, with their fatal and quite unnecessary embrace of the capitalist system. And the more religious is the Socialist the more he realizes that the very continuance of religion, as an organized force in the State, depends on its being freed from its alliance with plutocracy. The palace of the Anglican bishop, and his constant acceptance of the idle rich as his personal associates; the influence in the chapel of the Nonconformist millionaire; the clerical sanction given to lives of

WHERE THREE WAYS MET AT BRIGHTON BEACH.

Sunday attendance at these services leapt from 5,005 in June to 15,649 in August, with 50 acknowledged conversions.

exploitation and greed for riches; the perpetual 'backing up' of the private ownership of the means of production with the economic servitude that this entails are, in our opinion, the most potent allies of the secularist.

"It is an extraordinary irony that has made the Christian religion, with its ideal of personal humility and personal abstinence, part and parcel of a social order in which those who think themselves Christians heap up wealth at the expense of their fellow men, and expend the riches, which they never ought to have possest, on the luxuries and caprices of their families and themselves; and in which a Parliament, opened with Christian prayer, and sanctioned by the presence of Christian prelates, avowedly accepts the motive of pecuniary self-interest as the necessary basis of society. This state of things, to put it shortly, is fatal to religion. So long as it endures, skepticism and cynicism as to the reality of any religious belief will prevail—notably among the four-fifths of the community whom we have disinherited—and the religious Socialist in Great Britain will find himself helpless to stem the tide of a secularist materialism.

"And if we turn from our own country to the millions whom our Churches are attempting to proselytise, we shall find the failure of the Christian religion even more striking. It is with a disagreeable shock that the sincere religionist to-day realizes in the Far East how profound is the contempt and horror of the Oriental at the lives of material luxury of the ministers of religion of the Western Churches. If 'choose equality and flee greed' be an axiom of good manners for the ordinary householder, 'choose poverty' would seem to be the attitude for the follower of Jesus of Nazareth."

To the Socialist it seems as if religion, if it is to endure, say the Webbs, will necessarily cut itself loose from any approval of, or alliance with, the capitalist system. Further:

"There will be, in the churches as in the kingdom of heaven, neither riches nor poverty. No teacher of religion will, we think, feel it right to claim for his own use any larger share of the world's product than is enjoyed by all those with whom he worships. This modesty in the personal use of wealth does not mean a revival of puritanism. Music, painting, architecture, even the drama, have in the past all been made expressive of and subservient to the development of the religious feeling of the race; it has even been said that all the arts may be traced, in their origin, to religious emotion.

"But art in religion is essentially communistic; and we can well imagine a reborn art becoming once more the helpmate of a reconstituted Church of the people. There can not be a development of religious art, the exercise in common of the religious emotion, or public manifestations of religious feeling, without the allocation to this service of a portion of the national income. Will this expenditure be exclusively on the basis of voluntary cooperation?

"We ourselves believe that the nation will not, as it becomes more collectivist in feeling, abandon so important a part of life as that filled by the religious emotion to the anarchy and exclusiveness of private enterprise. We believe that the State of To-morrow will regard our beautiful cathedrals and abbeys and the churches in which our fathers worshiped God as a most precious national heritage. But these 'Houses of God' will not be left, as for the most part they now are, closed and barred, empty and deserted for six days out of the seven. Nor will they be converted into markets, warehouses, or police-courts. They will be constantly open to all citizens, either for silent meditation and devotion or for the exaltation to be gained by music, by the public reading of the world's noblest Scriptures, and by the inspiring counsels of the religious genius.

"With the diffusion among the whole population of the religious culture now limited to a minority—rich or poor—with religious services brought within the lives of the whole people, we shall go on constantly refining and perfecting our appreciation of the place that man holds in the universe, and our faint glimmerings as to its purpose and destiny; we shall come more and more to see that what we all of us mean, in our moments of spiritual exaltation, is that we have a duty to cooperate in that purpose, so far as we can ascertain it; we shall realize, to an ever greater degree, as a part of mental hygiene, both the advantage and means of stimulating those moments in which we are, as we say, lifted 'above ourselves'; we shall make some public provision for the periodical expression of that religious emotion and the inspiring and deepening of the spiritual life; we shall be mutually respectful of the diverse forms—painfully imperfect or 'illiterate' as we shall recognize all of them to be—that this may take among different sections of the community; and, here as elsewhere, we shall 'choose equality' as regards the communal provision to be made for them."

NOT SO MUCH GOOD IN US

HAS NOT the appeal to man's better nature been overdone? wonders the editor of *The Christian Work and Evangelist* (New York), as he reflects upon the events reported in the newspapers during the past summer. Is not our age "pressing the doctrine of human perfection harder than it will warrant?" he asks, and have we "not been shutting our eyes too much to the fact that sin still holds a fast place in all our hearts and needs only a little loosening of restraints to burst out?" Much of our righteousness, both personal and public, seems to this writer to be "only a very thin veneer over a boiling pot, a thin crust over a raging volcano." Better than we used to be? Yes, but still—

"How little it takes to turn us into beasts! How suddenly one incident will show our sympathies are with evil! How soon we yield to bribes! How many are living double lives! How cruel many men still are at heart! How we love an excuse to let our passions loose!"

This is no jeremiad. The editor of *The Christian Work* does not believe that depravity and hypocrisy are universal among us, nor does he omit to mention that our newspapers are daily reporting much of good. But he does ask the readers of his words to consider these facts:

"For one whole year five nations in the Near East have been committing such atrocities as the worst ages of barbarism never knew, and delighting in the fiendish perpetrations. The war itself was horrible, especially the savage glee in killing disclosed in it at the beginning. But the atrocities were never surpassed in Dante's most terrible circles of Hell. And these—setting cities on fire and shooting at fleeing women with babies in their arms and betting on the shots, filling wells up with babies and putting stones over the top, cutting babies up before their mothers, burning women up before their husbands, cutting off noses, ears, fingers, lips, gouging out eyes and letting the victims go; holding food up on spears to tantalize men and women in cities they were starving—all this daily and unspeakable horror, numbering thousands among its victims, has been perpetrated by men who were worshiping in Christian churches until the war broke out. As soon as the war gave them cover they reverted at once to *beasthood*. This is the horrible warning we ought to heed. How near *beasthood* lies to our Christian civilization. One has only to go through New York on New Year's Eve to see how quickly thousands seize the opportunity, on a night when the city will not molest them, to rush into a debauch.

"One has only to note another thing to make him realize how, in spite of all our growth in Christian character, we still lie dangerously near to the primitive man. We refer to the fact that even most exemplary villages will show sympathy with crime rather than with law when a test comes, and mob psychology gets to work. Perhaps no more disheartening commentary on human nature has been witnessed in a long time than the fact that in every town where Harry Thaw has been the community has cheered him and shown most marked sympathy for him rather than for the State. Here is a man whose whole life has been marked by drunkenness, cruelty, vice, and finally murder of the most vicious sort—a most dangerous enemy to civilization and righteousness—and yet everywhere he goes the good people are hoping for his escape and clamoring for his release. Furthermore, one begins to wonder whether there are any judges or lawyers in the United States or Canada who would not sell their characters if this criminal's money came within reach. Nothing has been more disgusting and nothing has done more to depreciate the whole legal profession than the way judge after judge and lawyer after lawyer has used his ability to defeat justice in behalf of this criminal. We are told that he has already cost New York over $1,000,000. This comes out of the pockets of the poor. Are we still really criminal in our instincts after two thousand years of Christianity? Sometimes it looks so. The biggest funeral New York has seen in years found 50,000 people on the East Side paying tribute to a man who for forty years looted the city in every possible way.

"We will not pursue these illustrations further, except to say that the specialists who have been studying vice conditions in the great cities were very much discouraged as they found how many men and girls were involved in evil practises; and how other reform agencies grow discouraged at the disgrace of politics, as witness the calm and foulest way in which certain politicians are proceeding to get hands on the State and city treasury by impeaching the Governor of a State. The Governor may have been guilty; it looks as tho he had been. But everybody knows the motive of the impeachment, and that so many members of a Legislature will lend themselves to Mr. Murphy's evil designs shows how much cupidity and greed still rule in men's hearts. We fear, from what revelations have already been made, that a good many businesses would not stand probing."

With all these things in mind, the reader is asked to consider "if we are not overdoing the doctrine of natural goodness and human perfectibility, and rather missing the mark in generalizing about the average man being more good than evil?" The writer himself greatly doubts "if the average man inclines more to good than evil when any real climax or temptation comes," and wonders sometimes "if all our culture or morality is more than veneer and would stand the test in a real strain, or check the sleeping beast when darkness covered actions." In fact, he concludes:

"We are rather inclining to the view that what our age needs is a universal and poignant gospel of man's sinfulness and his inability to escape it except by divine help and a reemphasis of the good news that Christ is here to help. There is something lacking in our present Christianity when it can not restrain its profest followers from Balkan atrocities, sympathy with crime, secret vices, and political immorality."

CATHOLIC ITALIAN LOSSES

THE GREATEST QUESTION confronting the Catholic Church in America, say the press of that faith, is the defection of the Italian immigrant population. *The Catholic Citizen* (Milwaukee) estimates that nearly a million have been lost, and that while thousands have been attracted to the Protestant churches, tens of thousands "have drifted into the non-churchgoing class." This journal quotes a Protestant Italian-American, Rev. Mr. Testa, who declared in *The Missionary Review* during 1908 that "not 5 per cent. of the Italian population of New York goes to church." "It is quite customary with the Italian immigrant to have his religion in his wife's name, and half of our Italians have no wives." The editor of *The Catholic Citizen* tries to take as hopeful a view of the situation as possible, but admits freely the grounds for disquietude. We read:

"Our Italians are children of a generation whose ideals of political liberty collided with the established order and also with the temporalities of the Church. But the needs of the soul are eternal, while the rancors of politics may in the course of time be forgotten.

"Nevertheless, if the Englishman takes his amusements sadly, the Italian takes his religion lightly. It is said that he comes to us from the religious atmosphere of a Catholic land. Perhaps he does; but in a state of mental and moral reaction. He belongs, by the tendencies which rule him, quite as much to the army of the unchurched as to the ranks of Catholicism. For instance, there are eighty Italian newspapers in the United States, not a single one of which is religious or Catholic."

Facts which show how "the Protestants have perceived an opportunity in the situation" are reviewed at some length:

"It was pointed out in their missionary reports as early as 1890. Some ten years ago, in the promotion of their propaganda, they saw the need of training a native ministry for work among the Italians. Their seminaries have since made this an important department. The Methodists alone claim (1913) to have sixty ordained Italian ministers working under their banner. The Presbyterians and Baptists claim each nearly as many more.

"Counting in with the ministers the lay workers engaged in mission work, we believe that there are to-day more Italians working under the banner of Protestantism in the United States than there are Italian Catholic priests in the United States. Rev. Mr. Testa (*The Missionary Review*, 1908) lists twenty-three Italian Protestant churches and missions in Greater New York. The number of Italian Catholic churches in Greater New York in 1908 was 19.

"According to *The Missionary Review of the World* (1911, p. 862) Dr. Morse estimates the number of Italian Protestant churches in the United States at 250. He has had actual communication with 214 of these, including 46 Presbyterian, 40 Baptist, and 38 Methodist. We can not count more than 150 Italian Catholic churches in the United States ('Catholic Directory,' 1913).

"So that Protestantism actually has more churches and missionaries among the Italians of the United States than has Catholicism. Rev. Testa, of the Brooklyn Italian mission, reports over 1,000 converts. We quote from the Nashville *Christian Advocate*, May 23, 1913:

"'The Chicago correspondent of *The Continent* says: "Probably no church can present a better report than that of the Italian church on Ohio Street, Chicago. The pastor, Rev. Philip Grilli, has supported himself by outside work, and the church has paid all running expenses and contributed to all the boards. Of the 461 members who have joined during the eleven years of the present pastorate, 435 were formerly Roman Catholics."'

"'*The Christian Intelligencer* claims that 'the great movement among Italians in America in the last five years shows a trend and almost a stampede from Rome. The officer in charge of the work in the Methodist Episcopal denomination told me that in his denomination alone there are now sixty churches and chapels east of the Mississippi where the preaching is in the Italian tongue. The Presbyterians have fully as many more, and nearly every other denomination will supplement the list in proportion to its size. There is hardly a rescue mission in which the Catholics do not form from one-third to one-half of the workers.'"

THE EDUCATIONAL WORLD

THE MONTESSORI SCHOOLS IN ITALY—AN ACCOUNT BASED ON PERSONAL VISITS BY TWO AMERICANS*

WHEN Froebel and his disciples, in perfecting the kindergarten, succeeded in making the education of young children a matter of delight to both pupil and teacher, it seemed to many educators that the last word had been said on the subject of primary education. That such an opinion was not without reason is evidenced by the fact that for seventy years the kindergarten maintained the field without an important rival. Meanwhile it had spread from Germany to every civilized land. Like many other systems that have well served their age, only in time to be displaced, the kindergarten is now likely to be greatly modified, or perhaps entirely superseded, by a new system of primary education which had its beginning in Rome in 1907.

This innovation is mainly the work of Dr. Maria Montessori, a physician, psychologist, and educator, of Rome. Her theories and methods are fully set forth in her new book, "Il Methodo della Pedagogia Scientifica" (The Method of Scientific Pedagogy). Dr. Montessori is a brilliant woman of middle age, whose life thus far has been devoted to study of the human body and mind and the development of her pedagogical ideas. After graduating from the school of medicine of the University of Rome she became assistant physician in the clinic of psychiatry in Rome. Later she was placed in charge of a school for feeble-minded and defective children. In this school children were instructed according to the methods of individual tutelage developed by Itard and Seguin. The remarkable progress made led Dr. Montessori to the conclusion that similar methods might be used to good advantage in schools for normal children. Accordingly, she set herself to work, and her "Method of Scientific Pedagogy" is the result.

While serving on the board of judges of the Department of Education, in the International Exposition at Milan in 1906, Dr. Montessori was invited by Edward Talamo, Director of the Institute Romano di Beni Stabili (The Good Homes Company of Rome), to take charge of schools which were being established in the group of tenements built by his company. Talamo's purpose was to bring together, in an attractive room and yard, children from three to seven years of age, of tenants forming the group, and place them in charge of a competent instructor who would also live in the establishment. As the company owned over four hundred tenements, and as full opportunity for a trial of the method would be offered, Dr. Montessori gladly accepted Talamo's offer. In January, 1907, the first school was opened in a tenement group containing about one thousand persons, and located in the San Lorenzo quarter of Rome This school was christened the "Children's House," or, in Italian, "La Casa dei Bambini." The expense of building and maintaining the school was paid by the company. It is interesting to note that rents were not raised when the school was established.

SPECIMEN OF HANDWRITING OF A GIRL OF SIX YEARS.

THE FIRST "CHILDREN'S HOUSES," AS OPENED IN THE SAN LORENZO QUARTER.

On our recent trip in Italy, we visited several of these "Children's Houses" in different quarters of Rome, and were greatly imprest by the things we saw and heard. In the group tenements and the "Children's Houses" we found combined the work of two great geniuses, Edward Talamo, the home builder of Rome, who is transforming vile rookeries into abodes of comfort and health, and Maria Montessori, whose schools are transforming the children of tenements from street Arabs into little men and women. Through neighborhood cooperation, working in harmony with a guiding spirit, the blessings of wealth are here being enjoyed by the poor. There is no charity in the enterprise, as the tenants pay in the rental of their homes for the advantages they and their children receive, but here are found many things not usually enjoyed by tenants. Here are cleanliness, sunlight, fresh air, and abounding health; here are free medical service, and free clubrooms, in addition to new primary schools.

The "Children's House" is a separate building in the spacious yard adjoining the tenements, or in a pleasant room on the ground floor of one of the buildings.

INTERIOR OF ONE OF THE "CHILDREN'S HOUSES," SHOWING SCHOOL APPARATUS ON TABLES.

WORK IN MONTESSORI SCHOOLS IN ROME.

* From advance proofs of "Modern Cities: Progress of the Work in the World-wide Awakening for Their Betterment." By Horatio M. Pollock and William S. Morgan. Soon to be published by Funk & Wagnalls Co.

So far as room and children are concerned, the school is not unlike the kindergarten. In the scheme of instruction, however, there is a wide divergence.

The fundamental aims of the "Children's House" are to insure the physical perfection of the child, to develop initiative, to train systematically the senses, and to develop and strengthen the child's personality. The emphasis is on the individual instead of on the class, and on the child instead of on the subject-matter. Direct personal instruction and development of special senses which were the secrets of Seguin's success are here continued and modified so as to apply to normal children. The results demonstrate the soundness of Dr. Montessori's conclusion, reached while a teacher in the school for defectives, that methods applied to defective children might be advantageously used in all primary classes.

At the opening of the "Children's House" in the morning, every child goes to the teacher for inspection. The little one holds up its freshly washed hands, shows its brushed teeth and neatly combed hair, with a feeling of genuine pride. The teacher smiles her approval. Before beginning school work the child dons a long apron, which serves as a protection to the dress and as a safeguard against the dissemination of germs. The highest standard of personal cleanliness is maintained, and great care is taken to promote health. The teacher is continually on the watch for any signs of disease or physical defects. If the child shows the least sign of illness or seems to have some physical imperfection, the matter is referred to the parents and to the house physician, who take the action necessary under the circumstances. Teacher and physician are a part of the large family group, and freely consult with the parents respecting the welfare of the children. The health of the children is also promoted by breathing and calisthenic exercises, by play in the open air, and by working in gardens connected with the school. The teacher aims to build up the physique of each child, and, therefore, plans exercises in each case to meet the child's needs.

Initiative is developed by freedom from restraint, and by giving full opportunity for choice and decision. Dr. Montessori recognizes that, while children are naturally active, activity of itself does not develop initiative. A choice of activities must be possible, and the child must have full liberty to choose without fear of reproach or criticism. The only restriction to liberty in the "Children's House" is that caused by the presence of other children. The children quickly grasp the idea that the spirit of freedom abounds, but such freedom can not go to the extent of permitting one child to infringe upon the liberty or freedom of another. Discipline is secured by the natural interest of children in the exercises given them, and by their love of teacher and school which prompts them to do the thing suggested. In many kindergartens and primary classes, initiative is stifled by the overactivity of the teacher in directing the work of children. In such schools, exercises are performed in unison, and children, instead of each acting for himself, blindly follow the teacher or leader. In the Montessori schools, exercises are mainly individual. The pupil takes up apparatus that is free and works with it. The teacher assists, but does not control, the activity of the child. Control is with the child itself.

We walked into the open door of a "Children's House" filled with busy pupils. Some of the little ones paid no attention to us. Others looked up and smiled, and three or four bright ones, with no sign to or from the teacher, came to us with hands outstretched and said "Bon giorno, Signor," and when we left, others came to bid us good-by and to ask us to come again. At another "Children's House" we were present at the opening exercises. A little prayer-song was sung, and then each child got out the apparatus he wanted to use. There was no strife, as there was plenty of apparatus, but there was genuine, immediate interest and a display of self-directed activity such as we had never before witnessed in children of that age.

The school works according to a general program, but there is no compulsion on the part of the teacher. If a child tires of one piece of apparatus, he takes another, or if he feels like leaving the school-room, he is permitted to go into the garden or yard at any time. . . . . .

In order to avoid monotony in the school, a large variety of apparatus is provided for different exercises. There are a series of weights for training the muscular sense, blocks of the same size, but of different weights to be assorted, fabrics of many kinds to be distinguished by sight and touch, sounding boxes to be graded according to intensity of sound, waists or jackets stretched on frames to be buttoned and laced in imitation of dresses, and many other interesting devices.

While the sense training is mainly individual, it is occasionally conducted as a game. Cards containing the colored yarns, for example, regardless of order or color, are distributed to several pupils. One pupil will then undertake to arrange the colors in order, according to shades, by calling for the color needed. The child having the color called for produces it, and then another is called for. All of the children taking part keenly watch the arrangement of colors so that no mistake is made.

The instruction is fitted to the needs of each individual child, and the development of each child is carefully watched. So far as possible, each child is permitted to do the thing he wants to do.

At the age of four, the children are taught to read and write. Dr. Montessori has worked out a new method for teaching writing which fits in perfectly with her system of sense instruction. As preparatory steps, the child marks out the exterior of geometrical forms with a crayon, and the interior of forms cut into a card or piece of wood as a stencil. By using colored crayons and bringing the various forms together, the child becomes greatly interested in the designs he is able to produce. The next step is to give him letters that have been cut out. The sounds of these letters are associated with their forms. After the child can recognize the letters, a large number are given him to pick out and form into words. Cards with raised script letters are then given him to trace. After a little practise in these exercises, the child is ready to write by himself and will often actually begin writing words independently and without suggestion from the teacher. Little tots of five in these schools write in a clear, round hand such as is not usually acquired in school before the age of ten. Reading comes along with, and almost as easily as, writing. The results are truly marvelous.

Altho only five years have elapsed since the first "Children's House" was opened it is evident that the new system of primary education has come to stay. Dr. Montessori's methods are being introduced in several places in Italy and in schools in France and Germany. Several American students have taken special courses under Dr. Montessori, and returning to America filled with enthusiasm, are active in establishing schools and teaching the new methods in this country. There is no doubt that, in establishing these schools and in presenting her methods to the world, Dr. Montessori has made the most valuable contribution of the past half century to the cause of primary education.

EDUCATION FOR A VOCATION

Students of the industrial progress made by France since the war with Prussia left her prostrate have found one of the primary sources of it to be the scientific education which has promoted efficiency in industrial and agricultural pursuits. Attention was called to this matter in notable degree by Professor Bracq, somewhat more than a year ago, in a work entitled "France Under the Republic," and an account of this book was given in these columns about that time. Professor Bracq set forth as the general results of such education statistics of commerce and general business, from which it appeared that since 1866 the tonnage of French ports had quadrupled, and in 16 years the tonnage of her canals and other inland waterways had increased 42 per cent. Since 1869 the commerce of the country has increased annually more than 5,000,000,000 francs. The business of the Bank of France in 1871 amounted to 68,814,000,000 francs, in 1908 it amounted to 236,975,000,000 francs. French investments abroad in the last days of the Second Empire were estimated at 12,000,000,000 francs; they are now put at 37,000,000,000 francs. The wealth of France in securities of all kinds in 1880 was estimated at 25,000,000,000 francs, and in 1906 at 135,000,000,000 francs.

Commenting on this book, a writer in *The Financial Chronicle* declared that after the war with Prussia, France took seriously to heart the lesson that it "was the schoolteacher who won at Sedan," this being even more true, and in a deeper sense true, than Wellington's famous saying that Waterloo "was won on the playground at Eton." France finds that education of the traditional sort will not do when it comes to industrial progress. Education for that purpose must be of the sort which "fits a man for the work he has to do in the world." The scholar must be the man who knows how after having been taught how.

American readers of Professor Bracq's book naturally turned their thoughts to their own country, and questioned whether more should not be done here to promote vocational education. James J. Hill's book, entitled "Highways of Progress," caught this spirit of inquiry at flood-tide. In that book he insisted again and again on the importance of going back to the soil and making the soil produce more through the adoption of scientific agricultural methods. Farm products per acre, through intensive

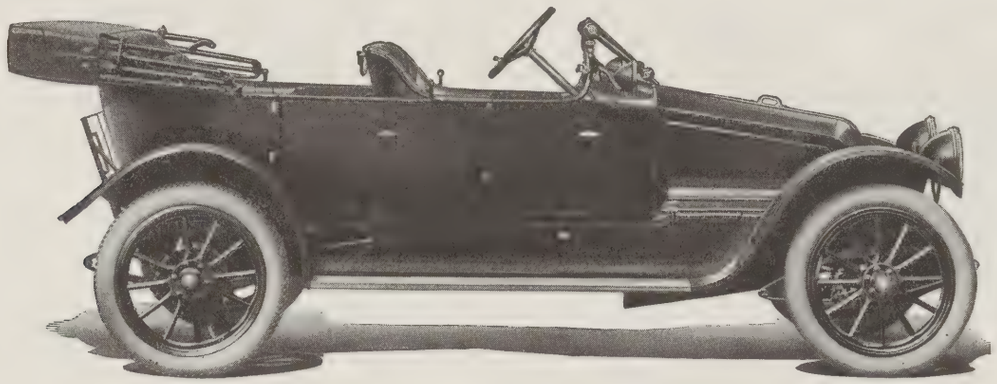
New Series Franklin Six-Thirty



Franklin 5-passenger touring car. Weight 2700 lbs. Wheel base 120 inches; tread 56 inches **$2300**

THE weight of the new series Franklin Six-Thirty, fully equipped, is only 2700 pounds. This light weight is secured through scientific design, direct cooling and the use of the very finest materials.

Tires are 34" x 4½". The wheel base is 120", tread 56". The steering wheel is on the left side with center control levers. Two doors to the front seat permit entrance from either side.

The new series Franklin Six-Thirty is built with six body types —five passenger touring, two passenger roadster, coupé, sedan, limousine, and Berlin. The touring model is a full size five-passenger car with 48" rear seat. The distance from the dash to the front seat is 27½". Luxurious in the extreme and just right for touring, the car is not too large for convenience and economy in city use. All bodies are new in design and made of aluminum.

The direct-cooled vibrationless six-cylinder engine, free from the weight and complication of water cooling apparatus, in combination with the light weight of the car, insures maximum ability and smooth running.

Full elliptic springs, wood chassis frame, long wheel base, large tires and small unsprung weight give a riding comfort that is little short of phenomenal.

Direct cooling and light weight make low operating cost. Gasoline bills and tire bills are not a burden. The Franklin has long held the world's record for gasoline economy, and recently in a test made by the Automobile Club of America with a special Franklin car, the record was put at the almost unbelievable point of 83.5 miles on one gallon.

Types and Prices

The different types of bodies are interchangeable on the one chassis which constitutes the entire Franklin line.

Touring car	**$2300**
Roadster	**2300**
Coupé	**2950**
Sedan	**3200**
Limousine	**3300**
Berlin	**3400**

F. O. B. Syracuse

All types are equipped with Entz electric starter, which is a simple, single unit, direct-connected system operated by one switch that also controls the magneto. With the Entz the motor cannot stall.

SPECIFICATIONS

Motor—
Six cylinder; thirty horse power.
Cylinders: 3⅝" x 4", cast individually.
Valves in head.
7 Crank Shaft Bearings.
Direct cooled.
Re-circulating oiling system.
Oil Capacity, 1½ gallons in sub-base.
Eismann high-tension magneto, single system.
Throttle control by lever on quadrant. Spark advance automatically regulated. Foot accelerator.
Special float feed carburetor, Franklin type.

Gasoline Tank—
Capacity 14½ gallons. Reserve 2½ gallons.

Clutch—
Multiple disc, running in oil, in fly wheel of motor.

Transmission—
Selective sliding.
Three forward speeds, one reverse.

Drive—
Shaft. Gear reduction. 3.71 to 1.

Axles—
Front: Tubular, with Timken roller bearings.
Rear: Live rear axle, semi-floating with Timken roller bearings.

Tires—
34 x 4½ inches. Non-skid rear.

Steering—
Worm and gear.

Brakes—
Service: Double-acting on transmission drum operated by pedal.
Emergency: Double-acting on rear wheel drums operated by hand lever.

Springs—
Full-elliptic. 40 x 1¾ inches.

Wheel-Base—
120 inches.
Tread, 56 inches.

Body—
Sheet aluminum.
Brewster Green with black trimmings.
Franklin sloping hood, made of aluminum.
Adjustable folding windshield.

Speedometer—
Corbin-Brown.

Starter—
Entz electric starter and lighting system.

Lighting—
Electric throughout with dimmer for headlights.

Horn—
Electric.

Storage Battery—
Eighteen volt Willard storage battery.

Full tool equipment.

A New Member of an Old Family

PACKER'S Tar Soap, by reason of its high quality, has earned the confidence of three generations of users. Its reputation for quality and effectiveness is established wherever toilet articles are sold.

And now, to meet inquiry for a liquid soap of equal merit, we introduce

Packer's Liquid Tar Soap

This new member of an old family is a vegetable oil product; pure, pleasantly perfumed, and of fine quality. For shampooing and general toilet uses, it is delightful, thoroughly effective, and—well, try it!

50c per bottle at your druggist's, or send us 60c (which includes mailing) and we will see that you receive a bottle promptly.

To help you get full benefit from the use of Packer's Tar Soap, we have printed a manual, "The Hair and Scalp—Their Modern Care and Treatment." Sent free on request.

The Packer Manufacturing Co.
Suite 84 A—81 Fulton Street, New York City

REVIEWS OF NEW BOOKS

HISTORICAL WORKS

Slater, Gilbert. The Making of Modern England. 8vo, pp. 308. Boston: Houghton Mifflin Co. $2.50.

THE author of this work might have entitled it, Political, Social, and Industrial development of the Democratic Ideal in England during the Nineteenth Century. According to Mr. Slater whatever progress England has made during the last century has been due to the growing spirit of Socialism as operating in the much more definite and therefore harmless form of democracy. But even the growth of democracy has been hampered by inveterate feudalism and invincible capitalism. Manhood suffrage and the accepted right of feminism are things of the future. Yes, but the vision of these things, he thinks, has at least dawned upon the intelligence of the masses, and even of the young. He gives a list of the subjects which have come to the front and exerted a stimulating influence on all who sigh for the ideal democracy, and who struggle for factory reform, for trade-unionism, and parliamentary reform, for the protection of the public health and for eugenics. All are treated by him with conciseness, yet clearness. While acknowledging the imperfections of the English parliamentary system, he candidly admits that the Reform movement of 1832 was a great step forward in the political history of the island, which was to culminate in the reform of the House of Lords some eighty years later. Yet Mr. Slater seems to throw up his hands in half despair as he confesses, "altho in theory the government of England only needs that the last step toward adult suffrage, with single voting and equal electoral districts, should be taken in order for it to become perfectly democratic, one is tempted to believe that the true theme of recent political history is the growth of bureaucracy rather than the growth of democracy."

This pessimism, for to Mr. Slater, with his democratic ideals, these are pessimistic utterances, is not without instructiveness. Socrates was a pessimist when he likened himself to a gadfly stinging the flanks of a sluggish horse. Mr. Slater is really spurring on, in this admirable book, all interested not only in English, but also in American political evolution. They will read with pleasure and instruction and lay on their shelves such a compendium, to which they may safely recur again and again for reference or information.

Van Loon, Hendrik Willem. The Fall of the Dutch Republic. Illustrated. Map. Bibliography. Cloth, pp. xii–433. Boston: Houghton Mifflin Co. $3 net.

In the present work, Mr. van Loon, who is a journalist and historical student, undertakes to supply the gap that usually exists in popular conceptions of the history of the Netherlands. Most students realize—thanks to Macaulay and Motley—that the sixteenth and seventeenth centuries form an exciting and important period in the history of the Dutch Republic, and that there is now a Kingdom of the Netherlands. Of what lies between there is little appreciation. Mr. van Loon wisely puts the record of this in a very popular form, seeking more to leave an impression than to write a chronicle. One of the chapters most interesting to American readers is that on the American Revolution. The part which the Dutch Republic played in it and the influence which it had on the Republic are not generally appreciated and should be more widely recognized in the histories of the movement of which the Revolution was a part. One is glad to find that Mr. van Loon is not writing political history alone, however, and that he skilfully weaves together the economic and literary influences of the time as well. The excellent bibliography calls attention to the best sources and secondary works.

Gowen, Herbert H. An Outline History of China. Part I. From the earliest times to the Manchu Conquest, A. D., 1644. Illustrated. Cloth, pp. 208. Boston: Sherman, French & Co. $1.20 net.

Dr. Gowen has supplied here the need of a suitable outline history of China for rapid reading and rapid reference. In it he has struck the "middle kingdom" between the large general histories, the learned monograph, and the sketchy "pot-boiler." He has also avoided the natural overemphasis on modern China and her foreign relations. The title is an exact description. In each chapter the rulers of each dynasty receive concise paragraphs in such proportion as to keep the "feel" of the general historical movement. This treatment by dynasties is all that one can expect yet. Many years of applied historical science must come before we can obtain the more illuminating social and economic histories—tho the author has not omitted such hints as are available. He is to be commended for his success in making a comprest treatment so entertaining. A chronological table of dynasties and rulers and a moderate bibliography have been added. The book should be popularly useful.

Lombardini, S. H. Rival French Courts. Pp. 254. New York: The Macmillan Company. $2.50.

It would seem difficult to find a new view of those dramatic years in which closed Louis XIV.'s reign and those which followed his death, but this is a "human document" in the form of memoirs, and characterized by delicious humor, charming directness, and a discerning and fascinating philosophy. The author describes scenes at Sceaux, Versailles, and in the Bastille, whither her association with the Duchesse du Maine carried her. The life at Sceaux was one in which all eyes were resolutely closed to realities. Madame du Maine masqueraded through life and "forced into her masquerade all those who came into contact with her." She also dragged them with her into conspiracy—the conflict of the "Légitimes"—dragged them into captivity and back again to her absurdities. It is a topsy-turvydom which Madame de Staal holds up to our eyes, but her own personality

(*Continued on page* 642)

Not only a Six You can afford to Buy—but a Six You can afford to Run

LIGHT WEIGHT SIX CHANDLER $1785 BUILT BY MEN WHO KNOW

THE Chandler Light-Weight Six at $1785 establishes a new standard of automobile values.

Here is a big, roomy, luxurious car, completely fitted with the highest grade equipment, representing the utmost advance in automobile design and construction, selling for several hundred to a thousand dollars less than any other car approaching it in quality.

Yet there is no great mystery about it. The builders of the Chandler Six have been building world-famous sixes for years. They have been able, through this extended experience, to avoid costly errors, and expensive experiment.

The Chandler Six is probably the lightest car of its size and power ever built—yet as strong and sturdy as a car can be. Though it is a long, roomy, graceful car, its *actual scale weight is less than 3000 pounds fully equipped*, ready for the road.

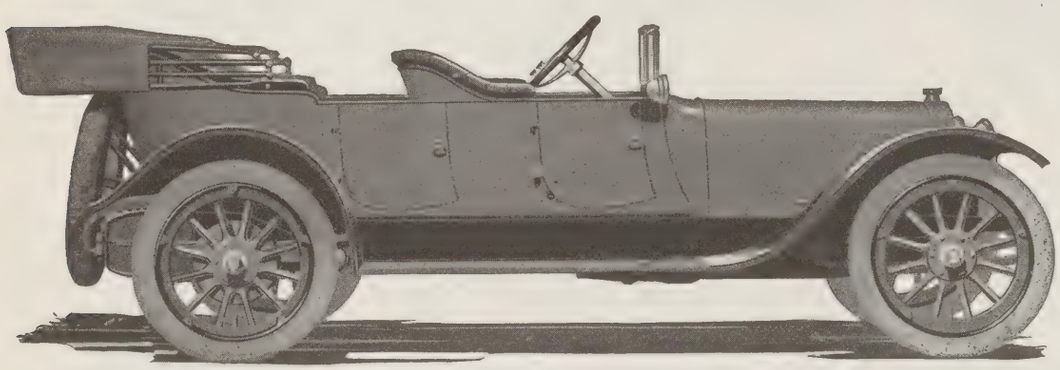
The builders of the Chandler Six have so thoroughly mastered the many problems of six construction that the Chandler Six combines all of the unquestioned advantages of the six with all of the economy of the best and most efficient fours.

The Chandler Six is daily averaging *over 16 miles on one gallon of gasoline.* It is one of the best hill-climbing cars made. And Chandler owners are getting hundreds of extra miles out of every set of tires. Let any dealer demonstrate these facts.

The Chandler Six is emphatically a car that you can afford to run.

The motor is the heart of any car. The motor of the Chandler Six is without equal in any car at any price. With it you can run at 3 to 55 miles on high gear and its "pick-up" is astonishing. The Chandler motor is the exclusive property of this Company and is not to be had in any other car.

Now read the Chandler specifications carefully. Not an experimental, untried, doubtful feature in the whole list.



The Men Who Know

F. C. CHANDLER, former vice-president, general manager and director, Lozier Motor Co.

C. A. EMISE, former sales manager and director, Lozier Motor Co.

W. S. M. MEAD, former foreign sales manager and director, Lozier Motor Co.

S. REGAR, former treasurer and director, Lozier Motor Co.

J. V. WHITBECK, former engineer, Lozier Motor Co.

C. A. CAREY, former purchasing agent, Lozier Motor Co.; assistant purchasing agent, Ford Motor Co.

J. R. HALL, former manager supply, repair and service departments, Lozier Motor Co.

The Specifications

LEFT-SIDE DRIVE—Center Control.
WHEEL-BASE. 120 inches.
ROAD CLEARANCE. 10½ inches.
WHEELS. Artillery type—34x4 inches. Firestone Demountable Rims.
MOTOR. Six cylinders. 35 H.P. 3⅜x5 inches. "L" Head type. Cylinders cast in two blocks. Valves enclosed.
OILING. Positive-gear pump in oil-base. Oil-gauge on motor-base.
IGNITION. Bosch High-Tension Magneto.
CARBURETOR. Stromberg "Little Six." Hot-air and dash priming attachments.
SELF-STARTER. Westinghouse Electric built into motor.
COOLING. Centrifugal pump. High-class square-tube radiator.
ELECTRIC LIGHTING. Westinghouse Electric-lighting Generator with large storage battery. Solar lamps, illuminated license-bracket.
CLUTCH. Multiple disc. Raybestos and steel ball-bearing.
TRANSMISSION. Three speeds forward and reverse.
REAR AXLE. Floating type. Full ball-bearing.
STEER-GEAR. Irreversible and adjustable. Ebonized steering-wheel.
GASOLINE SYSTEM. 20-gallon tank in rear. Gasoline-gauge.
STREAM LINE BODY. Five-passenger coach type.
UPHOLSTERING. 10-inch cushions. High-grade tufted leather. High-grade springs.
WIND-SHIELD. Built in without rods or braces. Adjustable for rain vision or ventilation.
TOP. Mohair top with "Jiffy" curtains.
HORN. Genuine motor-driven electric.
JONES SPEEDOMETER.
CLOCK. 8-day New Haven.
COLOR AND FINISH. Bodies, wheels, frame and running gear finished in handsome dark blue with silver stripe. Fenders, hood and cowl black. All hardware, lamps and fittings nickeled.

Over $4,000,000 worth of Chandler cars already sold to the strongest list of dealers ever associated with a new car. Get in touch with the Chandler dealer in your city and arrange for demonstration and delivery date at once. Catalog and name of nearest dealer on request.

The Chandler Motor Car Company 810-832 East 131st Street, Cleveland

HAYNES *America's First Car*

is controlled by pressing push-buttons

The new Haynes car is entirely controlled by electricity. The hand cranker and hand gear-lever are relegated to the tool box. In their place is a handy dial of push-buttons on the steering-post.

Electricity starts the motor and shifts the gears

You run the Haynes as easily and serenely as you'd ring a door bell. Press a button and the starting motor begins to spin; press another button, push down the clutch and you're off as quietly and gently as a zephyr, with every degree of speed under the absolute control of your finger tips.

There are many other new improvements in the new Haynes models, supported by a wonderful motor and an absolutely reliable construction that's the result of twenty years developing.

Prices range from **$1985** for our 4-cylinder car to **$3850** for our magnificent 6-cylinder limousine. All these models and full particulars are shown in our

Great Auto Book by Elwood Haynes In this book, "The Complete Motorist," the father of the American automobile tells how the auto is made and how to get the most out of it. It's a text book of information without an equal. Explains the workings of the **Vulcan Electric Gear Shift.** Sent for 10c in stamps. If you don't know your nearest dealer's name, ask us.

The Haynes Automobile Co.
42 Main St., Kokomo, Ind.

When Elwood Haynes first appeared on the roads around Kokomo in his 'horseless carriage," horses reared and people gazed in astonishment. Yet in the short space of twenty years automobiles have become more in evidence than horse-drawn vehicles on country roads as well as on our city streets, and the Haynes—America's First Car—is the most up-to-date car of all.

REVIEWS OF NEW BOOKS

(*Continued from page* 640)

which gives the book its value. Its pages reveal the light of her humorous wisdom and philosophy, her clear vision and independent spirit. Her dignity rises above the condition of waiting-maid. She saw true and transmitted what she saw. The details of her life, sad but rich in experience, prove her gifts of mind, language, and fate, which were an ornament to France.

Beer, George Louis. The Old Colonial System, 1660-1754. Part I. The Establishment of the System. 1660–1688. 2 vols. Cloth, 8vo, pp. xvi–381, vii–382. New York: The Macmillan Company. $4 net.

Mr. Beer's previous work on the subject of British colonial policy is well known for its thoroughness, its mastery of the sources, and its clear literary form. He has already considered "The Origins of British Colonial Policy, 1578–1660," and the disintegration of the system before the American Revolution in "British Colonial Policy, 1754–1765." In the present volumes he begins to fill in the gap between 1660 and 1754. Thus this work is not only "unhampered by problems of origins, but it is liberated to a great extent from those controversial questions which ultimately were decided, if not solved, by the ordeal of battle." Mr. Beer deals here then with the establishment of the system, studying the policies of the various English leaders, the navigation and trade laws, and the administration in different colonies. The work is well documented and wastes no time on speculative questions. It is written as scientific history, and it is part of the author's skill that it is not dry. When the series is completed it will stand in conjunction with Mr. Beer's other work as one of the most satisfactory historical studies of a special topic involving a great range of complex material to be found anywhere.

Innes, A. D. A History of England. 8vo, pp. 984. London: T. C. & E. C. Jack. New York: G. P. Putnam's Sons. 1913.

This is the outcome of Mr. Innes's desire to furnish the public with a readable one-volume narrative history of the British nation. To say that the attempt has been successful is perhaps sufficient praise. For Mr. Innes expressly disclaims any intention of writing a book to supersede Green's "Short History." And while his narrative is straightforward enough, it is little more than a commonplace recital of successive events. The author would avoid everything savoring of the "class-book" in his endeavor to attract the general reader, but it is a question whether his text is more interesting than that of Gardiner's "School History." What makes the book really worth while, lending it attractiveness and completeness, is the profusion of illustrations. Nearly every page-opening has a picture of some sort; there are 25 full-page plates and many extremely interesting contemporary prints.

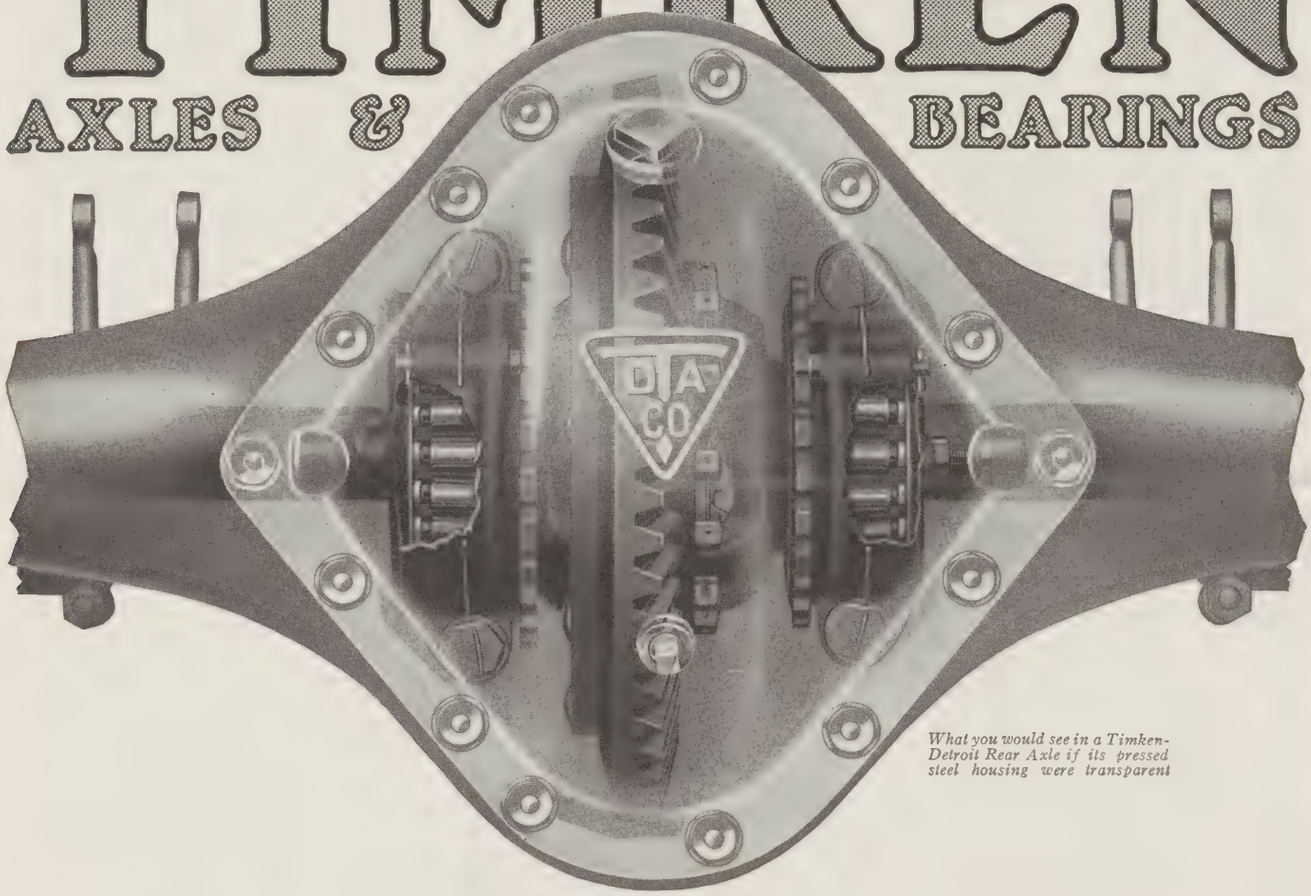
MR. RUSSELL'S "HALF LENGTHS"

Russell, George W. E. Half Lengths. 8vo, pp. 356. New York: Duffield & Company. $2.50 net.

It was Horace Walpole who said of a picture, "The Figures are less than Life and about Half-Lengths." It is sometimes

(*Continued on page* 644)

TIMKEN
AXLES & BEARINGS



What you would see in a Timken-Detroit Rear Axle if its pressed steel housing were transparent

Look Into Your Rear Axle

X-Ray pictures of the human body reveal what the eye cannot see. They gently penetrate skin and muscles and show the wonderful structure of vital organs and bones. Could the X-Ray penetrate the pressed-steel housing (the skin) of a Timken-Detroit Rear Axle it would reveal what is shown in the picture above.

Hidden under the housing are the shining teeth of polished gears that transmit driving power from engine to wheels. Quiet running, full power, satisfaction, depend on the accurate meshing of those polished teeth.

EVERY curve and angle of the teeth has been calculated by expert engineers and has been made an accurate reality by the unique Timken process of grinding every gear to its master pinion, every pinion to its master gear.

But even that accuracy would not avail, except for the labor of many hands and brains, through which it becomes possible to *put the gears together right* and *keep them right* after they are in the axle.

This means conscientious labor in the tool-room, where jigs and gauges are made.

It means exactness in size and alignment of holes, of threads, of adjusting rings. It means firmness of clamping devices that hold the parts almost as solidly together as though they were welded.

It means many men, many operations, constant gauging to the finest limits of accuracy, exhaustive testing.

It means using bearings that show almost *no* wear after thousands of miles of running—yet can be adjusted to correct that small wear perfectly—bearings that meet side pressure as well as direct weight. The one bearing that *does all* these things is the Timken Tapered Roller Bearing—and no other has been used in the Timken-Detroit Axle.

It means, in short, a design built upon long experience with all types of motor cars, under all possible conditions of service, in all parts of the world.

Look Deeper Still

Go deep down below the finished whole, below the operations and materials, even below the design—get down to the very heart and core of Timken Axle Quality.

There you find an organization of men, wholly devoted to one ideal—the building of a perfect axle. Absolute perfection is their goal, and no lesser goal will serve these men. From the day of the first motor-car they have worked together toward that end.

And to this ideal is due the safety, comfort and satisfaction of the man who drives a Timken-equipped car today.

You can catch the X-Ray spirit and look into the hidden, important facts by writing today for the Timken Primers, C-9 "On the Anatomy of Automobile Axles" and C-10 "On the Care and Character of Bearings." Sent free post-paid from either address below.

REVIEWS OF NEW BOOKS

(*Continued from page* 642)

much more difficult to produce a half-length in literature than in art, but the difficulty has been well surmounted by the bright and chatty writer of these essays which are full of taste and indicate a wide and choice social experience. The writer leads off with "Sense and Sensibility," in which he dwells upon the character and career of Newman as in contrast with that of Manning—the latter brought up in opulence, a man of the world gifted with push, tact, and skill in intrigue, the former a seminarist to the last. Mr. Russell dwells particularly upon the point that after going over to Rome, Newman's idols were shattered and he became the victim of "disillusionments, rebuffs, frustrations, disappointments." The story of his experiences was "a story of unjust suspicions and calculated insults, with here and there disagreeable symptoms of treachery and double-dealing." The evidence for these statements is plausibly unfolded by the author of them. Then come sketches of statesmen and parliamentarians. The author's reminiscences of Henry Labouchere are particularly vivid, piquan , and interesting, and his chapter entitled "Miniatures" is one of the best in the volume, containing as it does pen portraits, brief, sincere, and picturesque, of some of the men and women of the nineteenth century. The work of Mr. Russell has the firm touch which comes from certainty of knowledge and a talent for memoir-writing which he has already exhibited in previous works. All who love English life and follow the changes of English politics and literature will read with delight this collection of sketches, de ultory but discordant elements in a captivating series.

OTHER BOOKS WORTH WHILE

Alger, George W. The Old Law and the New Order. Cloth, pp. 296. Boston: Houghton Mifflin Co. $1.25 net.

This is a collection of ten pungent and pointed essays by a lawyer on old law and new disorder that should be read by all lawyers and any citizen who thinks three times as a citizen. Most of the essays have been published in some periodical, but that does not detract from the book—most of the people who should read them haven't done so yet. Why in America should there be a thing called "treadmill justice"? Does corporation punishment really get anything done? Other important chapters are indicated by the titles, "Executive Aggression," "American Discontent with Criminal Law," "Criticizing the Courts," "The Police Judges and the Public," "The Ethics of Production." If only the lawyers would turn to and clean up the machinery of their own trade, the product might be better satisfying to the general public and there might be less of the injustice of justice. But then—fewer lawyers would be needed! It should be said that Mr. Alger's style will be as clear to a layman as to a lawyer.

De Weese, Truman A. The Bend in the Road. Pp. 209. New York and London: Harper & Bros. $1.

This book was written "to show the man of the city the way to health and contentment through a return to those pleasant, pastoral pursuits that have to do with seed-time and harvest," and "to bring the

aroma of apple-blossoms and new-mown hay into the sordid life of one who has seen nothing but city streets and breathed nothing but commerce." It is a book by an enthusiastic nature-lover, written in a picturesque, artistic manner and using just the words and expressions that make his pictures alive. It is an appreciation of sky, flowers, birds, and beasts, everything that might contribute to that "rare contentment which comes from living in intimate relation with the soil." Nothing is too simple to receive a word of gratitude and admiration from this cheery author. We read glowing accounts of "grubbing-hoe," chimney building, and all forms of farm culture. The artistic side of nature seems to have an equal fascination for the writer. His chapter on "Pastoral Pictures" is full of the lure of color-blending. The book is as good as a sermon and more convincing than most of them. It is alive with the breath of open spaces and inspires the reader to go out and look for "The Bend in the Road."

Westervelt, W. D. Legends of Maui, a Demi-god of Polynesia, and of his Mother Hina. 8vo, pp. xvi–182. Melbourne: George Robertson & Co.

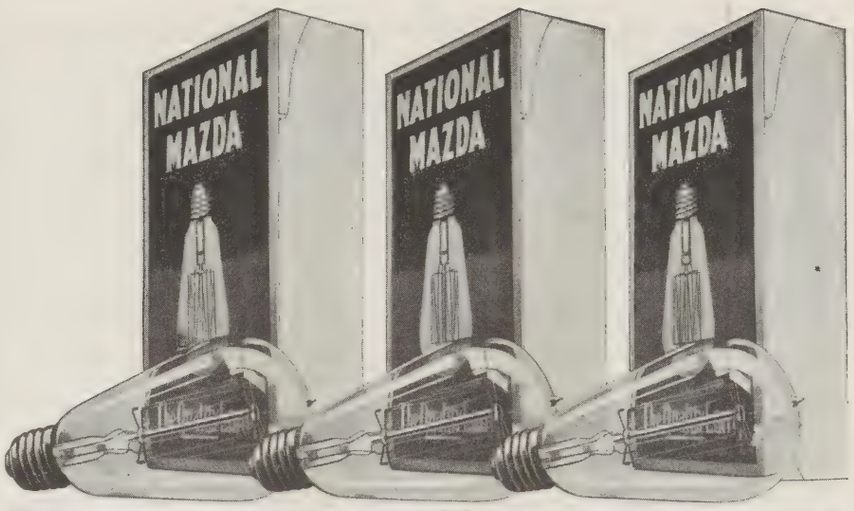
Cycles of legends that run through Oceania from New Zealand to Hawaii, leaving traces of ethnological and linguistic affinities, are told with discrimination and some criticism in this little volume. The hero is the great legendary figure in many of the South Sea islands. He combines the attributes of Prometheus, Hercules, Hermes, and Puck. The stories have been patiently collected and carefully annotated, making a volume welcome to folk-lorists and comparative mythologists.

Countess Marie Larisch. My Past. Pp. 379. Illustrated. New York and London: G. P. Putnam's Sons. $3.50 net.

The personal history of royal personages varies in interest according to the personality of the reader. The present volume has an unusual feature in its intimate description of the amor which Prince Rudolph of Austria carried on with Baroness Mary Vetsera, and the true facts about the tragic death of these lovers at Meyerling, the cause of which has never before been satisfactorily removed from the realm of mystery. The Countess Marie Larisch, *née* Baroness Wallersee, was the favorite niece of the Empress Elizabeth of Austria. She spent much time at the Austrian Court, where she enjoyed the confidence of the Empress and had many opportunities for observing curiosity-arousing incidents connected with the Empress herself and many noble families. From a dramatic or romantic standpoint the book possesses real interest. The material is well presented, but its greatest attraction is the revelation made of royal secrets and the author's unconscious connection with the tragedy of Meyerling.

Bolton, Reginald Pelham. An Expensive Experiment. The Hydro-Electric Power Commission of Ontario. Illustrated. Cloth, pp. 281. New York: The Baker & Taylor Co. $1.25 net.

This is a description and a pungent criticism of the methods of the Ontario Commission mentioned in the title, with the aim of calling New Yorkers' attention to the possibility of a similar near scandal and the danger of an "expensive experiment" on the New York side of the line. It enlightens one as to the limitations and difficulties of electric-power production as a state project.



What National Quality Means to You

It is National Quality that gives you 48 candle power from a National MAZDA Lamp with the same current that gives only 16 candle power in a carbon lamp.

It means better light and whiter light. It means no current waste, less heat, no flicker, no blackened bulbs.

It was National Quality that gave electric lights to trains and automobiles.

It was National Quality that put daylight into the New York Subway.

It is National Quality that resists the terrific shock of a broadside on a man-of-war fifty per cent better than wasteful carbon lamps.

It is rugged, generous, scientific National Quality in MAZDA lamps that is tripling the lighting value of electricity everywhere without increasing the bills.

Back of National MAZDA Quality is an organization of technical men who specialize on light; who have facilities and data that excel and exceed those of the best universities; whose services go continually into making still better lamps and devising still better ways of using them.

Be sure that every incandescent lamp in every socket has National MAZDA etched on the bulb. Buy lamps in the Blue Convenience Carton, with any of the labels shown below—each a guaranty of National Quality.

(Upper half of 1914 Pompeian fireside Panel)

He:—*I have a confession to make. I—*
She:—*You're using Pompeian, too! I knew it! Your skin looks so clear, clean and wholesome. All of us use it. Isn't it great?*

Now if you'd ask this handsome pair,
Whence came their rare complexions,
They'd answer, "From Pompeian, Sir,
Applied, as per directions."

Cut off, sign and send. *Stamps accepted, coin preferred*

The Pompeian Mfg. Co., 15 Prospect St., Cleveland, O.

Gentlemen: Enclosed find 10c. (coin or stamps) for a trial jar of Pompeian Massage Cream and the 1914 Art Panel.

Name .....

Address .....

City ..... State .....

$250.00 for Ideas

(Study the examples below panel carefully)

For the cleverest bits of talk (or poems) suited to this fireside picture, the makers of Pompeian Massage Cream will pay the following prizes: 1st prize $150, 2d $50, 3d $25, 4th $15, 5th $10.

Note 1. Contest is free. Note 2. But you may enclose the coupon below and 10c if you wish a trial jar of

POMPEIAN

Massage Cream

and a 1914 Art Panel of this picture in exquisite fire-glow effects. Size 32 x 7¼ inches. No advertising on front. An art store would have to charge 50c to $1 for a picture as well executed. "*Love's Fire Burns Forever*" is one of the picture hits of the year and was named by J. S. Kirk, of 1403 Lenox Avenue, Philadelphia, Pa. He won the $100 prize in our contest last Spring.

Rules: 1. Write your bit of talk or poem carefully at the top of your paper. Then your name and address. *Write nothing more on the paper.* (2.) 40 words or less allowed for bit of talk or verse. The shorter the better. 3. Only one suggestion from one person. 4. No questions can be answered. 5. Contest closes Dec. 1st, 1913. 6. Prize winners to be announced in Jan. 17th issue of The Saturday Evening Post. 7. Prizes will be awarded on clever advertising value of suggestions. Your statements about Pompeian Massage Cream must be correct and truthful or your suggestion cannot win a prize, so read the following carefully for points.

"How to look my best?" That is the question when preparing for an evening's engagement. Here is the answer: On each cheek apply a pinch of Pompeian Massage Cream. Massage vigorously. Into the pores the Pompeian goes; out it comes, darkened and dirt-laden, and—Presto! You are transformed. Your skin looks clear and clean, for Pompeian has brought out the pore dirt. The massage with Pompeian has also stimulated your sluggish circulation and brought a natural, healthy glow. No ordinary cream can do this. "Don't envy a good complexion, use Pompeian and have one."

WARNING! Cheaply made imitations are offered by certain dealers because they cost the dealer less and he makes more—at your expense. Get the original and standard massage cream. Get Pompeian. 50,000 dealers sell it—50c, 75c and $1.

THE EDUCATIONAL WORLD

(*Continued from page* 638)

methods, had been more than doubled in some European countries during the past two generations; in this country we produce scarcely half as much per acre as do some European countries.

Observers of educational movements have noticed for some years the new and greater attention which is bestowed upon agricultural science in our colleges, notably in the State institutions, and in other institutions partly endowed or encouraged by States, such as Cornell. A writer in the New York *Evening Post* declared a few weeks ago that matters had reached a point where vocational training has become "the great popular demand." We have a complex and growing population, which realizes more and more that it must "defend its economic position against the world's competition." Hence these insisted demands for public aid in rearing and teaching masses of skilled artizans. The complaint is often heard that our common-school system teaches preparation for life without much reference to preparation for gaining a livelihood.

The movement has already made some impressive progress in America. It was not until after this century began that the first State subsidy was put out here for agricultural and trade training, and yet there are already twenty-nine States which have passed laws pertaining to industrial education, while the national Government has actually established vocational training in our island possessions. In Ohio and Wisconsin the children of working people are virtually compelled to attend the public trade-schools as supported by industrial communities.

The writer, after a study of a recent government report on industrial education in Germany, no longer has any doubt of the value of such education "in building up the commercial and mechanical fabric of Europe."

"Institutions like the Charlottenburg Royal Technical High School, and the Leipsic High School of Commerce, with thousands of students from all over the world, take university rank, and combine valuable researches with the highest industrial training. The 'improvement schools' of Munich, which Dr. Kerchensteiner originated for youths who entered trades at the earliest legal age, have been imitated until there are now several thousand, attendance upon which is compulsory for hundreds of thousands of apprentices. The trade gilds have partial direction of these schools, and contracting employers must see that their boys and girls attend classes. Gild schools, state trade-schools, and state commercial schools abound everywhere. The net results of the system are seen in the efficiency to which it has raised German commerce and manufacturing, and the sharp lines of cleavage it has established between the various laboring and professional classes. At ten or twelve every boy must choose, according to his means and aptitudes, between the preparation offered by classical, semiclassical, liberal, technical, commercial, or trade-schools, or enter a shop with the privilege of going to improvement schools. His life is thus given its permanent direction. The plan crowns with glory the brave efforts of Fichte to start the nation in the paths of scientific experimentation and labor. It has given its point to the Kaiser's watchword that 'the future of Germany is on the seas.'"

CURRENT POETRY

AT any time a book of such distinction as William Rose Benét's "Merchants from Cathay" (The Century Company) would be sure of a cordial reception. But in this, a season which so far has been notably lacking in volumes of real poetry, it is especially welcome. Mr. Benét's whimsical romantic ballads, melodious and delicate lyrics, and thoughtful poetic studies of life's problems have long been known to the readers of the leading American magazines. Several of them have been reprinted in these columns. His book is not the conventional "slender volume," nor is "promising" the adjective it chiefly deserves. It contains over eighty poems, and not one of these is without the authentic signs of high poetry.

Not that all are of equal merit—a dead level of excellence would be depressing, and, in the work of a young writer, discouraging. But even when the influence of one of Mr. Benét's three masters—Browning, Francis Thompson, and Alfred Noyes—is most evident, there is always some flash of spirit, some turn of phrase, that is strikingly good and strikingly original.

The first poem that we quote is the book's dedication. It is more elaborate in technic than most of Mr. Benét's work; appropriately so, for a dedication is a formal and courtly thing. But it is sincere, as well as elaborate; it glows with a white passion.

To My Wife

BY WILLIAM ROSE BENÉT

Braver than sea-going ships with the dawn in their sails,
Than the wind before dawn more healing and fragrant and free,
Fairer than sight of a city all white, from the mountain-top viewed in the vales,
Or the silver-bright flakes of the moonlight in lakes, when the moon rides the clouds and the forest awakes,
You are to me!

For you are to me what the bowstring is to the shaft,
Speeding my purpose aloft and aflame and afar.
Through the thick of the fight in your eyes' steady light my soul hath seen splendor and laughed.
Now, however I tend betwixt foeman and friend through the riddle of Life to Death's light at the end,
I ride for your star!

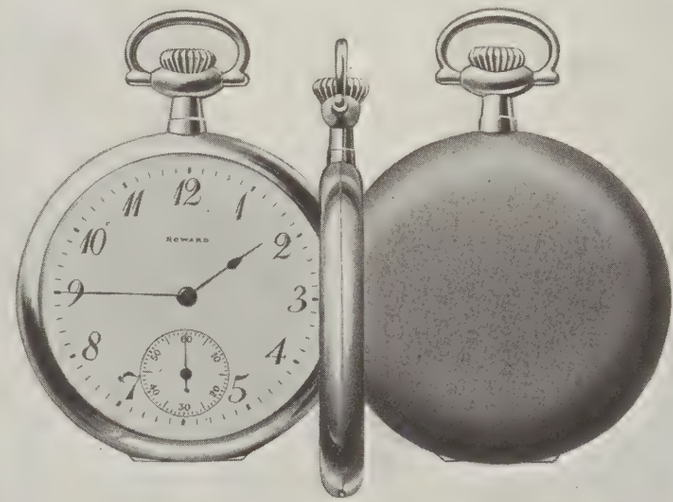
In the following verses Mr. Benét does a difficult thing. He gives actuality to classical figures. The Argo and the Golden Fleece are things remote from our experience, essentially (to us) symbols rather than facts. But this poet, by sheer strength of imagination, gives us intimacy with the heroes of legendary Greece.

The Argo's Chanty

BY WILLIAM ROSE BENÉT

Orpheus hath harped her,
Her prow hath drunk the sea.
Fifty haughty heroes at her golden rowlocks be!
His fingers sweep the singing strings,
Her forefoot white before she flings,
Out from the shore she strains—she swings—
And lifts, oh, gallantly!

Orpheus shall harp for her,
The Talking Head speak wise for her,
Lynceus gaze sharp for her,
And Tiphys search the skies for her!



A New Howard Watch

THE E. HOWARD WATCH WORKS begs to announce for limited sale, a new watch—the HOWARD 12-size Carvel, 17-jewel, extra-thin, open face, solid gold, at fifty-five dollars. This new watch is *thinner by one and one-third millimeters* than the regular 12-size extra-thin HOWARD. The movement is adjusted to three positions, temperature, and isochronism; cased in a single-joint solid gold case of special design, exceedingly flat and compact.

Selling complete in 14K solid gold case at $55—it is the only gold cased, 12-size HOWARD that you can buy for less than $75.

The small number that we are able to offer this year is due to the time and care given to all HOWARD movements and the necessarily limited output of an organization devoted to fine watches exclusively.

Your representative jeweler will doubtless have a few of these watches on exhibition during the next thirty days.

If you are interested in a reliable watch of the new thin-model type and possessing elements of the distinguished and the unusual, we advise you to make inquiry at an early date. It is an opportunity to own a 17-jewel HOWARD cased in solid gold at the very moderate price of $55.

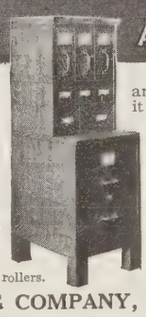
A Howard Watch is always worth what you pay for it.
The price of each Watch is *fixed* at the factory and a printed ticket attached—from the 17-jewel (*double roller*) in a Crescent *Extra* or Boss *Extra* gold-filled case at $40, to the 23-jewel at $150—and the EDWARD HOWARD model at $350.

Not every jeweler can sell you a HOWARD WATCH.
The jeweler who can is a good man to know.

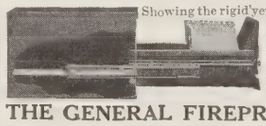
E. HOWARD WATCH WORKS, Boston, Mass.

Allsteel Filing Equipment

Safety, Rigidity Adaptability, Economy



Some day a paper lost from your files may mean calamity—or fire may burn, or rats mutilate important documents. Then you'll wish you had installed the ALLSTEEL Filing Equipment. It keeps your papers safe and sound from fire, rats, damp, dust and sneak-thieves. Besides, ALLSTEEL takes up *less* floor space and gives you *more* filing space per drawer. Comes in handy units. Grows with and adapts itself to your business.



Showing the rigid yet easy-running construction of ALLSTEEL drawers—how they run *all the way* on traveling steel rollers.

We are makers of the most complete line of standard steel office furniture in the country. Whether it be a simple card index drawer, a single letter file, a steel desk, an ALLSTEEL safe, or a complete filing system, we have just what you want, and have it ready NOW. Get our free 64-page catalog illustrated in natural colors. It shows our entire line and explains the many advantages of ALLSTEEL Equipment—many things that you probably wouldn't think of, yet highly important. With catalog we will send name of nearest dealer. Send for it now.

Doesn't Smudge, Rub nor Fade

TRADE MULTIKOPY MARK Carbon Paper

gives you copies that actually rival the original in clearness. It is the only carbon paper with a perfectly smooth surface. And it is so scientifically compounded that it gives off neither too little carbon, to make the copy faint, nor too much, to blur or smudge the paper or soil your fingers, but just enough to give the sharp, distinct, permanent impressions you need.

In black or blue, MultiKopy *never* fades. Economical, too, because one sheet makes 100 copies.

IDEAL VENTILATOR COMPANY

374 Waterman Street Providence, R. I.

New York Chicago St. Louis
Cincinnati Cleveland Detroit

May Colchis curse the dawn o' day when first she thundered free
And our golden captain, Jason, in glory put to sea!

Lovely Atlanta
The buskined huntress maid;
The lad who stretched Procrustes on the racking bed he laid;
And Hercules, whose infant thew
The hissing snake of Hera slew;
And Nestor, strong to dare and do,
Bring home each dripping blade!

Castor, ay, and Pollux
Who boxed Bebrycia's king,—
Warriors, seers, and mages at the rowlocks reach and swing;
But heirs to winds uproarious,
The Twain, sons of Boreas,
With furled wings white and glorious,
Most magic are to sing!

Lemnos lies behind us
And ladies of good grace.
Home, bring home the oars again and lift the coasts o' Thrace!
Nor yet the Clashing Islands find,
Nor stark Promethean highlands find,
But here, of far or nigh lands, find
Adventure's very place—
Adventure's splendid, terrible and dear and dafting face.

Then, Orpheus, strike harp for us!
Oh, Talking Head, speak true for us!
Lynceus, look you sharp for us!
And, Tiphys, steer her through for us!
May Colchis curse the dawn o' day when first she thundered free
And our golden captain, Jason, in glory put to sea!

In striking contrast to this sea-drenched song of mighty men and mighty deeds is the following tender praise of the young girls of long ago. In this poem, too, great figures of bygone centuries become as real as if it were only yesterday that they listened to "the seashore's faint-hummed morning tunes."

Umbrae Puellularum

By William Rose Benét

The memories of little maids
Are rosy round this gray old earth.
Heroes its glories, these the shades
Of tender evenings, sunrise mirth.

The blue wild lilacs on the dunes
Nod breeze-blown toward a lustered sea.
The seashore's faint-hummed morning tunes
Sing, little maidens, young and free.

The sun-blaze on the shifting blue
Shimmers a fantom down the sands
Where Phenix's daughter strays anew
Trailing arbutus in her hands;

Yet not as 'neath those cliffs whereunder
Her children playmates shrank and cried
When, bellowing o'er the breakers' thunder,
The white bull thrashed the rushing tide,

Dawn on such heights as Tabor's mountain
Shows a child Deborah glad and free;
Rainbows on every sobbing fountain,
A tearless bright Callirrhoe.

I seek not one as Night's sad daughter,
Nor one in Siser's camp on high
When sunset flames with swords of slaughter
And bannered armies mass the sky.

Only as little maidens, gaily
At play by wood and waterfall,
Hillside and sea, I dream them daily
And hear their happy voices call.

Their songs rejoice when morn rejoices,
They murmur home through evening's shades;
The cherished ghosts of children's voices.
The memories of little maids!

There are many other of Mr. Benét's poems that we would quote—the ringing ballad of Sir John Maundeville, for instance, and that which tells of the merchants from Cathay. But they are too long to reprint entire and we do not wish to mar them by partial quotation. We give, however, a brief, epigrammatic expression of that abasement before nature which distinguishes the poet from the poetaster.

Sincerities

BY WILLIAM ROSE BENÉT

I praised myself for nimble wit,
I viewed myself with pride;
But a rock-spring was bubbling it,
And subtler jests beside.

My breathless ardor was my boast,
That raced the heights along,
Till a great wind from off the coast
Drowned it in sound and song.

I preened me on my mood serene,
And knew that mood was none
Beside the quietude of green
Hill-meadows in the sun.

My rational armor seemed of proof,
Yet who could hope to be
Reticent as the clouds aloof,
And stoic as a tree.

. . . . .

Gladder than I each flower is still,
Nobler are wind and sea,
More reverent is every hill
Than I may hope to be.

From *Harper's Magazine* we take the following well-wrought but melancholy stanzas. The last four lines seem inconsistent with the spirit of the first eight; the poem would be improved by their omission.

God's Will

BY MILDRED HOWELLS

God meant me to be hungry,
So I should seek to find
Wisdom, and truth, and beauty,
To satisfy my mind.

God meant me to be lonely,
Lest I should wish to stray
In some green earthly Eden
Too long from heaven away.

God meant me to be weary,
That I should yearn to rest
This feeble, aching body
Deep in the earth's dark breast.

Here is a pleasant little love-song, conventional but charming. We take it from *The Bellman:*

Vigil

BY RICHARD BURTON

Why should it irk me, the night,
After the day that is done?
Stars, making distant delight,
Dew-pools, instead of the sun?

Soft, cool winds, and the scent
Of gardens, silent and sweet;
Why should I lack of content,
Joys like to these at my feet?

. . . . . .

Winds, waters, skies, be my friend,
Grant me swift sleep, and to wake
Swiftly, my waiting at end,—
Dearest, be mine with daybreak!

Waltham Watches

are furnished in cases the beauty of which corresponds with their inward ability and precision.
That an exquisite locket-like watch can also be reliable will be a new truth to many.
All the above watches are open face, the backs being shown to indicate the ornamentation.

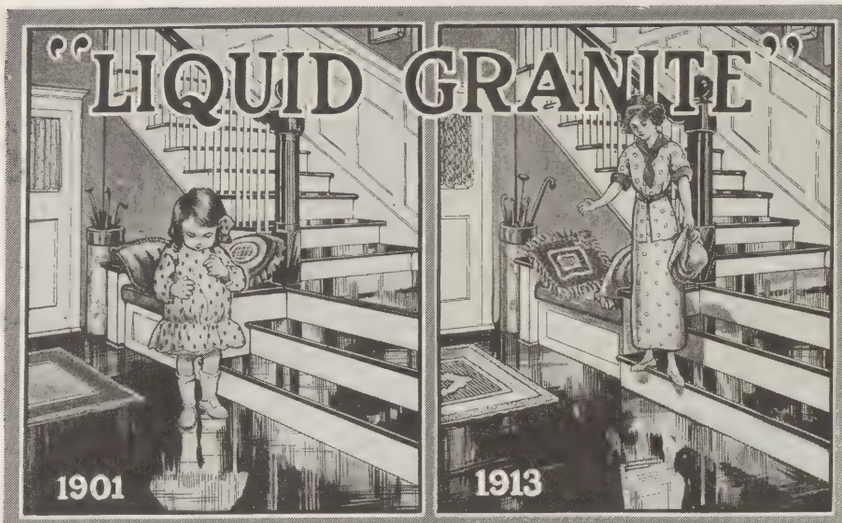
"LIQUID GRANITE"



After 12 Years This "Liquid Granite" Floor is Still Bright and Lustrous

Pittsburgh, Pa., March 4, 1913.

"Some 12 years ago I put down in my residence a hardwood floor and finished it with Berry Brothers' Liquid Granite. Three years ago we decided to refinish. Soap, ammonia and warm water were used to prepare the floor but had no effect on the varnish except to clean and brighten it. We are now using the floor with the original Berry Brothers' Varnish and still find it superior to any finish we have ever seen."
GEORGE HODGDON, Architect."

An architect is one of the severest varnish critics. He insists on good varnish—not only in his home, but in the buildings he erects for clients.

In the experience of George Hodgden *and thousands of other architects and users* throughout the land, for thirty years, Berry Brothers' Liquid Granite has been superior in durability, lustre and all-'round finishing value.

But it is not alone as floor finishes that Berry Brothers' varnishes excel. They are used for hundreds of different purposes.

55 years of honest making and honest service are back of every Berry Brothers' product. Berry Brothers' label is your guide to the varnish that will serve you best.

Use and specify "Berry Brothers'" varnish—for sale by nearly all dealers. Write for interesting literature on the varnish question. Let our service department help you.

THE SPICE OF LIFE

College Has Begun.—"D'ye make a living writing?"

"Yep, writing father."—*Cornell Widow.*

General Use.—"The vacuum system seems now to be applied to everything."

"Quite so. I know a number of people who even think with it."—*Baltimore American.*

Too Swift.—"Do any of the good things you hope for come to pass?"

"They all come to pass; but they come and pass so doggoned swift I can't grab 'em."—*Houston Post.*

Genuine Pity.—EXCITED SMALL BOY—"Hey, Mr. Tanks, there's a burglar crawlin' up your front steps, this very minute!"

MR. TANKS—"Poor devil, the missus'll think it's me."—*Sydney Bulletin.*

Remembered.—"Did your uncle remember you when he came to make his will?"

"Yes; he remembered me so well that he left my name out altogether."—*Buffalo Express.*

Mutual Joy.—"Were you glad to get back to school and see your dear teacher?"

"Well," replied the very observant boy, "I guess I was just about as glad as dear teacher was to get back and see me."—*Washington Star.*

Neighborly Help. — JESS — "Miss Schreecher is going abroad to finish her musical education."

TESS—"Where did she get the money?"

JESS—"The neighbors all chipped in."—*St. Louis Globe Democrat.*

Just to Oblige.—"The doctor says I must quit smoking. One lung is nearly gone."

"Oh, dear, John. Can't you hold out until we get enough coupons for that dining-room rug?"—*Washington Herald.*

Impotent Rage.—"It has been a long time since I have read any contemporaneous poetry that moved me to tears."

"Only the other day I read a poem that moved me to tears."

"How did it move you so?"

"I wept because I couldn't get at the author."—*Birmingham Age Herald.*

Only Surface Coloring. — WILLIE — "Mama, what's that stuck in papa's throat?"

MOTHER—"That's papa's Adam's apple."

WILLIE—"And did he swallow it green?"

MOTHER—"Don't be grotesque, dear; papa wears a brass collar-button."—*Cornell Widow.*

The New Way.—"What will we put in the magazine this month?"

"About forty pages concerning what we had last month."

"Yes."

"And forty more about what we will have next month."

"And then?"

"That ought to be enough for this month."—*Washington Herald.*

The Kind We Want.

In spite of all this proverb cant
I think 'twill be agreed
It is a friend in funds we want,
And not a friend in need.
—*New York Sun.*

Diplomacy.—SPECTATOR—"Why don't you rush in and end the row?"

POLICEMAN—"I'm trying to decide whether it's a case for mediation or intervention."—*Brooklyn Life.*

Explained.—"Atkins," said the sergeant angrily, "why haven't you shaved this morning?"

"Ain't I shaved?" asked Atkins, in apparent surprize.

"No, you're not," insisted the sergeant; "and I want to know why."

"Well, you see, sergeant," replied the soldier, "there was a dozen of us using the same mirror, and I must have shaved some other man."—*New York Mail.*

Popularity Counts.—Michelangelo beckoned to Rembrandt.

"I see they've found another of your pictures, Remmy."

The master sighed.

"They found four last week," he said, "and five the week before. Funny, isn't it?"

"That's where the boys who write have the best of you daubers," said John Milton. "You don't hear of any Paradise Lost's being found in out-of-the-way places."

"Nor any Pilgrim's Progresses," added John Bunyan.

"Nor any Hamlets," put in Will Shakespeare.

Rembrandt smiled.

"No," he answered; "I don't. All these discoveries seem to depend on present market values."

And pulling his big velour hat over his eyes he waved his hand and stalked away. —*Cleveland Plain Dealer.*

The Importance of Being Bryan.—This is selected by *Collier's Weekly* as Secretary Bryan's best story:

The year after coming to Nebraska, in 1888, I delivered fifty speeches against the Republican candidate for Governor, and in each one made it clear why he should not be elected.

He was elected, however, by the usual majority.

On the following St. Patrick's Day I was to make a short speech, and Governor Thayer (whom I had tried to defeat) presided. It was a varied program, consisting of songs and speeches and vaudeville numbers. It was the first time I had been in the presence of the Governor, and I wondered whether he felt any resentment toward me for all the work I had done against him.

At last my turn was reached. The Governor, having been prompted by another man, arose and said: "The next person on the program is W. J. Bryan," and as I came forward he stept toward me, smiled, and extended his hand. I felt greatly pleased that he did not harbor any resentment against me, and grasped his hand warmly as he drew me toward him and whispered: "Quick! Do you speak, sing, or dance?"

He had never even heard of me.

Dining-room of H. Belden, Clifton, N. J. Beaver Board makes a room cooler in summer, warmer in winter. It suits every climate and latitude.

BEAVER BOARD

Walls and Ceilings

PHOTOGRAPHS can not show the beautiful coloring of Beaver Board when painted; but they do suggest the great opportunity it offers for tasteful designing of interiors. The two rooms shown here are chosen from thousands of such interiors—all different.

TRADE BEAVER BOARD MARK

Will Not Crack

This permanent durability of Beaver Board is one of 41 great advantages over lath and plaster.

Easily Put Up

The quickness, cleanliness and ease of Beaver Board construction is in marked contrast to the delay, litter and confusion inevitable with other materials.

Pure and Healthful

The sanitary superiority of the light, firm panels of pure wood fibre is important in rooms where you must live, sleep, cook or work.

For New or Old Walls

Beaver Board can be nailed to the wall and ceiling beams of new rooms, or over old lath and plaster. It is as satisfactory for repairing or remodeling as for new buildings.

Sold by lumber, builders' supply and hardware dealers in sizes to meet all your needs.

Be sure it's the genuine, patented Beaver Board, with trade-mark on back and cream-color all through.

Pure-wood-fibre Beaver Board walls and ceiling make this bedroom of Wm. Thompson, Cleveland, Ohio, clean, beautiful and healthful.

Don't confuse this with ordinary "make-shift" roofings. We guarantee it 15 years and inside each roll furnish modern ideas for laying it artistically and permanently.

Certain-teed

Rolls **Roofing** Shingles

You can't tell how long a roofing will wear by looking at it—so for your own protection, accept no substitutes—be sure that the *Certain-teed* Quality Label is on each roll. Sold by dealers everywhere at a *reasonable* price.

What Is the Best Motor Car?

Mr. Prospective Car Purchaser, you want your 1914 car to be the *best* car in its price-class; to represent the *most* you can get for *your* money. For every dollar you spend, you want a dollar's worth of car.

From radiator to tail-lights you want your car to be *distinctively* a 1914 model. You want it equipped with every up-to-the-minute improvement—every refinement carried by the cars your friends are going to drive throughout 1914. You do not want to be ashamed of one feature in its construction.

You can't go wrong in choosing that new car if you read

MOTOR AGE

"The Car Owner's Weekly"

All the information about every new car—its price, mechanical construction, up-to-date equipment—is placed before you in a series of new-car articles now appearing weekly in MOTOR AGE. These articles tell you just what new features have received the stamp of approval of America's leading car manufacturers—the features you want *your* car to have.

We want you to read MOTOR AGE regularly for four months—17 weeks—to prove to you that you need it every week during the year. MOTOR AGE instructs you how to make ordinary repairs at home, how to increase tire mileage, and add to the life and service of your car. One tip a year from MOTOR AGE may be worth hundreds of dollars to you.

$1.70 Worth of Motor Age For $1.00

A four months' trial subscription, beginning November 6, would cost you $1.70 on the news-stand. By pinning a dollar bill to the attached coupon and sending it to us *now*, you get these 17 issues—$1.70 worth—at a saving of 70 cents.

CURRENT EVENTS

Foreign

September 25.—Raisuli and a small army of followers are defeated by Spanish forces at Glot, Morocco,

The International Conference for the Protection of Workers, at Berne, Switzerland, attended by delegates representing all the leading European countries, adopts a resolution declaring that workers must be allowed a rest of eleven consecutive hours a day and boys under fourteen be forbidden to work at night.

September 26.—Japan sends an ultimatum to China, demanding compliance with her demands in connection with the Nankin outrages within three days.

September 28.—General Chang Hsun, the commander of the Chinese troops at Nanking, apologizes to the Japanese consulate for the killing of several Japanese and an insult to the Japanese flag. The action is regarded as closing the incident.

Sir Alfred East, president of the Royal Society of British Artists, dies in London.

September 30.—The diplomatic corps in Peking vote in favor of recognition of the Chinese Republic as soon as the elections have been held.

The British Admiralty awards the Trade-Unions official recognition.

Domestic

WASHINGTON

September 26.—Reports of the amount to be derived yearly from the income tax indicate that 600,000 persons with incomes ranging from $3,000 to $100,000 and upward, out of a total population of 90,000,000, will furnish the revenue from that source.

September 27.—The subcommittee of the Senate Committee on Appropriations decides to recommend the abolition of the United States Commerce Court.

September 28.—An advance outline of the changes made in the Underwood-Simmons Bill by the tariff conferees shows that the House yielded in 427 items and the Senate in 151, while 97 were compromised.

September 30.—The Underwood-Simmons Tariff Bill, as reported by the House and Senate conferees, is adopted by the House by a vote of 254 to 103.

GENERAL

September 28.—Two drug-crazed colored boys, brothers, at Harriston, Miss., start a reign of murder that ends only when four white men, four colored men, and a colored woman are killed, and the two boys lynched. The total number of dead among the colored people may reach a score.

September 30.—The American Road Congress, in session at Detroit, adopts a resolution favoring the passage of uniform road laws by the several State legislatures.

October 1.—The commission form of government for Minneapolis is defeated.

My Hobby

Here's the sweetest smoke that I ever discovered, and I've smoked for 40 years.

Five Free

It is made up for me from a special Havana—a mountain-grown leaf of mild and wondrous flavor. A connoisseur who lives in Cuba picks it out for me.

It is made up only for my private use, with my monogram band. But hundreds of friends have found them out, and secured supplies through me. They have never found in a ready-made cigar such rare, exquisite flavor.

It occurs to me now that hundreds of others would enjoy this delightful smoke. So I invite those who seek something exceptional to try this Panatela.

This is not a business, for I have retired. It is merely an old man's pastime. So I will quote you a price which is close to my cost, for profit is not important. I ship by Parcel Post.

But I seek only men who enjoy the best, who want something rare, and who know good Havana. I am not after bargain-seekers.

Five Cigars Free

If you will send me 10 cents—just to show your sincerity—I will mail you these cigars. Smoke five with me—then order as wanted. The price is $5 per hundred, $2.60 for 50—all charges prepaid. Use your letterhead, please, or your business card, and **write now for the five cigars.**

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"L. K.," Repton, Ala.—"Kindly advise me as to the correct pronunciation of the word *pellagra*."

The word *pellagra* may be pronounced in either of two ways: (1) pel-la'gra (*e* as in *pell*, first *a* as in *late*, final *a* obscured almost to the sound of *u* in *but*); (2) pel-lag'ra (first *a* as in *latter*, *e* and final *a* as above).

"G. H. V.," Estancia, N. M.—"Is there any dictionary which contains the words 'overage' and 'shortage'? They are in more or less universal use in banks where tellers speak of 'an overage in their cash' or 'a shortage in their cash.'"

All the dictionaries give the term *shortage* in the sense of "deficiency." The New Standard Dictionary gives the term *overage* in the sense of "surplus."

"F. P. A.," Detroit, Mich.—"Kindly inform me: (1) How *Jacques* is pronounced; (2) Why *Virgil* now appears as *Vergil*; (3) Why persons are now *kidnaped* or *worshiped*, instead of with two *p*'s as formerly?"

(1) *Jacques*, as used in Shakespeare's play (*As You Like It*), is pronounced jay'kweez (*jay* as the word *jay*, *ee* as *ee* in *weed*). As a French name, equivalent to English *James*, the word is pronounced zhahk (*zh* as *z* in *azure*, *ah* as *a* in *father*).

(2) The spelling *Vergil* is perferred because the name appears in ancient manuscripts and inscriptions up to the fourth century as *Vergilius*. *Virgilius* is, therefore, a relatively modern corruption. The exacter scholarship of to-day bases its forms upon the oldest and best authorities; the scholarship of a generation or more ago was less careful in details.

(3) It is only when the vowel is accented that two following consonants indicate that the vowel is short; hence, two *t*'s are found in *matted*, and the word is different in sound from *mated*. But in such words as *kidnaped*, *worshiped*, the vowel in question is not accented, and hence the doubling of the following consonant does not necessarily imply that the vowel is short. But both spellings are admissible—with one *p* and with two *p*'s.

"W. C. U.," St. Louis, Mo.—"Is the form 'none of us *are* going' correct, or is the singular predicate only permissible with the word *none*?"

None is used both as singular and as plural. One may say "none *is*" or "none *are*." Unless something in the sentence indicates that the word is singular, we are likely to feel that it is plural.

"T. F. W.," Portsmouth, Va.—"Kindly tell me where the quotation 'God tempers the wind to the shorn lamb' occurs?"

The quotation, "God tempers the wind to the shorn lamb," is from Laurence Sterne's "A Sentimental Journey."

"K. J. H.," Chicago, Ill.—"Kindly advise which of the following phrases is correct: 'We carefully *censor* all copy,' or 'We carefully *censure* all copy.'"

"We carefully *censure* all copy" is a correct sentence, but it does not say what is evidently intended to be said; *to censure* is "to find objectionable." The verb *to censor* is in good use in the sense of "to subject to censorship"; and this appears to be what is meant.

"W. B.," Philadelphia, Pa.—"In the following sentence, kindly advise as to whether the phrase 'compiling a summary' is incorrect or not: 'Mr. Jones is *compiling a summary* of what has been published,' etc. Some maintain that it is right to say 'compiling a summary,' others claim that a summary is a compilation and therefore can not be compiled."

It seems to us that a person who objects to "compiling a summary" because a summary is a compilation ought to object to "building a house" because a house is a building. We should not regard the one expression as any more incorrect than the other.

SANITAX
GENUINE RUSSIAN BRISTLE BRUSHES

Does Your Heater Run You

—make you look after it from early morning till late at night—sometimes keep you roasting hot, more often freezing cold—and all the time burning more coal than is necessary. This condition can be avoided by equipping your heating plant with the Jewell Heat Controller. With this simple, economical device your heater must actually run itself. All that is necessary is to occasionally put in a little coal. The JEWELL automatically takes care of drafts and dampers and keeps an even, steady fire that gives you an even heat at any temperature desired—with the minimum amount of coal.

The clock attachment assures a warm house in the morning but keeps it cool over night.

By the use of the JEWELL, heating troubles and worries are not only abolished, expensive coal bills are not only reduced, but changes in temperature are avoided, making the JEWELL indispensable for health and comfort.

THE JEWELL HEAT CONTROLLER

Write for Literature — How to Solve Your Heating Problem and we'll also send you the name of the dealer at whose place you can see the JEWELL in actual operation.

Jewell Heat Controllers are attractive, an ornament to any room, come complete, ready to set up—may be applied to any system of heating—and guaranteed to give efficient service. Write for particulars.

INVESTMENTS AND FINANCE

WHAT CANADA EXPECTS UNDER OUR NEW TARIFF

SINCE it became a practical certainty that the Underwood-Simmons Tariff Bill would be passed by the present session of Congress, Canadians have been actively making preparations for shipments of their products to this country. A correspondent of *The Journal of Commerce*, writing from Ottawa, says the Department of Trade and Commerce of that country looks for "great increases in exports of the principal Canadian commodities affected by the bill." Abundant signs are seen that "extensive preparations are being made to take the fullest advantage of the changes." This activity is especially noticeable in live stock, meats, hay, coal, fish, and some lines of manufacture. Following are this writer's comments on the trade figures of Canada for the first five months of the fiscal year, —that is, up to September 1st. All "show great increases":

"Canadian exports during August broke all records. Total imports and exports for August were $97,742,581, a gain of nearly $8,000,000 over August, 1912. Exports of agricultural products in August—nearly all to the United States—were $18,000,000, a gain of $5,000,000 over August last year, while the total exports for August—mostly to the United States—were $64,000,000, a gain of $9,000,000 over August, 1912. For the five months' period ended August 31, the total of imports and exports was $456,-723,167, compared with $418,658,748 for the same period last year.

"American and Canadian buyers of live stock, hay, and other agricultural products for export to the States are much in evidence throughout Ontario, Quebec, and the other eastern provinces. Cattle and hay buyers are especially active for exports to the Buffalo, New York, and Boston markets. Practically all available live stock has been bought up for shipment to these markets after the enactment of the bill.

"The reduction of the hay duty from $4 to $2 a ton has enormously stimulated buying. Lumber activities are noticeable. In the maritime provinces of New Brunswick and Nova Scotia a great revival of selling to the New England States, especially of fish, lumber, coal, and agricultural products, is foreshadowed by present activities."

Accompanying these preparations for larger trade with us was "a growing fear that the impending increases in exports will further increase the cost of living in Canada, already at high-water mark." Predictions were made of a demand for some general lowering of the Canadian tariff also. The present government was said to be "watching the situation with the keenest interest," while the opposition party, under Sir Wilfrid Laurier, expected to "profit greatly by events following the enactment of the bill." In other words, Canadians, if they found they had to pay more for their own products because of the new demand from the United States, would insist on being allowed to pay less for the products they imported from the United States. Predictions were freely made that a strenuous effort would soon be organized to secure a reduction of duties on goods imported from this country.

Should such a movement lead to success it would be a singular sequel of the reciprocity agreement so cordially promoted by President Taft, and so severely rejected by the Canadians. Similar ends would thus be reached by another route. *The Journal of Commerce* believes that success for a movement of this kind, combined with our own new tariff, would much increase the volume and value of trade between this country and Canada and to the benefit of both countries. It goes so far as to declare that free trade between these countries "would be as certainly advantageous as it is between the eastern and western, or northern and southern sections of the United States, or the eastern and western provinces of Canada."

THE B. & O.'S PAST AND PRESENT

"When you see $75,000 worth of live, growling motive power pick up 1,500 tons of West Virginia soft coal in $36,000 worth of modern steel equipment, wiggle it to the summit of the Alleghanies and roll it over the top toward the Atlantic seaboard," says a writer in the New York *Times Annalist*, "you begin to perceive how largely man's work consists in moving things from where they are to where he needs them." The coal here referred to was left by nature in distant mountains but is needed on the seaboard in Baltimore. Because of this fact great locomotives toil with loads of it up the western side of the Alleghanies day and night, without end or rest.

Only a few years ago the question of putting down coal on the seaboard at Baltimore ceased to be one of putting down a certain quality, it ceased to be one of putting coal down at a low cost; it had really become one of putting coal down in the quantities required. A limit had been reached—not, however, to the amount of coal that could be produced, but to the amount that could be transported. The B. & O. had reached its

From the New York "Times Annalist."

THE CONTEST ON THE BALTIMORE & OHIO RAILROAD IN 1830 FOR THE BEST MOTIVE POWER. AND THE HORSE WON THE FIRST RACE!

transportation limit when Daniel Willard was made president, and undertook to increase the B. & O.'s hauling capacity 50 per cent. In solving that problem Mr. Willard, in three years, has spent about $60,000,000. Of his work the writer says in detail:

"The main artery of the Baltimore & Ohio is from Baltimore to Cumberland. From Cumberland two arteries diverge, one running through Pittsburg to Chicago and the other through Wheeling and Cincinnati to St. Louis. Mr. Willard found these two arteries suffering from strangulation in single-track tunnels, one at Sand Patch and the other at Tunnelton, crossing the Alleghanies; and some of the most efficient traffic men in the world were losing their souls trying to punch the trains through. The big Mallet mountain engine could not be got through at all. In both places new double-track tunnels, with lesser grades, were constructed alongside of the old, and as the old ones could still accommodate traffic, that made three tracks across the mountains where there had been one before, and the system was unstrangled. The new tunnels cost nearly $2,000,000 each.

"Romance has not gone out of railroading, if you look for it. The difference is that people are accustomed to see great works nowadays performed as a matter of course, and waste not the time to make an ado about them. When Thomas Swann, as President of the Baltimore & Ohio that ran only from Baltimore to Cumberland, promised his shareholders that he would carry their road to the Ohio River, it seemed a tremendous thing to promise. He did it. That was heroic. Later John W. Garrett promised to take it to Chicago, and did, and he is famous. Neither spent one-third as much as $60,000,000 in three years.

"To say that one built the road from Cumberland to the Ohio River and that the other built it to Chicago is to allocate to each an achievement in physical proportions that every one knows. But to be able to say that between Little Cacapon and Orleans Road Daniel Willard eliminated a 0.5 per cent. helper grade, established a continuous east-bound grade of only 0.1 per cent., and put four tracks where there were but two before—that does not appeal irresistibly to the imagination. Only an engineer can fully appreciate it. That is now the biggest piece of improvement work doing on the Baltimore & Ohio. It is known as the Magnolia cut-off and will cost $6,000,000. It extends over a distance of seventeen miles.

"You begin to see the differences between the work of a railroad man to-day and that of the Swanns and Garretts. They were intent upon pushing their rails on to new places; the problem to-day is to rebuild mileage on lower grades and put down two, and three, and four tracks where one was enough before. They were for conquering distance; to-day the work is intensive, and a railroad man dreams not of extending his line so much as of revising his grades, reducing curvature, and weighting his track with good 2-inch rock."

Oldest of American railroads is the Baltimore & Ohio. Its first piece of mileage—a stretch of fourteen miles from Baltimore to Ellicott Mills—was opened in May, 1830. It has been oddly said that this piece of road existed as a railroad before locomotives. By this is meant that its projectors decided first to construct a railway and then to employ as motive power the most efficient power obtainable, whether it should prove to be horses or steam. At that time the locomotive had

DO your booklets get into manufacturers' files or are tney filed in the waste basket before being read, simply because of their unattractiveness? Getting attention is a booklet's first problem and the first impression means much towards its success. Make sure that YOUR booklets do not fail in this all-important question of appearance. The De Luxe Hat Co. 41 S. 2nd Street, PHILADELPHIA, PA.

just appeared on the horizon as a competitor of the horse.

Much discussion took place as to the comparative merits of the two motive powers. In order to have a practical demonstration, an actual race was arranged over this first piece of B. & O. road between a horse and a locomotive, as shown in the accompanying illustration, taken from an old cut. Eventually the result was that the horse won the race. But later developments in the locomotive demonstrated the superior qualities of steam as a motive power on rails. Four months after this memorable trial, a locomotive was making regular trips between Baltimore and Ellicott Mills.

THE EXPECTED U. P. "MELON"

Gossip and predictions as to the "melon" to be opened by the Union Pacific Company has continued active into October. Just what form the distribution would take has been matter for much difference of opinion. It might be a 10 per cent. distribution, or a 25 per cent., or even a 40 per cent. one in cash, or it might be a distribution, in part of cash and in part of stock in railroads already in part owned by the Union Pacific, such as Baltimore & Ohio, Illinois Central, and New York Central. Among the suggestions was one that the company might make a large distribution in cash and then increase its own capital stock, permitting stockholders to purchase this new stock with the cash already distributed to them, the entire volume of stock, new and old, then to pay 8 per cent. instead of 10. In many quarters there has long existed a belief that the Union Pacific management ought to find a way to reduce its dividend as a concession to public sentiment. A cash distribution followed by an increase of stock after the plan here suggested would accomplish that result in a way that has commended itself to some students of the problem.

A writer in *The Wall Street Journal* has outlined in interesting detail the position of Union Pacific as to cash on hand and securities owned. The company at present has a book surplus reaching to the enormous sum of $220,000,000. This is substantially 100 per cent. on its own capital. In this sum, however, are included certain large holdings of stock at what they cost the company. In the present deprest state of the market, these securities show a paper loss of $38,000,000.

The writer says a large portion of this enormous surplus was accumulated "through the financial foresight of E. H. Harriman, combined with some good fortune." Mr. Harriman's unsuccessful attempt to get control of Northern Pacific resulted in the end in a profit to the Union Pacific Company of about $58,000,000. The stocks he acquired during that memorable contest with the Hill interests were afterward sold by the Union Pacific (in 1905 and 1906) for much higher prices than he paid for them, Northern Pacific bringing 232½ and Great Northern 348. To this profit for Union Pacific of $58,000,000 is to be added a further sum of $18,000,000, the same being the net profit from the recent sale of Southern Pacific shares under the Supreme Court decree. These Southern Pacific shares, which cost about $70, were sold for about $90.

The writer goes on to say that the Union

Branches in every civilized country

Pacific has become much more than a railroad, or a mere investment proposition; it has, in fact, been approaching "a banking proposition," a condition which for a railroad is "adverse to public sentiment at the present time." For a railroad to pay its stockholders 10 per cent., and to hold in addition a 100 per cent. surplus in cash and securities in its treasury, looks like something of a "menace to itself, its stockholders, and the railroad interests of the country." Says the writer further:

"In the merger dissolution plan which provided for transfer of the Central Pacific to Union Pacific the price agreed upon was $104,000,000. Were Southern Pacific compelled to dispose of the property by court decree this price might be shaded. Deducting $100,000,000 from the Union Pacific $220,000,000 surplus as a reserve against the possible purchase of Central Pacific, and an additional $38,000,000 as the shrinkage in Union Pacific's investment securities at present prices as compared with the cost at which they are carried on the books, leaves $82,000,000 for improvements, possible further shrinkage in asset values, and a margin for the extra distribution.

"With an annual surplus after dividends of from $10,000,000 to $15,000,000, Union Pacific will probably have $20,000,000 to $30,000,000 additional surplus by the time the Supreme Court would reach a decree in a suit to compel sale of the Central Pacific. This should be ample to take care of improvement expenditures meanwhile, leaving the bulk of the above $82,000,000 available for distribution.

"Nobody could have then dreamed that the genius of a Wall Street broker would cause Union Pacific to rise phenixlike from its financial ashes and in less than ten years put Union Pacific at the head of the railroad interests in the United States. When it started upon a career of expansion, geographically and financially, continuing until it reached from Puget Sound to the Gulf of Mexico with a $50,000,000 lap over into old Mexico, nobody imagined that, when arrested and sundered by the courts because of its size, the financial problem on its hands would be the free distribution of its accumulated treasury, notwithstanding an annual distribution to its common stockholders of $22,000,000, as contrasted with 1893, when there was only $8,000,000 of net earnings with which to pay $12,000,000 of charges.

"If the Union Pacific directors conclude to retain in the treasury the equivalent of $50,000,000 in cash, and securities that could always be relied upon to yield another $50,000,000, we think they might find in the balance something approaching $40 per share in cash or securities, or $86,000,000. Coupled with any such announcement of a $30 to $40 dividend should go a statement that annual dividends beginning with the next quarter would be at the rate of 8 per cent. instead of 10 per cent. per annum."

A second article in the same paper discusses the extent of the distribution which the Union Pacific management might properly make. Regard in this matter must be had for a possible need of funds by the Union Pacific in the near future for purchase of the Central Pacific. The Union Pacific must safeguard itself against any risk of having to borrow money for that or any other purpose, and especially in stringent money markets. But all this could be done and a generous distribution still be made to the road's stockholders. The writer believes that a dividend amounting virtually to $45 a share could be distributed, and still leave the company with

a profit and loss surplus of $80,000,000. This surplus would be its bulwark against any possible financial needs in a stringent market.

As a matter of fact a profit and loss surplus of $80,000,000 would probably be more than the company would need in the worst imaginable conditions. The writer estimates that $50,000,000 would provide an ample reserve against possible requirements. The company might even keep $75,000,000 in cash on hand, awaiting a solution of the Central Pacific problem, and meantime could safely distribute to stockholders $25 in cash and from $50,000,000 to $75,000,000 in the securities it owns. All this would mean a dividend of from $25 to $45 per share.

The writer again emphasizes the point that public sentiment is now adverse to railroads doing a banking business, for that is what the Union Pacific, with its millions of cash, has been doing. When any road is in such a condition of prosperity, engineers and firemen are apt to demand higher wages. So also will public commissions be apt to resist any demands from a company for higher freight rates. If the Union Pacific desires to stop demands for wage increases and for rate reductions it must "get its affairs down to a purely railroad basis, so that employees and shippers will not be clamoring for participation in the profits of its banking business."

HUGE UNIFIED MORTGAGES

The recent hearing by the Interstate Commerce Commission of the New York Central's application for permission to issue a huge mortgage, in which eventually to consolidate existing mortgages, and to include new issues as called for, is one of several contemporary signs of the great demands that will be made on capital in coming years. It is not so very long ago that the creation of a similar huge mortgage by the Great Northern Railway called attention to this coming demand. Still more recently a third potent sign has appeared in news that the St. Paul road has in preparation a similar scheme for the unification of outstanding bonds and other funded obligations, the figures named being $600,000,000. That sum would not only unify all the existing bonded debt of the St. Paul road, but would provide for its needs during a long term of years. At the annual meeting of the road on September 26, a resolution for the creation of such a mortgage was adopted. No details were given as to the probable sum for which it would be issued. Indeed few of the details have yet been worked out. The St. Paul proper at present has outstanding $299,554,755 in bonds. Just how the proposed issue could run to $600,000,000 is explained as follows by a writer in the New York *Times*:

"The St. Paul now has outstanding a total of $455,000,000 of bonds, including the bonds on the Pacific Coast extension, which amount to more than $173,000,000. Out of this total, however, the company holds in its own treasury not less than $156,000,000. Its bonds in the hands of the public fall just a little short of $300,000,000. The new bond issue, according to the terms which are now being discust, would provide, however, not only for the outstanding bonds, but probably for the full amount of the various classes of bonds which have heretofore been authorized.

Come-Packt Furniture Co.
1019 Fernwood Ave., Toledo, Ohio

"In round numbers about $110,000,000 of bonds have been authorized above the amount already issued to the public, or held in the treasury. This brings the total amount of bonds up to $565,000,000. If all of these bonds are to be covered by the new mortgage, as is thought likely, with some margin for future issue in addition to the bonds already authorized and unsold, the amount of the new issue might easily be as high as $600,000,000. It is not expected that the St. Paul will make any effort to refund its existing bond issues, but will leave them to be provided for as they mature by issues of the new general mortgage bonds through which the funded debt of the system will be gradually unified."

The earliest road to undertake financing on this colossal scale was the Burlington, which in 1908 authorized an issue of $300,000,000 to take care of existing issues and provide for future needs.

FAMILY MARKETING UNDER THE NEW TARIFF

With the new tariff bill made into a law, families throughout the country will at once be curious as to its effect on the cost of food and clothing. Comparative statistics, compiled in Washington and printed last week in *The Evening Sun* of New York, show just what changes were made in the duties on about forty different articles. These all enter into the primary cost of living,—that is, they are articles of food and clothing. Many of them will now be admitted from foreign countries free. Many others are still dutiable, but the rates have been reduced, in some cases very materially.

In the matter of clothing, it is to be kept in mind that the reduced rates will affect ready-made goods more perceptibly than clothes manufactured in this country, inasmuch as difference in the wages of labor entering into the cost is a greater factor than difference in the cost of material. It is believed that an ordinary suit of clothes ready-made will now cost from three to five dollars less than formerly; when the price remains the same, a very distinct gain will be secured by getting a suit made from better cloth than before. Clothes made to order will be affected to something approaching the same amount. Many experts in these matters contend that the benefits coming to buyers of clothes will be seen mainly in the better quality of the cloth used. In case, however, a purchaser desires to obtain a suit of clothes at from three to five dollars less than formerly he can do so when satisfied with cloth of the same quality as before. Following is the list of articles referred to, with the duties imposed under the Payne-Aldrich Bill and the duties which now go into effect under the Underwood-Simmons Bill:

FUTURE GREAT DEMANDS ON CAPITAL

Wide comment for some weeks has been made in financial circles on a recent statement by Frank A. Vanderlip, President of the National City Bank of New York, as to the enormous demands which will be made on capital within the next few years. Mr. Vanderlip had in mind at the time he spoke the demands of one industry only, since he was speaking before representatives of one—the electrical. He remarked that when present promises for larger uses of electrical energy in industrial work, agriculture, and interurban transportation lines are considered, it appears that new capital, amounting to approximately $400,000,000 a year, will be required. In other words, there will be needed an average of $8,000,000 for every week during the next five years. Within the same period, steam-railroad securities to the amount of $1,000,000,000 will mature, while for new work on railroads, in betterments and extension, judging from the requirements of the last five years, there will be in the coming five years a call for about $3,000,000,000 more, so that the railroads will need for refunding and fresh capital about $4,000,000,000. If to this sum be added the requirements of States and municipalities and the electrical demands, there will be needed between now and the end of 1918 something like seven or eight billion dollars. No account is taken in these figures of the demands for general industry and trade.

Mr. Vanderlip happily said that figures like these "sound more like astronomical mathematics than totals of hard-earned dollars." The raising of this money is now "the practical problem that financiers have directly before them." As to how the money will be raised, and the ability of the American people to provide it, "Holland" says in *The Wall Street Journal:*

"If normal conditions, political and economical, can be restored within the next

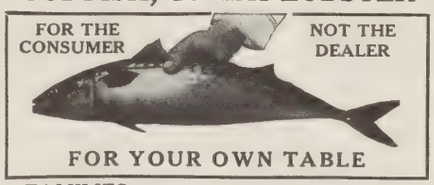
SALT MACKEREL, CODFISH, FRESH LOBSTER



FAMILIES that are fond of **FISH** can be supplied **DIRECT** from **GLOUCESTER, MASS.**, by the **FRANK E. DAVIS FISH COMPANY,** with newly caught, **KEEPABLE OCEAN FISH,** getting an unusually fine quality of the common varieties as well as lots of choice kinds that are hard to find elsewhere.

We sell **ONLY TO THE CONSUMER DIRECT,** sending by **EXPRESS RIGHT TO YOUR HOME.** We **PREPAY EXPRESS** east of Kansas on orders above $3.00. Our fish are pure, appetizing and economical to buy, and we want **YOU** to try some, payment subject to your approval.

SALT MACKEREL. These fat, meaty, juicy fish are delicious for breakfast. They are freshly packed in brine and will not spoil.

CODFISH, as we salt it, is white and boneless and ready for instant use. It makes a substantial meal, a fine change from meat at much lower cost.

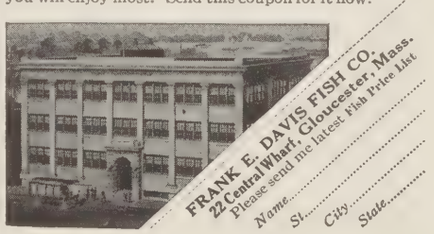
FRESH LOBSTER is the best thing known for salads. Right fresh from the water, they are boiled and then packed in **PARCHMENT LINED CANS.** They come to you as a perfectly pure and safe food product. The meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS are a relishable, hearty dish that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, **SHRIMP** to cream on toast, **CRABMEAT** for Newburg and devilled, **SALMON** ready to serve, **SARDINES** of all kinds, **TUNNY** for salad, **SANDWICH FILLINGS** and every good thing packed here or abroad, you can get of us to keep right on your pantry shelf for regular or emergency use.

With every order we send **BOOK OF RECIPES** for preparing all of our fish products.

Our list tells how each kind of fish is put up, gives the delivered price, so you can choose just what you will enjoy most. Send this coupon for it now.



year or two there seems to be no reason to doubt the ability of men of finance to secure this enormous amount of fresh capital. It certainly can not be secured for the railroads until there be some change in the attitude of the public and the legislatures, State and national, toward the railroad companies. But it must be obtained, or else there will be great danger that business will be stagnated; that there will be a congestion of traffic.

"Sir George Paish, in a recent article in the London *Statist*, clearly intimated his belief in the ability of the people of the United States to create new wealth convertible into money which will be needed for the important financing required in the United States in the next five years. If the American people were expert in practising personal economies, and if American municipal and State administrations were managed after the highly systematized and economic methods which characterize our great corporations, there would be not the slightest doubt about the creation of new wealth utilizable for capital and equal to the amount named by Mr. Vanderlip in the next five years.

"Part of this wealth must come from the soil, and indirectly, of course, all of it will be produced by the soil. There is no reason for believing that the American harvests will retrograde. The climatic misfortunes which have impaired a part of the harvest this year are not likely to occur again for several years. There is good reason for expecting that the harvests of next year may approximate, if they do not exceed, the greatest harvests yet garnered. Mr. Hill thinks that the American harvests should yield approximately each year $1,500,000,000. But there must be, he confest, considerable advance toward the mastery of scientific agriculture before so great a sum as that can be realized from the American crops.

"In addition, the growth of our exportation of manufactured products is likely to continue. The Secretary of Commerce, Mr. Redfield, predicts within two or three years exportation of American manu-

REAL ESTATE—FARMS

THE PROFESSIONAL MAN AND THE GREAT NORTHWEST

The vast, rich, new Northwest, with widespread arms is calling to professional men in all lines. Hundreds of new and thriving towns recently established along the new "Puget Sound Lines" of the Chicago, Milwaukee & St. Paul Railway offer unparalleled inducements and opportunities to attorneys, physicians, dentists, etc. The great "back to the land movement" is building these towns—their growth is rapid and solid. Climate is temperate and healthful. Good schools and churches are numerous in every community. Now is the time to investigate. Time will close these opportunities just as it has closed similar chances in other communities. Write for booklet K, giving details of business opportunities worth while. Address O. E. Shaner, Immigration Agent, Chicago, Milwaukee & St. Paul Railway, 750 Marquette Bldg., Chicago.

NATURE'S TREASURE GARDEN is calling you. Come South and grow with the country. Land $15 an acre up, cheapest in America, 2 and 3 crops grown yearly, ample markets. Living costs low. Climate very healthful and agreeable. Farm lists, "Southern Field" magazine and State booklets free. M. V. RICHARDS, Land and Industrial Agent, Southern Railway, Room 57, Washington, D. C.

MONEY-MAKING FARMS: 13 States, $10 to $50 an acre; live stock, tools and crops often included to settle quickly. Big illustrated Catalogue No. 36 free. E. A. Strout Farm Agency, Station 14, 47 W. 34th St., New York.

BUSINESS OPPORTUNITIES

PATENTS SECURED OR FEE RETURNED. Send sketch for free report as to patentability. GUIDE BOOK and WHAT TO INVENT, with valuable List of Inventions wanted, sent free. ONE MILLION DOLLARS offered for one invention. Patents secured by us advertised free in World's Progress; sample free.
VICTOR J. EVANS & CO. Washington

THEODORE ROOSEVELT is again writing for Scribner's. Magazine subscription solicitors can earn big commissions. Inquire DESK 2, SCRIBNER'S MAGAZINE, 597 Fifth Avenue, New York.

MAKE BIG MONEY—Take orders for our SCRIPTURE TEXT CALENDARS. They are works of art, printed in beautiful colors; sell on sight. Some have made as much as $6 a day. Send 25c for calendar and outfit with printed instructions; or write for circular explaining our liberal plan to Christian people of all denominations. Now is the time. Hurry! MESSENGER PUBLISHING CO., Dept. 13, 22 Quincy Street, Chicago.

The Finest Resort Hotel In the World has been built at Sunset Mountain, Asheville N. C.

Open all the Year
Absolutely Fireproof

Mr. E. W. Grove, of St. Louis, Mo., has built at Asheville, N. C., the finest resort hotel in the world —Grove Park Inn. Built by hand of the great boulders of Sunset Mountain, it is full of rest and comfort and wholesomeness. The front lawn is the hundred-acre eighteen-hole golf links of the Asheville Country Club, and with it sixty acres belonging to the hotel.

The purest water obtainable is piped seventeen miles from the slopes of Mount Mitchell, over 6000 feet altitude.

Biltmore milk and cream exclusively, supplied from 200 registered Jerseys on the estate of Mr. Geo. W. Vanderbilt. It is doubtful if this famous dairy is equaled in the world.

Four hundred one-piece rugs were made at Aubusson, France. Seven hundred pieces of furniture and over 600 lighting fixtures of solid copper were made by hand by the Roycrofters.

The plumbing material is the finest that has ever been placed in any hotel in the world. The bath tubs and fixtures are all solid porcelain. No pipes visible anywhere. No radiators to be seen—all placed in recesses under windows. No electric bulbs visible.

For the golfers there are lockers and shower bath rooms with a forty foot swimming pool that is not excelled by the finest clubs in existence, and the players are less than 100 yards distant when on the links.

Mr. Wm. S. Kenney, formerly manager of the Mount Washington Hotel, at Bretton Woods, N. H., is manager of the Inn.

Especially available for northern guests in the Spring, Fall and Winter, going and returning from farther southern resorts, or for an all Winter resort. Persons with any form of tubercular trouble will not be received at the Inn.

Rates— American Plan— $5.00 a day upward.

Reached by the Southern Railway.

factured commodities of the value of $1,500,000,000.

"If capital in the United States is not abundant enough to meet the demands of the railroads, of the electrical industry, and State and municipal needs in the next five years, there is no doubt about the borrowing capacity of the United States. Sir George Paish seems to be of the opinion that this country has practically ceased to be a borrower upon a large scale, at least of funds intended for permanent investment.

"The figures given out by Mr. Vanderlip will certainly tend to focus the attention of the country upon what our industries and our railroads will need in the way of new capital, and will also suggest that the enormity of the capital required of itself is sufficient proof of the material growth of the United States."

NEW LIFE ON AN OLD ROAD

An article printed here a week ago set forth the remarkable work done by President Underwood in imparting new efficiency and prosperity to the Erie Railroad. Another road long in need of restoration is now in process of definite reconstruction—the Missouri Pacific. President Bush came to the Missouri Pacific only a few years ago as a new man, believed to possess ability adequate to the solution of the road's great problem. He seems likely to accomplish in time for the Missouri Pacific results similar to those which President Underwood has so well achieved for the Erie.

The road's recent report shows that the last fiscal year, when compared with the previous one, was marked by a financial improvement express in a credit balance of $1,562,000, as against an actual deficit for the previous year of $2,000,000. Another item in figures that expresses the improvement is the one for "density of traffic." By that term is meant the average number of tons of revenue freight transported one mile per mile of operative road. "Density of traffic" is a measure of quantity much resorted to by railroad men. In the case of the Missouri Pacific, it showed for the last fiscal year an increase of 17.8 per cent. over the previous year and an increase of 28.66 per cent. as compared with two years ago.

Next.—This contribution is very faulty in spots, but we give it as it was postcarded to us. We are fond of the contributor:

"In a sweet Ohio village, whose chief industry is tillage, I sought a barber-shop to get my hair cut. I didn't find the hair man, but a note tacked on the chair ran: 'Lam the stovepipe if you want me. Charley Faircut.' So I hit the pipe and waited till a girl came in, who stated: 'Say, paw he's busy now out in the barnyard. He's a-workin' like a fool, clippin' ol' Hank Ramsay's mule. You're the next one; but I'll bet that you'll get darn tired!' Buck Danks."—*Cleveland Plain Dealer.*

Insupportable.—"Well, Henry," said the fair maid, "did popper ask you if you could support me in the style to which I am accustomed?" "No, dear," said Henry. "He merely informed me that he couldn't, and gave me his blessing."—*Judge.*

They are Strictly Sanitary and Harmless Medical Men Endorse Them

Slender, hand-rolled long filler stogies, witnout paste, hand-curl head, self-holding, unsurpassed for a short smoke. Long filler, we said—not ground sweepings found in some so-called all-tobacco cigarettes and small cigars, the dust of which settles on the lungs. No dust or scrap in Slendoras.

The business man going from home to cars, where smoking is prohibited; the traveling man, to store or office, where smoking is bad form, can enjoy a quality smoke instead of throwing away an expensive cigar. Get your money's worth in smoking Slendoras; they are an ideal in-between smoke.

If you want to wean yourself or somebody dear to you from cigarettes, try Slendoras.

Ben C. Nance, Nashville, Tenn., writes: "Send one box of Slendoras to my address, one to Miss Susie ——, —— St. Susie doesn't smoke, but she is trying to teach her brother to quit cigarettes."

Slendora XXX, genuine Havana filler, 6 inch, 100 to box $3.00
Slendora XX, 6 inch, 100 to box . . . 2.00

Make a perfect cigarette size if cut in half. Charges prepaid. "From the home of the stogie to the home of the smoker." Order a box. Specify light, medium or dark. Smoke some. If not convinced, return the rest and get your money back. Write for booklet describing our other high grade stogies and Havatoba Clear Havana Cigar, the latter equal to any 10c smoke. $2.50 for 50.

Oldsmobile 1914

Established—1880
Incorporated—1899

This is the Year of the Oldsmobile

If you have followed the rise and development of the motor car, you have probably noticed how among the better established automobiles first one car one year, and next season another car, seemed to claim the biggest share of the public attention.

This year it is the Oldsmobile that stands out in the spotlight of public approval, not on account of any unusual or "freak" element of design, but solely because of the completeness with which we have realized the American ideal of a perfectly designed, perfectly appointed six-cylinder car.

Last month we announced the new Oldsmobile Model 54 as the "greatest six-cylinder motor car ever produced." Since then thousands of capable critics, men well versed in motor-car design and construction, have inspected the new Oldsmobile and echoed and re-echoed the phrase we used in our first enthusiasm.

Now, after accepting this judgment of the motor-wise public, we again say:

Here is the Greatest Six-Cylinder Car Ever Produced

4 or 5 Passenger Phaeton, touring body type, $2975. 7 Passenger, touring body, $175 extra. Limousine, $4300.

Equipment 1914 Oldsmobile Model 54: Combination electric and oil side and tail lamps. Special Oldsmobile design. Special design Oldsmobile electric head lamps. Special design three-way adjustable ventilating windshield. Top, boot, and patent adjustable side curtains. 60 mile speedometer. Adjustable stem setting and winding Waltham clock. Rear tire irons, capacity for two tires. Demountable rims, one extra. Imported horse-hair tonneau mat. Motor driven air pump. Famous Delco starting, lighting and ignition system. Electric light in tonneau. Extension electric trouble lamp. Tools, jack. Patented bow separating top holders. Adjustable auxiliary seats in seven-passenger. (Extra, at additional cost, wire wheels; special Oldsmobile touring trunks.) Motor, 50 horsepower, six cylinders, unit power plant, three-point suspension. Bore 4¼, stroke 5¼. Extreme length of four and five passenger models, 16 feet. Extreme length of seven-passenger, 17 feet. Springs front, semi-elliptic. Springs rear, ¾ elliptic underslung. Tires, 36 x 5, both front and rear. Gabriel snubbers. Klaxon horn.

The 1914 Oldsmobile can be seen at any of our factory branches, located in all the principal cities, and dealers from coast to coast. Description of the new models will be sent on request.

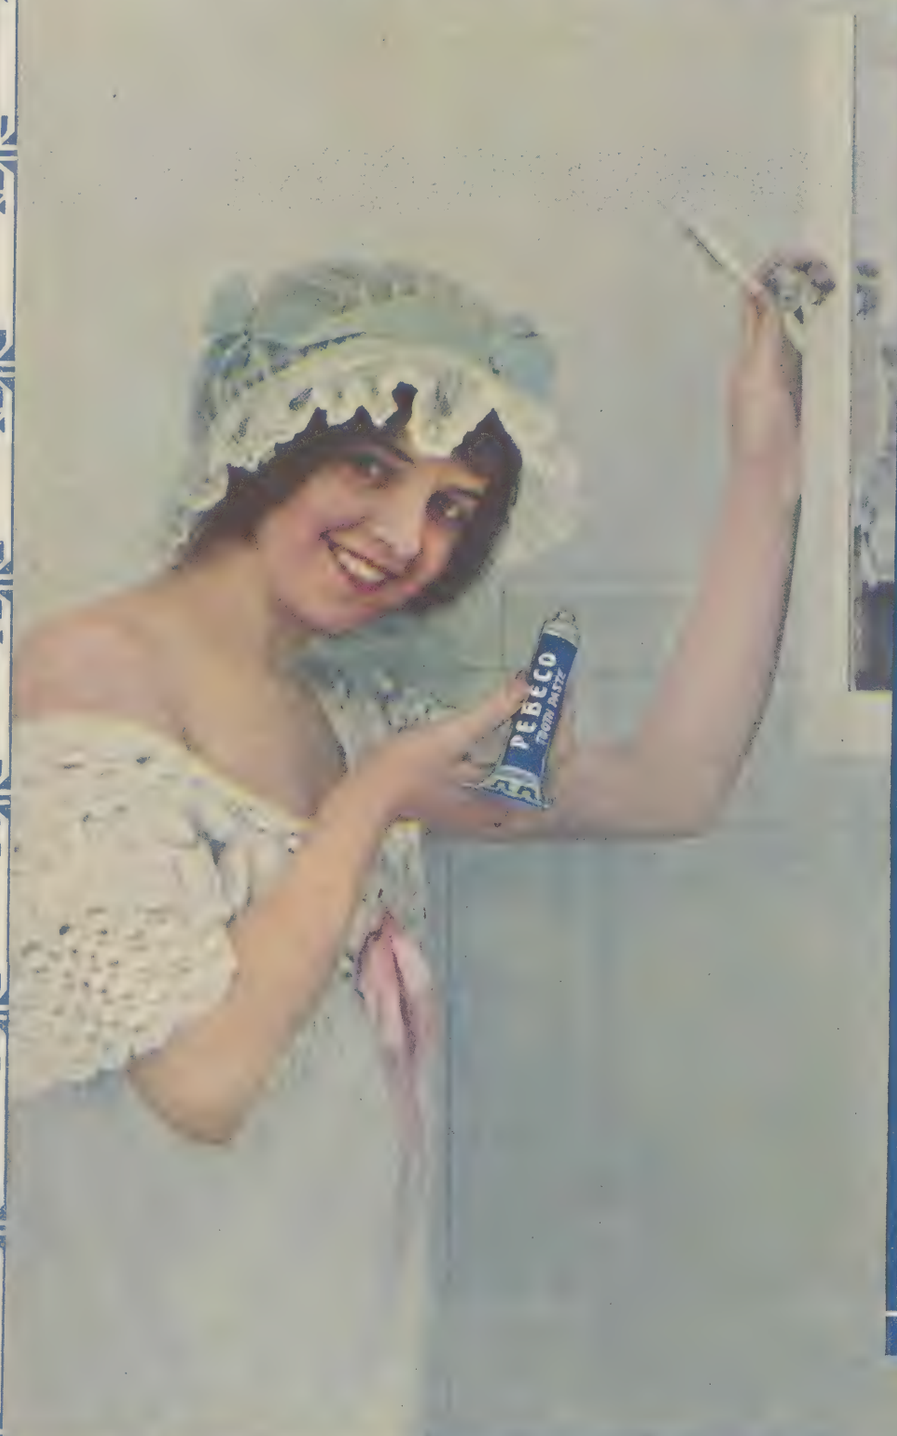
PEBECO
TOOTH PASTE



"It *saves* my teeth as well as cleans them"

It isn't enough to *clean* your teeth! You must protect them from the *acids* in your mouth, because dentists say that mouth-acids cause practically *all* decayed teeth (95%).

That's why you need Pebeco Tooth Paste. As it is the only dentifrice that really overcomes these mouth-acids, it is the only one that prevents them from eating into the tooth enamel. And by preserving this hard, protecting *outside* of a tooth, Pebeco prevents decay-germs from entering and decaying its soft, *inside* 'pulp' or 'dentine.'

Pebeco also gives such a delightfully refreshing sensation that its use is a distinct pleasure. Try it.

Send for FREE Trial Tube and Acid Test Papers

and prove Pebeco's all-round superiority. Pebeco originated in the hygienic laboratories of P. Beiersdorf & Co., Hamburg, Germany, and is sold by your druggist in extra-large economical tubes.

CHARGE OF THE SCOTS GREYS AT WATERLOO

WELLINGTON held this regiment of cavalry in reserve at the Battle of Waterloo, awaiting the supreme moment when an overwhelming charge might turn the tide of battle. The instant the French lines wavered the order was given to charge and the Scots Greys Cavalry hurled themselves against the French like a thunderbolt. This charge ended forever the career of Napoleon and his dream of universal empire vanished away with the smoke of his artillery. The celebrated picture shown herewith from Ridpath's History, the original of which was purchased by Queen Victoria, and is now owned by King George of England, illustrates but one event of all the thousands which make up the history of every nation, empire, principality or power and all accurately told in the world-famed publication,

Ridpath's History of the World

Literary Digest Readers are offered one more opportunity to place this magnificent History in their homes. The English-speaking world has endorsed this as the only History of the world worth having. We offer the remaining sets of the last edition, brand new, down to date, beautifully bound in half-morocco,

AT LESS THAN EVEN DAMAGED SETS WERE FORMERLY SOLD

We will **name our price** only in **direct letters** to those **sending the coupon** below. **Tear off the coupon,** write **name** and **address** plainly and **mail now before you forget it.** Dr. Ridpath's widow derives her income from his History, and **to print our price broadcast** for the sake of quickly selling these few sets would cause **great injury to future sales. Send coupon today.**

Leslie's Weekly says: "Dr. John Clark Ridpath is one of the ablest of American historians. He combines a beautiful literary style with wonderful accuracy and completeness. His great History of the World is a library in itself. There is no better set of books to place in the hands of youth than this notable work."

Boston Post says: "John Clark Ridpath is above all things an historian. His historical works are accepted as standards in schools, colleges and homes. His style is simple, his manner charming."

Christian Herald says: "No other work of its kind has ever supplied a history so well suited to the needs of all classes and conditions of men. We cheerfully commend this most popular and complete of all world histories to our readers."

William J. Bryan says: "Dr. Ridpath's History of the World is a lasting monument to the author's intelligence and industry. It is thorough and comprehensive and will be a permanent help to an increasing number as a reference library."

Literary Digest

FOLD HERE, TEAR OUT, SIGN AND MAIL

RIDPATH'S enviable position as an historian is due to his wonderfully beautiful style, a style no other historian has ever equalled. He pictures the great historical events as though they were happening before your eyes; he carries you with him to see the battles of old; to meet kings and queens and warriors; to sit in the Roman Senate; to march against Saladin and his dark-skinned followers; to sail the southern seas with Drake; to circumnavigate the globe with Magellan; to watch that thin line of Greek spearmen work havoc with the Persian hordes on the field of Marathon. He combines absorbing interest with supreme reliability.

SEND COUPON TODAY

RIDPATH throws the mantle of personality over the old heroes of history. Alexander is there: patriot, warrior, statesman, diplomat, crowning the glory of Grecian history. Xerxes from his mountain platform sees Themistocles with three hundred and fifty Greek ships smash his Persian fleet of over a thousand sail and help to mold the language in which this paragraph is written. Rome perches Nero upon the greatest throne on earth and so sets up a poor madman's name to stand for countless centuries as the synonym of savage cruelty. Napoleon fights Waterloo again under your very eyes and reels before the iron fact that at last the end of his gilded dream has come. Washington is there, "four-square to all the winds," grave, thoughtful proof against the wiles of British strategy and the poisoned darts of false friends, clear-seeing over the heads of his fellow countrymen, and on into another century, the most colossal world figure of his time. **Send the Coupon.**

FOUR CARS A DAY

There are two logical methods of building motor cars.

One method is to turn out cars in enormous quantities at low prices.

The other method is to produce a limited number of cars of the highest individual refinement.

Each system has its exponent. In a middle Western city "Mass Production" enables a car to be manufactured and sold at a very low price. In a New England city "The Best Built Car in America" is produced practically car by car in one of the most complete factories by the finest mechanics in the world.

One car carries out one ideal, the other a totally different ideal. Both are right. Both are built, not assembled. The Western company can turn out 1000 cars a day. The New England company produces only four cars a day. The idea back of the Western company is to meet the world-wide demand for a low-priced car. The idea back of the New England company is to meet the demand for the highest quality car that can be produced.

The Western car is turned out like a "Dollar Watch." The Locomobile is built like a Chronometer. Both cars are eminently successful—one in quantity, the other in quality.

The success of the Locomobile is due to the fixed policy of building not more than four cars a day. Its great factory could not successfully build cheap cars if it wanted to. The whole factory is designed, equipped and organized solely to build a limited number of cars in which the extremes of high quality are considered fundamentals. There are more high-priced, bred-in-the-bone expert typical New England mechanics in this factory than there are ordinary mechanics in some automobile factories which turn out 10 to 12 times as many cars as are produced in the Locomobile factory. The men, the machinery, the methods, the system, are all organized into a compact working whole for the production of Locomobiles. As such, they are responsible for the Locomobile success.

This is a fifteen year old policy with the Locomobile. Long ago we concluded that just as surely as the low-priced car could be manufactured and sold successfully only in very large quantities, just so surely could the car of Highest Quality be produced only in limited numbers.

Therefore our fixed policy from the very start has been to limit our production to the number of cars to which we could give the most intimate, personal attention to every detail. While other automobile manufacturers were increasing their plants and building more cars, we were increasing our quality and making the Locomobile "The Best Built Car in America."

Every Locomobile is built in every detail to carry out the ideal of quality, of individual perfection, of true artistic, mechanical refinement.

As a logical result of the "Four Car a Day Policy" the Locomobile now occupies a peculiar position. It is the only high grade car whose sales have increased during the past two years. By voluntarily limiting the number of the cars which it will produce, the supply each year falls further and further below the demand. Each year there are a greater number of people who appreciate the Locomobile quality and desire to satisfy that appreciation.

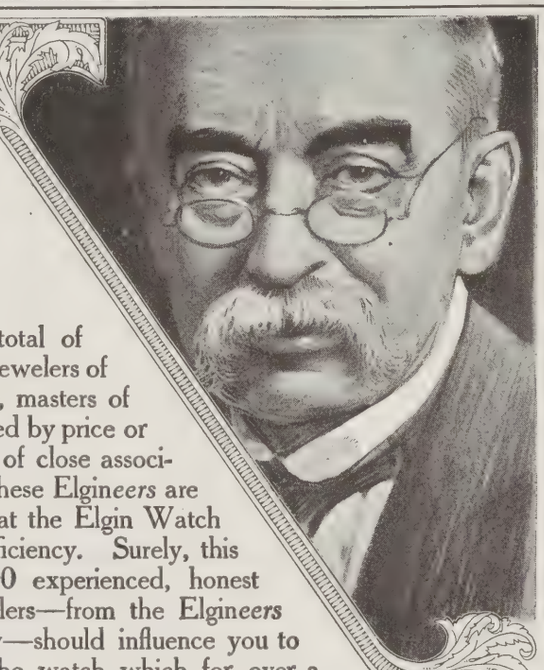
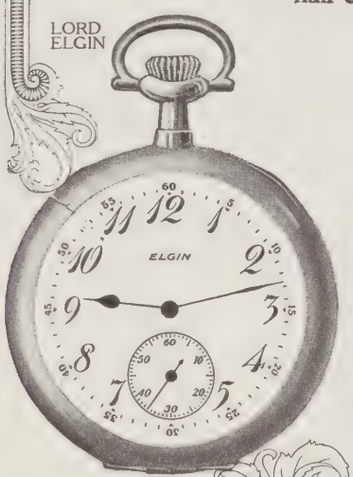
One of the 40,000 Elgineers



THE tremendous total of 40,000 foremost jewelers of America are Elgineers, masters of watchcraft. Unswayed by price or prejudice, after years of close association with watches, these Elgineers are a unit in affirming that the Elgin Watch leads in all-round efficiency. Surely, this judgment from 40,000 experienced, honest and well-known jewelers—from the Elgineers of your town or city—should influence you to decide on an Elgin, the watch which for over a half-century has been standard.

LORD ELGIN



The Elgin Watch

LORD ELGIN—here pictured in exact size—is the extremely thin master-watch. It is truthful, untiring, unfailing, unfaltering—a watch whose honesty and faithfulness are inspiring. Lord Elgin contains very latest devices for perfect timekeeping. Call on your Elgineer, and let him detail its strong points.

ELGIN NATIONAL WATCH CO.
Elgin, Illinois

"THE EMERALITE" BED LAMP

CAN BE ATTACHED TO ANY BED

Like all "Emeralite" lamps (with the emerald green glass shade and white glass lining) this lamp affords the maximum of reading comfort. It can be attached by felt-lined clamp and detachable key to any brass bed post, vertical or horizontal, round or square, from ¾ in. to 2½ in. diameter. Will not mar bed's finish. Also made with felted vice-jaw clamp to fit wooden bedsteads. The light is soft and restful and can be placed just where you want it.

This is the ideal fixture for hotels, hospitals or home. No unsightly screws, no protruding corners. Neat, efficient, practical, convenient. Can be used with electric Tungsten or Carbon lamp. Sold by dealers everywhere. Write for OUR BOOKLET telling all about this BED LAMP and the other 30 handsome styles.

Booklovers Shakespeare

DESIRING to close out all "slightly damaged stock," we offer without reserve every set on hand—and only a few are now left—of that great popular edition, the BOOKLOVERS SHAKESPEARE. Some of these sets are in perfect condition, but here and there a volume shows slight signs of handling or perhaps its cover is a trifle discolored. Not one person in a hundred would detect these blemishes, and most publishers would trust to their passing unnoticed. Our method, however, is to forestall possible criticism, and to offer the books at a sweeping cut in price—a cut that more than offsets any slight imperfections. *This notice will not appear again.*

EVERY WORD SHAKESPEARE WROTE

YOU must have a set of Shakespeare. The reading of Shakespeare is a necessity of modern education, as well as a literary delight.

The BOOKLOVERS is admittedly the best Shakespeare in existence. It is printed in large type and with ample margins, from new and perfect plates, on pure white paper of a very high grade. There are 40 dainty volumes of great beauty, 7 x 5 inches (just the size for easy handling), 7,000 pages in all, handsomely and durably bound in half-leather and superbly illustrated. There are 40 full-page plates in colors and 400 reproductions of rare woodcuts. The mere handling of these charming volumes affords a keen sense of artistic satisfaction.

The BOOKLOVERS is an absolutely complete and unabridged edition of Shakespeare. Each volume contains a complete play and all the notes that explain that play. These notes are the most complete and valuable ever offered to readers of Shakespeare.

YOU GET THE ENTIRE SET FOR $1.00

No Money with Coupon.—Free Examination

AN entire 40-volume set of the BOOKLOVERS SHAKESPEARE will be sent for examination, prepaid to any address, if you will fill up and return promptly the coupon in the corner. *We ask for no money now.* We allow you ample time for a careful, intelligent and unprejudiced examination of the set in the comfort and privacy of your own home. If you are disappointed, you may return it at our expense. If you are satisfied—and we know you will be—that the BOOKLOVERS SHAKESPEARE is without a peer, you retain possession of the entire 40-volume set and send us $1.00 only. The balance may be paid at the rate of $2.00 a month. *Can anything be fairer than this proposition?*

YOU MUST BE PROMPT

You will probably miss your chance if you don't send the coupon at once, as there has been enthusiastic response to this offer. The regular price of the BOOKLOVERS when sold through agents has been $58.00. You can get a set now *direct* for $25.00, and you have the privilege of paying for it a little each month. No comment is needed. *Avoid disappointment—order now.*

The University Society
44-60 East 23d St. New York

NOTE THESE GREAT FEATURES

They make Shakespeare easy to read, to understand and to appreciate.

TOPICAL INDEX
in which you can find instantly any desired passage in the plays and poems.

CRITICAL COMMENTS
on the plays and characters. They are selected from the writings of Coleridge, Hazlitt, Dowden, Furnivall, Goethe and many other world-famed Shakespearean scholars.

GLOSSARIES
A complete one in each volume, explaining every difficult, doubtful or obsolete word.

TWO SETS OF NOTES
One for the general reader, and a supplementary set for students.

ARGUMENTS
These give a condensed story of each play in clear and interesting prose.

STUDY METHODS
which furnish the equivalent of a formal course of Shakespearean study.

LIFE OF SHAKESPEARE
by Dr. Israel Gollancz with critical essays by Walter Bagehot, Leslie Stephen, Thomas Spencer Baynes and Richard Grant White.

L. D. 10-18-13

(Fold over coupon and tear off.)

The University Society
New York

You may send, prepaid, for my examination, a set of the BOOKLOVERS SHAKESPEARE in half leather binding at your special price of $25.00. If the books are satisfactory, I shall pay you $1.00 within five days after their receipt, and $2.00 each month thereafter for 12 months. If they are not, I shall notify you and hold them subject to your order.

Fanny of the Forty Frocks

By Frances Aymar Mathews, Author of "My Lady Peggy Goes to Town," etc.

Fanny was poor, very poor, and had but one frock. But she didn't sit by and mope and mourn over her apparent misfortune—not Fanny. "It's the call of forty frocks for me," she said one day. "I'm going to Europe." And she did go to Europe, and soon had her forty frocks. Some unusual experiences, too, of course, but Fanny had a sense of humor that carried her over the rough spots. Read about Fanny and you'll see the same sunshine that Fanny saw behind the cloud. It's a story that will do you good.

Frontispiece by George Gibbs. Cloth, $1.20 net, postage 14 cents.

The Man Who Saw Wrong

By Jacob Fisher, Author of "The Cradle of the Deep," etc.

A story that grips the imagination from the very outset. A simple plot, seemingly—two artists competing for a great prize and using the same model—but it almost ends in a tragedy. Each artist delineates the girl's character differently, and each for a different purpose. What those purposes were and how the whole affair terminates make one of the most absorbing stories you have read in many a day.

Decorated jacket and frontispiece by George Gibbs. 12mo, cloth, $1.20 net, postage 14 cents.

Damaged Goods

Brieux's Great Play, "Les Avaries." Novelized with the approval of the Author by Upton Sinclair.

"The production of Eugène Brieux's play, 'Les Avariés,' or, to give it its English title, 'Damaged Goods,' has initiated a movement in this country which must be regarded as epoch-making."—*New York Times.*

Cloth, 200 pages, $1.00 net, postage 10 cents.

The Fate of Felix Brand

By Florence Finch Kelly, Author of "With Hoops of Steel," etc.

Felix Brand deliberately chose the worst side of his nature, cherished it and tried to ignore and cast out the other, the better side. It was a tremendous battle, but the odds were against him, the odds being a strong-minded woman, who fought equally hard to redeem him from his fate. If you like a quick moving, powerful tale of intense dramatic interest, read this fascinating story of Felix Brand.

Illustrated, cloth, $1.20 net, postage 14 cents.

Sylvia *By Upton Sinclair.* "This is the best novel Mr. Sinclair has yet written—so much so that it stands in a class by itself."—*New York Times.* "No American fictionist in his day has produced a more trenchant and highly vitalized criticism and portrayal of the social order."—*Philadelphia North American.*

413 pages, cloth, $1.20 net, postage 14 cents.

The Mystery of 31, New Inn *By R. Austin Freeman.* "Rarely does one find a book of this type more interesting. It compels the interest of the reader from the first and chains him to the pages of the book until the mystery is solved."—*Boston Globe.*

332 pages, illustrated, cloth, $1.20 net, postage 14 cents.

Written in the Sand *By G. R. Duval.* "Original in its daring, persistent in its fascination, searching in its analysis of life. A remarkable piece of fiction."—*Boston Globe.* "Desert-born impulses and strange, perilous situations conspire in the narrative to arouse and enchain interest."—*Phila. North American. 325 pages, cloth, $1.20 net, postage 14 cents.*

The Reluctant Lover *By Stephen McKenna.* "He gives it a freshness that would have been lost by the more conventional method."—*New York Times.* "Stephen McKenna has turned abruptly from the beaten path of modern fiction writers and entered a verdant field where novelty and originality abound."—*Boston Globe. 320 pp., cloth, $1.20 net, postage 14c.*

Country Life Press, Garden City, N. Y., where The World's Work is made.

THE WORLD'S WORK

is covering subjects which should have energetic and immediate attention to make this country a better place to live in. One great need is **Swift and Cheap Justice.** George W. Alger, a brilliant member of the New York Bar, has written a series of articles telling what has been done and what must be done to get **Swift and Cheap Justice.** The first article, called

"Organizing the Courts for Business"

is in The October World's Work

"Tunnel McAdoo" once despatched a special train for a traveling bag he had forgotten. In the series "Who Govern the United States" Burton J. Hendrick tells the story and presents a fascinating portrait of the Secretary of the Treasury, the man who will largely influence the great question, ***"Shall the Control of the Currency be Public or Private?"***

And there will be the following articles and departments—Man and His Machines, March of the Cities, Forward to the Land, Editorial Portraits, The Church Militant Against the Saloon, The March of Events, Who Governs the United States? What I Am Trying To Do, etc.

The World's Work believes that the time has come when all sensible people in this country should combine to ***build up*** and ***strengthen.*** This, after all, best represents the American spirit and this has always been the particular hobby of the magazine:

1500 pages or more each year and more than 1000 graphic illustrations

"Forging Ahead in Business"

This is one of the most vital messages business men have ever received. Established only four years ago, the Alexander Hamilton Institute is today recognized as the leader in a great movement that touches every phase of commercial life. It will pay you to read every word.

You are a man of natural ability; otherwise you would not be holding or looking forward to a position of responsibility. You know how to capitalize your own experience and profit by it. You are growing.

But are you growing fast enough? Are you capitalizing the experience of others? Are you hedged in by your own specialty, or are you reaching out for knowledge of other departments of business?

If you could have at your command the accumulated experience of successful business men everywhere

—if you could know with absolute certainty the bed-rock principles upon which they have based their success

—Surely you would be able to shoulder bigger responsibilities, make larger gains.

Thousands of men today are finding just that help in the Modern Business Course and Service of the Alexander Hamilton Institute.

They are giving their spare hours to mastering the science of business as it is presented by business and university men in crisp, concentrated, usable form.

The Course and Service has been adopted by big business men of the highest type of personal ability and experience, including the responsible heads of some of the largest corporations in the country. These men realize that the science of business has immeasurable value for them in increased personal efficiency as well as in dollars.

No movement of the kind has ever before been known. It is so big that it must influence every business man.

Your self-interest demands that you learn more about the Alexander Hamilton Institute. The story is fully told in our new book, "Forging Ahead in Business," a limited edition of which has just been published.

Send for your copy today. We will mail it to you without the slightest obligation on your part. Either write on your business letterhead or mention your business position.

Alexander Hamilton Institute

21 Astor Place, New York City

You will find some indication of the sound policy upon which the Alexander Hamilton Institute conducts its work by noting the membership of its Advisory Council. The five members, representing commerce, accounts, finance, and scientific and business education, are:

JOSEPH FRENCH JOHNSON, D. C. S.
Dean of the New York University School of Commerce, Accounts and Finance.

ELIJAH W. SELLS, M. A., C. P. A.
Senior Member of Haskins and Sells, Certified Public Accountants.

FRANK A. VANDERLIP, LL. D.
President of the National City Bank of New York.

JEREMIAH W. JENKS, LL. D.
Professor of Government, New York University.

HENRY R. TOWNE, A. M.
President of the Yale and Towne Company.

What 15c Will Do

The little matter of **15c** in stamps will bring you the **Pathfinder** for **13** weeks on trial. The **Pathfinder** is an illustrated weekly, published at the Nation's Capital, for the Nation; now in its **21st** year of increasing success. The paper fills the bill without emptying the purse; it costs but **$1** a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the **Pathfinder** is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is at last. Send only 15c to show that you might like such a paper, and we will send the **Pathfinder** on probation **13** weeks. The 15c does not repay us, but we are glad to invest in New Friends. **Or send $1 for full year; money back any time if not satisfied.**
Address **Pathfinder, Box L, Washington, D. C.**

Young men will find our new overcoat models very satisfactory this Fall. The belt is a feature in many of them; patch pockets; the shawl collar will be much in vogue. Many new features also in suit models for young men and older men.

For women, we have made some very interesting models in rain-proofed overcoats; Norfolk skating coats; double or single breasted overcoats with patch pockets, shawl collars, belt backs. They're men's coats, modified for women.

IN buying clothes you ought to know what you're going to get; fit, style, quality of fabric and materials, tailoring; you can't tell much about it until you see the clothes, whether you have them made-to-measure or buy them ready. Even then the important things are those you can't see.

Correct style, all-wool fabrics, the tailoring that will give permanent shape and fit; your eyes don't tell you about these. They are something more than words which a salesman uses; they are underlying facts; they depend on the makers' skill, and ability, and purpose.

At $25, we put all these things in the clothes for you. You'll get value; better value, we believe, than in any other goods. We mention $25 as a price most of you can afford to pay; considering what you'll get for it, anybody can afford it.

We make suits and overcoats as low as $18 and $20 and up to $40 and $50. Send for the Fall Style Book.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 354–360 Fourth Ave., New York

VOL. XLVII., No. 16 NEW YORK, OCTOBER 18, 1913 WHOLE NUMBER 1226

TOPICS OF THE DAY

GOVERNMENT CONTROL OF THE WIRES

NO ONE SEEMS STARTLED nowadays by proposals for Government ownership of telegraphs. Postmaster-General Hitchcock advocated it officially as a member of the Taft Administration. Followers of newspaper opinion are familiar with the arguments pro and con. But the rumors of the Wilson Administration's intentions in this direction have provoked pointed suggestions from its opponents to the effect that, whatever merit the abstract proposition may have, the program as outlined in the dispatches has little, while the present is no time for its consideration. So far, it should be said, only its opponents have been heard from. The Dallas *News* (Dem.) has no objection to Government ownership of telegraphs, but finds the report that the President will "thrust this question" upon Congress next winter "altogether incredible," since "his heaviest task now is to hold his party together, and it is hardly a compliment to his sense of expedience to suppose that he would, just now, toss an apple of discord into the ranks of men who need but little provocation to set them into fighting one another." Then, too, it occurs to the New York *Times* (Ind.) that "if the wireless is as successful as its pioneers hope," the Government's acquirement of wire communications would be "backing the wrong horse." And with the same thought in mind, *The Wall Street Journal* exclaims: "Great idea to spend hundreds of millions of the public money expropriating telegraph wires which may be obsolete in ten years with the development of wireless." The reports from Washington say that the Government contemplates the eventual acquisition of the telegraphs through the control of long-distance telephones. As the New York *Press* sums up the chief points of the rumored program as given in the dispatches:

"If the parcel post could be made a success as a Government operation, a Government telegraph service could be made an equal success.

"If the telegraph corporations will not be reasonable in giving themselves over to the Government, then the government, through control and operation of the telephone systems, can harry the telegraph companies into a meek surrender.

"While it would be an enormous expense to buy the telegraph companies as a business proposition, if the American systems could be had at bargain rates—forced by competitive attacks of telephone systems controlled by the Government—then it would be as good a business for the Government to be in as the parcel post has proved to be."

It seems extremely doubtful to the Savannah *News* (Dem.) that there can be anything in the story "that the Government aims to get the telegraph lines by such a method." And a number of editors and Washington correspondents note that this report has been left without official confirmation, so that they look upon it as at most "a feeler." The Administration, concludes the Savannah paper,

"May contemplate Government ownership of the lines, but if it does it will acquire them in a way that wouldn't be open to criticism.

"The telegraph lines are owned by many thousands of people. It would be unjust to render their property worthless in order to get possession of it. When all the facts are known, it doubtless will appear that if the Administration is planning Government ownership of the telegraph lines its plan includes the buying of the lines at a fair price."

Long arguments against the "delusive promises" of Government ownership of the wires appear in the New York *Journal of Commerce* and *Times*, Brooklyn *Eagle* (Ind. Dem.), Philadelphia *Public Ledger* (Ind.), and Baltimore *American* (Rep.). The New York *Press* (Prog.) takes less extreme ground. It recognizes the strength of the arguments for public ownership of the means of communication by wire, saying:

"If it were necessary, for example, to establish communications with or throughout territory where the business could not possibly be self-supporting, the Government could do such a thing purely as a duty to a part of the public, when private corporations could not be expected to do the same thing. And then, of course, there is always the possibility that the Government may require the exclusive handling of wire communications for purposes of war. And whether we concede the economic advantages or not of such Government operation, there is a certain consistency in maintaining that if the Government provides and operates mail communications, it ought to provide and operate all other communications, so as to have a correlated whole."

But nobody, *The Press* continues, "can extract cold reason out of the proposition that because the Government has done well with the parcel post it could do as well with the telegraph lines." We are reminded that in the one case it had all the necessary machinery in existence and in operation; in the other, the whole service would have to be created, "unless it took over the whole telegraph business as it stands, with all the persons now engaged in the telegraph business to help out the Government." And in this case the same results, as far as the public is concerned, would be obtained by having the Government undertake, not to own, but "to control the operation of the telegraph

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless, it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

WHY THE DEMOCRATS ARE HAPPY.

lines and to govern their rates and the conditions of their rendering their service—to control and govern all this, privately owned and operated."

Yet, despite all objections and the silence at the White House and the Post-Office Department, the Philadelphia *Public Ledger's* Washington correspondent believes that the Postmaster-General will make recommendations as outlined above at the coming session of Congress and that the President will support him. Congressman David John Lewis, of Maryland, is said to be helping the Administration in the preparation of data, and to have estimated the cost of the purchase of the telephone systems of the country at about $900,000,000. In the opinion of the New York *Commercial*, "the usual objections to government ownership, and its practical operation, particularly such examples as England's losing investment in the telephone field, may be disregarded as applied to this latest suggestion that the key to government acquisition of the telegraph lines lies in obtaining control of the long-distance telephone lines." *The Commercial's* objections to "this latest suggestion" are found in its presentation of the existing conditions of telephone and telegraph ownership:

"The American Telephone and Telegraph Company owns the only long-distance telephone wire system in the country. Obviously the suggestion is to acquire this company's wires and system. Then the telegraph companies will be brought to terms. The Bell corporation is in a sense a transportation company. It licenses local concerns, holds as a rule 51 per cent. of their capitalization, and collects all charges for all long-distance messages sent over its lines which connect the various community systems. There are more than 5,200 local exchanges in its system, with 14,610,813 miles of wires.

"It covers the country like a fisherman's net. It owns practical control of the Western Union Telegraph Company, and is a far more valuable property than the Western Union and Mackay companies combined. Then, too, it has Canadian rights, and controls the Bell Telephone Company of Canada. How the Dominion Government would look upon American official control and operation of its long-distance service probably has not been considered.

"The American Telephone and Telegraph Company has a capitalization of $343,993,200 and a funded debt of $160,384,000. Its dividends last year totaled $26,000,000. The suggestion that the easiest way of acquiring the telegraph lines is by taking over this vast organization needs no further comment than the contrasting statement that the Western Union's capitalization is but $99,817,100, and its funded debt $28,745,000, while the Mackay system, including the $23,000,000 cable concern, is capitalized for but $91,380,000, and has no funded debt."

THE BANKERS' OBJECTIONS TO THE CURRENCY BILL

ALTHO THE PRIME PURPOSE of the Glass-Owen Currency Bill, as President Wilson has pointed out, is to supply "the second and final step in setting the business of this country free," the bankers continue to insist that in its present form it will have exactly the opposite effect upon that branch of business which they represent. While their specific objections to this Administration measure were made public more than a month ago by the bankers' conference in Chicago (see THE LITERARY DIGEST of September 6), the force of their protest is greatly increased by the virtually unanimous indorsement of the 2,400 delegates to the American Bankers' Association convened last week in Boston. It further developed at this convention that dissatisfaction with the pending legislation is not confined, as some of the bill's champions have contended, to those great and powerful banks which constitute the alleged "money trust," but extends to the so-called "country banks"—institutions whose capital is not less than $25,000 nor more than $250,000. Moreover, the assembled bankers frankly declared that the proposed law could not be effective unless it commanded the approval and enlisted the cooperation of the banks. This crucial point is thus urged upon the Administration's attention by the New York *Times* (Ind. Dem.):

"The banks can put life into the Federal reserve banking system, and they can take its life away. They can even refuse to give it any life at all by declining to subscribe to the capital stock of the Federal reserve banks. But having subscribed and paid in the capital, having put the system in operation, they will have the power, if it works to their and the public's loss and disadvantage, to destroy it altogether by withdrawing their membership. It would not be necessary for the member banks to go into liquidation; they could withdraw by surrendering their national charters and carrying on business under State laws.

"It will be well for the Administration and for Congress to keep this somewhat important fact in mind."

Among the objections set forth by the Chicago conference and reaffirmed by the Boston convention, says the New York *Evening Post* (Ind.), four are of outstanding importance. These are:

"The national board of seven, all of whom, under the bill, would be either Government officers or Presidential appointees,

Copyrighted by Philadelphia Inquirer Company

GETTING USED TO "THE NEW FREEDOM."

—Morgan in the Philadelphia *Inquirer*.

LIKE A PUPPY CHASING ITS TAIL.

—Heaton in the Chicago *Inter Ocean*.

—AND WHY THEY ARE NOT.

should contain, the convention holds, a minority of three, named by the regional reserve banks. National banks should not, as in the present bill, be required to join the system and subscribe to the capital of the regional reserve banks; membership should be optional. The national board should not be empowered to require rediscount of one regional reserve bank's paper by another. Finally, note issues should be described in the act, not as obligations of the United States, but as obligations of the Federal reserve banks, issued by permission of the Federal reserve board."

Turning to some of the more spirited attacks leveled against the bill by speakers before the convention, we find James J. Hill, of the Great Northern Railway, denouncing it as ineffectual, insincere, and socialistic. He said in part:

"One serious defect is that the bill will not and can not do what on its face it proposes to do.

"It does not simplify the currency. It does nothing with the greenbacks; it leaves the silver certificates where they are; it proposes to retire the outstanding national bank-notes only in the course of time. Our currency will be just as confused and unscientific as before.

"Another failure, in frankness at least, is the repudiation of the central-bank idea in name and the acceptance of it in fact. The proposed national and local reserve associations are merely variations on the principle of a central national bank with local branches.

"There are practical working weaknesses even more serious. First among these is the projected political control of the currency and banking of the country. The establishment of a Federal reserve board, vesting control of our banking, credit, and note issues in men chosen necessarily with some reference to political considerations, and at least partly subservient to party demands, is a proposition that sets reason and all our experience at defiance.

"The bill in its present form is too socialistic to suit the temper of the body of our people."

Another speaker, A. Barton Hepburn, ex-Controller of the Currency, ex-president of the New York Chamber of Commerce, and now chairman of the Chase National Bank of New York, also characterized the bill as "socialistic"; and he declared to B. C. Forbes, business editor of the New York *American*, that if forced through as it stands, it "would sound the death-knell of the national banks." On this point he went on to say:

"If we have 5 per cent. more money than is needed, money becomes a drug; if we have 5 per cent. less than needed, we have stringency. The new law would take $105,000,000 out of the national banks alone and put it into these Federal reserve banks still unborn—banks without any building, any furniture, any clerical force or anything. This $105,000,000 would be absolutely useless during the transition period. The same would apply to $105,000,000 Government deposits. Also to $250,000,000 country bank reserves deposited in the larger cities.

"You could not take all that amount of money and shovel it into another organization without pitching every national bank out of business. No bank could lend a dollar, but would have to let all loans run off to meet the situation."

Senator Owen, who is in charge of the bill in the Senate, suggests that the action of the Boston convention is not so significant as it seems, since bankers' conventions "are often engineered by a few active gentlemen who have what they conceive to be a class purpose to serve" and "do not of necessity at all represent the sentiment of the bankers of the country."

Meanwhile the Senate Committee on Banking and Currency continues its hearings on the measure, one of the most interesting witnesses being Frank A. Vanderlip, president of the National City Bank of New York, the institution recently accused by Senator Owen of carrying on a campaign of "misrepresentation" about the bill. In the New York *World's* (Dem.) Washington correspondence we read that Mr. Vanderlip told the committee that the bill is based upon sound principles, and, with a few amendments, will be an excellent measure. While stating that without these amendments he would not care to see it passed, he said that much of the opposition to the bill was due to the selfishness of some bankers and the ignorance of others. Here are some of the benefits which Mr. Vanderlip thinks will result from the proposed legislation:

"The bill accomplishes elasticity of note issue if adequate provisions are made for retiring present bond-secured notes and if the notes would be kept out of State bank reserves.

"The bill will tend to create a discount market, which is extremely desirable.

"It will lessen, if not entirely reduce, the advantage which borrowers on Stock Exchange collateral have over commercial borrowers.

"It will not decrease New York's financial supremacy. It will be a very important factor to increase it. Interest rates will not fluctuate so much and New York will become an international banking center.

"A repetition of a panic from the same causes that brought about the 1907 panic would be impossible."

A THREAT TO OUTLAW A STRIKE

THERE MAY BE "a head-on collision between Governor Foss and the New Haven engineers," to use a Springfield *Republican* phrase, or one of the two approaching bodies may see a danger-signal and put on the brakes, or even back up. The engineers and firemen are considering a strike because of the company's new rules regarding promotion and discipline, and the Governor threatens them with a State law "to prohibit all strikes of railway employees." In this the Massachusetts executive is, in the opinion of papers represented by the Detroit *Free Press*, occupying "wholly untenable ground," from which he will have to retreat. On the other hand, a number of dailies would like to inform the dissatisfied employees of the New Haven that they are the ones who will have to back down from what the New York *Telegraph* calls their "indefensible position." Whatever the outcome may be, the Governor's idea of abolishing strikes by law interests the editors, while they also have a word to say about the union's insistence upon a "hard and fast seniority rule" for promotion. A few weeks ago, as readers of Eastern newspapers will recall, the new management of the New York, New Haven & Hartford Railroad, "for the sole purpose of increasing the safety of our service," issued new rules regulating the advancement of firemen and engineers, putting more emphasis upon fitness and less upon seniority. These rules, explained General Manager Bardo, "will not interfere with the seniority of the men except where the questions of fitness, ability, and previous service are involved, and since these requirements can be definitely fixt by the record and service of the men involved, there is no opportunity for favoritism and none will be permitted." Yet the leaders among the men are hardly convinced of the truth of this last statement. The new order, too, supersedes the code agreed upon by the railroad and the Brotherhood of Locomotive Engineers, and in the opinion of the adjustment committee "it would be only a short time before the rules and working conditions that have taken years of hard work to build up would be destroyed and the engineers and firemen would be in the same condition that they were in before the organizations were formed." Hence the strike vote now being taken. But Governor Foss, firmly convinced that public opinion would be against these railway workers in the event of a strike, and determined to do all in his power to prevent the "public calamity" of a stoppage on the system connecting Massachusetts, Rhode Island, and Connecticut with one another and with New York, sent an emphatically worded letter to the headquarters of the two unions concerned, from which we quote these significant sentences:

"A strike upon the New Haven system means the stopping of the wheels of industry, loss of employment to hundreds of thousands of laborers, interference with the regular supply of food and fuel, and a consequent high death-rate among invalids and infants. As Governor of the Commonwealth, I am bound to take such action as I can to prevent such a public calamity.

"The real issue is not between the railroad and its employees, but between the employees and the people of this Commonwealth; and the question is whether the lives of the people shall be placed in jeopardy by the maintenance of the seniority rule, and whether, in order to enforce this rule, our people must submit to the evils incident to a railroad strike.

"If the strike is called I shall ask the council to join me in summoning a special session of the legislature for the purpose of enacting laws which, after providing effective remedies for all grievances of employees, shall absolutely prohibit strikes of railroad operatives employed within the Commonwealth."

In this "clear note," says the New York *Evening Post*, "Governor Foss has so affected the situation as to break the backbone of the strike movement." Other papers are much less sanguine, tho there are manifestations of approval from many who have hitherto seen less to praise than to censure in the Governor's public acts. These supporters take a stand in this three-sided controversy, among Governor, employees, and railroad managers, which is outlined in this paragraph from the New York *Globe's* editorial page:

"It is manifest that at a time when the public is aroused over the large number of preventable railway wrecks talk of strikes to resist measures for assuring safety will not be tolerated. The right of the men to organize to secure fair wages and protection against capricious exercise of despotic power is denied by no one. Their right to put their personal interest above the safety of human life is denied by every one. If the management of railways is to be held accountable, as it should be held, for the maximum safety possible, it must be free to employ in passenger service none but men of whose entire fitness to assume grave responsibility it has ample proof. This is the essence of man-efficiency higher up."

Governor Foss's threat "is radical," admits the Washington *Post*, "but possibly it is the only thing that suggests itself in a situation which threatens the health and comfort as well as the commercial prosperity of his State." The strike suggestion, according to the Providence (R. I.) *Journal*, really means "that the whole community shall be sacrificed to the domination of a single class," and "if there are no laws to meet such an intolerable condition, then new laws must be passed." New laws, but what new laws? *The Wall Street Journal*, which praises Governor Foss for taking the stand he does, doubts whether any legislature can enact a law, which, as the Governor puts it, "shall absolutely prohibit strikes of railroad operatives employed within the Commonwealth." Yet perhaps this can be attained in a less direct way. As this financial daily observes:

"There is no doubt that the legislature of any State can apply the principles of the Sherman Law to labor-unions. It can, for instance, make the taking of a strike ballot, or an order from union headquarters to the men to hold themselves in readiness to walk out, or the final order to cease work, evidence of a conspiracy in restraint of trade.

"Even without going to such lengths, the legislature could handle the situation as it exists on the New Haven very effectively. It would have only to pass a law compelling railroad corporations to select engineers and conductors in the order of their fitness and training for the responsibilities imposed upon them, providing a jail sentence for any employee or group of employees who should attempt to interfere with the rational and diligent efforts of railroad corporations to protect the lives of passengers and men."

And *The Journal of Commerce*, taking up Governor Foss's suggestion that the Massachusetts legislature should memorialize Congress and urge upon it the enactment of such legislation as may be needed for the prevention of strikes affecting interstate commerce, comments as follows:

"There must be some legislation which shall place railroad employees on a par with the railroad employers in conducting the business of transportation so far as the terms and conditions of employment are concerned. This would mean that another declaration of law under the principles of the Federal Government should be made—a declaration that all wages paid, as well as charges for any services rendered in the transportation of property, passengers, etc., shall be reasonable and just. A declaration of this character would give the railroad employees the status of quasi-public servants, and it is obviously in this direction that any such legislation as Governor Foss has in his mind must take shape."

Returning to the Governor's plan for outlawing the railroad strike in Massachusetts, we find both the Brooklyn *Eagle* and the Savannah *News* doubting whether he would be able to get any such legislation passed. "The notion of a law against strikes," we are reminded, can not be advanced without lining up the whole mass of union-labor votes "against any lawmaker who accepts that notion." And the Savannah paper does not think that any law would be effective. In Massachusetts the Springfield *Republican*, which welcomes the action of Governor Foss because it places the public interest in the operation of

public utilities "in clear, sharp outline before the Commonwealth," sees "much that is utterly impracticable in the Governor's program." For instance:

"The Massachusetts legislature might pass bills all winter prohibiting railroad strikes; the Governor might sign them and place them on the statute-book. But the engineers of the New Haven still might lawfully strike in Rhode Island or Connecticut, and thus bring about the paralysis of transportation."

Moreover, as the Detroit *Free Press*, which seldom takes the labor side in such controversies, observes:

"The men in the New Haven service may be unreasonable in their opposition to the new company rules and morally unjustified in threatening to walk out, but however wrong-headed their stand, it is not to be remedied by an attempt at sheer despotism. . . . . .

"In his desire to avoid a tie-up of the New Haven road, Governor Foss seems to have forgotten that the Thirteenth Amendment to the Federal Constitution contains a clause prohibiting involuntary servitude except as punishment for crime, and that devices for preventing walkouts which may pass muster in Canada or France or Germany could not be tolerated for an instant in this country."

But the statements of Governor Foss were not to go unanswered by the railroad workers, and the explanation of their position in their reply to him may well round out the discussion. After suggesting that the strike is a matter of as "grave concern" to those directly involved as to the people of the State generally, and expressing regret that the Governor should have seen fit to take "a stand with the corporation and against the employees," before giving the latter "the opportunity to present their side of this controversy," the representatives of the engineers and trainmen thus defend their position:

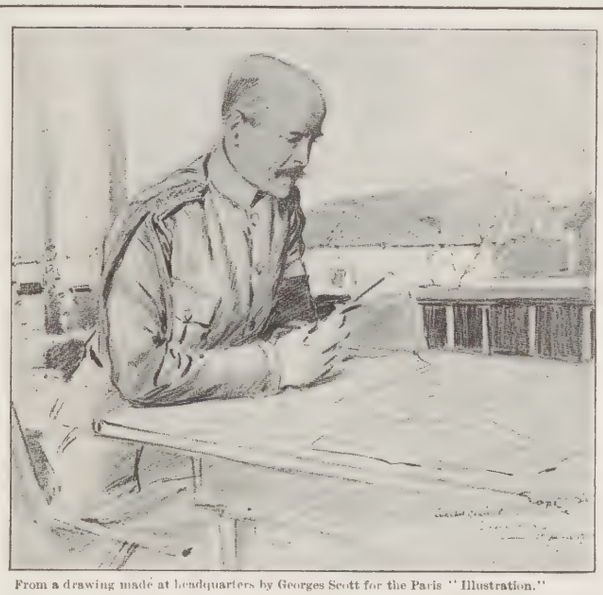
"Seniority rules have been in effect upon all railroads in the Commonwealth for many years, and have been to the traveling public the greatest possible assurance that only employees of experience and tested ability could be placed in charge of trains, and we are of the firm belief that if the traveling public but realized the increased dangers that would exist under operating rules that would permit of favoritism, that it is not only possible, but probable, under the revival of the old customs, that it would submit to the evils incident to a strike rather than to permit of the revival of the old conditions.

"Our position in this respect will not be indefensible, and we hesitate to believe that the people of New England will array themselves against us until they are informed that we have endangered their safety by accepting the rules thus far objected to. . . . . .

"If a strike is declared, it will be because no other means of reaching an adjustment of the differences is possible, and we beg to inform you that to the best of our belief the attitude you have assumed to take will act more as an incentive of a strike than as a preventive of one. As law-abiding citizens, we have only the deepest respect for your office, but believe it to be our duty to those whom we represent as well as to every workingman or woman in the Commonwealth to disagree with you, and to tell you so, on the matter of your recourse to the enactment of law that will curtail the liberties, rights, and privileges of the citizens of the Commonwealth in order that corporate greed may fatten upon products of involuntary servitude."

THE OTHER SIDE OF THE MACEDONIAN ATROCITIES

BY ACCEPTING at their face value the appalling tales of Bulgarian atrocities in Macedonia given to the world by the King of Greece soon after the outbreak of fratricidal war among the Balkan Allies, public opinion in America, according to more than one student of the situation, has done Bulgaria a grave injustice. Because these stories were put into circulation at a time when Bulgaria, bottled up by her foes, was entirely cut off from uncensored communication with the outside world, they gained such headway that belated denials and corrections do not easily overtake them. Consequently a prejudice against the Bulgarians has established itself in the popular mind, with the practical result of freezing up those springs of private charity which would naturally flow to alleviate the bitter sufferings of the Bulgarian refugees from Macedonia. These 150,000 refugees, facing the winter, homeless and destitute, declares a competent witness who has just returned from Bulgaria, "will perish miserably unless help is given them from the outside."



From a drawing made at headquarters by Georges Scott for the Paris "Illustration."

KING CONSTANTINE I., OF GREECE.

As he looks when planning a battle. His vigorous denunciations of Bulgarian "atrocities" are now looked upon by recent investigators as due more to patriotic fervor than to knowledge of the facts.

This witness is Prof. W. S. Monroe, a well-known educator, lecturer, and traveler, who adds his voice to that of Lieut.-Gen. Nelson A. Miles in a plea for a fair and understanding attitude toward "heroic, but unfortunate Bulgaria." While Mr. Monroe does not deny that the Bulgars, in common with all the nations involved in the Balkan disturbances, have committed atrocities, he declares himself "profoundly convinced that for every atrocity committed by a Bulgarian, twenty like atrocities have been committed by Greeks." He also reminds us that it was Bulgaria who demanded an international commission to investigate these charges, and Greece and Servia who put obstacles in the path of it. Despite these obstacles, the commission has done its work and will publish its report in November. In the meantime Mr. Monroe, writing in the Springfield *Republican*, makes the following interesting contribution to our knowledge of the subject:

"I have personally interviewed hundreds of Bulgarian refugees from Macedonia; and, after the armistice, I made a horseback trip to some of the regions from which they were forced to flee. Of more than 150,000 such refugees who were compelled to flee from their homes, a few only were able to take with them their cattle and flocks of sheep and goats. Their descriptions of atrocities committed by Greek troops are heart-rending, and would be incredible but for the overwhelming testimony on all sides. There was wholesale massacre of the Bulgarian population in the parts of Macedonia occupied by the Greek Army—the victims in many cases being horribly mutilated.

"Extermination of the Bulgarian population was evidently carried out on a preconceived plan, the cavalry in many cases being employed for the purpose. Surrounding the villages, the troops pursued all those who attempted to escape, sabering indiscriminately men, women, and children. Not only did general massacre take place, but villages and grain fields were burned. In cases where emissaries urged the villagers not to flee, no mercy was shown. Practically all the regions

traversed by the Greek troops have been devastated. Gen. Nelson A. Miles, of the United States Army, and myself visited 5,000 of these refugees in the region of Samokov and interviewed many of them. Subsequently I interviewed hundreds of refugees from Kukush, Dramen, Dorran, and other regions laid waste by the Greeks. The story in most cases is as above summarized."

Moreover, continues Professor Monroe, certain Greek documents recently published confirm the testimony of the Macedonian refugees. These documents are letters from Greek soldiers to their people at home, taken by Bulgarian troops in the region of Raglog from the 19th Regiment of the 7th Greek Division. Omitting names and addresses for the sake of brevity, Professor Monroe quotes the following extracts:

"This war has been painful. We have burned all the villages abandoned by the Bulgarians. The latter burn the Greek villages and we burn the Bulgarian villages. They massacre and we massacre, and the Mannlicher has worked against all those of this wicked nation who have fallen into our hands. Of the 1,200 prisoners we made at Nigrita, only 41 remain in the prisons.

"Here in Vrondron (Brodi) I have taken five Bulgarians with a girl of Serres. We shut them all up in a caracol (guardhouse), and kept them. The girl was killed. While still alive we thrust out their eyes.

"From Serres to the frontier we have burned all the villages of the Bulgarians. We kill them like sparrows.

"We burn all the Bulgarian villages and we kill all the Bulgarians who fall into our hands.

"The Hellenic Army sets fire to every Bulgarian village that it reaches, and massacres all those whom it meets.

"I was given sixteen Bulgarian prisoners to take back to the division, but I only took back two. The others were swallowed up by the darkness, massacred by me."

A representative of the Newark *Evening News* drew from Professor Monroe these additional points:

"Three-quarters of the population of the country in which these things are said to have occurred were Bulgars. It is not sensible to believe that the Bulgarians would carry on against their own kinsmen such a campaign of extermination as is evident to any one who visits the scene. Besides, King Constantine's stories do not tally with the facts. For instance, he telegraphed that the Bulgars had slaughtered 30,000 Greeks in a town whose population was only 9,000, most of whom were Bulgars and hardly any Greeks. Again he telegraphed that a whole town had been wiped out by the Bulgars, but a few days later he wired that his army had occupied it and that the entire population had turned out to welcome them."

Because all the odium of the Macedonian atrocities has been piled on Bulgarian shoulders, continues Professor Monroe, "the sufferings of Bulgarians driven out of Macedonia will be appalling." To quote further:

"There are 150,000 Bulgarian refugees from Macedonia in Bulgaria for whom the Bulgarian people are unable to make provision. These refugees are mostly women and children who have actually been forced out of Macedonia with nothing but the clothes on their backs. Their villages have been burned, the crops destroyed, their stock stolen, and the surrounding territory devastated even of its grass. They are camping in the open in Bulgaria, the only haven of refuge open to them. Communities and kindly disposed persons give them such food and other succor as they can, but it is altogether inadequate.

"Now winter is coming on and these refugees, who are dying along the roadsides, will perish miserably unless help is given them from the outside. Sympathy for the Bulgarians, however, has been alienated by reports of the atrocities practised by their soldiers, and this aid will not be forthcoming if this prejudice persists."

This tragic situation should have a special appeal for America, declares the Brooklyn *Standard Union*, because Bulgaria owes much of its progress in recent years to the influence of American educational methods and ideals. Our schools and missions have made their way to this Balkan land, "and now comes the time when those behind them, and whose principles they express, should demonstrate their faith by their works."

FILIPINO FREEDOM DAWNING

WISE OR FOOLISH as one or another may judge it, new or old as they may call it, the writers of the press at least agree on the main fact that the Wilson Administration has now taken a definite step toward Filipino freedom. The announcement that henceforth native Filipinos will have a majority representation on the appointive Philippine Commission, thus giving them control of both houses of the Filipino legislature, is received with many misgivings by papers like the New York *Tribune* (Rep.) and *Journal of Commerce*, which have been arguing editorially against recent Democratic proposals for hastening the dawn of Independence Day in the archipelago. On the other hand, a Democratic daily like the New York *World* hails it joyously as a long-wished-for fulfilment of party pledges, and as another reminder to dwellers in foreign lands of our national mission "to proclaim liberty throughout the world." The Administration is content with the admission that it acts with the express intention of hastening the ultimate independence of the islands. Yet the manner of announcement, after a somewhat puzzling silence, was not lacking in a certain dramatic quality. The time chosen was the day the first representative of a Democratic Administration to hold rule over an American dependency arrived in Manila. And it was from a grand stand overlooking the Luneta that Mr. Francis Burton Harrison delivered his inaugural address before an applauding throng of Filipinos. These sentences are taken by the press as embodying the instructions of the United States Government:

"We regard ourselves as trustees, acting not for the advantage of the United States, but for the benefit of the people of the Philippines. Every step we take will be taken with a view to the ultimate independence of the islands and as a preparation for that independence, and we hope to move toward that end as rapidly as the safety and the permanent interests of the islands will permit. After each step taken experience will guide us as to the next.

"The Administration will take one step at once. It will give to the native citizens of the islands a majority in the appointive commission, and thus in the upper as well as in the lower house of the legislature. It will do this in the confident hope and expectation that immediate proof will thereby be given, in the action of the commission under the new arrangement, of the political capacity of those native citizens who have already come forward to represent and lead their people in affairs."

The new Governor-General further asserted his own accord with the Wilson policy. "Until your independence is complete," he then added significantly, "we shall demand unremitting recognition of our sovereignty." The people of the Philippines, he told them, must now furnish "convincing proof" that they are "capable of establishing a stable Government"—

"We place within your reach the instruments of redemption. The door of opportunity stands open, and the event, under Providence, is in your hands."

President Wilson's plan, according to a Washington dispatch, will be carried out in this way:

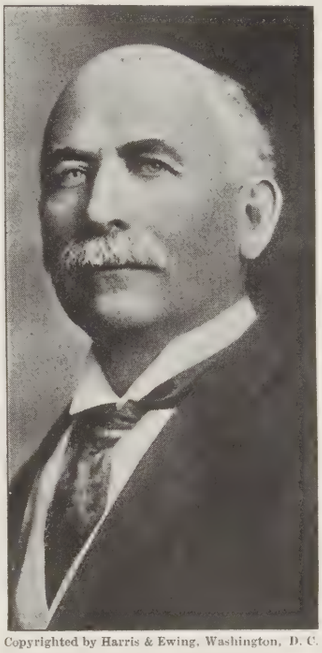
"The Filipinos already have a majority in the Assembly, the lower branch. They will get a majority on the Commission, which is the upper house, when the American Commissioners, Frank A. Branagan and Vice-Governor Gilbert, are retired in the near future, and their places are filled by natives. Two new American Commissioners, however, will soon be appointed in place of Commissioners Worcester and Elliott, recently resigned. Under the new arrangement there will be six native Commissioners and three Americans."

The change promised gladdens the heart of the New York *World*. It is action, after calls for action from four national Democratic conventions. For the Filipinos "it is a promise of greater things to come, such as popular elections," and it is also "an exceedingly tangible realization of virtual independence in one important field." Further:

"No scuttle is involved in this policy and no commitments are made that can not be canceled. . . . . .

"The main thing so far as we are concerned is that another party pledge has been shown to have vitality and sincerity, and, so far as the Filipinos are concerned, that the means of their emancipation are already in their own hands. The triumph is as great for us as it is for them. Once more, after some years of uncertainty, we proclaim liberty throughout the world."

After this warmth of enthusiasm, the cold atmosphere of doubt and criticism into which we must pass is somewhat chilling. In the judgment of the New York *Journal of Commerce*, to quote one opponent of the Democratic policy, "the experiment goes far enough to impair confidence in the stability of American rule in the Philippines, but falls short of any real test of native capacity to govern." The most objectionable aspect, we are further informed, "is that it tends to support the assumption that with the election of a Democratic President and Congress there necessarily went a 'popular mandate' to adopt a Philippine policy conformable to that outlined in successive Democratic platforms." To the Washington *Post* (Ind.) the Administration's plans seem very much like "beginning at the top in the task of instructing the natives in the ways of self-government, as nothing now stands between them and autonomy, except the Governor-General's veto." The situation looks even worse to the New York *Tribune* (Rep.), for it does not seem to think that any veto power rests with the Governor-General, and considers that, with a Filipino Commission as well as a Filipino Assembly, "there will be no veto power short of Washington itself over any legislation, however ill-advised it may be." This, in *The Tribune's* opinion, is a most undesirable arrangement—



Copyrighted by Harris & Ewing, Washington, D. C.

HE PREFERS WAGON ROADS TO "JOY ROADS."

Congressman Shackleford favors Federal aid in road-building, but thinks the farmer and his market-wagon should be thought of before the tourist and his motor-car.

"Of the wisdom of giving the Filipinos at this time control of both branches of the legislature there is doubt. But there can be no doubt of the need of a veto power over every legislature, such as we have in our States, and over Congress itself, and it is obvious that such a power should be exercised as closely as possible to the legislature itself and should be in the closest possible touch with the constituencies thereof."

Under the new plan the veto power, as *The Tribune* sees it, instead of being in the hands of the resident American Commissioners "on the scene, familiar with the islands' needs and able to act promptly," will be "exercised at Washington by an arbitrary American functionary" personally unknown to the Filipinos and whose acts might be regarded "as oppressive and despotic." Hence, the new plan, "instead of satisfying the Filipino agitators," will "furnish them with a new point of attack."

But whatever may be said of this Wilson policy, declare the New York *Sun* and *Times* and Springfield *Republican*, "it contains nothing new." *The Times*, using some of Governor Harrison's own words, reminds him that we have always regarded ourselves "as trustees" in the Philippines, that "every step" taken by President Wilson's Republican predecessors was "with a view to the ultimate independence of the islands" and intended to hasten and prepare for that independence. Indeed,

"The suppression of the Aguinaldo faction, the dealing with the predatory tribes, the extension of local government, the Filipino Assembly, the employment of Filipinos in the public service, especially the judiciary, and the organization of the native constabulary have all been steps toward that end."

GOOD ROADS—FOR WORK OR PLAY?

SO MUCH HEADWAY has been made by the good-roads movement that the main question now seems to be merely whether the Federal Government shall help provide "business roads" or "touring roads." It is evident from the speeches delivered by Secretary of Agriculture Houston and Congressman Dorsey W. Shackleford, of Missouri, chairman of the House Committee on Public Roads, at the third annual American Road Congress at Detroit, that Congress and the Wilson Administration are disposed to consider first the interests of the farmers, who need good wagon roads to bring them closer to the market. This, says the Chicago *Post*, "is bread-and-butter logic," while the Springfield *Republican* remarks that "if there are any roads that properly come within the scope of Federal aid it is precisely the great interstate boulevards which Mr. Shackleford calls 'joy roads.'" The "interstate-boulevard" idea is largely supported by the automobile people, whose campaigning for good roads has given the general movement much of its impetus. The so-called "touring class"—which, of course, includes automobile manufacturers and agents as well as owners—argue that the farmers would receive as many benefits from big interstate highways as anybody else, because those living along the main highways would use them, the value of their lands would be enhanced, and communities would be encouraged to build better local thoroughfares. There are several elaborate interstate schemes on foot. One of them is the Lincoln Memorial Highway, an ocean-to-ocean road, originally planned by Carl G. Fisher, an Indianapolis manufacturer. Another is a great system of national roads extending to all parts of the country.

This plan is advocated by the National Highways Association, the moving spirit of which is Charles Henry Davis, an eminent civil engineer of South Yarmouth, Mass., and Washington, D. C. Mr. Shackleford's address aroused the hostility of many members of the American Automobile Association. Here are a few paragraphs from his remarks as reported in the press:

"It can not be doubted that an overwhelming majority of the people want Federal road legislation; but unfortunately they radically differ in opinion as to what such legislation should provide. They are divided into two general classes which, for the purposes of this discussion, may be designated as the 'touring-roads' class and the 'business-roads' class.

"The 'touring-roads' class is largely made up of rich automobile owners who desire to spend a part of their leisure in touring the country. These are reenforced by manufacturers of road machinery and road materials who regard Uncle Sam as 'good pay,' a liberal buyer, and one who would be a valuable customer if only he would embark in the business of building 'national roads.'

"The 'business-roads' class believe that in dealing with roads we must keep in mind their functions and the relation which they bear to the general transportation system of the country; that as the harbor is the terminus of the river and the railroad, so, for practical purposes, the railway station is the terminus for roads.

"Where good roads are there will be good schools, knowledge, and prosperity, while along bad roads, poor schools, ignorance, and poverty will prevail. The National Roads Association proposes that people along 98 per cent. of the roads are to be left 40 years wandering in the wilderness of poor roads, yet must help pay the costs of the 2 per cent. of the roads which the American

Automobile Association and the National Roads Association would build to the end that the rich automobile owners may "See America First.'"

Secretary Houston told of the appropriation by Congress last year of $500,000 "to be expended by the Secretary of Agriculture in cooperation with the Postmaster-General in improving the condition of roads to be selected by them over which rural delivery is or may hereafter be established." This work is being done in several States, and the Office of Public Roads in the Department of Agriculture will ascertain the benefits derived by the local population and by the rural delivery service. Congress made the appropriation, says Secretary Houston, "contingent on the appropriation by the State or subdivision thereof in which such improvement was to be made of double the amount of money for the improvement." The Secretary went on to give his idea of what government aid ought to be:

"In short, as a practical program, I believe that this matter is one in which haste can best be slowly made. The people will sanction a reasonable expenditure of their money—and it is their money and theirs only, whether it be expended through the Federal Government or the State—when they are convinced that it is applied to a wise purpose and will yield the results anticipated. And I am imprest by the wisdom of the action of Congress, in the midst of so much clamor, in constituting a committee 'to make inquiry into the subject of Federal aid in the construction of post roads,' in providing an appropriation of a half million dollars to be expended cooperatively with the States in the proportion of one to two, and in requiring the Secretary of Agriculture and the Postmaster-General to report to Congress the results of such expenditure.

"To summarize, it seems to me that if Federal help is to be extended to the building and improvement of roads, it should follow, approximately, these lines:

"First, it should require the cooperation of the State in a larger measure in financial support and in construction and maintenance.

"In the second place, it should be understood that the Federal Government should have adequate supervision and control over the enterprise in each community and guarantee the efficient expenditure of its own funds.

"In the third place, the Federal Commissioner should deal exclusively with efficient agencies provided and supported by the States.

"In the fourth place, the plan should provide for the apportionment of funds among the States, on the basis of certain essential factors; and,

"Finally, the primary undertaking should be to improve those community roads which are essential for the marketing of products and for the betterment of the physical, intellectual, and social side of rural life."

The Charlotte *Observer*, commending Mr. Shackleford's courage in "speaking out in meeting," says that "unquestionably the mass of good-roads sentiment in the United States is not correctly represented by the average good-roads convention," and that "the roads we need are such as will connect the farm with the market or with the point of shipment to market." The Fort Worth *Record* opposes all the schemes of Federal aid, but says that if there is to be any government aid, it should be for business roads. To quote from *The Record:*

"Federal aid for roads is very doubtful statesmanship. The road problem is essentially local. The Federal Government has no need for cross-continent or interstate roads; its postal service across States or between States is handled by railroads. The only concern it has in highway construction is to encourage good roads for the rural delivery of mail, and such roads should follow the course of settlement and local traffic. All other considerations of location, construction, and maintenance are concerns of counties and communities. A highway from ocean to ocean or from the Lakes to the Gulf would accommodate no interstate traffic; it would be useful only in so far as it might serve communities lying along its course. Otherwise it would be merely a highway for pleasure automobiles. On the other hand, local systems of roads adapted to local use would constitute connecting links of cross-continent lines. The difference is that great touring roads would accommodate comparatively few people except joy-riding automobilists, while local roads would serve the needs of localities and still accommodate the joy-riders."

FOREIGN COMMENT

CHANGING PARTNERS IN THE BALKANS

THE WAR-DANCE in the Balkan Peninsula has reached the point where the performers are looking around for new partners, and Turkey sees a chance to take over one of the former Allies who caused her downfall. Such an alliance would prevent their reconciliation and prolong the stay of the Crescent on European soil. Which shall be taken, and which left as possible foes? The *Tanine* (Constantinople), discerning Greece as the coming foe, singles out Servia as "having shown least hatred toward the Turk," as the best ally to choose. Bulgaria, says this organ, is weak and may be dismissed as a possible enemy, but never to be trusted as an ally, we read. To quote the words of this paper:

"We consider Greece as an enemy that may in future give us more worry than the Bulgarians can. The Greeks, naturally very visionary folk, have become intoxicated by their successes. Many among them dream of being in Constantinople within three or four years. But officially Greece will certainly talk with us in a very friendly and benevolent way. We shall take no stock in this, and shall still consider Greece as our chief enemy. How can we be convinced that the Greek statesmen will give up their dreams and busy themselves with the prosperity of their country, and take measures against the Bulgarian peril? If Greece decides to entrench herself in the islands so as to invade Anatolia, we can have no worse enemy than Greece. For in that case her aim will always be to foment troubles on the Asiatic coasts. But if she will proclaim the neutrality or the autonomy of those islands that threaten the coast of Anatolia, this will be the best proof of the good will and loyal intentions of the Hellenic Government. There would then remain not the least cause of suspicion or coldness as between the Greeks and ourselves. The quietness and respect of the Greeks of the interior would be secured, and Greece would have in Turkey a trusty ally against any Bulgarian attack, or even a helper in case of Servian aggression."

THE BALKAN PENINSULA BEFORE AND AFTER THE WAR.

The instability of the Balkan equilibrium and the confusion of affairs and interests there are further proved by the fact that the *Ikdam* (Constantinople), which represents the actual Government, has been advocating an alliance of Turkey with Greece against Bulgaria, for, we are told, the ferocious Bulgarians are the bugbears of the gentle Turk, who would associate much more kindly and congenially with the humane and polished Greeks, who have never done any wrong to Islam, and so we read:

"Danger from the Bulgarians, those enemies of all morality and civilization, has now made Turks and Greeks feel the need of going hand in hand. Just as the Bulgarians have acted as savages, so the Greeks, on the contrary, have behaved in a humane way. The Greeks have easily appreciated how much they could profit by their natural allies, the Turks, as against their born enemies, the Bulgars. Over against the stupidity of the Bulgarians, the Greeks have shown great common sense. They have protected the Moslems, and given back their mosques that had been transformed into churches. The Greek statesmen have declared in public speech that there was no distinction of religions in the Hellenic régime. They have even appointed Moslem officials in certain places, and, according to the papers, have fired the *iftar* (evening breakfast) cannon at Salonika during Ramazan.

"Thus by such civilized procedure the Greeks have won the sympathy of Europe and the friendship of the Turks. The Turkish population in the regions taken by Greece is a fortress for Hellenism, a fortress of iron. With proper drill the Turks will make the best of soldiers against the Bulgars. To-day every Turk feels an insatiable thirst for vengeance. If the Turks ever forget what the Bulgarians have done to them, they will prove that they deserved it all. This spirit of vengeance should be passed on from father to son. Not a single Turk should touch anything that comes from Bulgaria. Vengeance on the Bulgarians is a sentiment that must be inculcated and strengthened in the Turkish heart from the primary school up.

"If the Bulgarians should attack the Greeks, the Turks that have become subjects of Greece should hurl themselves, even more than do the Greeks, against these enemies of the religion and the nation. They must help the Government to prevent a single Bulgarian *comitadji* from living on Greek soil.

"The Turks should submit without objection to the laws of the Hellenic Government, since these apply to every one, and not try to secure justice against any violation of rights except by legal means. The Turks must not fall into the mistake made by Moslems in certain districts. It can not be a wise measure to wish to be exempt from the application of the general laws of the country. They must not live there as foreigners, but as citizens. Consequently it is their part to accept gladly military service, study to become an enlightened class, and, while giving attention to their own language and religion, to acquire foreign languages, and especially that of the Government whose subjects they have become, and cultivate friendly relations with their Greek fellow subjects. As for the Moslem *ulema* (religious teachers), they must keep in constant touch with the Greek clergy and officials, and try to cultivate good relations between the communities by advice and by sermons. Such is the advice we give, with the hope that the Greek papers will do likewise for their readers, so as to form of the two elements a strong force against Bulgaria."

TURKEY'S REAL NEED

ALL THE TALK about Turkey's need of cultivating education, commerce, and industry, which we have quoted in these pages from time to time from the Turkish press, must be subordinated to the need of developing the Army, declares the *Tanine* (Constantinople). The Turkish Empire was won by the sword, and it has been painfully demonstrated that it can not be kept without the sword. The need of thorough discipline, of equipment with the most modern and effective arms,

OSMAN'S VOYAGE OF DISCOVERY.

—*Kladderadatsch* (Berlin).

was keenly felt in the recent Balkan struggle. Let every effort, declares this organ of the Union and Progress party, be directed toward remedying so deplorable a condition of things. To quote its words:

"Our Government has been blamed for expending so large a proportion of the revenue upon the Army, to the neglect of roads and schools. True, the latter were in need of more money. But the late war has very clearly shown that the safety of a nation before all else depends upon its ability to rely with confidence upon its own strength. The roads and schools we opened in Roumelia remain there for the profit of our enemies, because our strength was insufficient to protect them. During the truce and the conferences, if we had not devoted attention to reform in the Army, supplying it with arms, ammunition, and other necessities, and calling to the colors 300,000 vigorous young men, could we have retaken and held Adrianople? No doubt the savage acts of the Bulgarians stirred the conscience and caused disgust in the civilized world, and this was a help to us. But had the Ottoman Army been unable to make good its hold upon Adrianople, Bulgaria would have listened to nobody, even in the face of the indignation awakened against her."

Tho financial affairs in Turkey are not in such a bad way as was to be expected; yet we need external aid, continues this patriotic writer, for "strong we must be in physical as well as moral power." To quote further:

"For the complete equipment of an army money in large amounts is necessary. We have unsettled debts. We need to negotiate a large loan, for our budget is far from balancing.

"A portion of our revenue is already hypothecated for various objects, and the money we require will, we must confess, be very difficult to find. And if we must continue to expend large sums on our Army, the needed money will become a problem perhaps impossible of solution. Yet, while we must, at all hazards, keep our Army in a state of efficiency, the danger of an attack upon us by a Balkan state is not, in the exhausted condition of the Balkan armies, an urgent danger."

Turkey is safe from the Balkan Powers, who, like "Kilkenny cats," have fought each other to rags. But what of Russia?

"Coming to the possibility of an attack by Russia upon our Asiatic possessions, the late war has proved that the question of Asiatic Turkey is an Eastern question. A more opportune time for an attack from that quarter can not be imagined than the time of the Balkan War. Russia could have made the attack with little difficulty while the enemy was before Chataldja. Russia made no assault, for Europe did not permit the question of Asiatic Turkey to be opened. Yet, as we have said above, a nation has no other resource with which to defend her rights and her honor than that which is found in her military strength. Therefore for us to neglect military preparation, because Europe does not wish the question of Asiatic Turkey opened, would be treachery to the fatherland." — *Translation made for* THE LITERARY DIGEST.

NEW GERMAN RESPECT FOR FRANCE

THE GERMANS at first treated the French three-years'-service law very lightly, and laughed at this endeavor to add to the number and efficiency of the French Army as a counterpoise to the amazing forces to be raised by Germany. France was represented by the German cartoonists as rallying a multitude of the halt, maimed, and blind. The cripple and the legless were all represented as being marshaled under the French colors, and sometimes children of three or four years were pictured in French uniform as constituting the Army thought worthy to meet the invincibles of Austria, Italy, and Germany. But a change has lately come over German military opinion, and it is recognized that Premier Barthou was by no means out of his reckoning when he drafted that law and the financial bill for carrying it into execution. High German military authorities are beginning to show some concern, and to recognize that the position of Germany is in danger. For instance, General Litzmann publishes, in a Pan-Germanist organ, the *Tägliche Rundschau* (Berlin), an article upon the military consequences which will result from the three-years' law when it is put into effect in France. He says that this law will very materially increase the French Army, that it will provide better military instruction to the troops, and it will moreover furnish the whole nation with a better education in patriotism, in love of military service, and in readiness to fight for their country. In the words of this General:

"What will be the consequences of these extraordinary efforts on the part of France? In my view these consequences are the

THE LATEST RECRUIT.

Kaiser William has been appointed a soldier in the bodyguard of the King of Greece. —*Kikeriki* (Vienna).

increase of the French Army in active service, and this means the increase of the whole Army, including the reserves, as a power in war. The second advantage of this law of three years is the better training of the troops, by which all reservists will profit, but in my opinion the most valuable of all these results is the education of the nation in the sentiment of duty as soldiers —an education which will result from the personal effort and

financial self-denial which the law demands of a Frenchman. The Frenchman, very well endowed with the spirit of enterprise, will certainly see that it is a grand thing—this military service—which he is obliged to undergo at the cost of great sacrifices."

THE THREE YEARS' SERVICE.

"It is those two ladies who make me sweat blood."
—*Kladderadatsch* (Berlin).

The General compares the alacrity with which a Frenchman goes into military service with the grudging spirit visible among his own countrymen:

"While those Germans who are called to serve in the Army go with a sigh to carry out their year as volunteers, the young Frenchman will at once understand on joining the colors that no other condition of life and no other accomplishments can render him equally serviceable to his country. No one will be willing to pass for a coward or for one who is too weak to leave his home. Even the most rigorous military service will result in developing a training for the individual which is above price."

As for the effect of this law in its execution upon the general public, the writer continues:

"In the eyes of the people military service will now be esteemed an honor and a manly duty, and not a burden which a man would use every device to cast off. When we compare the energy, the daring, with which the French people march forward to acquire an equality in arms and even a military superiority in comparison with the more numerous forces of Germany, we can understand the proud words uttered by the Prime Minister Barthou. They run as follows: 'The new Military Law is not a burden which crushes me,' says the French boy. 'It imposes a duty the discharge of which is an honor to me.'"

Another German general has dwelt upon the superior geographical situation of France in case of war. France has outlets to the sea and to other parts of the Continent which are denied to Germany. So we are told by General von Bernhardi, who writes in the *Tag* (Berlin) on war, which he thinks is imminent:

"We are not threatened only by economic misfortune, but by an economic catastrophe. This last point can not be too earnestly insisted upon. In this respect Germany is not so well off as France. Germany, in order to supply the needs of its population, is forced to rely continually upon foreign countries. It is true that she raises in her own territory 95 per cent. of the meat which she consumes, but she can not raise a sufficient quantity of grain. We fall short every year 15 or 20 per cent. in our annual supply of breadstuffs. The situation of our industries, therefore, in case of war, would be most critical. Germany is forced to import a great part of the natural products of which she has need. Our steel industry imports annually 12,000,000 tons of ore. Our commercial exchanges—imports and exports—rose in 1911 to $4,500,000,000, of which $3,250,000,000 were sea-borne."

He says that in all probability, in case of war, France would have access to foreign ports and foreign productive countries much more easily than Germany. In his opinion both the British Channel and the Mediterranean would be cut off from Germany by the battle-ships of the enemy. The Mediterranean would be dominated by French and English warships. If we tried, he says, to gain what we needed by a land route, we should find France to the west of us and Russia on the east of us, while Belgium and Denmark would probably be hostile, and Holland under the control of British guns.

"To sum up, we are in a dangerous situation, and find ourselves compelled either to augment our military power to such a degree that we would be sure of success, or to give up all hope of a great future. There is no choice in the matter. We must either be a great world-Power or abandon ourselves to an irremediable decadence."—*Translations made for* THE LITERARY DIGEST.

WHY GERMAN SOCIALISTS WANT A BIG ARMY—The *Liberté* (Paris) tells us that one of its representatives asked an eminent German statesman how it was that the Labor party in the Reichstag voted in favor of increased armaments, and he replied:

"The German workingman of to-day is convinced that the economic supremacy of Germany, on which his own prosperity is based, depends on the powers of the Army, and especially of the Navy, whose prestige secures an outlet and a market for national industries. It is this frame of mind that compels the great leaders of the Social Democracy to vote in the Reichstag for the military laws and led the recent Socialist Congress at Jena to take an attitude and pass motions which delighted the Kaiser above every one. . . . Germany is solidly united in aspiring after the creation of a greater Germany. This is the keystone on which all classes are cemented by patriotic enthusiasm whose tendency grows more and more decided toward increased militarism."—*Translation made for* THE LITERARY DIGEST.

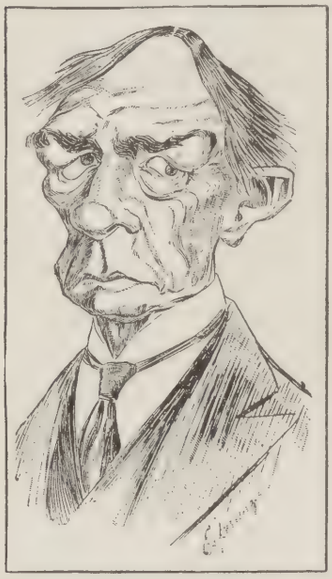
The self-sacrifice of Michel at length restores the fighting strength of the poor patient. —*Simplicissimus* (Munich).

OUR LATIN-AMERICAN CRITICS

IT MAY BE NATURAL that the Mexican press should resent our policy as unneighborly interference with a family jar, but we find the majority of the outside newspapers of the Latin lands, led by the great *Prensa* of Buenos Aires, also sympathizing with Huerta's people. "It is time for Mexico to prepare for a struggle against the United States," declares the *Voz de Oriente* (Lima), and it proceeds:



A MEXICAN CARICATURE OF MINISTER LIND AS "A BIRD OF ILL OMEN."

—*Imparcial* (Mexico City).

"Far from mending, the situation in Mexico is growing more complicated and dangerous. This condition of things results in a large measure from the attitude of the Government at Washington in refusing to recognize Huerta, while Wilson sympathizes with the rebels and even gives them his support. This is the cause of the movement among the students in Mexico City. These youngsters have made a grand manifestation against the Yankees before the palace of the Governor when they carried flags bearing the inscription 'Death to the Yankees!' The irritation exhibited by the Mexicans is amply justified."

Stronger still is the language of the *Revista de Yucatan* (Merida), which scoffs at American diplomacy in the following terms:

"President Wilson and his Secretary of State appear each to be one of three things. Either they are the romanticists of diplomacy, or the ignoramuses of diplomacy, or the hypocrites of diplomacy. In whichever of these characters we regard them, they are hurtful to the country they govern and to the nations with which they deal. For nothing can be more pernicious in political life than romanticism which engenders your dreamers, your fanatics, extravagant theorists, and your Utopians who do not see the reality of things, who do not perceive the world in which they live and attempt to go beyond the law of nature. The ignoramus is one destitute of science or letters. . . . The hypocrite is just what the word imports—he is a man who blazons abroad as his own the virtues he does not possess.

"Now the antecedents of Mr. Wilson and of Mr. Bryan oblige us to acquit them of either ignorance or hypocrisy. Therefore it remains that they are romanticists. Romanticism in politics as in letters consists in an ignoring of precedents. I regard these gentlemen as men of good faith, but idealists wanting in experience. . . . One of the great poetical moralists of Greece has said, 'Do not undertake to prop up the house of your neighbor without his consent, for perhaps in your attempt you may bring it down upon your head.'"

In speaking of President Wilson's openly declared reasons for opposing the Government of Huerta in Mexico, the *Prensa* (Lima), one of the most important of Latin-American papers, calmly remarks on the same point:

"The President's declaration that he could not recognize Huerta's Government because it was founded upon treason is extremely interesting. It would, however, have had more effect if it had been made immediately on the death of Madero, at a moment when all civilized nations were feeling a thrill of horror over the deed. If President Wilson had spoken then, probably the provisional Government of Mexico would never have been recognized by the European and South American Powers, and the United States would not have been involved in those awkward complications which she is meeting to-day, and whose end and solution no one can foresee. A frank and energetic attitude would have nipt in the bud the present growing peril. . . . But in any case, however tardy the President's utterance is, it exhibits firmness of criticism and is of deep political significance. But nothing can justify the intervention of one state in the affairs of another. At least there ought to be some explanation of the motive which urges North America to favor, by opposing Huerta, the interests of Carranza's insurgents who have raised the ensign of an independent Mexico."

But Huerta does not find himself supported by all his own papers, and it is worth while to listen to the criticism of his administration which appears in the *Pais* (City of Mexico). After praising the methods of Madero as implying "liberty first and peace afterward," this paper says that Huerta works on just the contrary principles, consequently:

"The Government of General Huerta came as a reaction. He profest as his program the reign of order and the conservation of social interests. This was a protest against the Madero doctrine of liberty before peace. He said peace before everything, the main thing, the crown of all, this is the great principle.

"He sincerely desired to bring pacification. He has not, however, used suitable means for this purpose, for we see that the revolution, far from abating, resists with unexampled tenacity all efforts to stamp it out, altho the revolutionists fight under no one flag, possess neither ideals nor cohesion, and violate even their own principles by reducing the country to a condition of outlawry and anarchy."—*Translation made for* THE LITERARY DIGEST.

PROTECTING THE CANAL—The man with the empty pocket sings gaily in the face of robbers, says the old proverb. But the man of vast possessions is perturbed. Already, as the time for opening the big Panama channel approaches, we hear frequent discussions about the risk its possession runs in time of war. Count Maurice de Perigny, the noted French explorer,

A GERMAN IDEA OF SECRETARY BRYAN AS AN ENTERTAINER.

The ballet are scandalized.

—*Ulk* (Berlin).

writes to the Paris *Temps* that "this gigantic and remarkable work of the United States is insufficiently protected in a military sense." He thinks that 20,000 to 25,000 men would barely suffice to guard the waterway. In this connection the *Mexican Herald* (City of Mexico) observes:

"Doubtless the Canal in time of war would be frequently threatened with attacks [from air, sea, and land], for to prevent its operation would be to inflict a heavy blow upon the United States. It is quite clear that the American people are in for a large bill of expense to provide for safeguarding the waterway. As the discussion progresses, the advocates of neutralization will undoubtedly once more make themselves heard."

FIG. 1.—Dense smoke passing through the precipitator before the current is turned on. The flow of gas is 900 cubic feet per minute.

FIG. 2.—Same as Fig. 1, but just after the current has been turned on. The smoke is seen disappearing above the apparatus.

FIG. 3.—Dense smoke is passing in at the bottom of the chamber, the gases coming out clear at top, as long as the current flows.

STRIKING PROOF OF THE ELECTRIC CURE FOR SMOKE.

ELECTRIC SMOKE ABATEMENT

SMOKE ABATEMENT by electric discharge has been experimented with for some time, but altho the method has been attended with some success, it is not widely used, nor even familiarly known. The principle of the method is to charge the soot particles with electricity so that they will cling together to form large masses, like wet snowflakes, which fall by their own weight instead of being disseminated through the air. A contributor to *The Scientific American Supplement* (New York, September 6), W. W. Strong, asserts that lack of success hitherto has been due to faulty electrodes. He uses ring-shaped poles to distribute his electricity and claims that they are satisfactory beyond previous experience. He says of the "corona method," as he terms it:

"In many of the methods used for clearing smoke, a 'point' or 'edge' electrical discharge is used. A discharge of this kind is not uniformly distributed about the point or edge. The discharges cause a slight pressure in the gas, and the smoke or fumes always seek that part of the apparatus where the discharge is weakest or entirely non-existent. Thus, it will be seen that the efficiency of the point or edge discharge process is greatly reduced.

"The writer has made use of a corona type of discharge and has thus obtained a perfect radial symmetry of the discharge about the electrode. The negative corona is found to be more suitable since slight changes in the position of the corona electrode do not greatly affect the symmetry of the electrical discharges.

"It is probable that this form of discharge is the most efficient application of the electrical method of removing fumes, smoke, and dust from gases. The use of 300 watts will clean 800 to 1,000 cubic feet of the densest kind of smoke or fumes per minute, with a very small energy loss. The cleaning can be done by passing the gases through 4 feet, or even less, of the corona discharge. The voltage is about 28,000. . . . . .

"Referring to the accompanying illustrations, Fig. 1 shows dense, black smoke passing through the precipitating chamber, which is 4 feet high and 3 feet in diameter. About 900 cubic feet of smoke is passing through every minute, uninterrupted by current flow. Fig. 2 shows the same precipitating chamber in which the corona current was turned on only a second before the photograph was taken. At the top of the picture is seen part of the black smoke that was passing through before the current was turned on. The corona discharge cuts the smoke off 'just like a knife.' Altho dense smoke is flowing into the precipitation chamber in Fig. 3, the smoke particles are aggregated and fall into a receptacle at the bottom. The precipitation continues to take place as long as the corona current flows, allowing only clear gas to pass into the air. An end view of the precipitation chamber, taken at night, is shown in Fig. 4. This shows the electrodes covered over and completely hidden by the discharge from the corona current—a purple violet discharge somewhat similar to the northern light displays

FIG. 4.—TOP VIEW OF PRECIPITATION CHAMBER.
Taken at night, showing electrodes hidden by discharge.

sometimes seen in the midnight sky. With the rapid development of high-tension apparatus, this method promises to be an important factor in abating smoke and the many kinds of dust and fumes of our cities. It is quite probable that the apparatus can be made to run automatically and can be so shielded that no one can come in contact with the high voltage currents.

"This method of cleaning gases does not interfere with the draft to any appreciable extent, and it does not lower the temperature of the gases. It precipitates the dust, fumes, or smoke in a practically pure state so that if they possess any value they can be very easily recovered. This method also produces a small quantity of ozone which assists in purifying the gases."

RACE-SUICIDE AND RACIAL STAMINA

THAT THE BIRTH-RATE is now decreasing in every civilized country seems to be an acknowledged fact. It is worrying experts of all varieties, from Theodore Roosevelt down to the Government of France—a country where the phenomenon is especially noticeable. In this country we even contemplated, by exemptions in our income-tax bill, a prize for the possession of offspring, but later this feature was eliminated. Now comes Prof. Karl Pearson, the English statistician, and informs us that a falling birth-rate is merely nature's way of protecting us against the coming into the world of feeble children. We carefully preserve, by our modern customs, parents who would have been allowed to die off, a hundred years ago. It is well, perhaps, that we do so, but it is also well that they do not see fit, or are not able, to rear large families to which their defects are transmitted. The remedy for our trouble is not even, he thinks, to further perfect methods of caring for infants, but to increase the strength of the parents. His motto would be "Strengthen the Mothers," rather than "Save the Babies." In fact, with such mothers as we should have, the babies would take care of themselves, and would not need saving. Says *The Hospital* (London), in a leading article on Professor Pearson's lecture at the London School of Economics, in which he embodies these views:

"Professor Pearson believes—and we incline to think that his belief is right—that the value of the child population of a nation is fixt, in general, by the physical value of the mothers. He finds that artificial feeding and the many other causes which medical men are in the habit of regarding as certain factors of infant mortality have, on the whole, less danger to the community than is to be found in a defective maternal parent vitiated by disease or by hereditary enfeeblement. This is a deduction which should be prest home. In every civilized country the birth-rate is falling; that fact alone is not sufficient to cause any uneasiness to those who rightly understand the difference between civilization and savagery in regard to this aspect of motherhood. With the economic factors to be considered, it is easy to see that the child-bearing period of women in civilized communities is steadily contracting, and that the physical enfeeblement of women exposed to the stress and strain of modern life must inevitably lead to the physical deterioration of subsequent generations unless something more than at present is done for the benefit of the coming race. That being the case, the real question at issue is not whether the birth-rate is declining. With these factors present it is inevitable, and indeed expedient, that the birth-rate should decline, for no honest parent can afford to bring into the world children whom he can not fit with a strong constitution and endow with that physical and social means of safeguarding their position when they are grown up. On the contrary, the question concerns not the number of births, but the value of the births recorded. A declining infant mortality must ensure that a larger number of children will reach the age of puberty; the prophylactic, ultra-humanitarian measures of to-day make it possible for the weakest and unfittest to survive along with the strongest and best. Indeed, the tendency is to safeguard the interests of the former at the expense of those of the latter, a tendency which is bound ultimately to affect the race detrimentally.

"The whole matter of the birth-rate in reference to the value of the births and the status of the community can not be settled on statistical grounds alone. Nevertheless, we are duly grateful to Professor Pearson for drawing attention to certain outstanding facts which medical men are apt to overlook. Such semi-popular lectures should make the nation alive to the facts that ought never to be forgotten, but which are, unfortunately, remembered by comparatively few public men. One of these facts is the desirability of training the rising generation so as to perfect its physique and enhance its means of resistance to factors that act adversely upon less resistant organisms. This fact should be acknowledged by every public man, and it is a great pity that the unfortunate bogy of alleged 'militarism' still interferes with the due appreciation of the benefits to be derived from such physical and early training as military discipline entails. The recent pronouncement that no such training will be allowed in the public elementary schools is a deplorable testimony to the apathy and shortsightedness of a nation that still regards party politics as of far more importance than a healthy birth-rate. When Professor Pearson again lectures on the subject we commend to him to pay some attention to the position of the father. An investigation into the antecedents and environmental conditions of the father should prove interesting, and we venture to think that some of the results to be obtained from such a study ought to be of decided value to the community."

COMPULSORY STEEL CARS

OWING to the general impression that safety in a railway collision is insured, or at least greatly increased, by the use of steel cars, it has been recently proposed to seek Federal legislation making the use of these cars compulsory. This plan is deprecated by *Engineering News* (New York, September 18), which asserts that the safety of passengers in a steel car, tho greater than in a wooden one, is only slightly so, and that immediate compulsory substitution of steel for wood on all American railroads would involve not only staggering expense, but the performance of impossibilities. Says the paper just named, in an editorial article:

"It is furthest from our desire to oppose any reform looking to greater safety in railway operations, but before enacting hasty legislation of this sort Congress will do well to give heed to the relative importance of other needed improvements in railway safety practise. It ought to consider the question how much money the railways can spend on safety equipment during the next five years or ten years or whatever period may be fixt. It must consider also where and how that money is to be obtained, and in what directions it should be expended in order to produce the greatest results in the saving of lives and limbs.

"There is little doubt that in case derailment or collision occurs to steel cars, the passengers inside it have rather better chances than they would have if the car were of wooden construction. But that is the most that can be said, altho from some of the current newspaper discussion one would suppose that passengers inside a steel car were safe no matter how it might be knocked about in a collision or a derailment."

Taking only such railways as conduct a fast-train service, there are probably 35,000 cars, we are told, that should be, and doubtless eventually will be, replaced with steel. The cost of such replacement would be something like $525,000,000, but the task of finding that huge sum would be child's play beside the job of turning out the cars. Says our authority:

"It need hardly be said that all the steel passenger-car building establishments in the United States could not produce that number of coaches or anything like it in the next four years. It may be urged that new shops could be built to supply the demand; but the establishment of a plant equipped to turn out first-class steel passenger-cars is not a thing that can be done in a few months. Even were it possible to establish such plants at enormous cost and rush the equipment through in the time stated, it is easy to see that at the expiration of that time these plants would be lying idle, having completed the work they were built to accomplish, and with no further market for their product. Such a wasteful use of manufacturing capital would be an injury to the public as well as to the railway interests, were it made compulsory by legislation. It is just such overbuilding of manufacturing capacity during boom periods that has frequently brought about financial panics and resultant distress.

FIG. 1.—Rear view of mechanism. FIG. 2.—Front view of mechanism. FIG. 3.—Ball-controlled mechanism.

HOW THE WEATHER WINDS THE CLOCK.

"There is still another aspect to the steel-car problem. It appears to be assumed that the present steel car is a finality, and that all the railway has to do is to give out an order for steel cars and everything will be perfect. Every engineer familiar with steel-car construction, however, realizes that we have only made a beginning in this art. Those most familiar with the details of steel-car design agree that there are large opportunities for improvement. For one thing, steel cars, as well as most other railway rolling-stock, have too much dead-weight for economical transportation. It should be possible by economical design to reduce considerably the present weight of these cars, thereby effecting a great reduction in the cost of transportation.

"If we assume that a steel passenger-car will travel a million miles during its life—not an extravagant assumption—then every needless pound of weight put into that car must be hauled that million miles. That is the equivalent of 500 ton-miles of work. If we estimate the cost to the railways of hauling that extra weight at so low a figure as one mill per ton-mile, then fifty cents expense by the railways will be saved for every pound that the car is made lighter in its original construction.

"Again, it is by no means certain that we have reached finality in other details of car construction, the protection of the metal from corrosion, for example. It may even be that the steel car of the future will be so designed as to offer still more security against telescoping in collision than do present steel cars.

"All such improvements in design would be literally thrown to the winds were any such hasty legislation enacted as has been proposed. Manufacturers alter their designs and make improvements under the stress of competition and through a desire to get orders. All of these forces tending toward improvement would be neutralized if the railways were compelled by law to make large contracts for cars so that the car builders could practically dictate prices and terms and force the use of their own designs."

A CLOCK RUN BY THE WEATHER

A PERPETUAL CLOCK that is operated by the expansion and contraction of metal bars due to changes of temperature is described in an article on "Perpetual Force Clock Mechanisms," contributed to *The American Machinist* (New York, September 18) by Robert Mawson. The writer explains that when he uses the term "perpetual force," he does not mean what is usually called "perpetual motion." In the latter there is creation of energy, which is impossible. But gravity is a "perpetual force," within his use of the term, and when we use it we are employing a perpetual-force machine. This would seem to include pretty nearly everything in the way of power-plants, but Mr. Mawson concentrates his attention for the moment on certain forms of self-operating clocks, including that mentioned above. We read in part:

"Many attempts have been made by inventors to produce a perpetual winding clock. Most clocks are run by a spring or weight and have to be wound daily, every eight days, or, in some of the later models, every year. We have also pneumatic and electrical clocks, the latter being wound by a battery or an electrical current from the contact of a master clock.

"It is a well-known physical law that all bodies contract or expand with changes of temperature. The mechanism of the first clock Mr. Bangerter, the inventor, made, embodying the principle of metal expansion and contraction, is of interest. The expansion metal used for this clock was zinc wire and strips, and it required 500 pounds, aggregating a bulk of 8 feet high, 24 inches wide, and 18 inches deep. And yet this enormous mass of metal supplied only enough energy to run a watch movement.

"Fig. 1 shows a rear view of the original clock with one of the zinc strips removed at *A*. These strips were connected by levers, shown at the upper and lower ends of the clock frame. These levers were then connected by the wires shown to pawls engaging into the ratchets, seen in the center of the mechanism. These various ratchets were connected to a central ratchet, which wound up the clock by means of a chain attached to the spring barrel. A front view of the clock is shown in Fig. 2. In this

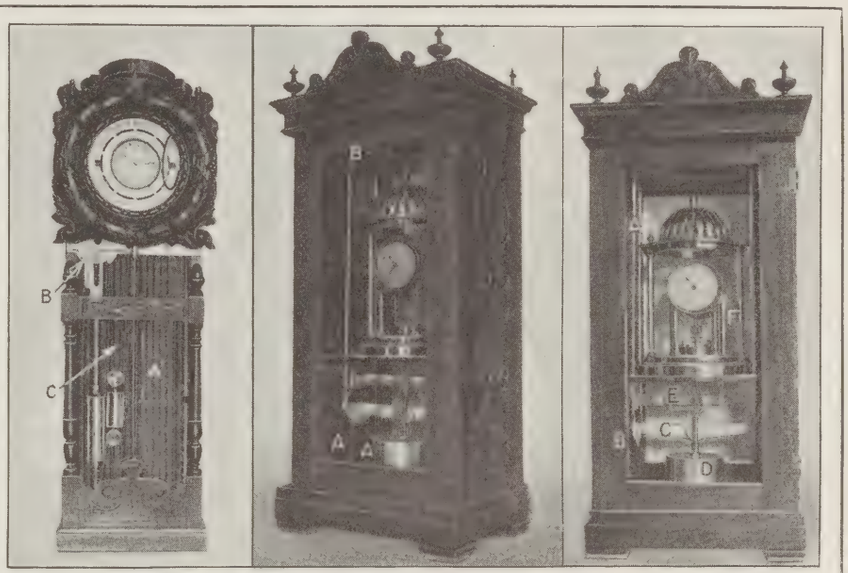

FIG. 5.—Weight-controlled method. FIG. 6.—View showing strips. FIG. 7.—Fitted to a year clock.

IT WILL RUN AS LONG AS THE WEATHER IS FICKLE.

view a number of the levers which worked on knife-edges are shown at *A;* the chain attachment from the central ratchet to the spring barrel is plainly shown at *B*.

"Three styles of perpetual self-winding clocks are manufactured in New York City. . . . These clocks employ no electricity, chemicals, or fuel to produce the energy to run them. This is supplied by strips of secret composition, which possess a high expansive quality. In other styles of clocks and watches, the desire of the maker has been to guard against or equalize this expansion or contraction, and consequently we find the compound pendulum in clocks and compensators in watches."

AN ACCIDENTAL DISCOVERY.

This device, which clarifies and amplifies the reproduction of talking-machine records, was the result of an accidental touch of the needle by the inventor's finger.

In these latest designs, we are told, the expansion strips do not connect directly with the clock mechanism. In one type they raise a number of little balls which, running around a raceway, wind the clock. In another the winding mechanism is controlled by a weight, and in still another by a spring. There is always a reserve supply of energy, so that the clock would continue to run should the temperature remain absolutely constant for two months, which is a climatic impossibility. Further:

"The question might be asked, whether this principle could be used for larger units. Ordinary clocks will run 24 hours with an energy equal to 1 pound dropping a distance of 12 inches. One horse-power is equivalent to 33,000 pounds moving 1 foot per minute, or 47,520,000 pounds moving 1 foot every 24 hours; hence an engine producing 1 horse-power would be able to run 47,520,000 clocks. Supposing the expansible metal strips to cost only $1 per clock, it would cost $47,520,000 to create a 1 horse-power engine. This would indicate that the principle, tho feasible for clock and similar work, is not practical for larger units."

A SCHOOL FOR HEALTH OFFICERS

A SCHOOL to train officers for what has been called "the public-health militia" has been established under the joint auspices of Harvard University and the Massachusetts Institute of Technology. This is the first time that these institutions have joined hands in this way despite various projects that have hitherto come to naught. That the need of precise training for public-health officials is a crying one, and that the graduates of the new school—the first of its kind in the field—will be in a position to render great civic service, is the opinion of M. J. Rosenau, who writes in *The Harvard Graduates' Magazine* (Cambridge, September). He says:

"Health administration in this country lags largely for want of trained leadership. The call to public health is loud and clear. Preventive medicine is the watchword of the hour, and the people are asking: 'If disease is preventable, why is it not prevented?' They are not satisfied with promises, but demand results; this is as it should be. It is now recognized that the orthodox training leading to the degree of M.D. does not necessarily fit a man for the position of health officer. The average practitioner learns little concerning vital statistics, sanitary engineering, water purification, sewage disposal, disinfection, forensic medicine, and the making and breaking of health laws. The public-health officer looks upon disease in the large, and is less interested in the individual case, which is the chief concern of the practising physician. The health officer looks upon disease with an eye to preventing its spread—in order to do so, he must know its mode of transmission. The practising physician, on the other hand, looks upon disease with a view to affording relief or cure, and his principal interest, therefore, is in diagnosis and treatment. The public-health officer must also be a specialist. Public-health administration is, indeed, a profession which bends its knee to none, so far as ideals and service are concerned.

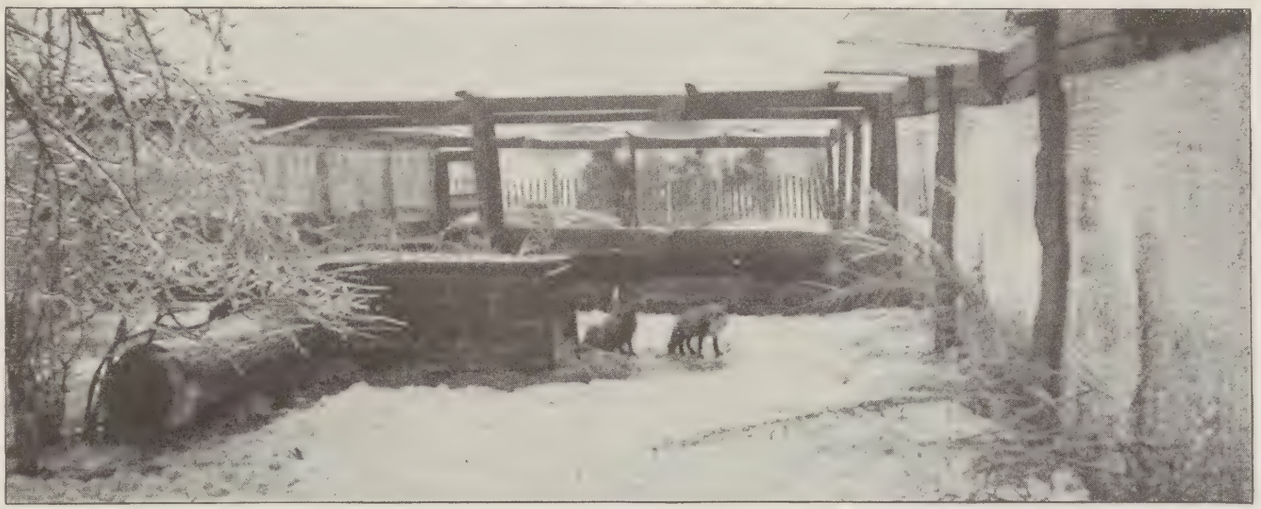
"It must not be understood that the health officer is concerned only with stamping out the communicable diseases. There are many preventable defects which may be reached, especially in school children, and there is the general conduct of life, which makes not only for longevity but for maximum efficiency. The present-day health officer must also concern himself with the problems of heredity and eugenics. He must further concern himself with questions of immunity, and must make every effort to help the conditions which menace work-people. Industrial hygiene and the diseases of occupation form a large and important chapter in the volume of preventive medicine. Furthermore, the people must depend upon the health officer to guard the quality of the food, including the purity of the milk and the cleanliness of the water which they consume. The health officer must therefore be familiar with the sanitary sciences in addition to the medical sciences, both of which, in the broad biological sense, underlie the foundation of successful health administration. . . . .

"The demand for men with a proper training to supervise the health of every community will be very great. Everywhere the importance of this matter is coming to be more thoroughly recognized. The Public Health Service of the National Government, the State and municipal boards of health, are constantly widening the scope of their activities and will need many additional skilled workers. Smaller communities which have boards of health composed of men not specially trained for the work will require expert assistants. Communities that are too small to support health officers are now being grouped into districts in a system of cooperative sanitation. It will take an army of trained health workers to meet the demand."

TO MAKE PHONOGRAPHS MORE HUMAN

A SIMPLE ATTACHMENT for causing talking-machines to articulate more clearly, plainly, and loudly was discovered by the accidental touching of a fine needle with the finger while a record was being played, says *The Scientific American* (New York, September 27). The inventor, M. B. Claussen, about two years ago, while testing out some records, happened to touch the needle and noticed that it vibrated. He was using a very fine straight-sided needle, which produced a low, sweet tone, but lacked the power to propel the sound from the horn. This fine needle was free from scratch, and while it did not produce the volume of the heavy needle, it had none of the heavy needle's mechanical tones. The working out of the invention is thus sketched:

"Mr. Claussen argued that if he could add power to the vibration of this fine needle, it would reproduce all there was in the record with a volume equal to that of a heavy needle without any of the heavy needle's defects, such as scratch and aftertones. Besides, the great wear on the record caused by the heavy needle would be avoided. After trying many devices to increase these vibrations, he found that a disk of a certain diameter, thickness, and density attached to the needle near its point, not only increased the volume of the fine needle considerably, but retained all the purity of the fine needle, and, at the same time, by its vibratory action eliminated the aftertones and caused each word and note to be reproduced clearly and distinctly. Some indistinct records even became audible. Tones never heard before were brought forth. The sound was lifted clear of the machine. The singer or musician was in the room, not in the box. It reproduced all the artist put into the record in the artist's natural voice, or with the musician's artistic touch. In its present form the device consists of a disk, two springs, and an insulated metal band. The band is slipt over the circumference of the sound-box and the disk over the point of a fine needle. The springs hold the disk in place. Tests, made under a microscope, of



SCENE ON A FOX-FARM.

records played one thousand times with the device showed no perceptible wear. The long point of the fine needle had reached all parts of the record, but had not broken down the wall. Further experiments showed that by slightly increasing the length of a fine, straight-sided needle, the vibrations were increased and the reproduction brought to a point of perfection. The device is made to fit this needle, and with it produces the best results."

FUR FARMS IN CANADA

DOUBTLESS MAN ATE of the fruits of the earth for many ages before it occurred to him to cultivate them for his own use, and while cultivated plants and domestic animals are now equally familiar, yet, curiously enough, the fur-bearing creatures, whose product is one of the most valuable offered by the animal kingdom, are just beginning to be bred and kept in captivity. Fur farms are already an undoubted success with foxes, minks, and skunks, we are informed by Mr. Ernest Thompson Seton, and will soon be satisfactorily worked out for marten, muskrat, and chinchilla. An account of the success of these efforts in French Canada appears in the *Moniteur Officiel du Commerce*, and we translate an abstract of it made for the *Revue Scientifique* (Paris, September 13). Says this paper:

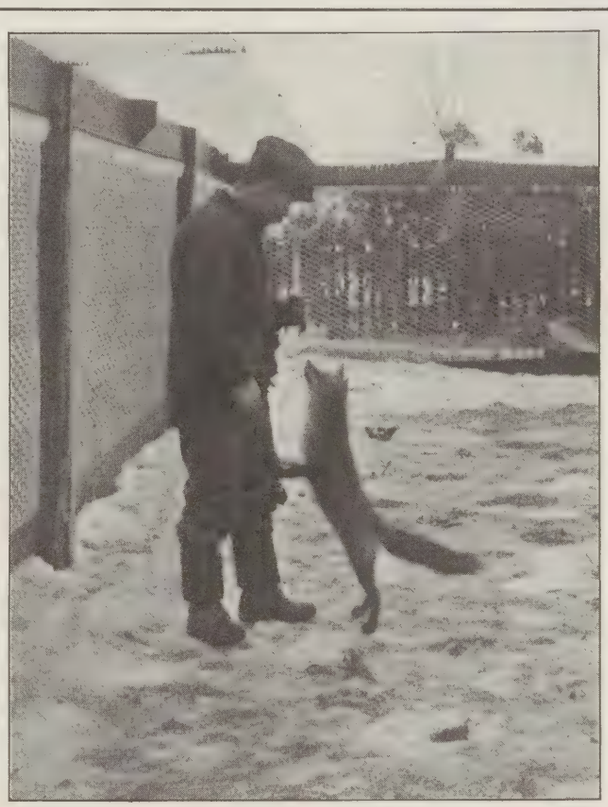
"At the present time the breeding of black and silver foxes is carried on with success in several provinces, notably in Prince Edward Island. Ranches have been established for the purpose in New Brunswick, on the northern borders of the province of Quebec, at Piastre Bay, and on the island of Anticosti, which belongs to the well-known French manufacturer, Henry Menier.

"In New Brunswick very large sums have been invested in raising black and silver foxes, and especially in breeding the blue fox (which must not be confounded with that of Russia), whose reproduction, much larger than the first named, reaches eight to ten cubs in a litter.

"In the province of Quebec, the breeding of fur-bearing animals is becoming common, and there are now ranches for breeding the red fox, the muskrat, the mink, and the skunk. To encourage the industry, the provincial parliament adopted, in last December, a law that protects breeders against marauders. . . . . .

"In the domestication of the fox, life in the open air is preferable, and the best plan is to install the animals in small enclosures thirty to thirty-five feet square, fenced to a height of ten feet. . . . The animals must be abundantly fed, but not fattened, for their fur then becomes inferior. They thrive well on all kinds of food—for instance, fish, crackers and milk, and potatoes. They must have pure water, running if possible.

"At the end of December or the beginning of January the fur of these foxes attains its highest value. The darker it is the more it is sought after. It has now been demonstrated that by suitable crossing it is possible to improve the breed, not only in the beauty of its fur, but in the vitality of the species.



ASKING FOR HIS BREAKFAST.

"The mink, whose skin has a certain value, is now successfully raised in the province of Quebec. On one ranch, situated on Lake Chaud, there are sixty minks. . . . . .

"A company is being formed, it is said, to raise muskrats, whose skin is highly considered and is known commercially as Hudson otter, after suitable dyeing and treatment.

"At present only the breeding of the fox is really well developed. If, by overproduction, the value of the skins finally becomes depreciated—a fatal error—prices will probably not fall below a certain level, which will leave a profit for the breeders. Thus their efforts are of much interest, and besides their speculative value they assure the conservation of certain varieties whose increasing rarity has inspired fears of their complete disappearance." — *Translation made for* THE LITERARY DIGEST.

LETTERS AND ART

A HUNDRED YEARS OF VERDI

IF SIGNOR TOSCANINI should open the Metropolitan opera season with a performance of Verdi's "Aïda"—a habit that seems to grow on impresarios—he will only prolong the notes of the composer that all Italy has been celebrating through the past months. Toscanini's own contribution to the centenary celebration of the famous Italian (falling on October 10) has been the turning of the little theater at Busseto, Verdi's birthplace, into a sort of Bayreuth, with the orchestra pit constructed like that *Festspielhaus* "to accommodate some 500 spectators in comfort and perhaps 700 on special occasions," where "La Traviata" and "Falstaff" were given. The little town has been the object of many pilgrimages this summer, for it holds the few personal memorials of Verdi left behind. His birthplace is a humble enough dwelling, bearing the inevitable marble slabs that point its importance, while a little beyond the town is the Villa Sant' Agata, where he lived after attaining prosperity. The house is surrounded by a garden, rather English in character, we are told by a writer in the London *Times*, and, like Alexander Pope and his somewhat tasteless grotto at Twickenham, Verdi built an artificial stalactite cave which he called the "Tomb of Aïda." We read further:

VERDI AND HIS LIBRETTIST, ARRIGO BOITO.

The original of this is in a museum in Frankfort, Germany.

"The house is neither large nor small. It is built in the style of no particular period, and has no architectural pretensions; but it achieves a certain dignity and beauty by its absence of decoration and its just proportions. The room which Verdi habitually occupied has been left as it was in his time. It is a fair-sized room on the ground floor, with a large window opening into the garden. Against one wall a bed; against the opposite one a grand pianoforte; facing the window a large sofa, and in the middle of the room an old-fashioned writing-table with a well-worn armchair. It is all quite uninteresting and characteristic of the man who detested ceremony and parade, and who resented, above all things, any intrusion into his private life. The only object in the room which is of artistic interest is the one thing which has been placed there since Verdi's death—the original bust of the composer executed by Vincenzo Gemito in the early seventies, when the sculptor was little more than 20, and commissioned by Verdi as an excuse for giving him generous financial assistance at a moment when he stood badly in need of it. It represents Verdi with head bowed in meditation, the beard falling on the folds of a cloak thrown over his shoulders. It has become familiar to many in reproductions, but Signor Angelo Carrara, who showed us the villa, pointed out that the substitution in these of an open coat for the voluminous cloak had robbed the bust of much of its character. As a likeness it is declared by those who knew Verdi intimately to be beyond praise."

One of the rooms is fitted up as a museum, and here are preserved things that the historian of music, particularly of the interaction of German and Italian music, can not overlook:

"Here is a bookcase, left just as it was, containing Verdi's musical library, which was of the smallest. It includes, of course, a good many works presented by their composers—operas by Gounod, Ambroise Thomas, Reyer, and other contemporaries; symphonies of Beethoven, Haydn, and Mozart in pianoforte arrangements, and a few other classics. But it also includes a good many of Wagner's operas, and a good many odd volumes of antiquarian publications to remind us of the famous phrase, 'Tornate all' antico e sara un progresso.' One of the Wagner volumes has an interest of its own. It is a copy of 'Lohengrin' in vocal score with Italian words, which was used by Verdi to follow the celebrated performance at Bologna in the autumn of 1871. That performance was the first step to the Italian acceptance of Wagner's music, and Verdi's copy, copiously annotated in pencil, is a document of historic importance.

"The actual execution of the opera must have left much to be desired. Verdi has noted all the cuts, which were numerous and extensive, especially in the second act; he notes further that the *tempi* were often disastrously hurried, and that the chorus at almost every entry sang abominably out of time. For the music itself he had no lack of appreciation. The word *bello* is of frequent occurrence, and he has even a *bellissimo* for the dramatic climax of the first scene of Act III. There are some adverse criticisms, of course; but when one reflects on the state of public opinion about Wagner at that time even in Germany itself, it is a most remarkable testimony to the broad-mindedness and unprejudiced impartiality of Verdi that his annotations are hardly ever severe, and that in no case is there the slightest indication of definite hostility. His judgments are almost all such as any modern critic would accept as just. He finds fault with the slowness of the declamation, particularly in the speeches of *King Henry* and *The Herald;* he points out that the long *ensemble* which follows the King's prayer has no dramatic value and makes the scene halt—*fredda la scena* is a note which occurs more than once, and is a very instructive criticism for those who are interested in the technic of opera. It is this coldness of the scene, this absence of real drama in spite of movement on the stage, which he censures in the opening of the second scene of Act III—a development which is purely musical, purely symphonic in its effect.

"Another interesting criticism occurs in the preceding scene. He finds beauty in the beginning and in the end of the duet between *Lohengrin* and *Elsa*, but in the middle he finds fault with the shortness of the vocal phrases. Here again we note the Italian, the born singer, and we turn to the opposite side of the little room, where are laid out a sheaf of rough sketches for 'La Traviata' and 'Il Trovatore.' Here we see Verdi's own methods; it is an inspiration purely vocal. The voice parts are written

out in full, almost without corrections; below is a stave for the accompaniment, but it is generally blank, unless there is some sort of contrapuntal treatment of accompanying voices. And it is interesting to note at this point the contrast between the methods of the two men—Wagner learning, not too skilfully, from the Italians in his youth, taking over almost literally the melodic style of Bellini and Rossini; Verdi learning from Wagner in middle life, not a new form of melody, but a more symphonic sense of construction.

"An Italian writer, Signor Fausto Torrefranca, has pointed out the importance of the psychological development which took place in Verdi's brain at this time. Already in 'Aïda' he had shown signs of a more definitely symphonic habit of thought, after the eclectic and often incoherent variety of style employed in 'Rigoletto'; and 'Lohengrin' at Bologna may well have induced in him that unexplained period of repose from 1871 to 1887, the earlier years of which brought forth those two works in which his new style is foreshadowed, the 'String Quartet' and the 'Requiem.' Verdi's most remarkable genius lay, perhaps, in his faculty for perpetually renewing his youth—a faculty not observable in the representative composers of modern Italy. Certain Italian writers have spoken lately of 'Falstaff' as if it were the definite conclusion of a musical period now for ever ended; but the history of music shows us that no period ever comes definitely to an end without inaugurating a new one, and we prefer to maintain the hope that 'Falstaff,' which is only just beginning to be appreciated by the musical world at large, may be the starting-point of a new and more vigorous school of Italian lyric drama."

BIRTHPLACE OF ITALY'S GREATEST COMPOSER.

Crowds have been visiting Roncole de Busseto (Parma) this summer to see the old house where Verdi was born and to hear his operas in the little theater there.

THE LOST YEARS OF THE SCHOOLBOY

SOMETHING OF A SHOCK was felt when the first Rhodes scholars from the United States discovered, on presenting themselves as candidates for the Oxford scholarships, that "they needed about two years of preparation beyond that required to fit the usual boy for the usual American college." The recovery from the shock was buoyantly effected, however, when newspapers and teachers began to explain that the English boy might know more Latin and Greek, but "his American rival was much better posted in everything else." If this explanation has served to convince the majority that "our school system leads the world," there seem to be some skeptical ones still. One of these is Prof. Henry A. Perkins, of Trinity College, who discusses, with much detail, in *The Yale Review* (October) the schoolboy's loss of two years in this country. He is among those not blinded by the virtues of our system for the education of the masses. In his paper he recognizes that "we have the problem of the illiterate many and we have the problem of the educated few." If their joint solution is not possible, he contends, "it is our business to distinguish between two equally important educational necessities and to provide a separate solution for each." The summary of his argument, which *The Yale Alumni Weekly* (September 26) presents, reveals some of the causes of why "somewhere in our educational system a slowing up of mental development and intellectual equipment occurs that is never made up, sending forth our college graduates probably less well educated men than the English universities produce."

"This may come about from a variety of causes, any one of which is open to pretty careful consideration by American university men, and all of which are serious matters. For instance, Professor Perkins isn't at all sure but that the home influences in the United States to-day, during a time of 'inevitable reaction from the period of stern parental discipline that was thought necessary in the sixties and even in the seventies,' have been deteriorating, and that a certain amount of neglect has come about of the 'mental and moral fiber' of the growing youth. He suggests, again, that there is no such separation of the industrious from the idle school children as would avoid lowering the educational standards of the brighter ones. The schools are overcrowded, and promiscuously. The heavily increasing percentage of foreign-born in many public schools may, he thinks, partly account for this condition. Or, he thinks, a cause may be found in the low pay of American schoolteachers, with the attending lowering of their usefulness to the public. All of which is not new, in a sense, as the various angles of the problem have been brought to view for years past by educational students and agitators for reform; but the large problem involved has rarely been brought out quite so convincingly as in this paper. Behind it is a question in which college men can not but be interested, and in the solution of which many of them may be possible factors. Because, if the American schoolboy is to continue to come to the American colleges ill-prepared, or prepared for advanced work on a lower intellectual scale than he might be, or as his European cousin is, then the question of the usefulness of the college itself to the community is immediately in the foreground and its educational results attackable. If these 'two lost years of the schoolboy' can in any degree be made up under a more useful school system, then the college student can in the future come earlier to his college, and graduate earlier into his chosen life-work from his professional school. That our educational system is not as useful to the public as it might be is generally admitted; whether it may not be vastly improved by the introduction of a little more steam in the early years—and by considerable more steam in the final years, also—is perhaps not as debatable a proposition as it may seem at first sight."

Professor Perkins has a sharp criticism to make upon our complaisant idea that the American system "seems to work, and suits our people and our conditions best." We take the view that it doesn't matter if the boy "knows less Latin, less mathematics, yes, less English even, than his British cousin, provided he has learned to know his fellow men, and has acquired the power to mix, the self-assurance, the sophistication, that are so necessary in our conglomerate civilization." But—

"From the standpoint of ideals, a people who are satisfied with mediocrity in what is best and highest in education have a poor, sordid future ahead of them. If we did not lose so much time in our preparation, we might adopt the European method which gives a boy a liberal education by the time he is nineteen years old; and then we could turn him into business, equipped to get the best out of himself through the rest of his life; or send him to the university to study some particular profession without distraction of irrelevant courses, so that he might reach the age of practising his profession two years earlier than at present, but still with the foundations of a truly liberal culture."

A HOUSE THAT KILLED INSPIRATION

IF YOU'RE a man of letters and work well in your environment, better stay where you're put, is the moral one would draw from a little fable Walter A. Dyer contributes to *Country Life in America*. His hero, whom he calls "Solomon John" for short, had been pretty successful and had earned quite a little money. "He thought he was tired of New York and he fancied he could do better work in the quiet country." Besides, he thought he could live cheaper in the country, where there were "no taxis, no theaters, no restaurant parties." It is the real story of a real person who tried emigration, and the conclusion his biographer draws from his experience is that it "all proves the mighty power of the country's lure, and shows that a country home may be made so attractive that even a humorist can not convert it into a literary mill." At least, we are assured "Solomon John" built a masterpiece tho he ceased to write them. This was his procedure:

COULD YOU WRITE NOVELS IN A HOUSE LIKE THIS?

One prosperous writer couldn't; so the house is now rented, and he woos inspiration in his old flat back in the city near the bright lights.

"Solomon John sought out a boyhood friend who was an architect, and told him just what was wanted. Together they worked out the general plan, and the architect put it on paper so attractively that Mrs. Solomon John started out at once to buy rugs and furniture and wall-papers and curtains. She just couldn't wait. She also wrote to all of her relatives and to some of Solomon John's, demanding heirlooms to help give the new home atmosphere.

"As for Solomon John, he swore he couldn't write another line until he was safely settled in that gable aerie at the head of the winding stairs.

"Well, they built the house and laid out the gardens, and while it lasted it was more fun than writing stories or plays. It was a many-gabled, many-dormered house of stucco, with shingle-tile roofs and English chimneys. It was built of hollow tile, with reinforced concrete where arches, etc., came. All the timbering on the outside was really structural—not merely boards tacked on.

"'It shall be a house without a fake or a poor thing in it,' declared Solomon John. 'Real beams, real stone fireplaces, copper drains, brass water-pipes—hang the expense!'

"Dozens of casement windows let in light from all sides and the fragrance of the shrubs and garden flowers. There were hospitable entrances at front and back. Terraces and stone steps, and lots of growing things all about, gave it the proper setting, and the views from the upper windows were superb. . . . . .

"There were eleven acres in the grounds, all told, with a dream of a brook in a lovely little glen. Parts of the place were left wild, and the abundant sumac beautified these spots. Down by the brook paths were made and simple steps put in, and here they began to naturalize trees, shrubs, and flowers—evergreens, birches, rhododendrons, mountain laurel, violets, wild strawberries. In an old sand-pit that was too large to be filled up a rock garden was started. Large rose gardens were planted, and enough fruits and vegetables for ten families the size of Solomon John's.

"'You see,' he said to me afterward, 'I had a momentary illusion that I was a prince, and I came devilish near becoming a pauper instead.'"

The cost of all this was "thousands and thousands." Solomon John refuses to tell how much. He declares it was worth it all. What broke him was the way it worked:

"At first there was a series of house-warmings, and lots of guests.

"'Of course, I enjoy all this,' said Solomon John. 'When it is over, I will get to work.'

"Finally the guests departed, and then the neighbors came. A humorist can not expect to remain in entire isolation in an up-to-date and leisurely community, nor can one hope to have tea or cigars alone on a veranda like Solomon John's. And there are social obligations that are not to be neglected.

"Then there was a chap down the road a piece who was an anglemaniac, and as soon as the season opened he came over and lugged Solomon John off to a fishing club back in the country where there were lots of fine trout. Also, there were many special motor-trips that had to be taken; every friend had some favorite inn or club to introduce them to. And when Solomon John was hot and tired with trying to work, some one would suggest a yachting trip on the Sound, or a swim. The swimming especially appealed to Solomon John when he was all burned up with effort.

"As to golf, that was fun, too, while it lasted. It was nice to be on the links in the pleasant weather. But playing golf does not produce an income, and Solomon John had begun to think of income.

"'Besides,' he says, 'after two summers of golf I found out that I was a dub at the game, and my clubs are now for sale cheap. Also there is a little locker, with my name on it, for rent next season.'

"As I said, Solomon John began to think of income. In fact, he began to worry. There weren't so many checks coming in, and he found that it cost money to keep up a country place. The simple life of the country began to develop symptoms of complexity and expensiveness.

"One man proved to be insufficient to handle the garden and grounds. The man and wife they brought with them found the house too large for their comfort, and left. They tried various combinations of cook, maid, and laundress, but they didn't work. Man-and-wife combinations proved lopsided and had to be abandoned. The gardener's wife was imprest into service to act as kitchen-maid, and questions of precedence arose. In short, the Solomon Johns raised a bumper crop of servant troubles and Mrs. Solomon John's nerves began to get on edge.

"Likewise, before this, Mrs. Solomon John found that they were too far from the village to depend entirely on the public-cab service. An automobile was a natural concomitant of the kind of house they had built. Solomon John would run it himself, he said. He did, for a while, and it took up all his time. So there arrived a chauffeur. The chauffeur required a salary, also. Solomon John felt that he must be getting at his work."

When, at last, he was free to sit down to pen and paper, his idea was to write the amusing adventures of a Kentucky colonel on Broadway. "He tried to recall the Broadway atmosphere, but the view from his two windows didn't help him." Nothing, in fact, did help, so this is the sad sequel:

"Mr. and Mrs. Solomon John and the little Solomon Johns are back in Manhattan. They are living in a very pretty apartment with all the modern improvements. The beautiful house is rented to a man who doesn't need to work in it, and it may soon be sold. The little room at the head of the stairs hears no more

the sputtering of a genius that is struggling to burn. For Solomon John is happily ensconsed in a room in the back of the flat—a little cubby-hole that was intended for a maid's bedroom. It is his study. The single window looks out upon the white-painted brick wall of the apartment house next door; there is nothing to take his eyes from his work. Here the typewriter clicks away in happy industry, for Solomon John is himself again. He is writing a novel. Perhaps it will be humorous? Perhaps it will be something about country life?"

FORBES-ROBERTSON ON TWO CONTINENTS

WHILE Sir Johnston Forbes-Robertson is enacting his farewell parts before American audiences, he has left behind him his counterfeit presentment in the movies, for the benefit of his fellow countrymen in England. On Thursday, October 2, he opened the new Shubert Theater in New York with his well-admired impersonation of *Hamlet*. It was this that the dramatic critic of *The Westminster Gazette* (London) saw in "the cinema," and, he adds, "I am informed that the production is the greatest thing yet done in the way of cinematography." It was not long ago that we gave some pictures representing the actor before the cinema camera. Here is what the critic thought of it:

"Of matters purely theatrical I possess a little knowledge; otherwise I should not enjoy the privilege of writing for *The*

"DO YOU SEE YONDER CLOUD THAT IS ALMOST IN THE SHAPE OF A CAMEL?"

Thus Forbes-Robertson as *Hamlet* interrogates his *Polonius* for the last time among us.

Westminster Gazette. Concerning the cinematograph and its work, I have a magnificent ignorance. At the moment I am rather dazzled by what I saw. We began the evening with a two-act drama called 'Eastern Passions'—the name of the author is not given, upon which fact I tender to him my hearty congratulations. . . . I now arrive at the point which, from the dramatic critic's point of view, is the supreme joy of the Picture Palace play: in dealing with the P. P. P. one has not, as a rule, to criticize the players! In the case of 'Hamlet,' even this was denied to us, for the names of all the casts were

GERTRUDE ELLIOTT AS *OPHELIA*.

She accompanies her husband, Forbes-Robertson, on his farewell American tour.

exhibited on the screen, inside the proscenium arch. Happy mortals, the players thus consigned to a kind of immortality. I hardly know how to describe what happened. Sir Johnston Forbes-Robertson, his wife, and their Drury Lane Company, apparently acted the whole tragedy, or, rather, his particular version of it, before the camera, and the films are exhibited with cuts deemed to be necessary. There are variations from accepted ideas. For instance, the *Ghost* makes his famous *ex-parte* statement to *Hamlet* about the murder on a very pebbly seashore, and not upon 'the platform'; indeed, it is hard to regard the ground below any beach as 'the cellarage.' Perhaps this does not matter very much. We watched the characters making faces presumably appropriate to their words, tho sometimes we were in doubt as to the individual speech. We were presented with a synopsis which bravely included what is called the 'moral,' and I regret that I am unable to give the name of the humorist who wrote it. The pictures I imagine are very good of their kind, and must have cost an immense amount of money. They are affected by the necessary limitations of the medium; the characters are represented on very different scales, and the color is horrible. When the scale is large, the 'field' is rather comically small, and, of course, quaint effects are produced by the difficulties due to the employment of a lens less efficient than the human apparatus. The audience seemed imprest, tho whether it enjoyed 'Eastern Passions' more or less than 'Hamlet' I can not tell. To the historian of drama it may be useful to possess these records of a performance, but to suggest that the affair from any point of view does justice to the tragedy would be an outrageous absurdity."

RELIGION AND SOCIAL SERVICE

THE UPLIFT OF "CHAUTAUQUA WEEK"

SECRETARY BRYAN'S Chautauqua lectures are justified by their fruits, in the opinion of a writer in the current *Congregationalist* (Boston). Not in financial rewards to the lecturer or the Chautauqua association, but in the inspiration received by his hearers. Nor, according to this authority, Dr. Loyal Lincoln Wirt, who has himself appeared on the Chautauqua platform, need the Secretary of State be ashamed of his associates. For the Chautauqua circuit, "the encyclopedia of the common people," "the country folk's university," has, we are told, suddenly sprung up as one of the greatest educational movements of history. It is a real force for human betterment, and so comes into the department of Social Service. To the culture-thirsty dweller in the corn-belt it furnishes the one week of uplift and inspiration—"to look forward to half the year and remember the other half," the only vacation, the "one outlook upon the world of mind and spirit beyond the farm." "The man who is responsible for two hundred Chautauqua assemblies, in the State of Iowa alone," says this writer, "has been called the greatest educator in that State. His teachers, lecturers, preachers, orchestras, grand-opera singers, children's hour story-tellers, cartoonists, magicians, and all the rest of the 'faculty' (called by courtesy 'the talent') give what is practically a summer school of high value to half a million people—the kind of people whose minds live mostly under gray skies and to whom the Chautauqua is the one intellectual sunburst of the year." But we are not asked to take these assertions unsupported by direct testimony from the Chautauqua-goers. In motoring from one Chautauqua tent to another in a typical seventy-town circuit in the corn-belt, it seems, Dr. Wirt and some musical "talent" (those who furnish one day's program generally travel together, it is explained) stopt at noon at the home of a prosperous farmer. Revelation of their identity brought a compelling invitation to share the midday meal. While this was preparing the singers made themselves heard in snatches from their repertory, which brought their hostess from the kitchen "with floury hands and tear-filled eyes" to say:

"Do you know what this means to us? What the Chautauqua means to thousands of intellectually and musically starved country people? It is our oasis—our life-belt. The music we hear during assembly week is the music we sing and play all through the year. The lectures we discuss for months. My husband remembers all the jokes and the politics, and I try to remember, with the aid of a note-book, all the new ideas set forth. The speakers and singers we add to our circle of friends and follow them with interest ever after. Sometimes I think we could not endure the privations and loneliness of this new land were it not for the Chautauqua—our annual 'Feast of the Tabernacles.'"

These are strong statements, but they are only a few of the things told by Dr. Wirt in the course of his *Congregationalist* article relating experiences on the Chautauqua circuit with Dr. F. W. Gunsaulus and Secretary Bryan. The Chicago orator is called "our greatest Chautauqua lecturer," but the eminence of the Secretary of State in this field is recognized in the characterization—"the most fiery comet in the Chautauqua orbit." Interesting stories of Dr. Wirt's acquaintance with these two platform princes can not here be told, but his tributes to their influence over their hearers must be quoted. Journeying for forty days with Dr. Gunsaulus, the writer could see the "awakening going on in the minds of tens of thousands of young people" as they listened.

A CHAUTAUQUA AUDIENCE IN THE CORN-BELT.

"The plowboy would go back to his plow—but not the same—he would remember."

"Whether the 'open sesame' was history, biography, politics, art, criticism, humor, music, or the great sermon on Sunday, the effect was always the same—tense, eager faces—the satisfying of hungry souls.

"I never tired of sitting where I could watch the upturned faces and the play of human emotions. The plowboy would go back to his plow—but not the same—he would remember. The farmer's daughter would go back to her cooking and baking and dish-washing—but she could not forget."

And as for William Jennings Bryan, Secretary of State, whose Chautauqua lecturings have brought down upon him the scorn of the European press and much criticism in his own country, we are told that "to eat, sleep, and journey with this knightly soul, this Cromwellian spirit, this embodiment of finest American manhood, is to witness the withering of the sprouting of pessimism everywhere—civic, social, and religious faith." Dr. Wirt continues:

"There is no question about it—the common people hear him gladly, as they heard his avowed Master. The hard-headed farmer will drive his machine fifty miles, burn up two dollars' worth of gasoline, and pay his fifty cents smilingly at the Chautauqua gate for the privilege of standing two hours to listen to the man whom he knows to be sound and sweet to the core, to the only man who could drag 'the old man of the sea' from the neck of Democracy.

"Does it mean anything that from five thousand to ten thousand people will pay for the privilege of hearing the great 'Commoner' whenever he is advertised to speak?

"In all this criticism of Mr. Bryan and his lecturing I share with his Middle West friends the feeling that if there has been a mistake it is not in giving a little of his time and strength to the common people (which he may well do without serious neglect of his duties of State). But the mistake, if mistake there be, is in not giving the larger reason for so doing; namely, a vital message which clamors for utterance and a vast audience which clamors to hear it. 'I would rise up from the dead,' said Robert Louis Stevenson, 'to preach.'

"Mr. Bryan is the people's prophet, and his Chautauqua message is a 'Thus saith the Lord' to them.

"He has as much right to slip away at the week-end and inspire twenty thousand people with two or three lecture-sermons—pay or no pay—as the other members of the Cabinet have to go fishing or the President has to sit on his veranda at Cornish."

It is only "after swinging around the Chautauqua circle and looking into the faces of many thousands of thoughtful, prosperous American citizens," we read finally, "that one can begin to realize that here has arisen, almost in a night, one of the greatest educational movements of history."

"Here is Areopagus, here is the Forum, here is the evolution of the Grange, the Lyceum, the Camp Meeting, and the County Fair; here is University Extension, popularized and made practicable; here is the Encyclopedia of the common people.

"Henceforward, preachers, teachers, and politicians must needs reckon with the Chautauqua summer assembly and the ten million American citizens who are going to school there."

PREACHERS FORGETTING SINS

SERMONS AGAINST SINS like those that were dinned into our fathers' ears by the preachers of a former generation are not heard from the pulpits of to-day. There are, adds the editor of *The Christian Century* (Disciples of Christ, Chicago), the stock sermons against dancing, card-playing, and theatergoing, and "this trinity of doubtful amusements feathers the arrow of the professional evangelist, but even he says comparatively little about sin in general, or other sins in particular." There was a time, we are reminded, "when men came to God through deep consciousness of sin." Now the idea of being "the chief of sinners," "a worthless worm," one whose sin-stained garments must be "washed in the blood of the Lamb," may have been overdone; but, declares this writer emphatically, "the time has not yet come for us to forget altogether that we are sinners in the sight of God." Nor is it enough, he continues, "that we have sermons against sin,"—

"A sermon against sin is one thing; a sermon against sins is another. Sin is an abstraction; nobody commits it, but sins are concrete, personal, the kind you and I have. God does not call upon his prophets to show the people their sin; he is told to show the people their sins. He is not told to rebuke them, nor abuse them, nor denounce them, but just to show the sins of the people of God."

Then follow a few paragraphs telling what "the sins of the people of God are to-day." Foremost among them is placed "indifference to religion as the supreme fact of our modern life. In theory we all acknowledge that religion is the supremely important interest of life, but in practise not every good person acts as if it were so." And in the judgment of *The Christian Century's* editor, "the people who no longer hate the truth, but are simply indifferent to the truth, are more of a menace than those who blaspheme and deny." Then there is "worldliness"—

"The things which we have striven to acquire have very largely acquired us, mastering our souls, monopolizing our affections, crowding our religion into the corners of our life. This fatal self-seeking has gone far toward the destruction of family life, giving the parents and children separate interests, causing the young people to suppose that the chief end of life is to have a good time, and the father and mother to look forward to mere ease and display as the supremely great things to be achieved."

Then, "the love of the things of this world leads swiftly to extravagance," and "extravagance leads to the non-payment of debts, to embezzlement, to downright dishonesty." That "religious indifference and a spirit of criticism are not wholly unrelated," tho they seem at first to be violently opposed, is another thought that occurs to this writer. He says:

"It is when people's religion becomes self-seeking, when their aim and end in life is personal enjoyment, that they come to test even the services of God's house as if they were intended to minister to their pleasure. The service is good or not good for them in proportion as the music gives them enjoyment or the sermon pleases their vanity, or fails to rouse them from their lethargy with some call to duty. It is when people are interested and hard at work that they have no time for criticism. It is when they sit back in apathy that they have time to be critical and fault-finding."

These, then, "are among the sins of our time"—

"To many people they seem so gentle and amiable, such rather pleasant and altogether negligible sins that they have no inclination to be disturbed concerning them, but the voice of the prophet must always be a voice to his own day and generation, and the sins against which he preaches should be the sins of his own time. These sins are not harmless ones. They are benumbing, deadly sins; they freeze the life out of consecration, they chill joy out of the heart of religion."

MISSIONARY INFLUENCE IN SOUTH AFRICA

IT IS DUE to the missionaries more than to any other agency that the small minority of white people in South Africa are able to live in security among the overwhelming mass of the native population. The missionaries are the real friends of the native, says Mr. W. H. Mason, in *The Guardian* (London), the organ of the Established Church, tho, of course, "security is due, in the first instance, to the justice of the administration of the English magistrates, backed by the knowledge that there is an armed force behind them if needed." This writer, apparently a layman, writing from Unolusapo, goes on to give some interesting facts which disclose the relation of the white and black people, pointing out that "the missionaries and their families know where to draw the line of distinction in their relations" with the natives, and "while showing themselves not their equals but their superiors in every sense of the term and in reality, treat them as friends and fellow creatures to be loved and cared for." Further:

"To them the natives come in every trouble. Many missions now have hospitals, where heathen as well as Christian natives are well cared for. These hospitals are by degrees ousting the witch-doctors with their horrors. There are, however, two kinds of witch-doctors, one of which is really medicinal. They have a great knowledge of the use of herbs, but keep it to themselves, and it is not easy to get their secrets from them. Some of the medical missionaries have, however, been able to gain their confidence, and are learning from them much that is useful and interesting. Thus, putting aside the religious aspect of the question, it is to the missionaries, next to the magistrates, that white people owe the quiet and safe life they lead among native tribes. If it were not for them, the natives might feel that they had no friends among the whites to care for them for their own sakes, and not merely on account of their services or the profit to be made out of them; and when natives have before their eyes so many bad examples in white persons, the work of missionaries is needed to show them that such conduct is not the recognized standard of Englishmen and Christians. It is indeed necessary to teach them something better. From the moment that the explorer, trader, or settler invades the country, there the missionary should follow, if we do not wish for complete deterioration and corruption.

"A very able man was, not long ago, reiterating the old arguments against missionaries, and, in answer to such observations as I have made above, said it would be much better, instead of missionaries, to send out a thousand traders of such excellent character that they would set an example of higher civilization without preaching Christianity and upsetting natural conditions. But who is to find the virtuous thousand? Who is to finance them? For trade and traveling need capital, and where are we to find a thousand men ready to leave their homes and occupations here in order to set an example to heathens abroad? And supposing the thousand found, what is there to secure that their virtue will be permanent and stand the strain of years of exile and isolation? My friend did not explain whether the thousand

were to remain in one place as neighbors or to be scattered over various countries. If an able and generally sensible man can even for a moment make so fantastic a suggestion, it shows to what lengths the opponents of missionary work are driven. The scheme of industrial missions for the training and employment of natives, and for the development of the natural resources of the country, under Christian laymen who are men of business and under missionary auspices, but separate from the missionaries, is very different and much more practical."

On one point, however, the writer professes to have a quarrel with the South African missionaries. It relates to clothes and the differentiation between native heathen and Christian through the manner of dress. The missionaries, in an effort to see that the converts wear enough clothing, overdo it, Mr. Mason says, by prescribing an amount that is injurious to health, and he recommends the missionary practise in Zanzibar, where the demands of modesty and climate are both regarded.

HALTING "NARCOTIC CURES"

KANSAS CITY is the latest center to take up a combat with immorality. The country is hearing "horrible stories of juvenile excesses," not among the wage-earning classes or the "half-world," which are receiving so much attention in various parts of the country, but confined mainly to the richer classes who have automobiles to put to use in their misdemeanors. The preachers and the women's clubs are demanding a curfew law and a general closing of the streets to young people after a certain hour. These remedial means are called merely "narcotic cures" by the San Francisco *Argonaut*, which preaches a little homily designed to point the real causes of such ills as Kansas City now suffers from, and what it regards as the mistaken methods of frenzied reformers. We read:

"There will be no disposition anywhere to treat a terrible evil with levity or even with indifference. And it is a terrible evil. San Francisco has had her own experiences, and it is quite easy to believe that other cities are similarly situated. But unfortunately there is a disposition to resort to snap remedies and to treat the results rather than the causes. Nothing is so fatally easy as to pass a law. There is no more popular narcotic for an uneasy public conscience. But narcotics are not cures, and Kansas City will be likely to find that police control is the worst possible substitute for parental influences, and that even a curfew law can not take the place of those elementary duties that can be performed in the home, and nowhere but the home.

"But the neglect of parental duties is by no means the only cause for the apparent extinction of the moral barriers that were once so effective. The barriers of morality and convention are by no means so distinct as we like to suppose. Usually they supplement each other. During the last few years we have seen the almost complete destruction of those reticences upon sex matters that doubtless had their own attendant evils, but that did actually prevent far more evils than they caused. What we call plain speaking became a vogue and a fashion. Literature and the drama combined in what was said to be a moral crusade, but that was actually a financial crusade. And now the churches have followed suit. Nothing is too private for public discussion, no audience too young for admission and participation, no vital fact too explosive for reckless handling. Upon every side we see gross familiarity at its deadly work. Here in San Francisco we are about to have what its promoters call a Purity Sunday. Countless sermons will be preached to audiences of young men and young women, and with their own sex relationships as a topic. Does any one with a sane knowledge of human nature suppose that even the most exquisite delicacy can neutralize the inevitable poison of those sermons? Is it not well known to even the tyro in such matters that here at least the most fatal and irresistible of all forces is that of suggestion, and that reason and prudence struggle in vain against it. The cure for this sort of evil is reticence and not publicity, mystery and not familiarity, the home and not the pulpit, the mother and not the school-teacher. To err in such a matter as this is to poison the rising generation. Indeed if we are to credit the hysterical exaggerations of the women's clubs the rising generation is already poisoned by a familiarity that presents experiment as a pleasing adventure in well-known paths.

"Therefore it is time that we called a halt to the sex fanatics. They have been at their work for some years past, and now the air is becoming unbreathable. Every field of publicity has been invaded. They have almost persuaded us that sex is the one thing worth thinking about and worth talking about. The results are sufficiently evil upon matured minds that have learned to govern themselves. Upon immature minds to whom self-government has hardly occurred it has been little short of disastrous. Every sacred mystery of life has been cheapened, coarsened, profaned. All the protective veils of mystery and sanctity have been broken down, and in their place we are offered statistics, hospital reports, and iodoform. It is these sex fanatics that are largely responsible for the juvenile immorality of the day. It is the sex newspaper, the sex drama, the sex novel, the sex reformer, and the sex pulpit that have created it. And it has been nourished by the apathy and the neglect of parents who are quite content that the policewoman and the delinquency court shall do the work that has been so shamelessly neglected by themselves.

"Let us hope that we are nearly at the end of this particular epoch lest some worse thing befall us. It is bad enough that for years past our young people should have been forced to live in an atmosphere of public discussion comparable only with that of an open sewer. Things will have come to a pretty pass if we must now forbid our children to go either to school or to church for fear of the moral contamination that must ensue."

ADVERTISING FOR FULLER PEWS

A MODERN WAY of going out into the highways and hedges would perhaps be to go out and put an "ad" in the paper. At least this is what the Albany ministers did when, confronted with the problem of constantly diminishing church attendance, they decided to "compel them to come in." The capital of New York usually assumes news prominence by reason of political happenings, but last summer one of its daily papers took a church-attendance census. The figures were so small as to provoke comment from a number of religious journals. After such unusual publicity, says the New York *Christian Advocate*, those in charge of the Albany churches "evidently believed it was time to act." Sunday, September 21, was selected as "Everybody at Church Day." The pastors of twenty churches inserted a full-page advertisement in the Saturday edition of one of the most widely circulated Albany dailies. "The first half of the advertisement was an appeal to the public on the social duty of churchgoing," one reads in *The Christian Advocate*, and it began in these words:

"The man who stays away from the polls on election day fails in a duty to society. Good citizens call him unpatriotic, and rightly. Every man should take his stand one way or another at the polls.

"It does not occur to most people that staying away from church is a kindred failure in duty to society. Men must vote for or against the Church. It does not occur to most persons that non-attendance upon religious services is really nothing more nor less than a vote against religious services—a vote to remove them from society.

"Go to almost any one who is not a church attendant and say, 'I see you do not believe in God.'

"He will answer indignantly that he does believe in God, even if he does not think it necessary to express that belief in him by attending church and doing him reverence. But how is the world to know his sentiment if he does not cast his vote? The world knows that by the mere action of going to church a man says, 'I believe in God.'"

The lower half of the page was given to a display announcement of the services of each church. But the real interest in such means lies in the way the end is attained. And according to *The Christian Advocate*, the Albany ministers are satisfied on this score:

"The outcome of this first attack of the united church forces on the lukewarm, the backslidden, the easy-going was a notable increase, in every instance, at both the morning and evening services, tho the day was somewhat lowering, and in the afternoon and evening there was a steady rain. The Albany ministers exprest themselves very freely as highly pleased with the experiment, and entirely hopeful of the future."

REVIEWS OF NEW BOOKS

FABRE, THE NONAGENARIAN POET OF SCIENCE—DR. LEGROS' LIFE OF HIM*

Reviewed for THE LITERARY DIGEST by

JOHN HENRY COMSTOCK

NINETY years ago there was born, of very humble parents, at Saint-Leons, a little French commune, Jean Henri Fabre, regarding whom the general public is more interested at this moment than it is regarding any other living scientific man.

This popular interest in Fabre is, however, a thing of to-day; for altho the value of his scientific work has long been recognized by certain learned societies and a limited number of professional biologists and philosophers, it is only recently that his fame has spread beyond this narrow circle.

Fabre's long life has been spent for the greater part in solitude and poverty. The story of his life has been written by Dr. C. V. Legros, and is now made available to English readers by an admirable translation by Bernard Miall.

This biography was prepared under peculiarly favorable circumstances. The author states: "Among the greatest of my pleasures I count the notable honor of having known him, and intimately. As an absorbed and attentive witness I was present at the accomplishment of his last labors; I watched his last years of work, so critical, so touching, so forsaken before his ultimate resurrection. What fruitful and suggestive lessons I learned in his company, as we paced the winding paths of his Harmas; or while I sat beside him, at his patriarchal table, interrogating that memory of his, so rich in remembrances that even the remotest events of his life were as near to him as those that had only then befallen him; so that the majority of the judgments to be found in this book, of which not a line has been written without his approval, may be regarded as the direct emanation of his mind."

Fabre is fortunate in his biographer. The book is thoroughly sympathetic, and presents a very clear picture of the life of this "solitary student" and an excellent exposition of his methods of work and of the fundamental ideas that actuated it. Gaps have been filled "by listening to his conversation, by appealing to his memories, by questioning his contemporaries, by recording the impressions of his sometime pupils." His manuscripts have also been studied, as well as all available correspondence. Following the account of his life there are chapters in which are set forth, very largely by quotations from Fabre's writings, his views on instinct, on evolution or "transformism," and on the animal mind.

The biography is an eminently satisfactory one and is a fit companion for the volumes of translations of Fabre's writings that are appearing.

For a period much longer than is commonly allotted to man Fabre worked in retirement, finding his society in the creatures that he studied, and shunning all advertisement. Fortunately, he gave to the world the results of his studies in contributions to scientific journals, and especially in a series of charmingly written volumes published under the title of "Souvenirs Entomologiques, Etudes sur l'Instinct et les Mœurs des Insectes." But these works did not catch the popular eye; and the income received from their sale was small. In his earlier years he supported himself by teaching, first as a primary teacher and later as an assistant professor of physics, but always for a very inadequate salary, which he was forced to supplement by giving private lessons. After nearly thirty years of teaching he devoted himself for about a decade to writing elementary text-books of science.

It was when he was fifty-six years old, in 1879, that he retired to Sérignan, "to the peaceful obscurity of a tiny hamlet, and this quiet corner of the earth had henceforth all his heart and soul in keeping."

It was here that he made his "Harmas" an out-of-doors insectarium which he enthusiastically describes in the second volume of his "Souvenirs Entomologiques." And it is here that he would have ended his days in obscurity but that a few of his disciples decided to celebrate his jubilee, "hoping thus to reveal both his name and his wonderful books to the crowd that knew nothing of him."

The festival took place on the 3d of April in the year 1910, and had the desired effect. "This tardy reparation at least had the result of shedding a twilight of glory over the evening of his life, and from that day he suddenly appeared in his true place and took rank as a man of the first order. Everybody began to read him, and presently no one was willing to seem ignorant of him, for more of his 'Souvenirs Entomologiques' were sold in a few months than had been disposed of in more than twenty years." And now volumes of translations of chapters from these books are appearing in rapid succession; and sketches of him and of his work are published in the larger newspapers.

The present interest in the writings of Fabre centers about his contributions to entomology. But Fabre's activities were far from being confined to this field; mathematics, physics, geology, botany, zoology, and archeology all received his attention. He made extensive collections of plants, and devoted much time to the study of fungi. He was an excellent draftsman and water-colorist. He has prepared an atlas of nearly 700 plates representing the mycological flora of the olive-growing districts, which is accompanied by a large body of explanatory and descriptive matter. This atlas is, however, unpublished.

His broad studies of science fitted him to prepare his remarkable series of elementary text-books. "For more than a quarter of a century these catechisms of science, models of lucidity and good sense, effected the education of generations of Frenchmen. Abridgments of all knowledge, veritable codes of rural wisdom, these perfect breviaries have never been surpassed."

While Dr. Legros gives a very appreciative reference to these books, it is necessary to consult the catalog of the Bibliothèque Nationale to gain an idea of their number and of the range of subjects they cover. Here several pages are devoted to their enumeration, more than eighty titles, and we see that many editions of many of them were published. Among the subjects treated are the earth, the sky, animals useful to agriculture, botany, zoology, physics, agricultural chemistry, industries, inventions, geography, history, and theoretical and practical agricultural arithmetic.

It is impossible to estimate the value of these books in rendering science accessible to the children of his country. "How insipid, how forbidding were the usual class-books, the second-rate natural histories above all, stuffed with dry statements, with raw knowledge, which brought nothing but the memory into play! How many youthful faces had grown pale above them! What a contrast and a deliverance in these little books of Fabre's, so clear, so luminous, so simple, which for the first time spoke to the heart and the understanding."

Beyond the confines of France, where his text-books were used, the influence of Fabre's work is exerted chiefly through the ten volumes of his "Souvenirs Entomologiques." These are the product of observations unsurpassed in patience and in loving devotion to a cause, and are written in a style that has won for Fabre the titles of "The Homer of Science" and "The Poet of Science." Of him Maeterlinck wrote, in a private letter quoted by Dr. Legros: "One of the loftiest and purest geniuses which the civilized world at that moment possest; one of the most learned naturalists, and one of the most marvelous of poets in the modern and truly legitimate sense of the word."

While Fabre holds a unique position as a poetic interpreter of science, and, by long and patient observations, has discovered a vast amount of the details of the lives of the animals that he studied, he has established no new fundamental principle which entitles him to be ranked with Darwin and Lamarck, as is done by some of his enthusiastic admirers.

His "Souvenirs Entomologiques," the ten volumes of which include nearly 4,000 pages, is a vast accumulation of accurately determined data regarding the instinct of insects. But beyond some destructive criticism of the theory that instinct is inherited habit modified by the struggle for existence through countless generations (see l. c. Vol. 2, Chap. IV), there is little in his work that helps us to solve the prob-

lem of the essential nature of instinct. He has accumulated the bricks, but has not erected the building.

Fabre and John Stuart Mill

A crisis came into Fabre's life while he lived in Avignon (1870). He lost a position yielding him a small salary; his school-books had ceased to sell; he had to move elsewhere with his family. Practically penniless, it was from John Stuart Mill, the English economist and philosopher, whose winter home for many years was at Avignon, that help in this distress came. Of an incident so honorable to both men Dr. Legros writes:

"At this moment he was so poor that he had not even the money to meet the expenses of his removal. The times were troublous: the great war [the War of 1870] had commenced, and Paris being invested he could no longer obtain the small earnings which his text-books were beginning to yield him, and which had for some time been increasing his modest earnings. On the other hand, having always lived far from all society, he had not at Avignon a single relation who could assist him, and he could neither obtain credit nor find any one to extricate him from his embarrassments and save him from the extremity of need with which he was threatened. He thought of Mill, and in this difficult juncture it was Mill who saved him. The philosopher was then in England; he was for the time being a member of the House of Commons. and he used to vary his life at Avignon by a few weeks' sojourn in London. His reply, however, was not long in coming; almost immediately he sent help; a sum of some £120, which fell like manna into the hands of Fabre; and he did not, in exchange, demand the slightest security for this advance.

"For a long time his life at Orange was literally a hand-to-mouth existence. As soon as he was able to realize a few advances, he had nothing so much at heart as the repayment of Mill, and he hastened to call on the philosopher; all the more filled with gratitude for his generosity in that the loan, altho of the comparatively large amount of three thousand francs, was made without security, practically from hand to hand, with no other warranty than his probity.

"For this reason this episode was always engraved on his memory. Thirty years later he would relate the affair even to the most insignificant details. How many times has he not reminded me of the transaction, insisting that I should make a note of it, so anxious was he that this incident in his career should not be lost in oblivion!

"Scarcely two years later Mill died suddenly at Avignon. Grief finally killed him, for this unexpected death seemed to have been only the ultimate climax of the secret malady which had so long been undermining him. It was in the outskirts of Orange that Fabre for the last time met him and accompanied him upon a botanizing expedition. He was struck by his weakness and his rapid decline. Mill could hardly drag himself along, and when he stooped to gather a specimen he had the greatest difficulty in rising. They were never to meet again."

ESSAYS, LETTERS, AND ADDRESSES

Bryce, James. University and Historical Addresses. Delivered During a Residence in the United States as Ambassador of Great Britain. Cloth, pp. ix–435. New York: The Macmillan Co. $2.25 net.

There are few observers of America for whose opinions Americans have had so much respect as for those of James Bryce—and few there are who have given of themselves so freely to intimate association with American life and American interests. In the present volume Mr. Bryce has collected, with slight revision, more than a score of addresses made during his ambassadorship in this country. Tho covering a wide range, they are all of worth. Four deal directly with university topics—"What University Instruction May Do to Provide Intellectual Pleasures for Later Life," "The Mission of State Universities," "What a University May Do for a State," "Special and General Education in Universities"; four more with allied topics, "Some Hints on Public Speaking," "The Study of Ancient Literature," "On the Writing and Teaching of History," and "Some Hints on Reading." "The Beginnings of Virginia," "The Landing of the Pilgrims in 1620," "The Tercentenary of the Discovery of Lake Champlain" form the nucleus of the historical group. And yet the half has not been told, for art, foreign missions, architecture, peace, law, biography, and the Constitution of the United States come in for their share. While Mr. Bryce is occasionally given to the use of the platitude and to the preceptorial style, we may forgive him when we recall that he is in the presence of an undergraduate audience. The saneness of his points of view in a diversity of subjects always commends him to our sober and thoughtful enjoyment. Now that he is no longer ambassador here we hope he will break down his reserve on American political topics and give us an even closer analysis than his diplomatic garb has permitted.

More, Paul Elmer. The Drift of Romanticism. Shelburne Essays. Eighth series. Cloth, pp. xiv–302. Boston: Houghton Mifflin Co. $1.25 net.

These finely written essays of Mr. More's are marked by keenness of philosophical insight on the one hand and a refreshing freedom from the terminology of the philosophical schools on the other. To be sure one must adjust oneself to Mr. More's way of thinking, but this is so clear and consistent that it is a pleasure to follow him in the elaboration of it. The uniting thread on which the essays are strung is a protest against the "drift of romanticism." Says he: "The romantic movement, beneath all its show of expansion and vitality, seems to me at its heart to be just such a drift toward disintegration and disease." He is careful to explain that by "romantic" he does not mean certain attributes of poetry of every age when it rises from the common level to the climaxes of inspiration," but "that expansive conceit of the emotions which goes with the illusion of beholding the infinite within the stream of nature itself instead of apart from the stream." He continues: "The question finally raised is thus one of dualism: Is there, or is there not, some element of man's being superior to instinct and reason, some power that acts as a stay upon the flowing impulses of nature, without whose authoritative check reason herself must in the end be swept away in the dissolution of the everlasting flux?" As examples of this romantic tendency he selects William Beckford, Walter Pater, Cardinal Newman, Fiona Macleod, Nietzsche, and Huxley, treating them with a keen analysis that is never acidulous and with that marked literary charm that the good critical essay should possess. He closes the volume with a chain of "Definitions of Dualism," which elucidate more positively the consequences of his fundamental position.

Whiton, James Morris [Editor]. **Getting Together.** Essays by Friends in Council on the Regulative Ideas of Religious Thought. 12mo, pp. 303. New York: Sturgis & Walton Co. $1.50 net.

We regard this work as particularly valuable and interesting because it deals with the foundations of belief. The authors have approached their task with well-equipped minds. They are all theologians and their essays have been skilfully marshaled by Dr. Whiton, the chairman of the New York State Conference of Religion. We call attention to the broad views found in this work, to the reverential spirit with which the most solemn questions of human speculation are approached, and particularly commend them to those who are making the question of unity one to be limited to questions of discipline, of creedal faith, and of general ecclesiastical government. These are minor questions and may be left to the discretion of the various denominations. On the fundamental facts of religious beliefs all these writers are at one, and they provide a basis for religious unity which is far better than the unity which is looked for as consisting in unity of ceremonial practise, unity of dogmatic utterance, and unity of church government. These are but slight incidents in that great and universal unity which scientifically recognizes the basic principle of religious belief.

Martin, Edward Sandford. The Unrest of Women. Pp. 146. New York and London: D. Appleton & Co. $1.10 net.

Martin, Edwin C. Our Own Weather. Pp. 276. New York and London: Harper & Brothers. $1.25 net.

Martin, Edward Sandford. Reflections of a Beginning Husband. Pp. 164. New York and London: Harper & Brothers. $1.20 net.

Seven chapters are devoted by Mr. Martin to a discussion of the present dissatisfaction of women with social conditions, their efforts to change them, the part suffrage plays in this condition of unrest and its possible efficacy in the solution of the difficulties. It is seldom that one not ardently advocating "Votes for Women" states both sides so fairly and convincingly. Mr. Martin illustrates his points by quotations from Miss Thomas, president of Bryn Mawr, from Mrs. Belmont, and from Jane Addams, everywhere paying the most sincere compliment to superior intelligence and womanly attainment, but he has no respect for the "soap-boxing," blatant advertising, noisy type. He divides women into two types—"those who have found themselves and their world, and those who haven't." The master they need is "not a man, but an inner governor, who shall look out of their eyes and see truth and duty, and strengthen their hands to seize them." Altho he frankly declares himself unfavorable to "suffrage for women," he advises the experiment. "If it belongs to come, we shall have it; if it belongs to stay, it will stay." His most pointed question is how women are to solve political difficulties when the servant problem, over which they have undisputed control, still remains unsolved. "We have lots of votes now, amply enough to express every form of discontent. The need is not of more votes, but of more dispassionate intelligence; not of more votes, but of knowing what to vote for."

Mr. Martin, in his valuable and interesting exposition of our weather, claims less mastery of, than fondness for, his subject, but has succeeded in presenting a

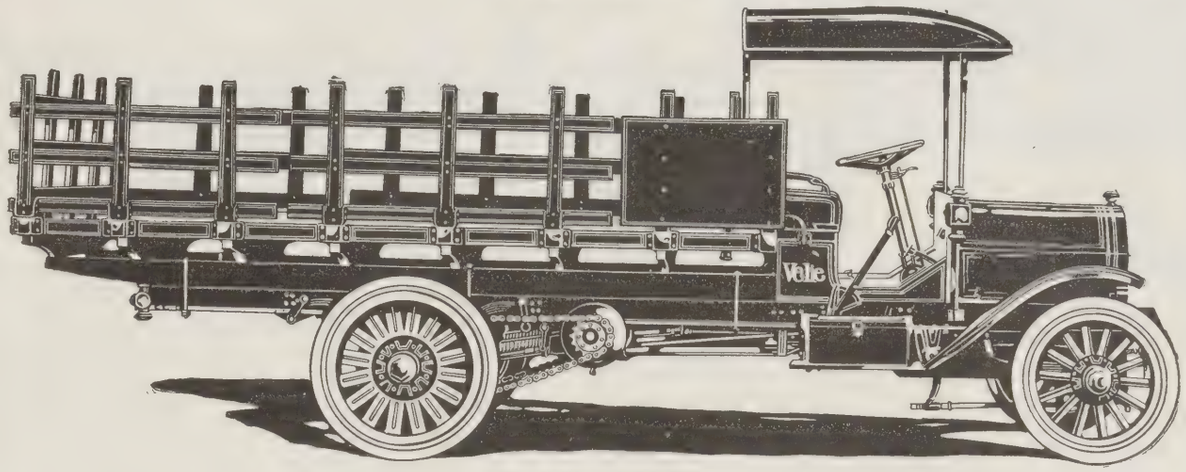
Velie



¶ You can make no better selection than to buy a Motor Truck of proven superiority in your own line of work.

Velie Trucks are made in three sizes to meet every possible requirement in Motor Truck service.

The Velie One - Ton Delivery Truck, equipped with electric lighting and starting, shows an economy in short hauls of relatively light loads not found in any other type of Motor Truck service.

The Velie Two-Ton Truck is especially adapted for expressage and general service.

For heavy hauls, where maximum loads are handled constantly, the Velie Three-Ton Truck finds this particular field.

Each in its own field of operation has established a record for economy and for general service, that is not equalled by that of any other type of Motor Truck.

A comparative study of Velie Motor Truck specifications with those of any other Motor Truck built will show you why.

Investigation among the list of Velie Truck owners, representing practically every kind of truck service in every part of the country, will be a final argument.

Send for special Truck folder concerning the model in which you are interested.

VELIE MOTOR VEHICLE COMPANY

52 Velie Place, MOLINE. ILL.

Mr. and Mrs. Carter's Inx

To the Overlords of Business:—

Gentlemen,—your signature means something. When you dip your pen in ink something *happens!*

Permit us to introduce the Carter's Inx Family,—exhilarating and inspiriting little brain-joggers and wit-prodders to grace the busy man's desk; fanciful and whimsical little impsies that will chase the office grouch; the happiest, joyfullest little wizards that ever helped to pinion the fleeting, fugitive thought for the man who wields the pen.

Bookkeepers, lawyers, bankers, brokers, business heads, departmental chiefs, purchasing agents, editors, dramatists, critics, physicians, all signers of cheques, orders and vouchers, all men of high degree,—you *particularly* should know the Carter's Inx.

Dressed in appropriate colors, Mrs. Carter's Inx pilots the red ink, while Mr. Carter's Inx presides over the black or blue, and they are very choice about inks. You lose the "charm" if you use any other than Carter's Inks.

Because the Inx *know* that Carter's Inks are made more especially for overlords—they are more brilliant, more permanent; they flow more freely and gum less easily. The chemicals are more pure, less danger from oxidation and corrosion of the pen.

Ask your stationer to show you Mr. and Mrs. Carter's Inx and to tell you how you can secure both—or you can get them by sending us 25c to pay for their traveling clothes and transportation. Pin the coupon to your letter head, please.

REVIEWS OF NEW BOOKS

(*Continued from page* 688)

work which combines scientific facts with practical suggestions in an enjoyable and interesting manner. The weather is "simply the air's business and is itself but an activity." He discusses the action of the sun, the winds, the tendency of cyclone and anticyclone, the extent and temperature of the atmosphere, unusual storms, and all the different cloud formations and their meaning. Pictures and maps adequately illustrate the course of storm centers, and several entertaining chapters investigate the signs and superstitions that have grown up in our minds in connection with the weather. Many "have true value and, with more attention to them, could be made of much greater service in our every-day life and affairs." The book gives much valuable information in a way that makes easy reading. A perusal of its pages would be of advantage to any one.

In Mr. Martin's third volume a young man, who has married his "Cordelia" and set up housekeeping on sixty dollars a week, takes the reader into his confidence and tells him how they got along and how the different life problems appealed to him when viewed from the standpoint of a new husband. With a background of evident content and satisfaction, we are given practical and humorous reflections on almost every known subject of current interest, from babies to automobiles and woman-suffrage. It is bright, stimulating reading in which fun alternates healthily with serious thought. A book that will be read with profit and pleasure.

Straus, Oscar S. The American Spirit. 8vo, pp. 379. New York: The Century Co. $2 net.

This collection of Mr. Straus's minor productions consists in part of articles reprinted from *The Forum, North American Review,* and Viereck's *Review of Two Worlds,* all of them dealing with political America. The rest of the volume is occupied by the ex-ambassador's addresses and speeches on various occasions. The author is an able, well educated man who has done the state some service both at home and abroad, and his works show that he knows his country well. He himself has thoroughly imbibed the American spirit, just as Disraeli imbibed the English spirit, without however losing the keen and emotional spirit of his progenitors. The ancestors of Disraeli were banished from Spain by royal decree together with their conationals, and Spain from that time forth—once the light of learning and commercial prosperity in Western Europe—immediately declined. The country of Maimonides and Averrhoes became the land of intellectual darkness, and the home of bright intellects whose light was reflected in Lord Beaconsfield was ruined for want of statesmanship.

Mr. Straus recognizes the noble and religious ancestry from which he springs and owns that the ideals which it presents find their highest development in Americanism. He dwells with great eloquence on this point in his address to the American Hebrew congregations, entitled "America and the Spirit of American Judaism." But his addresses deal with much wider questions. Being a member of The Hague Tribunal and an ardent pacifist, he makes a good profession in his "Peace of Nations and Peace Within Nations," while his economic addresses are equally weighty and readable. He plainly shows that he has the will as well as the power to state the case for disarmament as well as to lead his people into right understanding of the privileges they enjoy under the Declaration of Independence.

Bourne, Randolph S. Youth and Life. Pp. 365. Boston and New York: Houghton Mifflin Company. $1.50.

Many of these essays have appeared in *The Atlantic Monthly,* but, in collecting them into book form, much new material has been added and also some essays never before published. The titles—"Youth," "The Life of Irony," "The Excitement of Friendship," and "The Experimental Life"—will indicate slightly the line of thought pursued, but will hardly give an adequate idea of the subtle force and power of the ideas and theories advanced. The papers consist of a sort of self-examination and exposition, an inner illumination, for the purpose of study, and a confiding of conclusions to the friendly reader as facts liable to aid in solving character problems and expressing personality. The writer presents some new viewpoints and advances some illuminating theories, but leaves conclusions to the individual reader in adapting the theories to his own conditions. To be wise is "simply to have blended and harmonized one's experience, to have fused it together into a 'philosophy of life.'" In an interesting chapter on "Youth," he sums up his advice in one word, "Dare! Take chances and you will attain. The world has nothing to lose but its chains—and its own soul to gain." Of irony he says: "Irony is a life rather than a method." "The ironist, by adopting another's point of view and making it his own in order to carry light and air into it, literally puts himself in the other man's place; irony is thus the truest sympathy." This is a book for selective reading.

Abbott, Lyman. Letters to Unknown Friends. Cloth, pp. 170. New York: Doubleday, Page & Co. 60 cents.

However varied and important are Dr. Abbott's lines of service—in journalism, in preaching, in the promotion of national peace and civic righteousness—he has never ended a pastoral ministry. His parish is not now a little company in the village of Cornwall, nor the great congregation of Plymouth Church, but the wider circle of students in the colleges to which he is frequently summoned both for public service and private conference, and beyond them the unknown friends whose letters appeal to him for an interpretation of the mysteries of faith. The answers to some of these letters are now brought together in a little volume. The calmness of his spirit and the sincerity of his thought are reassuring, whether his answers to the great problems of faith and destiny are accepted or not. Unlike the colored preacher who proceeded to "unscrew the unscrutable," Dr. Abbott does not endeavor to unlock some of the great spiritual mysteries against which the mortal mind dashes itself in vain. His contentment in knowing "not now" will help many an overperplexed soul. These pastoral epistles are pervaded with the lucidity and independence of thought which have ever characterized Dr. Abbott's writings and with that

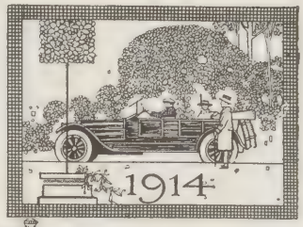
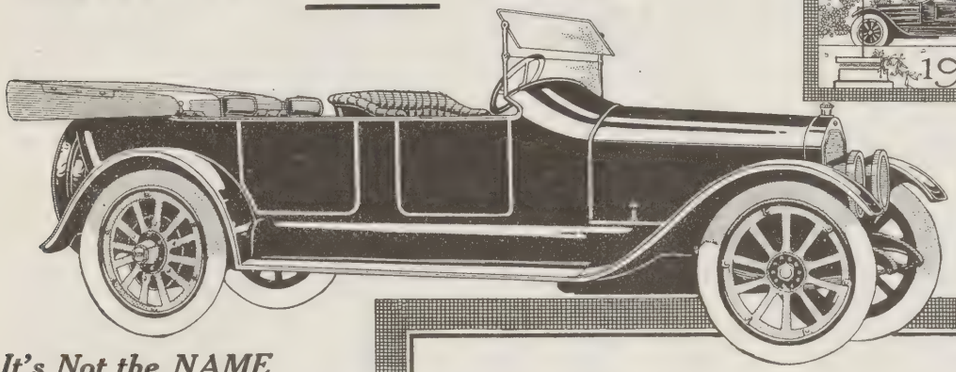
This Car Was Built To *Your* Order





Light Six-50
Streamline
Six or Seven Passenger
$2,225.00

It's Not the NAME But the WEIGHT That Makes a Light Weight Six LIGHT

When you buy a Light Weight Six *get* a Light Weight Six.

A car that weighs over 3,500 pounds and up to 4,000 pounds is a compromise—an expensive compromise to run.

A car that weighs between 4,000 and 5,000 pounds is a *heavy* Six—the car you've been trying to avoid with its heavy cost of upkeep—yet you want a six.

The Moon Light Weight Six is a *real* Light Weight Six—it weighs 3,480 pounds. Weighs no more and costs no more to operate than a Four of the same power. *The Car That's 3 Months in Advance of the Calendar.*

Light Weight Six-50
Four Passenger Torpedo or
Five Passenger Touring
Price, $2,150.00
Fully equipped including

DELCO

Electric Lighting, Cranking and Ignition.

All the past year you've been making mental notes of what you were going to insist upon in your 1914 car—things you want it to *do*—things you want it to *be*—appliances you want it to *have*. Here it is—

1914 MOON
Light Weight Six-50

As completely answers those mental notes as if you'd ordered it so—indeed, if you had a car built to your order embodying all the features you wanted you'd discover even then that you'd forgotten to incorporate some of the good features you'll find in this Moon.

And As for Your Wife

—all the features she wants you to be *sure* and get in your 1914 car—the well-bred lines, the good style (without "flash")—a car she can learn to run, and can run without tiring—well, everything a *lady* wants in a car; they're here, too.

The Moon Dealer

in your city will be glad to show you this car and the *New* Moon Four-42. He will explain them in detail. Should there be no Moon dealer where you live, write us and we will send literature and put you in touch with a Moon man.

MOON MOTOR CAR COMPANY
ST. LOUIS, U. S. A.

REVIEWS OF NEW BOOKS

(*Continued from page* 690)

increasing gentleness and sympathy which have marked those of recent years. The Letters are continuing to appear in *The Outlook*, and a second volume will be welcomed. It is a noble task to seek to be "to other souls a cup of strength."

Townsend, Charles Wendell, M.D. Sand Dunes and Salt Marshes. Pp. 301. Boston: Dana Estes & Co. $2.50 net.

The title of this volume has not the power adequately to describe its interest and value. Only a careful reading will reveal its delights. The formation of sand dunes and salt marshes, we are told, is much the same the world over, while the animal and vegetable life of these regions is very similar on both sides of the Atlantic. The book is addrest "to all lovers of seashore dunes and marshes and of their wild inhabitants." The formation of the dunes, their changes, vegetation, inhabiting birds and beasts, whose tracks reveal so much to the intelligent observer, are described glowingly and with poetic fervor. The same is true of salt marshes. The whole volume abounds with desirable and intensely interesting information, presented with contagious enthusiasm. The photographic illustrations are beautiful and add much to the charm of the book, but even without them a powerful fascination would be exerted on the reader.

RECENT FICTION

Fuller Anna, and Read Brian. The Thunderhead Lady. Pp. 186. New York and London: G. P. Putnam's Sons. $1.

Even a college man will do foolish things when properly "dared." The following advertisement is proof of one man's folly: "Wanted: By a Harvard graduate, a permanent position as husband. Carefully trained by an anxious mother and used to feminine domination." As a result of the advertisement and a woman's mischievous and adventuresome spirit, there grew up a correspondence which appears now in this spicy and scintillating little book. A fantastic and mocking spirit characterizes the letters at first, but gradually they become more serious. The writers allow themselves to discuss books, pictures, and abstract subjects, with here and there a touch of romance. Interest follows curiosity, and hearts as well as minds become involved before the correspondence closes. It is a brilliant, clever little skit—a bit of light reading sure to please.

Wriothesly, William. The Ambassadress. Pp. 310. New York: George H. Doran Company. $1.25.

This book is advertised as "the fascinating life of the inner court circles of the embassies at European capitals," but hardly seems to fulfil the promise of "fascinating." The diplomatic, political part of ambassadorship is successfully suppressed and we are treated only to the social functions and habits which seem more questionable than admirable. "The Ambassadress" is Angelica, Lady Jan, mother of a precocious nine-year-old son and a stepdaughter of 32, who adores her. Angelica herself is the victim of an inordinate liking for cigarets. She smokes incessantly, but is trusted absolutely by her husband, even tho she has innumerable adorers always at her beck and call, and whom she usually receives in her boudoir. The novel centers in the almost-union of Alexa, the daughter, with an old flame of the mother's, Fürst Lichtenfeld, which failed of marriage through the caddishness and mercenary character of the young man. There are many more or less interesting characters who enliven the pages of this novel, but there is nothing particularly new offered to the reader.

Montgomery, L. M. The Golden Road. Pp. 369. Boston: L. C. Page & Co. $1.25 net.

Old and well-loved friends reappear in this new chronicle of Prince Edward Island by Miss Montgomery, who pilots a happy, fun-loving crowd along "The Golden Road" to the parting of the ways. We may long have left the golden road of youth behind, "but its memories are the dearest of our earthly possessions." Sara Stanley, the "story-girl," the weaver of dream stories, is the guide and leading spirit in all the daily adventures, but the group of boys and girls, brothers, sisters, cousins, and friends, pursue the natural methods of children. They love and squabble, they play and plan, and their adventures and doings charm by their very spontaneity. Fun and pathos alternate in these interesting pages, and a glimpse of romance is not lacking. The editing by the children of "our magazine" provides a clever and convincing incident.

Pickett, LaSalle Corbell. The Bugles of Gettysburg. Pp. 163. Chicago: F. G. Browne & Co. $1.

This little romance was written to commemorate the fiftieth anniversary of the Battle of Gettysburg, and is, most fittingly, the work of the widow of a hero of that terrible conflict and the author of "The Heart of a Soldier." It is a simple description of a heart episode—a love-story of one who loved and served his country, but felt the call of his mother State, Virginia, stronger than all else. The development of the story gives a clear picture of the war background, the bravery and self-sacrifices of the women of the South. There is a glowing tribute to this hero of Gettysburg and to the loving spirit of General Pickett.

Raleigh, Francis. Ralph Somerby at Panama. Pp. 305. Boston: L. C. Page & Co.

This is a book of adventures with an historical background, the kind of book characterized as "Boy's Own Book." Ralph Somerby and Nate Quigley, being apprehended for poaching in a typical English village during the reign of Charles II., escaped the stocks, but were banished to a seafaring vessel bound for Jamaica. This trip was full of adventures. There were mutinous sailors, a shipwreck, and a rescue by the famous pirate band under the notorious and merciless Henry Morgan. The lads play a prominent part, consciously or unconsciously, in the capture of Panama. The pages are filled with thrilling adventures with Indians, wild beasts, and fighting Spaniards.

Hichens, Robert. The Way of Ambition. Pp. 473. New York: Frederick A. Stokes Company. $1.35.

Mr. Hichens's audience is so well assured that the critic's voice will make little differ-

(*Continued on page* 694)

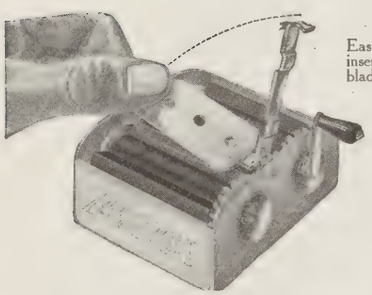
Strops both edges at once

100 Shaves from 1 blade

Don't throw away your safety razor blades!

You wouldn't throw away an ordinary razor after one or two shaves. Neither would you try to shave with an ordinary razor without stropping it. A safety razor blade is just as good steel as the blade of an old style razor and will give you just as many shaves—*if you strop it.* Very few can strop an old style razor. Any one can strop a double edge safety blade on a

Twinplex ROTARY Safety Razor Stropper
Two edges at once



Easy to insert blade.

Strops two edges at once, then reverses itself and strops the other side.

Handsome dust-proof cloth covered wooden case lined with purple velvetine.

This clever little stropper strops double edge blades with mechanical accuracy. Thirty seconds and all edges are sharp. Gives you 100 to 500 perfect shaves, better than you can get from a new blade, unstropped. It improves your shaves and pays for itself in less than a year by saving blade money. It is a handsome little machine, perfectly made and beautifully nickeled. It is guaranteed for ten years.

Easy to insert blade.

Slip catch, raise holder, lay blade on pegs and close. That's all. So simple a child can do it.

Then strops the other side.

Thus giving the correct principle of stropping—first on one side then on the other—with perfectly uniform *sure* results.

Strops two edges at once.

The rollers revolve in opposite directions, stropping both edges at once, on exactly the right angle and with the correct pressure. At every complete turn of the rollers the blade automatically reverses.

Sold on thirty days' trial.

Any dealer will sell you a Twinplex with privilege of returning it within 30 days and have your money refunded. If your dealer has none in stock we will send you one on 30 days' trial, carriage prepaid, on receipt of price.

You can get a Twinplex for either of the two sizes of double edge blades. Model G for the short. Model DD for the long. The price of either is $3.50 (Canada $4.00). Model G is also sold in both Gold and Silver, in a leather case, with place for razor and blade boxes. Price in U. S., Gold $6.00; Silver $5.00. The Silver Stropper also is sold in a combination set—leather case, Williams Holder Top Shaving Stick, Rubberset brush and space for razor, and blade boxes. Enables you to have entire shaving outfit in one compact case. Very handy. Price in U. S., $7.50.

2 blades stropped FREE

Send us 2 double edge blades, either style, free from nicks or rust. We will strop them, without charge, to show you how perfectly Twinplex does its work.

Ask for booklet, "The Slickest Little Thing You Ever Saw." Fully explains Twinplex.

REVIEWS OF NEW BOOKS

(*Continued from page* 692)

ence. His ready and facile pen has again produced a novel pleasing and idealistic, characterized especially by fine character drawing and free from the sex problem which this author has used so freely in former books. His theme is worthy of careful consideration: that commercializing the soul is apt to be at the expense of individuality and a real expression of genius.

Claude Heath was a musical genius, whose compositions had originality, power, and charm, but, by disposition, he was retiring and poetic. When a worldly society "discovered" him, reluctantly he emerged from his quiet home, where he considered "enough as good as a feast." Attempts to lionize him failed, but he learned to know Mrs. Mansfield, whom he admired, and Charmian, whom he almost feared. Charmian, ambitious not for wealth but for fame, marries Claude and tries to make him a popular success, a writer of opera. In the attempt poor Claude's personal power is nearly choked. He allows his wife to dictate his methods, his ideals, and his mode of living, only to find himself an utter failure in every way. Fortunately Claude and Charmian learn from their defeat a love that had been nearly annihilated by social frivolities and inordinate ambition, and so turn failure into happiness and a probable later success. The action takes place in London and Africa. The latter country is especially well adapted for the dramatic scenes of the story. The tenets of theosophy are rather prominent in these pages and play some part in the development of a thrilling plot. Susan Fleet, who is its sponsor, is an original and convincing character.

Johnson, Owen. Murder in Any Degree. Pp. 305. New York: The Century Co. $1.30 net.

In this volume is a collection of nine short stories, the first of which is, perhaps, the best, tho each has a well-defined undercurrent of wit, pathos, satire, or tragedy. Murder, according to Mr. Johnson, may be that of genius, affection, or spirit, as well as of the physical man. The thoughtful reader will have his eyes opened to some pitiful truths about the ordinary conventional lives of the majority of people. Each story illustrates the great power fate has to change the natural course of events. We are shown how cleverly many a man "bluffs" even when, through habit and conventions, he keeps the surface ready for exhibition.

Nicholson, Meredith. Otherwise Phyllis. Pp. 397. Boston and New York: Houghton Mifflin Company. $1.35.

Personality and individuality mean much in character delineation, and Mr. Nicholson, in his latest story, has proved that even a locality may have individuality. An Indiana town is, as usual, his background, and in it he has laid a story wholesome, dramatic, and appealing. The Montgomerys and Holtons were the most prominent people in town. Lois Montgomery had seen fit to desert her husband, Tom Kirkwood, and the baby Phyllis for the superficial charms of Jack Holton. Phyllis had grown up her father's chum, trained to all kinds of outdoor sports, unusually original, quick-witted, and a friend, confidante, and adviser of every one in town except her three ponderous and proper aunts, who tried to have her properly tamed. The part which the little witch—"otherwise Phyllis"—plays in the affairs of love and state is convincingly set forth. Mr. Nicholson has done some of his best work in his vivid depiction of episodes, both of comedy and pathos. Phyllis will have many admirers.

Dudeney, Mrs. Henry. A Runaway Ring. Pp. 316. New York: Duffield & Co.

This is a story of the Sussex Downs, in which the lives of two women, Frusannah Floate and her "niece" Fanny, become identified with the lives of the Bagient family. It is this family that pervades the tale, with its commonplace self-satisfaction and platitudinous conventionality. While the story has some good foundations and illustrates some very typical human frailties, it is so massed with sordid details of every-day life, and with quotations from the "Wedlock Treasure" and the sayings and doings of the numerous Bagient babies and grown-ups, that one is slightly bored before arriving at any real action. Fanny seems like a colorless kind of creature, but she was ready to fight when they crowded her too far. She was also ready to yield when life and fate convinced her she was conquered.

Burgess, Gellett. Love in a Hurry. Pp. 346. Indianapolis: The Bobbs Merrill Company. $1.25 net.

When Hall Bonistelle learned that his rich old uncle had left him four millions on condition that he married before he was twenty-eight, he had only fourteen hours and five minutes to spare, and had never thought of marrying any one. His life had been rather aimless. His artistic, photographic studio had been really run and managed by his capable young bookkeeper and manager, "Flodie," whose devotion he took as a matter of course and as his right. His attempts to secure the fortune and prevent it from falling into the hands of a sanctimonious cousin lead to many laughable episodes with his female sitters. It takes some ingenious plotting to make "Hall" marry for love and yet win the fortune, but Flodie finally brings him out victor after some thrilling experiences which nearly land him in trouble and furnish fun and interest to the reader.

Harben, Will N. The Desired Woman. Pp. 407. New York: Harper & Brothers. $1.30 net.

One thing is always true of Mr. Harben's characters: they may be wholly good, but they are never wholly bad. In this love tale of the Georgia hills, we have two contrasting characters—two young bankers: one having risen by questionable methods to wealth and power, the other "true blue" and self-sacrificing. Dick Mostyn finds his ideal woman in Dolly Drake, a country school-teacher, lovely, lovable, and of startling capabilities, but he has not moral stamina enough to resist the power of wealth, and contracts a loveless marriage with the daughter of a self-willed financier. Broken hearts, misunderstandings, and all sorts of retribution follow this move, but after many years Dolly learns that Jarvis Saunders is the right man after all. All the characters are slightly exaggerated, but likably so, and Mostyn's devotion to his

little son and his final regeneration are very touching. It is a placid story, told with Mr. Harben's customary humor and optimistic philosophy.

Parker, Sir Gilbert. Imperial Edition of His Works. Volumes XVII and XVIII. New York: Charles Scribner's Sons. Sold only by subscription. $2 per vol.

We feel almost like voicing a regret that these are the final two volumes in this imperial edition of Sir Gilbert Parker's works. The writer's own account of his literary career, which he has written in the form of a preface to each volume, has been of as much interest as the stories themselves. The reader feels flattered at the intimate way in which the author has taken him into his confidence. His final words are the very acme of dignified modesty: "The world has drunk deep of wonderful literature, and all that I can do is to make a small brew, with a little flavor of my own; but it still could get on very well indeed with the old staple and matured vintages, were I never to write at all."

Volume XVII contains "A Lover's Diary," the first complete collection of Sir Gilbert Parker's verse which has ever been published, including "Embers," which is a collection never intended for the public eye. "Embers" was one piece of work which the author claims made no bid for pence or praise, "merely a book of youth and memory and impressionism in verse."

Volume XVIII contains the latest novel of this writer, "The Judgment House," a book of 522 pages, a tale that unites London life with that of South Africa in the time of the Boer War, and gives a masterly conception of the troubles and anxieties of those terrible times. Sir Gilbert was the chairman of the Imperial South African Association, formed immediately after the Jameson Raid, and had unusual opportunity for realizing the life of the subcontinent. "I did not write this book," he says, "merely because the opportunity presented itself; it had a natural genesis, and it was a long time in being born." "Dramatic" is the one word that characterizes this latest Parker novel. Its situations are so unusual and so forcibly presented as to grip the reader deeply, and make him wonder at the broad deep nature that could see beyond the trivialities of petty human action and look bravely and confidently forward to the goal of aspiration and happiness.

Only Mr. Parker's skill could keep the various threads of the story distinct, and hold the interest of the reader through powerful complications.

Kester, Vaughan. The Hand of the Mighty. Pp. 412. Indianapolis: The Bobbs-Merrill Company. $1.35.

The most of these stories are reprints, but "Mollie Darling" appears here for the first time, and "All That a Man Hath," which occupies nearly half the book, was written when Mr. Kester was only twenty. The sketch of the author by his brother Paul, which prefaces this volume, is not the least of its attractions. We are led to mourn with him his brother's untimely death. There are a keen sense of humor, a high ideal of honor, and a gentle and tender pathos manifest in his stories. Even when immaturity and crudity leave a legible mark, there is always that promise

of genius that would doubtless have made Vaughan Kester a literary personage. As in "The Prodigal Judge," there is more material than can be used to advantage within the scope of the writer's plot, but he holds the interest of his readers and stimulates that which is best in us. The stories range from comedy to tragedy and show clearly the impress of his Western experiences.

Bazin, René. The Marriage of Mademoiselle Gimel. Pp. 270. New York: Charles Scribner's Sons. $1.25.

Five short stories translated from the French of René Bazin are here brought together, the first three of which are entirely new. When a translation can so forcibly express the power and charm of simplicity one can only long for a reading in the original. Even then complete understanding would come only with the French nature and the Frenchman's point of view. The first story is very sweet and pretty, with the appeal of direct methods and sincerity. There are no subtleties in the love-making of Louis Morand and his Evelyne. We rejoice in their happiness. "The Diplomat" is amusing in the farcical vein, but "The Will of Old Chogne" has more of the dramatic atmosphere and does not lack thrilling interest. The genius of Bazin is versatile.

Hewlett, Maurice. Bendish, A Study in Prodigality. Pp. 311. New York: Charles Scribner's Sons. $1.35.

It may be that Mr. Hewlett again contemplates a literary trilogy, since here we meet our old friends Mrs. Lancelot, and her Duke, her one-time poet and present husband, Gervase. We follow constantly the fortunes of "Bendish," a lord by inheritance, not by nature, a complacent, posing poetaster and peer who "always misdoubted his equals, and despised, but used, his inferiors." As for women, he "either made love to them or thought nothing about them. If he made love to them they gave him his desire, or they did not. If they did—well, then, they were husks, not women at all. If they did not, he hated them." Bendish was never really happy "unless he was trying to be something which he was not, or to get something which somebody else had, and was a very chameleon for lapping up atmosphere." It is a tale of the time of William IV. The atmosphere is both poetical and political, introducing Tom Moore, Rogers, and Leigh Hunt. If Gervase Poore is to be identified with Shelley, why not see in Bendish Byron, and compare his "Wanderer" with "Childe Harold"? We are carried with the "eternal sentimentalist" through all sorts of interesting experiences, but his colossal conceit never fails him and blinds him both in affairs of head and heart. His character is consistently drawn and, in the end, he is left desolate and discomfited. His political prestige is nullified by the Duke's disdain; his attempt to belittle Gervase, because repulsed by Georgiana, misses fire, and when he is ready to return to the neglected "Rose," he finds that she has married Roger Heniker, and thus shabbily rewarded his faithful and enduring loyalty.

Page, Thomas Nelson. The Land of the Spirit. New York: Charles Scribner's Sons. $1.20.

A book by Thomas Nelson Page means a finished style and worthy subjects. This

"SAVORY" Seamless Roaster

"SAVORY Prize Recipe Book" FREE

Contains 130 prize recipes for "SAVORY" Roaster and other utensils. Sent free postpaid on receipt of request mentioning name of your nearest dealer. A copy of this book accompanies each purchase of a "SAVORY" Cooking Utensil.

It Produces Those Rare Full-Flavored Delicious Roasts

THE "SAVORY" *Seamless* Roaster makes a first-class, full-flavored roast from even a second-choice cut. Its oval bottom inside the outer supporting jacket distributes heat evenly; hence the "SAVORY" roasts quicker, needs no water or attention, and cannot burn. The construction being practically air-tight, the rich meat juices are cooked into roast again and again, leaving it delicious, tender and delicately browned. Being self-basting and self-browning, no water is necessary, and only pure meat gravy is left when roast is done. Seamless oval bottom is easily cleaned. Used and appreciated by a million women—*sold under an absolute guarantee.*

The "SAVORY" Double Boiler has hundreds of uses. It cooks by steam, cereals, fruits, vegetables, puddings, etc.—all are deliciously appetizing when cooked in this utensil.

The "SAVORY" Bread Box and Cake Closet has round corners and a ventilated back. The cover fits down snug, thus keeping contents clean and sweet.

The "SAVORY" Coffee Percolator needs only two-thirds the coffee required for an ordinary pot. Ten minutes' boiling with the "SAVORY" produces delicious coffee of an aroma that cannot be obtained through ordinary boiling. The "SAVORY" Percolator presents every practical advantage of the most expensive and can be had at half the price.

Ask Your Dealer For "SAVORY" Utensils

"SAVORY" Cooking and Kitchen Utensils mean better work in your kitchen. Ask your hardware or general store dealer for them; if he doesn't handle them, write to us and we will inform you what dealer near you *does* handle them.

REVIEWS OF NEW BOOKS

(*Continued from page* 696)

collection of short stories is no exception to the rule. Some are based on actual incidents, some on other tales, and all are meant to reflect glimpses of the new "Land of the Spirit." Our new Ambassador to Italy takes into consideration that there has been a deepening in the note of our national life. Of late, the mind "has been directed not to things of the surface, but to those things that lie beneath, and we find the universal mind turning with serious heart-searchings to a frank facing of the divine commandments." This seems to be the underlying thought and inspiration of these stories. They are evidently meant to be recognized as typical of true conditions. The themes are rather serious and subdued, but they are pervaded by the spirit of true character, the uplifting force of real gentility, and an implied arraignment of the Church for the terrible contrast between its spiritual ideals and its hypocrisy and frequent superficiality. There is an undercurrent of quiet humor in the "Trick-Doctor" and "The Bigot," but all are transcription of fact and reflect phases of life unhappily universal.

TRAVEL

Goldring, Douglas. Along France's River of Romance. 8vo, pp. 332. New York: McBride, Nast & Co. $2.75.

The Loire, the river that flows through a large extent of France from south to northwest, is perhaps the most interesting of all rivers of the country from a historic, artistic, and literary standpoint. The ancient capital of the country, Tours, is haunted by memories of Louis XI. and Balzac. Its course runs through Blois and the great château zone of France, and its upper waters in Velay flow past the volcanic slopes of Le Puy, which is the special shrine of Mary the Mother of Christ. Thus it is indeed a river of romance, tho Mr. Goldring scarcely seems to recognize its importance as a stream associated so venerably with the traditions of the Catholic Church. We think it a serious disqualification for a writer on Catholic monuments to obtrude an aversion toward the religious ideas of a foreign land. Lack of sympathy with these should be veiled in modest or generous silence. In other respects the book is a respectable account of the perambulations of a traveler who before he undertook his work should have read Montalembert's "Monks of the West," or some such work. The illustrations, colored and plain, are excellent.

Tower, Charles. Along Germany's River of Romance. 8vo, pp. 332. New York: McBride, Nast & Co. $2.75.

The Rhine, we read, is no longer the river of romance. The thought of this hackneyed stream is soiled with the memory of that nobleman who spent the summer sailing backward and forward on the Rhine steamer because he said it was the only place in Europe where he could find a decent beefsteak to eat. Goethe never seems to have done much to celebrate the castles, the knights, and the fair maids whose stories people the river of the Lorelei. But the Moselle is a new field of travel quite out of the route of the ordinary globe-trotter, and to describe this stream Mr. Tower has used both pen and pencil. The book, moreover, shows a breadth of reading which is exceptional, but the learning does not detract from its brilliancy. The maps and pictures will unfold to many readers a new road, while graceful narration and historic and legendary details make the work one of solid and instructive value as well as of vivid literary charm.

Graham, Stephen. Changing Russia. Illustrated. Map. Cloth, pp. 310. New York: John Lane Company. $2.50 net.

"Chance and change are busy ever," as the titles of many recent books testify—"The Changing Chinese," "Changing America," "China's New Day"—and now "Changing Russia." The title in Stephen Graham's interesting account of his tramps along the Black Sea and in the Ural Mountains fits rather more loosely than do those of the books of Professor Ross. The commercialization of Russia is constantly in the background of the author's thought; the change which will befall the Russian peasantry, now, in its "simplicity and purity, far away from commercial regions," when forced into a fierce industrialism, illiterate and unprotected, Mr. Graham does not anticipate with satisfaction. His comments upon the *Intelligentia*, upon the present state of Russia's literature, art, and society, upon the summer resorts of the aristocracy on the Caucasian shore are vivacious and interesting. We should suspect that from Russian journalism he had acquired the staccato style which characterizes several of his chapters, tho he does not imitate its extreme—"a paragraph which consisted of a dot." But he himself tells us of his father's instructions which laid the foundation of his style—"never more than fourteen words in a sentence and about five sentences in a paragraph." But after all the *wanderlust* is as strong in the reader as in the writer, and it is especially pleasant, after one has seen the fine portrait of the author which prefaces the book, to roam with him along the Black Sea and to meet the furious sailor running away from duty and the eager, young novice hastening as rapidly to it, and to tarry at New Athos and among Ural gold mines and the English graves of the Crimea.

We are glad to find in the July number of *Harper's Magazine*, as a postscript to Mr. Graham's chronicle, an account of his journey with the Russian pilgrims from Constantinople to Jerusalem, for which his tramp had prepared him and ourselves.

In the multiplication of venturesome travels and books which describe them, one begins to wonder whether the journey is the occasion of the book or the book the cause of the journey, whether these ready writers are first attacked by *wanderlust* or by *scribendi cacoethes*. We must leave the diagnosis to the doctors of literature.

Higinbotham, John U. Three Weeks in France. Pp. 315. Chicago: The Reilly & Britton Company. $2.

The author of the Three Weeks Abroad Stories has written delightful travel books on Europe, Holland and Belgium, and the British Isles. Readers familiar with those books will welcome this new volume on France, which contains much that is entertaining and instructive. His volumes are not guide-books. One

Locate the finest example of Stucco House Construction in your neighborhood and you will find a practical illustration of the surpassing value and enduring beauty of appearance of this method of exterior construction.

Were it possible for you to strip off the outer coating of cement or plaster you'd find the secret of its smoothness, freedom from cracks and permanency of beauty is due to the intelligent use of

Kno-Burn
Expanded Metal Lath

There are any number of houses, large and small, of this type in every locality. The best of them are overcoated directly on the studding, without the use of Furring or Sheathing —with our special "Kno-Fur" variety of "KNO-BURN" Metal Lath as the *plaster base* —thus insuring *permanency*.

This is true economy. It is the best insurance against unsatisfactory Stucco Construction. It is the only logical solution to the fire hazard problem. It is not cheap, but it is the best in the end for the simple reason that the use and mesh of "KNO-BURN"

—Makes the Plaster Stick
—Is proof against the effects of moisture, dampness, mould and the ravages of time or decay
—Is fire-resisting, durable and produces a finish that is absolutely satisfactory.

Our 24-Page Booklet "Metal Lath for House Construction"—Replete with Practical Building Pointers—will be mailed FREE on request.

Construction details; material details; comparisons of cost, time-saving and permanency and such other information as every prospective home-builder wants to know before building or remodeling are all to be found within the covers of this practical book. Write for *your* copy today.

North Western Expanded Metal Company
970 Old Colony Bldg., CHICAGO, U. S. A.

REVIEWS OF NEW BOOKS

(*Continued from page* 698)

could follow his suggestions and routes with profit and delight. The half-tone illustrations add greatly to their general charm. Wandering from one city to another, the author and his companion have all sorts of experiences, which he relates in fascinating narrative, giving the historical facts about each place, alluding to the triumphs of art and architecture, and relating experiences, sometimes trivial in themselves, but indicating things to be avoided or sought in traveling. Mr. Higinbotham has a keen sense of humor and a ready wit. He turns every experience into a joke, if possible; perhaps he puns a little too much, but his book is enlivening as well as instructive and is well worth reading.

Hanoum, Zeyneb. A Turkish Woman's European Impressions. Pp. 246. Philadelphia: J. B. Lippincott Co. $1.35.

There are so many things to be considered in this timely book that selection is difficult. Zeyneb and Melek are the originals of Pierre Loti's "Les Désenchantées." Women of high position and of good family in Turkey, they fled from the monotony of their existence and the intolerable surveillance of the Turkish system; they really spent their lives striving to change the existence they were forced to lead rather than adapt themselves to it. Their impressions, revelations, and descriptions are in the form of letters to Miss Grace Ellison, who edits them, and are wonderfully illuminating in discussion and criticism of Western civilization and frank disclosures in regard to the East. The Hamidian régime comes in for the severest censure possible. Its supervision is characterized as "degrading." Turkish women, tho highly educated, after assuming the veil, are allowed no freedom, whether in art, literature, or personal matters. These sisters from a foreign country have something to say on our opera, on gambling, and even on the suffrage movement. Every letter betrays culture, enthusiasm, and a desire for bettering Turkish conditions. After six years Zeyneb returns to her own country, believing, as does Miss Ellison, that "The civilization of Western Europe for Turkish women is a case of exchanging the frying-pan for the fire." The time has not yet come "for the Turkish woman to vindicate her right to freedom."

Clarke, John Mason. The Heart of Gaspé. Pp. 292. New York: The Macmillan Company. 1913. $2 net.

After coming to Gaspé with a geologist's as well as a tourist's eye, and coming again and again until the rocky coastland became a familiar haunt and well beloved, Mr. Clarke has decided to put into a book a few sketches of this country of which so little has been written. Those who have never seen the picturesque Gaspé coast will gain from the book some idea of the rare beauty of this land washed by the waters of the St. Lawrence River on the north and the Gulf on the east, and may be led to see its beauties for themselves. Those who have visited Gaspé, or even sailed along its coast, will learn from Mr. Clarke's book how the forces of nature have worked to produce the strange rock formations of the coast; they will read the story of Gaspé's historic past, and the no less interesting tale of the present-day life of her fisher-folk.

LOTI IN INDIA

Loti, Pierre. India. Translated by George A. F. Inman. 8vo, pp. 283. New York: Duffield & Co. $2.50 net.

A great many volumes have been written about India, from the conquest of Pondicherry to the Indian Mutiny, and the royal visit which so brilliantly illustrated the permanence of the British rule. We have had Kipling in his reminiscences of social life at Simla, and the life of the Irish private of the Indian Army, and we have read the journals of generals and commanders such as to this day fill the pages of *Blackwood*. There are many books on Calcutta and Benares, but India, as a home of religious mysticism, has never been adequately described. Mr. Loti goes to India to find out, as he says, whether "the Indian sages that I seek would not convince me that I might find pity and pardon." It is certain that he went to Constantinople on a somewhat restless quest; while he visited Senegal, Algeria, and Morocco from the same motive of noticing and chronicling in exquisite language the impressions and sentiments evoked in his mind by the contemplation of strange scenery and by contact with primitive people. This book on India is a sort of picturesque reverie, half melancholy, half passionate in its vivid portraitures. It leaves the mind of its readers stimulated and arrested, but only half satisfied. Loti went to Benares which roused his deepest thoughts about the invisible:

"The illusions of this world, as the sages call them, have a hold upon me still. Those feelings of supreme detachment and renunciation of all that is earthly and transitory, which they have instilled into me, grow in my soul; but I know no place where the spiritual and the fleshly so mingle as at Benares. Here people think of prayer and death, yet the lights, the colors, the young women, whose damp veils but half conceal their charms, and the incomparable displays of Indian beauty, lurk on every side to trap the senses."

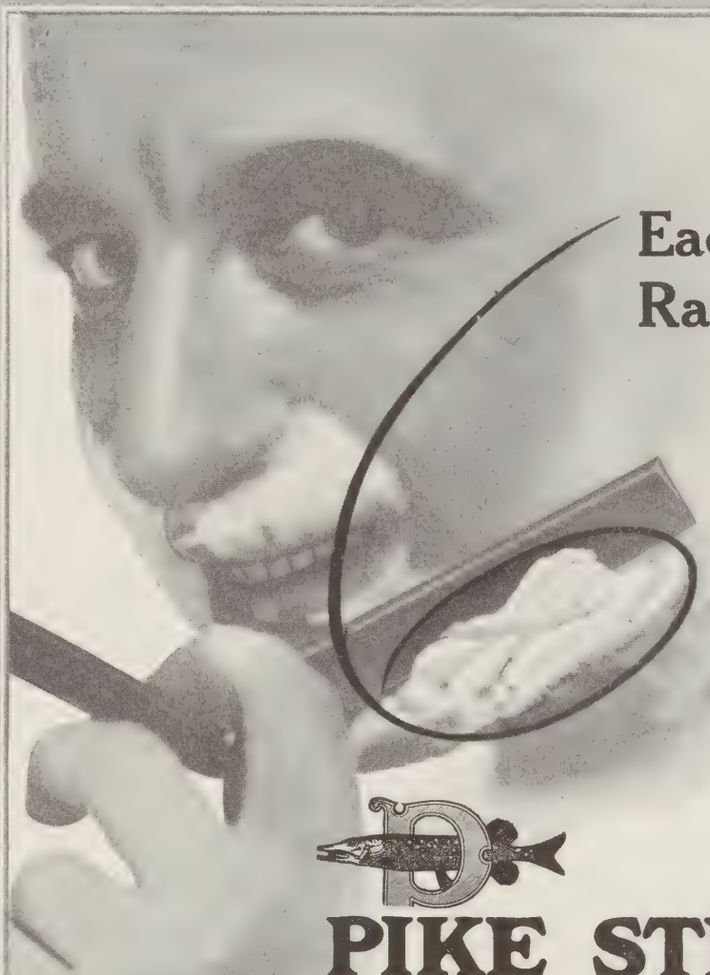
The clever illustrations in color and black and white help the reader to realize more vividly the dream pictures of Pierre Loti. The language of the translator and editor has done all that could be done to reflect the iridescent splendor and variety of his rhapsodical musings.

VICTORIAN ENGLISH

Ware, J. Redding. Passing English of the Victorian Era. London: Routledge & Sons.

If the title of this book is no misnomer, the book can apply only to English English, not to American. We have noted about one hundred expressions from A to C (in the first one hundred pages of the book) which are still current in America, and hence are neither "passing" nor exclusively "Victorian." And considering that the population of England or of Great Britain is less than one-fourth of the English-speaking population of the world, an author ought (one would think) to make it clear whether he is restricting himself to the

(*Continued on page* 702)



Each stroke of your Razor a gentle Caress

After all—it's the *edge* on your razor that counts.

That soft, gentle way that some razors have is a matter of *honing* as well as of stropping.

And honing is easy if you use a

PIKE STROP-HONE

For Safety or Ordinary Razors

FREE

A Pike Stone

Send us your dealer's name and 4 cents for packing and mailing and we will send you our Pike India Vest Pocket Stone—*not* for razors, but for pen knives, ink erasers, office use, etc. We will include our famous book, "How to Sharpen"—tells how to get a good edge on knives, tools, etc., and how to select and care for oil stones. You'll be pleased. Write today.

Three or four strokes on this hone *each time you shave* do the trick.

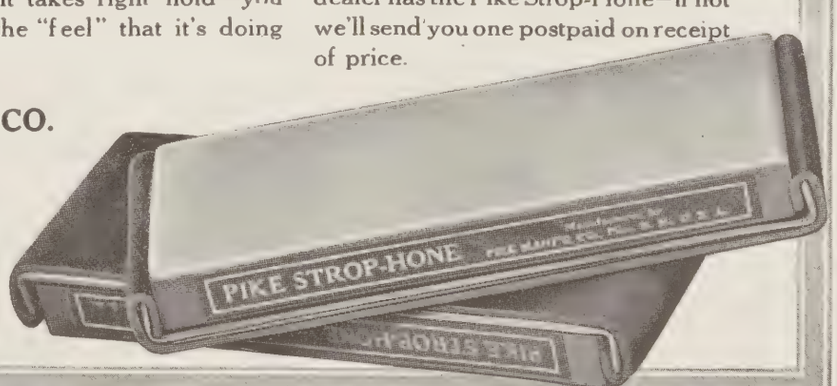
This takes hardly a second because the hone is used "dry"—needs no mussy wetting.

And because of the honing, less stropping is necessary. The strop is a good one—it takes right hold—you can tell by the "feel" that it's doing its work.

There's nothing else like this strop and hone combination. It's handy, practical, with nothing to get out of order. It's a regular stone hone on one side with a strop on the other—the best of both at the cost of one, $1.00.

Your nearest hardware or tool dealer has the Pike Strop-Hone—if not we'll send you one postpaid on receipt of price.

PIKE MANUFACTURING CO.
171 Main St., Pike N. H.



Pike India Kantbreak Knife Sharpener 50c

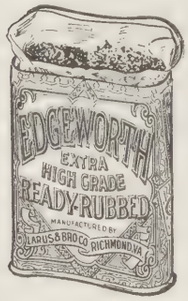
A patented device—faster, better and easier than a steel for kitchen and carving knives. Almost indispensable in every home. Makes an edge that *lasts*. Handsomely finished, rubber mounted and reinforced by a steel rod that makes breaking almost impossible. Price 50 cents at your hardware or tool dealer's. Look for "Pike Kantbreak" on handle. No other has rubber mountings.

The man with 15 pipes and what he said—

A man who owns fifteen different styles of pipes and keeps them hanging on a carved rack in his home asked us a question the other day. He said:

"I have been smoking pipes since the year Ruth Cleveland was born in the White House. I've smoked from sack, jar, tin and box; I have smoked long green right from the warehouse and I have turned my coat pocket wrong side out and smoked the nameless blend that gathers there. But Edgeworth carries for me a kind of satisfaction that keeps it my favorite year after year.

"Why don't you give away a few thousand dollars' worth of it? Get it into the hands of the smoker—don't pass it out to him at ball games and county fairs and conventions when his mind is on something else, but invite him to ask for a sample package. You'll never regret it and the fellow who tries Edgeworth in his pipe once or twice is going to be as well pleased with it as I am."



Well, it was a question *which* to sample, for Edgeworth, made from the finest Burley that grows on the ground, comes both in the Sliced Plug and in the Ready-Rubbed.

Finally, we decided on sending out Ready-Rubbed and all you have to do to find out what Edgeworth Ready-Rubbed is like is to send us a post card and tell us to send your package along.

The idea of your asking for this free package is not that you get so much tobacco without paying anything for it, but that you find out what Edgeworth Smoking Tobacco is like, so that, like our friend whose words we quote above, it will be your *favorite*. If you let us know your dealer's name we will then be able to arrange for you to keep supplied thereafter by him.

The retail price of Edgeworth Ready-Rubbed is 10c for pocket size tin, 50c for large tin. Edgeworth Sliced Plug is 15c, 25c, 50c and $1.00. It is on sale practically everywhere. Mailed prepaid where no dealer can supply.

If you want the free package, write to Larus & Brother Co., 5 South 21st Street, Richmond, Va. This firm was established in 1877, and besides Edgeworth makes several other brands of smoking tobacco, including the well known Qboid—granulated plug—a great favorite with smokers for many years.

REVIEWS OF NEW BOOKS

(*Continued from page* 700)

English of England or is treating English in general.

We must assume, from the contents of the book and from the preface, that the author has in mind only English English, and perhaps merely London English. Hence it is not worth while to cite any of the many expressions which are not "passing" and not "Victorian"—unless, perhaps, one confines one's view to London, or, at any rate, to English English.

But even for that restricted field one must have doubt of the value of the work because of the obvious errors upon which a reader stumbles. "Bad egg" is characterized as "originally American, tho no longer used in the United States." The latter statement will be news to Americans. "Buncombe" is derived "from a *celebrated orator of honeyed phrases* named Buncombe"! And this, altho the quotation from "Mr. Rees (New York)" should have set the author right. Perhaps this etymology was invented to fit the definition, "politically, or possibly any publicly, spoken *flattery*." But that isn't what *buncombe* means—in America. "Caucus," according to our author, is "not yet admitted to the dictionaries"; but it is in the New English Dictionary, and in all the dictionaries published in America. "A cold snap" is not "the first premonitory frost"; it is a short spell of cold weather, come when it may. A "cowlick" is not a "wisp of growing hair, of different color from the general tone"; it is a tuft or mass lying in a different direction from the general position, and especially such a tuft on a human being's head turned back from the forehead as if a cow had licked it.

The author's derivation of "smithereens" from "Smither's ruins," and "dead as a door-nail" from "dead as O'Donnel," are certainly curiosities of literature and ought to insure the fulfilment of his chief hope, namely, "that he may be found amusing, if neither erudite nor useful. *Plaudite!*" "Indeed, proper names *are* a great source of trouble in analyzing Passing English." But, as far as "dead as a door-nail" is concerned, in our school-days we ran across the phrase in a fourteenth-century poem; a poem, written probably centuries before O'Donnel died. And the all-knowing N. E. D. knows nothing of "Smithers," whose "ruins" gave us *smithereens*.

ENGLISH SURNAMES

Harrison, Henry. The Surnames of the United Kingdom. A Concise Etymological Dictionary. Vols. I and II: *A–Pyzer*. London: Eaton Press.

The first work on the subject of the family nomenclature of the United Kingdom was published under the title of "English Surnames" (1842). It was the work of Mark Anthony Lower, a schoolmaster by profession, who was one of the founders of the Sussex Archeological Society. From one volume of 240 pages it was expanded in its fourth edition to two volumes, post 8vo, and was described by the London archeologists as "an instructive and amusing volume which ought to be popular." It was followed by "Patronymica Britannica," a dictionary of family names of the United Kingdom in 1860. This was followed by a more scientific work from the pen of Canon Isaac Taylor, "Words and Places," published in 1864. Since then a number of other works on this subject have been issued, some of them good, others bad; some reliable and instructive, others faulty and misleading.

In 1901 there appeared Canon Bardsley's "Dictionary of English and Welsh Surnames," the purpose of which was to supply material for an etymological dictionary of English and Welsh surnames, and in the interim not fewer than eight other books treating the subject have seen the light of day. Therefore, when Mr. Harrison began his task, about 1907, he had the advantage of the labors of his predecessors to guide him. In his "Forespeech," as Mr. Harrison styles it, written in 1911, we find a reflection of the thoughts exprest by the Rev. S. Baring-Gould in the preface of his work, "Family Names and Their Story," published in 1910. Both authors agree that, in treading the mazes of English nomenclature, one is surrounded by many pitfalls and one has to work warily, and Mr. Harrison, being himself human, has tried hard not to stumble. Let us hope he may have succeeded.

Unfortunately etymological science has suffered incalculable harm at the hands of theorizing devotees. Carried away by enthusiasm for the cause, their purpose seems to be to provide some sort of etymology for every word without limitation of known facts. In this way the most plausible of derivations have sometimes led to the perpetration of egregious blunders. The practise of following the lines of least resistance applied to the science of etymology can not be condemned too severely. It is wiser to skirt the shoals of the plausible and thus avoid such as wrecked the reputations for reliable lexicology of men of the type of Samuel Johnson and Noah Webster. Even so great an expert in the science as the late Prof. W. W. Skeat was sometimes misled, altho he was the master-pilot of the British etymological bark for years. Comparison of the new edition of his "Etymological Dictionary of the English Language" with any of its predecessors will show many changes that he made.

In etymological science it is not a crime to acknowledge that one does not know, but it is a crime to pretend to know and to offer information that is untrustworthy or is tainted by uncertainty. The author of this work has been at great pains to produce it, and has succeeded in bringing together a mass of very interesting and erudite information which is supplemented by deductions and probabilities, perhaps regrettable. Nevertheless, his work marks a distinct advance in the field of his labors, the value of which time alone can determine.

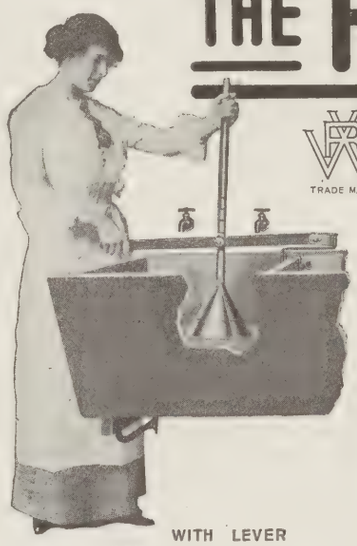
WASH WITH COMPRESSED AIR

COMPRESSED AIR, recognized today as a most potent factor in many mechanical devices, has met with no greater success than in its application through the Rapid Vacuum Washer to relieve the home of its dreaded wash day. This machine is constructed on scientific and hygienic principles. By compressed air the soap and water are forced through and through the clothes, not merely washing them on the surface, but bringing every garment out with all its meshes clear and full of life. IT SUCKS THE DIRT OUT INSTEAD OF RUBBING IT IN. All this work is done much better, quicker and more easily than by any other method.

THE RAPID VACUUM WASHER

TRADE MARK PATENT PENDING TRADE MARK



WITH LEVER ATTACHED

The little Washer that makes a BIG Washing look small

MADE OF ZINC AND BRASS
And Will Not Rust

WITHOUT LEVER ATTACHED

CONSTRUCTION. The Rapid Vacuum Washer is so constructed that there is nothing to get out of order—nothing to break. It cannot rust as it is made entirely of zinc and brass. Can be used with or without lever attachment.

CONVENIENCE. It is as light as a washboard, can be instantly attached to any style of tub—and can be easily operated by a child. A tub full of clothes washed in from 5 to 10 minutes. Very compact—the only washer for the average home where space as well as price must be considered.

WASHES EVERYTHING. It is the only process by which bed comforts and blankets can be thoroughly washed. It brings blankets and flannels out as light and fluffy as new. For washing laces and delicate fabrics it has no equal.

THE PRICE places this washer within the reach of everyone. Do not pay a big price for a washing machine when the Rapid Vacuum Washer will do as good work as the best and will cost but **$1.50** without lever attachment and **$3.00** complete. We also make the Rapid Vacuum Washer of the best quality tin. These are made from exactly the same pattern as the zinc washer, do just as good work and give perfect satisfaction.

REVIEWS OF NEW BOOKS

(*Continued from page 702*)

ticularly the intimate, private, and personal character of the letters, which partake of the nature of a running commentary on his life-work, and in which he gives the record of his "misgivings and fears concerning the passion that animated him, the value of this passion, and the meaning of his function as a painter in the midst of civilized Europe of the nineteenth century." Vincent Van Gogh was born in Holland in 1853, and tried many professions before he discovered that his inspiration lay in brush and pencil.

Tho he was for a short time a pupil of Mauve, and attended the Academy of Antwerp, in 1885, he was mainly self-taught and his best work was done in the south, where he died in 1890 in a hospital for the insane. These letters are written to his best friend and to his brother Theodore, an art dealer, through whose generosity Vincent was able to paint and live when he had no other visible means of support. Deprecating the hysterical exaggeration of the value and beauty of his works which has characterized the attitude of large numbers of his followers, Ludovici considers him superior to Manet, Monet, Renoir, Degas, and Whistler, principally because his aims were higher and more vital, and because he realized more keenly what was wrong and what was desirable.

Even if Impressionists are "art-form maniacs," Van Gogh and Gauguin may be contemplated with equanimity and approval. Van Gogh constantly asserts his faith in the ultimate value of his pictures, and yet is his own most severe critic. He longed to paint "humanity," but wrote his friend: "Any figure I paint is generally dreadful even in my own eyes." "I should like to paint in such a way that every one with eyes to see could not help but read a clear message from my pictures." As he describes some of his own theories and coloring, we wish for a better understanding of his meaning and methods, which the reader may get from his letters and also from his life as estimated and sketched by Anthony Ludovici.

Koester, Frank. The Price of Inefficiency. Cloth, pp. xxiv–439. New York: Sturgis & Walton Co. $2 net.

If any one—from a schoolboy preparing a commencement oration to a Democratic Congressman seeking to demolish a previous Administration—desires material on the horrors of the wasteful life which we live as a nation he will find it in Mr. Koester's book. Naturally his outlook is pessimistic. One is apt to be so in 447 pages on such a subject—especially if the land of one's ancestry furnishes one's ideal and the land of one's dwelling-place the failure. For Mr. Koester's chapter on "Remedies" disguises the specific which he has been offering all the way through, but which is otherwise perfectly patent—do as Germany does! Much of the author's pessimism, we fear, must be laid at the door of his enthusiasm for his ideal. However, his range of interest is wide—from football to the trust problem and the national government—and his citation of opinion is liberal, tho frequently more journalistic than scientific, and one can not always accept as sound the social and economic conclusions of one whose profession is ap-

plied physical science. Yet through this book many should be aroused to study the question of inefficiency still more closely and also to find out what other lands can suggest to us as solutions for our problems.

Leonard, Delavan L., D.D. A Hundred Years of Missions. Third Revised Edition. Cloth, pp. 456. Funk & Wagnalls Co. $1.20 net.

In this decade which excels all its predecessors in the prevalence of mission study in the Protestant Church, it is inevitable that the demand for so comprehensive an outline history of the great missionary century as that of Dr. Leonard should be renewed. In response to this appeal, especially among the younger students of modern chapters of the Acts of the Apostles, the author has thoroughly revised the book and covered the ten years of the rapid progress of civilization and of Christianity since the second edition was issued. The book presents a swiftly moving panorama of the missionary events in "all the world," since William Carey laid down his last and set sail for India. It serves, therefore, as a little encyclopedia for frequent reference.

Walling, William English. The Larger Aspects of Socialism. Cloth, pp. xxi–406. New York: The Macmillan Co. $1.50 net.

The writer of "Socialism As It Is" presents here the sequel to that volume. He had already discust the political and economic aspect of Socialism and now turns to its relations to philosophy, morality, religion, education, and the sexes—thus speedily overthrowing the common conception that Socialism is solely an economic propaganda. To discuss these wider relationships, he turns from the party platforms—which have avowedly avoided these larger aspects—to the opinions of individual leaders of Socialist thought. These he endeavors to interpret as signboards of the movement, erecting a post himself whenever they are silent. To say that Mr. Walling has said the last word on the subject would be to deny the premise of his hopes for progress, but he has made very clear the foundations of his opinions, and one who reads intelligently can not fail to agree with him often—tho there reappear, even unwittingly, the occasional serious misjudgments made by those he is interpreting. He who reads carelessly should leave this book unread. Advanced thought it certainly represents—tho such a statement pertain to the inexpensive art of prophecy! One wonders how many of the rank and file of the party are thinking in step with the leaders in these matters—or ever will!

Popp, Adelheid. The Autobiography of a Working Woman. Pp. 135. Chicago: F. G. Browne & Co.

Adelheid Popp, whose home originally was in Vienna, relates the events of her life with directness, simplicity, and power. The daughter of a drunkard father and an overworked mother, hers is the record of loveless days of struggle through years of alternating illness and poverty. Her narrative omits no hardships or temptations, no sordid details of compelling hunger, and innate uprightness. Gradually her experiences and daily tasks threw her under the influence of democratic Socialism and she became a loyal and enthusiastic propagandist, lecturing and working for the cause, even after marriage and mother-

hood. The book is not full of arguments; she neither states problems in, nor solutions for, economic conditions and brutalities in the modern industrial world, but makes a plea for industrial fair play, as representing a "passion for service." It is a plain, unvarnished tale she tells of all kinds of suffering by a working girl, who triumphed over illiteracy, and was inspired to serve the cause of Socialism.

Kneeland, George J. Commercialized Prostitution in New York City. Cloth, pp. 334. New York: The Century Co. $1.30 net.

This is the first of the publications of the Bureau of Social Hygiene, of which John D. Rockefeller, Jr., is the chairman and one of the founders. It is part of their aim to make a thorough and fundamental study of the social evil, as it exists here and abroad, and with such an understanding as only such a study can give to proceed in the direction of steady, constructive, relentless attack on the "ancient evil." In addition to the report on New York City conditions, this volume includes a study of the material at the State Reformatory by Miss Katharine Bement Davis, its superintendent, and a survey of the preventive, reformatory, and corrective agencies in New York City.

Ruffin, Arthur. The Jews of To-Day. Translated by Margery Bentwich. 8vo, pp. 310. New York: Henry Holt & Company. $1.75 net.

The Jews, for the sociologist, are the most interesting people in the world. Lord Beaconsfield, descendant of a Spanish Jew of Venice, said that however the race was regarded it could not be forgotten that one-half of Europe worshiped a Jewish Man and the other half a Jewish woman. A serious attempt, therefore, to eliminate the character of the people of Israel in their origin, their present condition, and their relations to the modern Gentile populations and governments among whom they play so important a part, is of supreme value to the student and statesman. The present work occupies a high place among German authorities in this subject and is particularly interesting in its full discussion of Zionism, as an institution which might not be able to collect into one Eastern territory all the 14,000,000 Jews of the world, but could at any rate form a center where culture of the special Jewish type, Jewish art and literature, might be fostered so as to constitute a radiating influence on the nation scattered throughout the world.

The essay of Dr. Joseph Jacobs prefixt to the excellent translation of Margery Bentwich is very illuminating as a guide to the Zionistic drift of Dr. Ruffin's comprehensive work.

Harden, Maximilian. Monarchs and Men. Cloth, pp. 316. Philadelphia: The John C. Winston Co. $3 net.

Fearless utterance is a characteristic of Maximilian Harden. He is a good champion, a hardy and uncompromising foe. Whatever he has to say about monarchs and men is sure to be brilliant, trenchant, positive. The democratic American always enjoys a discussion of the crowned heads of Europe by one who is no respecter of persons. We have become so accustomed to the pleasant commendation of King Edward VII., since his much-lamented death, that Mr. Harden's half-contemptuous treatment of this "lucky man" jars a little, but his final characterization of the "most popular figure in Europe" is fairly generous. The studies of Emperor William II., of the Czar of Russia, of Emperor Francis Joseph, and of King Albert of Saxony are less character sketches than discussions of intimate facts and episodes in the politics of Europe. In the imaginary conversation between Count Tolstoy and Mr. John D. Rockefeller, with which the book closes, Americans will hardly recognize their fellow countryman; but it is very good reading. Mr. Harden is an artist in literature, who, like the painter Opie, mixes his colors "with brains, sir!"

Herman, George Earnest. Diseases of Women. 8vo, pp. 899. New York: Funk & Wagnalls Co. $7.50 net. Postage 34 cents extra.

This fourth edition of Dr. Herman's standard work appears in an enlarged and more fully illustrated form. The colored illustrations, eight in number, and the diagrams, the invaluable indexes—one of topics, the other of authorities—considerably enrich the volume. Dr. Herman is one of the famous practising gynecologists. He possesses also the gift of exposition, and as a teacher of younger students ranks high among surgical and medical lecturers. Surgery is now making such rapid progress and the medical profession demands such ample scientific knowledge that no physician can afford to be unacquainted with the latest and freshest information in gynecology, a branch of science which has only within the memory of the present generation reached the perfection and exactitude exhibited in such treatises as this. Ever since Kelly wrote his "Operative Gynecology" the advances in the art of healing women have been large.

The author is a specialist of high class and at the head of his profession in London, as well as an examiner in his particular branch of surgery at the University of Oxford. His learning may be judged by the ample bibliography added to the work, and the exhaustive treatment which he accords even to the minutest details of his difficult and delicate subject.

Saintsbury, George. The English Novel. 8vo, pp. 319. E. P. Dutton & Co. $1.50.

This book is one number of the publishers' "Channels of English Literature," and to the majority of general readers it is likely to be ultimately considered the best of the ten volumes. It is learned, independent, and written in that clear and direct style which lends so distinct a charm to all Professor Saintsbury's works. The arrangement of the matter is comprehensive—starting from the romantic poetry of Greece and Rome, thence going forward on a leap from Lyly to Swift, the eighteenth-century novel, Scotland, Miss Austen, Thackeray, the mid-Victorian novel, and the fiction of yesterday, which last essay contains a fine criticism of Hardy and Meredith. It was said of Lowell's criticisms, and appreciated, that they were too rich in allusions and illustrations, like an overbraided garment. Mr. Saintsbury has taken the advice of Polonius, and his literary habit is rich, but not gaudy, not so much exprest in fancy as punctuated and stamped with the clear-cut impressions of reality. With all of the author's conclusions the reader may not agree, but all will allow that they are fresh, pungent, and eloquently stated.

For Cold Weather Driving

THE CLARK AUTO HEATER

for Automobiles, Carriages, Wagons and Sleighs.

The Clark Heater is not only a luxury but a positive necessity for comfort during winter driving.

Everyone who rides or drives in cold weather will derive the greatest satisfaction from the use of a Clark Heater.

It fits in at the feet in any style of vehicle, makes a comfortable foot rest and yields up a welcome heat that can be regulated at will to conform to the needs of the user.

There is *no flame, or smoke, or odor connected with their use or chance to injure the most delicate garments.*

Clark Heaters have been in use for 15 years and are so durably constructed that many of those purchased 15 years ago are still in active service.

The price of the Clark Heater is within the reach of anyone. You can buy a Clark Heater from **90c up to $10.00** each, according to size and quality.

We make them in 20 styles and sizes—each one with our guarantee behind it.

Most of our Clark Heaters are made with indestructible steel bodies with all metal parts heavily nickeled. They are suitably lined with asbestos and perfectly covered with the best and most durable materials in assorted colors.

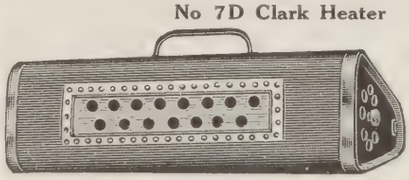
Don't Shiver and Get Cold When You Ride

in Auto, Carriage, Sleigh or Wagon. With one of these heaters you can prevent a severe cold and probable illness by being warm and cozy on the coldest day.

The temperature in closed cars can be regulated and kept the same as in your home.

Here are two favorites of the 20 different styles we make:

No 7D Clark Heater



No. 7D. Showing side and end ventilators

No. 7D Heater, a well-known and popular style, having flat, slanting top, has ventilators in both ends and at the side with which it can be made to throw out as much or as little heat as is desired. It is 14 inches long and weighs 9 pounds. Has cold drawn steel ends, heavily nickel-plated, and is covered with superior Brussels carpet.....Price **$2.25**

No. 7X Clark Automobile Heater

Shown below in the right hand margin is same shape as No. 7D, but with handsomer finish. Has slanting, flat top; covered with maroon mohair plush. Ends of heavy stamped metal, quadruple nickel-plated; has both side and end adjustable ventilators; 14 inches long, weighs 9 pounds.

Price **$4.00**

How These Heaters Are Operated—Fuel, etc.

The fuel used is the celebrated Clark Carbon Brick. Part of a brick is enough for a trip of several hours. This brick burns without flame, smoke or odor of any kind, and yields a heat greater by 25 per cent than any other. Bricks are 7½"x2½"x1¼" in size. Price, in neat carton, 75c per doz.

Our Guarantee: We guarantee every Clark Heater and all Clark Carbon fuel to be just as represented and to give perfect satisfaction to every purchaser or refund the price.

There are nearly a half-million of Clark Heaters now in use in the U. S. and Canada. Thousands of pleased purchasers have testified to the wonderful comfort they give during cold weather driving.

Get one from your dealer. *Insist on a Clark* if you desire one that will give you long and satisfactory service.

CHICAGO FLEXIBLE SHAFT CO.

Even heating—and steps saved

We enjoy the "first steps" of little girlie—the more the merrier! But for grown-up women in the home we like to save steps—especially those caused by oft running to the cellar to "fix the dampers" of the heating boiler. This is well done by the

IDEAL SYLPHON REGITHERM

which regulates the temperature of your rooms during the cool or winter months so there is no lack nor surplus of heat, but even comfort in all rooms. Every effect of the weather changes on the air in the room where REGITHERM is located (see picture above) expands or contracts its brass accordion bellows; this moves a cable that operates the draft- and check-dampers of the boiler. You set the regulator at 70 degrees (can be set at 60 degrees to 80 degrees) and the REGITHERM controls the fire day and night—at the exact degree wanted—guards your comfort, stops fuel wastes. REGITHERM has no electricity, no clock-work, diaphragms, or machinery to wear out. Installed in OLD buildings in few hours.

REGITHERM also regulates heating to bring out good workmanship in concerns where varnishing, painting, glueing, or drying demands a steady temperature. (Specially adjusted, 50 degrees up to 250 degrees.)

Our "New Heating Aids" booklet (free) tells you about the REGITHERM, Sylphon Packless Radiator Valves, Norwall Air Valves and Sylphon Boiler Regulators (steam or water.) Worth reading—shall we mail it?

THE GREAT BEEF PROBLEM

THE discussion at Chicago, by the American Packers in convention a few weeks ago, of the diminishing supply of beef (of which note has already been made in these columns) has awakened wide comment on this subject throughout the country. One of the speakers at Chicago produced the following impressive tabular statement as to the beef supply of the principal beef-eating countries of the world.

"Tabulating the percentage of the population and cattle increase in these countries for a period representing approximately ten years, we have the following:

	Population. Increase. per cent.	Cattle. Increase. per cent.	Cattle. Decrease per cent.
France	2	3	..
Germany	16	4	..
United Kingdom	10	4	..
Austria-Hungary	10	2	..
European Russia	14	..	12
Canada	35	20	..
Brazil	20	..	20
Argentina	40	unchanged	..
Australia	18	40	..
New Zealand	30	16	..
United States	20	..	30

"An average increase in population of 20.5 per cent., and of cattle a fraction more than 8 per cent."

So serious have become relative conditions as to population and cattle-production that one prediction evoked by them is that porterhouse steak, at the present percentage of decrease in the supply, will sell ten years hence at $1 a pound at retail. To the talk as to relief from importations of cattle from Argentina, not much attention is seriously paid. Importations from that country there will be,—indeed, some have already occurred,—but the Argentine supply, in view of the European demand, was never large enough to promise for us any appreciable help, and what surplus it now has is diminishing.

A writer in the New York *Times Annalist* declares that the hope for any proper supply of beef in the future lies not in importations, but in the movement for better farming. That movement has already made some notable beginnings, especially in the West. Ten years hence the efficient farmer ought to have become as wide-awake a man in his business as any professional man ever was. He will then be found raising cattle because they pay. On any ideal farm cattle should be raised as a proper part of what is known as the rotative system, by which the land is rested through changes in use and is also supplied with a natural fertilizer. Farms supplied with dairy and beef herds can be carried to a higher state of efficiency than those without them. Better business will be done by the Western farmer when part of his grain is put into butter and beef, part into hogs, and other parts, meanwhile, are sent to market on the cob, or in the kernel. One of the speakers at Chicago declared:

"Here in the United States are millions of acres of the best cattle-breeding grounds in the world. Our grain-raising acres probably never will be utilized for running cow-herds, but even in Illinois, Indiana, and Ohio are vast stretches of broken land adapted only to pastoral purposes. South of the Ohio River are other millions of acres, and Michigan, Wisconsin, and Minnesota are equally well situated. West of the Missouri River are the park regions of the intermountains country and a constantly increasing acreage in hay, a bulky crop which has little value in its original form, but is readily converted into beef, provided the stockowner has the cattle for the conversion purposes. All these natural resources await development, and but one obstacle exists, the necessary financial ammunition for the campaign."

The Department of Agriculture at Washington is already alive to the gravity of the situation. One purpose it has in hand is to free the small farmer from dependence on the big packer, by promoting the establishment of abattoirs in centers all over the country, the raising of cattle on small holdings, the formation of co-operative live-stock associations, especially in New England and the South Atlantic States, and the organization of boys' "pig clubs," similar in plans and aims to the boys' "corn clubs," which the Department has promoted for several years.

In the regular session of Congress this winter one of the first items of legislation to be taken up will be what is known as the Smith-Lever agriculture extension scheme. It is believed that the enactment of this measure will do much to encourage the raising of beef cattle by small farmers. The small farmer does not now believe that raising cattle is profitable. The department believes differently, and so do the agricultural colleges, provided the farmer knows how to grow cattle understandingly. After the passage of the Smith-Lever measure much detailed information will be supplied to farmers in order to correct their error. Actual demonstration work will also be made accessible to them. Following is a statement on this subject, obtained for the New York *Evening Mail* from Mr. Galloway, Assistant Secretary in this department:

"We want to form live-stock associations in the counties, and when they are established I believe the production of live stock will be the predominant industry in those localities. The department will send experts to advise the members of these associations, instruct them in cattle-raising, and assist them in the selection of their stocks. Already we have received promises of farmers in many localities to organize. The farmers who join them can get combined credit with which to buy breeding animals—and can aid each other in many ways.

"The supply of hog meat, altho it is not decreasing as rapidly as beef, is in danger, and the department believes it has found a way in which to increase it materially by the development of boys' 'pig clubs.' Several years ago we started corn clubs, and now have over 200,000 boys raising corn every year.

"Some of these boys are finding out that they can make more money by feeding their corn to pigs and selling the fattened hogs. The success some of them have had, not only in raising for the market, but also in raising blooded stock, has led the department to take up the idea of 'pig clubs.'

"Once the boys are interested, they will

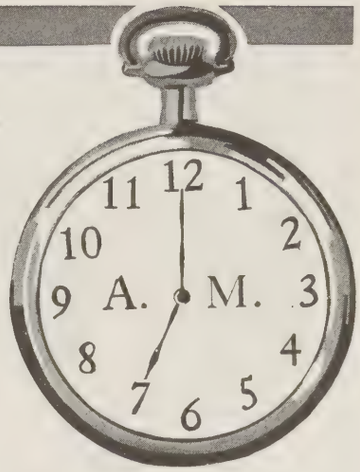
Stays Hot All Night Long

(From 7 P.M. to 7 A.M. Easily)



Boiling water *stays* hot all night—12 to 15 hours—in this hot water bottle. It stands erect, so you can fill

The M. H. P. Aluminum Hot Water Bottle

with boiling water without scalding or burning your hands. A permanent investment in health and comfort. Always in good condition, ready for use, never leaks. Get one and your children will use it for their children.

Handsome, polished aluminum, all one piece. Lightest weight metal bottle made. Especially adapted for foot-warmer, for use at abdomen or small of back. Cannot flop down flat or lose its shape when in use. Cotton Felt Bag for covering comes with it.

It has all the advantages of a metal bottle over a rubber bottle—and these additional advantages over other metal bottles:

(*a*) A bottom to stand on when filling.
(*b*) One piece of seamless aluminum (no nickel plate to wear through or peel off).
(*c*) The best shape for general use.
(*d*) Much lighter in weight.
(*e*) Will never leak if not grossly abused.

10 Years' Guarantee

The M. H. P. is guaranteed for 10 years, or we will give you a special 50-year guarantee, if you wish it.

For Sale by Druggists, Hardware Dealers and Department Stores.

If your dealer cannot supply you, write us for descriptive folder, giving dealer's name. We will supply you direct upon receipt of price, $3.50.

FANNING SALES COMPANY

Dept. E, 131 Washington St., Providence, R. I.

SPECIAL TO DEALERS—The M. H. P. makes good. Beautiful, easy to use, flat-bottomed, keeps hot 12 to 15 hours. Never leaks. No nickel plate to wear off. Guaranteed. Write for details.

"You may serve breakfast in ten minutes, Mary"

A telephone from upstairs to the kitchen—think what a saving of time, energy and strength it means for you. Climbing up and down stairs—so dreaded by the housewife—almost entirely done away with. The maid always within summons without the alternative of your calling down the stairs or going down to the kitchen.

Western · Electric Inter-phones

will do all this for you. You can have one placed anywhere in the room. You do not even have to hang it up when you are through talking. Lay it down—on the table or any other convenient place. It is always ready for use. It carries your message perfectly.

These handy little telephones, with the necessary wire and everything complete for installation, can usually be bought of your dealer. If, however, you cannot get it in your town, we will send it direct. The outfit costs only $15—a mere trifle compared with the help it gives you.

Perhaps you are not yet convinced that you need Inter-phones in your home. Perhaps you don't realize in how many ways they will save steps for you. Then, by all means, get a copy of the little book we have prepared. This booklet, No. 28-D, "The Way of Convenience," will certainly throw a new light on the problem of housekeeping. It will show you where to begin to apply scientific management in your home. Get a copy, free, for the asking.

Hy-Rib Concrete Sidings built without forms.
Mark Manufacturing Co., Evanston, Ill.
United Sash for all windows.

Hy-Rib Factories at Low Cost

FIREPROOF—Hy-Rib, a steel sheathing stiffened by rigid deep ribs, is the ideal reinforcement for concrete. Hy-Rib makes fireproof, durable, economical walls, sidings, partitions, floors, ceilings and roofs.
ECONOMICAL—Hy-Rib combines reinforcement, lath, studs and centering. Reduces cost of building in three ways—by obviating need of expensive field labor, by doing away with studs and centering, by saving time in erection.
DURABLE—Hy-Rib construction is monolithic, rigid, permanent—never burns or rots.

Whenever or whatever you intend to build, it will pay you to learn about Hy-Rib. Write us about your plans, and receive literature and suggestions FREE.

show their pigs at the country fairs, and the competition between them will do much to encourage not only the boys, but the small producer to feed his corn to pigs.

"But the real solution of the whole problem, in my estimation, is the establishment of abattoirs in the smaller cities of the country, to which the farmer can take his stock and have it slaughtered and held for him until a favorable market.

"There is one of these abattoirs in Paris, Texas, now, and it has been most successful. Another one is to be built at Alexandria, Va. They are very common all over Europe, especially in France, but have been but little thought of in this country, perhaps because the large meat-packers have discouraged their existence.

"Their establishment will give the farmer a competitive market, which will be an incentive. He will produce cattle as soon as he finds it is a profitable business."

NOT ENOUGH TO THE ACRE

Coincident with alarming reports as to the diminishing beef supply, agitation is going forward in farm journals and elsewhere for a more intensive cultivation of American soil. *Farm and Fireside* remarks that, if American farmers can make any money with an average wheat yield of only thirteen bushels to the acre, "what might they not make with twenty-six?" A yield of twenty-six bushels of wheat has for years been secured in several European countries. Europe also has better yields of oats. Here the average of oats per acre is twenty-nine bushels; in Germany it is over fifty; in France, 31.6. In barley we make a better comparison, altho some countries are ahead of us. The American yield is 25.8 bushels, the German 35.3, and that of Great Britain 35. Of potatoes we have the smallest yield reported from any country. Some of our irrigation States report averages of 119 bushels of potatoes to the acre, but the general average is only 84. If the high average in the irrigation States were to prevail throughout the country, we should still fall behind Germany, which has a yield of 200, Austria one of 151, France one of 133, Great Britain and Ireland, 193. Even Russia has an average of 100.

President Brown, of the New York Central, has long been prominent as an advocate of more intensive cultivation. Soil is here in abundance, but it is not cultivated. Soil which can be had here on small terms can be made to yield harvests "unprecedented," provided farmers learn how to handle it. Great areas of American land east of the Mississippi, and much of it east of the Alleghanies, have suffered from wholesale neglect, when it was available for high cultivation in raising various crops and cattle and sheep. An official statement from Washington recently sent out shows that there are some farm lands in New York State which now yield in money larger sums than do many fertile regions of the West. Not, however, in wheat and corn, which must long continue to be raised in largest amounts elsewhere than in the East. There are unlimited opportunities in the Atlantic States and on the Gulf for raising many crops with profit. "Holland" in his daily *Wall Street Journal* letter, commenting on Mr. Brown's activities, presents the following interesting items:

"What can be done in the South almost staggers the imagination. One schoolboy is understood to have raised 237 bushels of corn on one acre of land, and the presumption is that this is not a mere lucky experiment. The State of Alabama possesses lands which can easily produce food products in amount sufficient to pay the cost of land in a single year. And these lands can be bought for from ten to twenty dollars an acre. Splendid lands can be bought in New York State for from one hundred to three hundred dollars an acre.

"It was recently reported from Washington that there were nearly five millions of acres in the Southern States which border the Atlantic and the Gulf capable of the very highest development of truck farming. Yet not one-tenth of 1 per cent. is utilized for truck, and, in fact, about 75 per cent. is not utilized at all. These lands are very cheap, and the time will surely come when they will be occupied by American farmers and profitably cultivated. There is magnificent trucking land in the vicinity of Savannah, Georgia.

"President Brown once said that the soil is here, the climate is here, the area is here—all the conditions are at hand for maintaining and increasing American food products, including beef, if only the American citizen is willing to take advantage of these opportunities."

AFTER NINETEEN YEARS

"Times are now so utterly different from those of 1894," that *The Wall Street Journal* is moved to indicate, by means of figures, the commercial character of a contrast which is so striking as to be "almost unbelievable." It points out that October 4, 1913, and August 27, 1894, "will be distinguished in history as the only two dates within nearly three-quarters of a century when low tariff measures went into effect in the United States." Within that period the standard of living, of production, and of prosperity in general was so greatly extended as to produce a degree of well-being on the part of the people at large which in 1894 would have seemed magnificent. Because of these conditions the results of the new tariff must inevitably differ from those which followed the old. Just how they will differ no man can yet tell.

In order to make clear the contrast in conditions during the two periods, some statistics of leading industries are given by the writer on a per capita basis. These show, for example, that the poor crops which now bring forth laments that they represent only $61.38 per capita present a striking contrast with those for 1894, when the per capita amount was only $49.26. Following is a table of statistics prepared by this writer:

	Statistics of 1913		Statistics of 1894	
	Amount	per Capita	Amount	per Capita
Misc. imports	$1,812,978,234	$18.57	$654,994,622	$9.32
Manfd. exports	1,187,000,460	12.16	202,804,463	3.00
Prod. of mfrs.	10,500,000,000	107.60	4,937,000,000	73.00
Gr. R.R earn.	3,057,163,762	31.32	1,073,361,797	15.87
Comm'l failures	261,100,000	2.67	172,992,856	2.56
Pig-iron output, tons	32,181,274	0.329	6,657,380	0.098
Steel output, tns.	30,000,000	0.307	4,412,032	0.005
Coal output, tns.	525,000,000	5.38	152,447,791	2.25
Farm outpt, qty.	5,992,000,000	61.38	3,331,500,000	49.26
Security issues	1,740,000,000	18.32	375,000,000	5.54
Money in circul.	3,365,855,775	34.48	1,661,307,165	24.56
Bank deposits	16,995,000,000	174.10	4,651,115,300	68.77

NOTES—Failures and pig-iron production are estimated on the basis of eight months. Railroad earnings this year are for the year ended June 30 and include only roads whose yearly operating income exceeds $1,000,000. Money in circulation is as of September 6. Most of the 1913 figures are partly estimated. Manufactured output means only the value added by manufacture. Farm production is total value of all crops, figured in both years at average prices of same twenty years.

It is indeed striking to read that our

Temptation

You mothers wish to make oats tempting. And this is how to do it.

Get Quaker Oats, for this consists of just the rich, plump, luscious grains. All the puny grains are discarded, all the poorly-flavored. We find only ten pounds of Quaker Oats in a bushel.

These are the cream of the oats. And each mammoth flake is so processed by heat that its flavor is kept intact.

Common oatmeal may have equal food value. But what matters that if it lacks the flavor which makes children love this dish?

Quaker Oats has that flavor.

Quaker Oats

The Luscious, Big-Flaked Oatmeal

The evidence is that nowhere in the world are there other oats like Quaker. A hundred nations now send here to get this Quaker Oats. Some send ten thousand miles.

Even the British Isles, the home of Scotch oats, consume more packages of Quaker than all other brands together.

The peoples of the earth now consume each year a thousand million dishes of Quaker. All because of the wondrous flavor.

Yet many a mother buys lesser oats where every store sells Quaker. They pay the same price per package, the same cost per dish.

They go without this matchless flavor, which other people send over seas and continents to get.

This is why it matters:

Oats are our premier food. Nothing else grown supplies so much of what growing children need.

Nothing else compares with oats as vim-producing food.

Every modern mother wants her children to love oats. That is why it's vital to get the oats they love.

Regular Size package, 10c

Family Size package, for smaller cities and country trade, 25c.

Except in Far West and South.

Look for the Quaker trade-mark on every package

exports of manufactured products in 1894 amounted to only $3 per capita, whereas for the year ending on June 30 last they were $12.16 per capita. Again, it is disclosed that, during the current calendar year our manufacturing industries will add to the value of the raw material they use a sum equal to $107.60 per capita as against $73 so added in 1894. The growth of our transportation industry is shown in the fact that railroads this year report having received $31.32 per capita, whereas in 1894 they received only $15.87. So again, we now consume 5.38 tons of coal per capita, and then consumed only 2.25 tons. Of steel we now produce 634 pounds per capita; we then produced 130 pounds. Our stock of gold has increased from $500,000,000 to $1,900,000,000. In 1894 the money raised by means of securities for the benefit of industries amounted to $5.54 per capita; this year it amounts to nearly $19.

LARGER BANK CLEARINGS

Bank clearings for the entire country increased in September over August 8.4 per cent., the total being $13,287,617,511. August was the lowest level touched in about three years. The total for September, however, indicated a gain of 26 per cent. over September of last year. Indeed, the returns for September of this year, in *Bradstreet's* words, presents "an exceptionally favorable contrast to every September, save one, of which there is record," the exception noted being September, 1909, when there was no complaint as to trade or speculation. *Bradstreet's* says further:

"Bank clearings at the metropolis for the month of September aggregated $7,455,917,151, which represents an increase of 10.2 per cent. over August and of three-tenths of 1 per cent. over September, 1912. Withal, the total is, with the exception of that reported for August, the smallest returned since September last year; but it exceeds by 3.7 per cent. the total for the like month in 1911; it runs 19.8 per cent. above the exhibit for September, 1910, tho it falls 12 per cent. below the same month in 1909, and while it considerably exceeds the sums registered in September of 1908 and 1907, it shows a recession of 10.3 per cent. from the same month in 1906.

"It is pertinent to observe that while transactions in stocks on the country's leading exchange exceeded those of August by 26 per cent., they fell 23 per cent. under those of September last year, and barring the dealings for the corresponding month in 1910, total transactions last month were the lightest reported for any September since 1900. In 1909 and 1906 the turnover aggregated 20,054,496 and 26,121,583 shares, respectively, whereas for September of this year dealings amounted to only 7,683,000 shares.

"Outside of New York the total for September aggregated $5,831,700,360, a rise of 6 per cent. over August and of 5.7 per cent. over September, 1912. While the sum stated exceeds those reported in February, June, and August of this year, it is, with those exceptions, the lightest returned since September of last year.

"Every group but one—the New England—shows an increase over September, 1912. The New England division, owing principally to a loss of approximately 10 per cent. at Boston, displays a drop of 7.4 per cent. On the other hand, relatively large gains are reported by the Northwestern and Southern groups, viz., 9.9 per cent. and 9.5 per cent. The Western group indicates a rise of 8.3 per cent., and the Southwestern, despite drought and loss to the corn crop, returns an advance of 6.4 per cent. The far-Western group reports an increment of 4 per cent. and the middle division exhibits an increase of 1 per cent. It is significant that ninety-seven of the individual cities furnish gains over September of last year, while only twenty-one suffered losses.

"Despite some complaints of poor trade, tight money, paucity in speculation, and difficult collections, payments throughout the country for the first nine months of the calendar year fell only six-tenths of 1 per cent. below the best on record, those of the first three quarters of last year, when the total aggregated $124,990,945,160, as against $124,153,920,594 for the none months of this year. Most of the gain was furnished by the first quarter of the year. The total for the period just passed outstrips that of 1911 by 7 per cent.; it goes over 1910 to the extent of 2 per cent., clearings in January of that year having reached the unprecedented total of $16,998,000,000, and it reflects a rise of 5 per cent. over 1909 and of 11 per cent. over 1906.

"New York City's total for the nine months of this year—$70,353,963,234—represents a drop of 3.5 per cent. from the like time in 1912, but it shows a gain of 2.4 per cent. over 1911. At the same time, the total discloses a loss of 4.3 per cent. from 1910, of 5.6 per cent. from 1909 and of 9 per cent. from 1906, but increases over 1908 and 1907 rule."

IMPRESSIVE RAILWAY STATISTICS

An advance summary by the Interstate Commerce Commission of statistics pertaining to American railways for the fiscal years 1911-1912 having reached a writer for the London *Times*, that paper concludes, after a study of it, that it presents "a wonderfully impressive proof of the immensity of the American systems." The aggregate mileage, in this country, not counting a few very small roads, on June 30, 1912, was 360,714—an increase of 8,925 miles over 1911. On this mileage 61,260 locomotives were employed and 2,308,658 cars of all classes. The number of engineers employed was 63,555, of firemen 66,408, of conductors 49,051, of other trainmen 135,958, and of switch tenders, etc., 39,538.

Statistics of the capital employed include the following: Par value of the outstanding capital, $19,533,750,802, of which there was $6,882,813,008 of common stock, $1,586,747,679 of preferred, and $11,064,190,115 of funded debt—that is, mortgage bonds, collateral trust bonds, debentures, notes, etc. Of the total stock, preferred and common, the same being $8,469,560,687, a little more than 34 per cent. paid no dividends. Dividends paid during the year amounted to $400,432,753, which was a little more than an average of 7 per cent. on the dividend-paying stocks. The average on all stocks outstanding, those that paid as well as those that did not, was 4.73 per cent.

As to the service rendered in the year, following are interesting statistics: The number of passengers carried was 994,158,591, an increase over corresponding returns for 1911 of 6,447,594; passenger mileage, or number of passengers carried one mile, 33,034,995,806, the corresponding return for 1911 being 73,465,336 more; number of passengers carried one mile per mile of road,

(*Continued on page* 714)

Hupmobile

TWO or three weeks ago Hupmobile dealers from all parts of America, and Europe as well, came together in convention at the factory to see this new car.

And one man swept the convention by saying what everyone else had thought but had not said.

For ten minutes he had been telling of the hold of the Hupmobile on his big Western territory; and the crowd went wild when he suddenly drawled, by way of climax:—

"Boys— when yuh talk to me about competition— I— don't— know— what— yuh— mean. I never met up with it!"

And do you know, my dear sir— you who are thinking of buying a car— that this dealer merely expressed a condition that exists everywhere?

Stop and think— have you ever heard any but kind words of the Hupmobile?

Isn't it always spoken of separately— by itself?

Isn't it always singled out, and not grouped, as other cars are grouped together in a low priced class?

And do you know why?

Why shouldn't they whirl off to school in a Hupmobile on wet and stormy days, instead of being drenched or chilled by exposure to dangerous and inclement conditions?

Why This 1914 Car is Unique and Alone

The Hupmobile is in a class by itself because it has a sturdy pressed steel frame.

The Hupmobile is in a class by itself because it has a pressed steel Pullman body.

The Hupmobile is in a class by itself because it is the biggest user of aluminum of any moderate priced car.

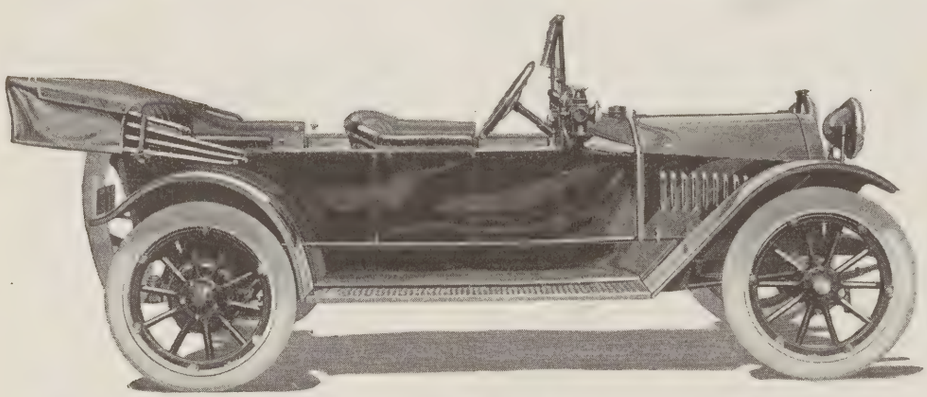
The Hupmobile is in a class by itself because it is the biggest user of high priced steel of any moderate priced car.

The Hupmobile is in a class by itself because it has a powerful long-stroke motor, 3¼ in. x 5½ in.

The Hupmobile is in a class by itself because it has an individual, distinctive design.

The Hupmobile is in a class by itself, in other words, because by its careful and exhaustive attention to the most intimate details of construction—and by its use throughout of the finest materials obtainable, no matter what the cost, it has justified our belief that it is the best car of its class in the world.

Hupp Motor Car Company, 1243 Milwaukee Ave., Detroit



"32" Touring Car or Roadster— $1050 f. o. b. Detroit

139,356, as against 142,859 for the preceding year; number of tons of freight carried, 1,818,232,193, the corresponding figure for the previous year being 1,753,189,939, the increase, 65,042,254; ton mileage, or number of tons carried one mile, 262,955,605,123, the corresponding ton mileage reported for the preceding year being 253,456,389,237; number of tons carried one mile per one mile of road, 1,108,578, as against 1,088,314 for the preceding year; average number of tons of freight per train-mile, 409.29, the corresponding figure for the preceding year being 386.17; average receipts per passenger per mile, 1.985 cent; average receipts per ton per mile, 0.743 cent; passenger service train revenue per train-mile, $1.30.404; freight revenue per train-mile, $3.04.015; average operating revenues per train-mile, $2.30.201; average operating expenses per train-mile, $1.59.544; ratio of operating expenses to operating revenues, 69.30 per cent.

The total operating revenues of the roads for the year were $2,826,917,967; in 1911 they were $2,772,773,828. Operating expenses for the year were $1,985,963,430, and for the previous year $1,901,399,475.

THE COST OF LIVING IN ENGLAND

The assertion has commonly been made that the cost of living in England and elsewhere in Europe has advanced at a pace similar to that now so familiar in America. No doubt these statements are well borne out when they refer to the higher kinds of living, especially in homes and hotels of the best classes. But an inquiry, just completed by the London Board of Trade, indicates that, for the working classes of the United Kingdom, the cost of living has not risen at anything like the same rate as in this country. The inquiry, of which details are now published, pertains to the year 1912, the results being compared with those for the year 1905, when an inquiry, similar in scope and character, was undertaken by the Board of Trade. Rents, the cost of food, and fuel prices were considered. In general, the conclusions contained in the report are as follows:

"The cost of living, as represented by rents (including rates) and the retail prices of the selected articles of food and coal, was between 11 and 12 per cent. higher in London than in the other 87 towns investigated, taken as a whole. London is followed in this respect by the Scottish towns, and at the other end of the scale are the towns in the Midlands in which both rents and prices were at a low average. Croydon, Newcastle-on-Tyne, Plymouth and Devonport, Sheerness and Swansea are the towns in England and Wales for which the combined figures most nearly approach those for London, while the towns in which the cost of living was lowest are Wolverhampton, Walsall, and Macclesfield. London being taken as 100, the extreme range of index numbers for rents and prices combined in other towns was from 81 to 97.

"Over the periods since 1905 rents show little increase except in a few towns, notably Coventry and Macclesfield. In London rents have fallen by about 4 per cent., altho they still remain much higher for the same accommodation than in any other town in this country. Thus, while the mean of the predominant range of

Willys Utility Truck

¾ ton **$1250** ¾ ton

(Chassis only—body as shown $150 extra)

The most popular trade developer you can get

THE Willys-Utility Truck is intended for those who want *more business, bigger business* and *better business.*

You can get along without a Willys truck if you are content with a limited radius of trade, which means a limited amount of business. But unless you *increase* your business area you cannot *increase your profits.*

Look around you. Practically every live merchant in this city is using trucks. It will pay *you* to investigate our proposition. We have *more* to offer for *less* than any other manufacturer in the industry.

The Willys-Utility Truck is the lowest priced truck of its size and capacity built. It costs 30% less than any other similar truck in the world. *Get that—30% less than any other truck of equal power and ability.*

With the cost less and the utility 200% to 300% greater it seems like good business judgment to, *at least,* investigate.

This truck has a powerful thirty-five horsepower motor, which is controlled by our patented governor. It is impossible for the truck to be driven over eighteen miles an hour. It has a heavy reinforced pressed steel frame; both the front and rear axles are unusually rugged; it has a selective transmission—three forward and one reverse; it has 34 x 4½ pneumatic tires on the front, and 36 x 3½ solid tires on the rear. The distribution of weight is correctly solved.

If you haul things you can use one or more of these Willys-Utility Trucks to advantage.

INVESTMENTS AND FINANCE

(*Continued from page* 714)

weekly rents for two rooms in all the provincial towns investigated was found to be 3s. 1½d., the corresponding rent in the middle zone of London was 5s. 6d., an excess of 2s. 4½d., or 76 per cent.

The prices for food and fuel are then contrasted in the report with rents. In their general level in the different towns rents are shown to have maintained a greater degree of uniformity. In 88 towns the percentage of increase in rents was only 1.8; in the cost of food and fuel it was 13.7 per cent. The two classes yield a combined percentage of increase of 11.3 per cent.

An attempt was then made to make the inquiry more complete by ascertaining the course of prices for clothing during the same period. While this part of the investigation "was beset with special difficulties," a conclusion was arrived at from such data as were available, this conclusion being that an appreciable rise in the cost of clothing had occurred. It probably is not much less in proportion than that in food, coal, and rent. It took place either as an increased price for the same article, or as a lower quality of goods and workmanship for the same price.

In the final conclusion is a statement which would perhaps be found measurably true in this country, if any investigator were to take it up for careful study. This is that, while rent, food, fuel, and clothing, taken together, have increased in cost during the last seven years—the increase in England being about 10 per cent.—"prices are, however, still at a lower level than a generation ago." In these columns a few weeks ago were printed prices for a few articles of universal consumption, taken from a personal account-book kept in 1883, which fully bear out this English statement as to prices being at least not higher now than they were a generation ago.

STOCKHOLDERS IN CORPORATIONS

Somewhat more than two years ago an interesting compilation was made by *The Wall Street Journal* of stockholders in corporations, figures for the same having been derived from the corporations themselves. Comparisons were made with conditions of several years earlier and marked increases were indicated, some of them being extremely impressive as to tendencies in investments. Another compilation, similar in purpose and based on statistics similarly obtained, is now under way. The first instalment of the reports was recently printed. Figures are given for six companies: American Sugar, Standard Oil, Pennsylvania, Reading, Telegraph and Telephone, and Rubber.

Within twelve years the capitalization of these companies has increased 81 per cent., but the number of stockholders has increased 204.7 per cent. In this period the number of shares in the average holding declined 40 per cent.—that is, the stock, being more widely distributed, is now held in smaller numbers of shares; there are now three stockholders where there was only one in 1901. In five large companies women now hold about 50 per cent. of the stock. Following is a table showing the number of stockholders in these six com-

JACK LONDON
Royal Tailored Man

COPYRIGHT, 1913, THE ROYAL TAILORS

"It's funny what a difference a few Clothes Make!"

When Jack London picked out a Royal Fabric for a 2 piece Fall suit a few weeks ago, the fancy took him that he wanted a hat made of the same material. "Nothing easier!" said the local Royal dealer. And straightway he measured the London head and the London crown—sending those measurements to us along with the London body dimensions.

We cut and tailored the hat just as we did the suit, to exactly dovetail the specifications given us. Perhaps it may, or it may not be to your taste to wear a hat that matches your suit. But the point is: Royal Service gives you exactly what you want—exactly as you order it. There is no such thing as "partial satisfaction" in a Royal Tailor transaction. A Royal deal means *complete* satisfaction or no sale.

You select the fabric you want. You pick out the style and cut you want—and if any little individualities are wanted, not shown in the fashion plate you select, you dictate the desired changes to your local dealer—and we edit them into your suit! The Royal Tailored Man is the type of man who appreciates exact perfection—and gets it in his clothes.

The Bissell Electric Suction Cleaner

Do you know that the easiest way to clean *clean* is also the *cheapest* way? It is true.

One reason is because our way cuts the work in half. This is proved every day. And a searching trial will convince you, too, that it is *cheaper* to own a Bissell Electric Suction Cleaner than to go without one.

To the money saving in labor—and in floor coverings—and in draperies—you must add the saving in health; your old way let the finest and most dangerous dust escape you.

It's the Volume and Velocity of Rushing Air That Count

A month's trial costs you only a ridiculously small sum. We pay the freight. A short trial tells little. You use the Bissell Electric Suction Cleaner for four weeks; learn to know it; decide leisurely after making every test. Then you can own it, if you wish, for

Only $1.75 Per Week

It sucks up the microscopic dust, lint, ravelings, big cuttings. And it is easier than a broom on your good floor coverings.

Weighs only 33 lbs. Any woman can carry it up and down stairs easily. Runs lightly on rubber-shod wheels, following the user without conscious effort. Reaches 40 ft. from any electric fixture. Cleans a whole floor without disconnecting.

The Bissell Electric Suction Cleaner is used in private homes, big and little apartments, office buildings, churches, hotels, theatres, restaurants, steamships; everywhere.

Appliances for sharpening knives and polishing silverware are furnished free. Equipment for running washing machines, meat choppers, bread mixers, costs only a little extra.

Isn't the servant question always with you? Here is its best solution. Try a Bissell Electric Suction Cleaner, for less than you now pay to do without it. The price is within the reach of any woman's allowance.

Ask About our Easy Payment Plan

THE BISSELL MOTOR CO., 224 Huron Street, Toledo, Ohio

FARM MORTGAGES

netting six to seven per cent. constitute the very best investments. We offer First Mortgages on the best farms in the "Garden Spot Of The World." Georgia farms capable of producing three and more crops each year, and where grazing is good for ten months each year. The land is readily salable for more than three times the amount loaned. In twelve years we have never lost a cent of principal or interest to investors.

LANKFORD & MOORE

Douglas Georgia

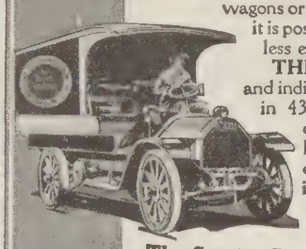
The Device That Makes The Profitable Motor Truck Possible

The real point in figuring the cost of Motor Truck Operation—and for that matter the cost of operating horse wagons—is WASTED TIME. Time lost on the road—time lost at loading and unloading stations—lost time which amounts to far more than the combined cost of tires, gas, oil, repairs and depreciation.

Checking sheets and cost-keeping systems may show some of the loss, but they miss that vital and expensive item "WASTED TIME."

THE SERVIS RECORDER deals only with time—It gives an accurate, tamper-proof record of every movement of the vehicle during every minute of the 24 hours—It gives mechanical supervision, accurate and impartial—It works equally well on motor trucks, horse-drawn wagons, or sleighs—It has no gears, shaft, or outside connections of any kind—It can be attached to any vehicle in ten minutes.

THE SERVIS RECORDER will demonstrate whether horse wagons or motor trucks are the most profitable, and show, if it is possible, how the same work can be performed with less equipment.



THE SERVIS RECORDER is in use by firms and individuals in more than 50 lines of business, in 43 cities, and by 56 railroads, for use on switching locomotives.

How the Servis Recorder operates—the economy it will effect—the improvement it will produce in delivery service—the experience of its owners, will be told without obligation.

The Service Recorder Co., 4010 E. 105th St., Cleveland, Ohio

INVESTMENTS AND FINANCE

(*Continued from page* 716)

panies in the present year and in three previous years:

Company	Number of Shareholders 1913	1912	1906	1901
Am. Sug. Ref.	18,149	17,388	12,312	10,816
Standard Oil of N. J.	*6,201	*5,759	§4,000	3,832
Penna R. R.	84,244	74,002	40,153	27,510
Reading Co.	6,560	5,924	6,388	§6,300
Am. T. & T.	53,737	49,029	17,783	8,143
U. S. Rub.	†12,846	‡9,666	3,500	3,000
	181,737	161,768	84,136	59,631

*May 20. †July 15. ‡July 6. §Estimated.

In order more fully to understand this distribution in ownership, the following summary is presented by the writer:

Shares outstanding, 1913	12,600,055
Shares outstanding, 1901	6,941,433
Shares, increase	5,658,622
Shares, increase per cent	81.5
Number of shareholders, 1913	181,737
Number of shareholders, 1901	59,631
Increase	122,106
Increase per cent	204.7
Average per holder, 1913	69.3
Average per holder, 1901	116.4
Decrease, shares	47.1
Decrease per cent	40.4

Of these six companies, only American Sugar and Reading fail to show a change in capitalization between 1901 and 1913. Standard Oil made only a small increase, while the Pennsylvania and U. S. Rubber more than doubled their stock and American Telephone tripled its share capital.

Of the six companies referred to above, five report the number of their women stockholders for the present year and for last year. Following is a table in which these figures are shown, along with the total number of shareholders and the percentage of shares held by women:

Company	1913 Shareholders Total No.	Women	%	1912 Shareholders Total No.	Women	%
Am. S. R.	18,149	9,606	52.9	17,388	*9,349	53.7
St. O. N. J.	†6,201	‡2,434	39.4	†5,759	§2,599	45.1
Penn. R.R.	84,244	40,325	47.8	74,002	35,376	47.8
A. T. & T.	53,737	28,188	52.4	49,029	25,589	52.1
U. S. Rub.	‖12,846	‖5,780	44.9	**9,666	**4,350	45.0
	175,177	86,333	49.1	155,844	77,263	49.6

*January, 1913. †May 20. ‡Dec. 20, 1912. §Dec. 15, 1911. ‖July 15. **July 6.

These figures are presented as "highly interesting in the light of the lowest level of prices that was reached in 1913 as compared with any other year since 1909.

Since the above figures were given out figures for two other companies have come to hand. One set relate to the Baltimore & Ohio, in which the number of stockholders during the past year increased more than 20 per cent., the number in August of this year being 14,114. In August last year the number was 11,694. This addition of 2,420 stockholders to the company's list was secured without any increase in the number of shares outstanding. Moreover, in Germany are large holdings of B. & O. stock, one banking house representing more than 10,000 shareholders, and again it is to be borne in mind that the Union Pacific Railway has a large investment in this road. The German and Union Pacific holdings together amount to approximately 50 per cent. of the entire B. & O. capital stock. Hence the other half of the stock is distributed among 14,114 owners.

Statistics on this subject, affecting the New Haven system, are also to hand. So wide is the distribution of this stock that Howard Elliot, the new president, recently said the system was "in the hands of odd-lot stockholders."

CURRENT POETRY

NOT all were carried away by enthusiasm over Mr. John Masefield's "The Everlasting Mercy" and "The Widow in the Bye Street." These were compositions of undoubted power, containing many beautiful passages, but it was objected that they were not poetry. The emotionalism of "The Widow in the Bye Street" was declared thoroughly artificial, and "The Everlasting Mercy" was held to be convincing in only a few parts. There were signs, however, that these were the work of a poe, of real talent, who, for the moment, had given up poetry in order to tell a sordid little story and moralize in the manner of his contemporaries. Now from the Ma millan Company comes a book of Mr. Masefield's earlier verse, his "Salt Water Ballads." These poems, he says, were written in his youth, and first published in book form nearly eleven years ago. It is well for Mr. Masefield's reputation that they have been republished; for many of them are real poetry, musical and spontaneous. There is humor in them, too, and a strong sympathetic realism. Kipling's influence is very evident, but this by no means constitutes a fault.

Here is a poem that has been widely quoted during the years that have passed since its first publication—perhaps it has appeared in these columns. But it can not be too often quoted, for it has the simplicity and vitality of enduring art.

Sea-Fever

BY JOHN MASEFIELD

I must go down to the seas again, to the lonely
sea and the sky,
And all I ask is a tall ship and a star to steer her by,
And the wheel's kick and the wind's song and the
white sail's shaking,
And a gray mist on the sea's face and a gray dawn
breaking.

I must go down to the seas again, for the call of
the running tide
Is a wild call and a clear call that may not be
denied;
And all I ask is a windy day with the white clouds
flying,
And the flung spray and the blown spume, and the
sea-gulls crying.

I must go down to the seas again to the vagrant
gipsy life,
To the gull's way and the whale's way where the
wind's like a whetted knife;
And all I ask is a merry yarn from a laughing
fellow rover,
And a quiet sleep and a sweet dream when the
long trick's over.

Here is a quaint superstition of the sea put into the authentic idiom of seamen. Mr. Masefield traveled the world over as a sailor before the mast and he knows the men of whom he writes.

Sea-Change

BY JOHN MASEFIELD

"Gonies an' gullies an' all o' the birds o' the sea,
They ain't no birds, not really," said Billy the
Dane.
"Not mollies, nor gullies, nor gonies at all," said he,
"But simply the sperrits of mariners livin'
again.

Fairy Magic—Telephone Reality

A tent large enough to shelter his vast army, yet so small that he could fold it in his hand, was the gift demanded by a certain sultan of India of his son, the prince who married the fairy Pari-Banou.

It was not difficult for the fairy to produce the tent. When it was stretched out, the sultan's army conveniently encamped under it and, as the army grew, the tent extended of its own accord.

A reality more wonderful than Prince Ahmed's magic tent is the Bell Telephone. It occupies but a few square inches of space on your desk or table, and yet extends over the entire country.

When you grasp it in your hand, it is as easily possible to talk a hundred or a thousand miles away as to the nearest town or city.

In the Bell System, 7,500,000 telephones are connected and work together to take care of the telephone needs of the people of this country.

As these needs grow, and as the number of telephone users increases, the system must inevitably expand. For the Bell System must always provide a service adequate to the demands of the people.

It will save your flowers from frost in the Spring and Fall; give you vegetables and blooming plants all Winter. Buy now and be ready.

Send for booklet fully describing it.

It contains valuable growing hints.

Hitchings & Co.

NEW YORK 1170 Broadway — PHILADELPHIA Penna. Bldg., 15th & Chestnut Sts.

Factory—ELIZABETH, N. J.

"Them birds goin' fishin' is nothin' but souls o' the drowned,
Souls o' the drowned an' the kicked as are never no more:
An' that there haughty old albatross cruisin' around,
Belike he's Admiral Nelson or Admiral Noah.

"An' merry's the life they are living. They settle and dip;
They fishes, they never stands watches, they waggle their wings;
When a ship comes by, they fly to look at the ship
To see how the nowaday mariners manages things.

"When freezin' aloft in a snorter, I tell you I wish—
(Tho maybe it ain't like a Christian)—I wish I could be
A haughty old copper-bound albatross dipping for fish
And coming the proud over all o' the birds o' the sea."

Homesickness, theme of much fine poetry, brings from Mr. Masefield some of his best lines. The following poem seems Celtic in spirit and in expression—perhaps because the Celts who write verse usually are homesick.

The West Wind

BY JOHN MASEFIELD

It's a warm wind, the west wind, full of birds' cries;
I never hear the west wind but tears are in my eyes.
For it comes from the west lands, the old brown hills,
And April's in the west wind, and daffodils.

It's a fine land, the west land, for hearts as tired as mine,
Apple orchards blossom there, and the air's like wine.
There is cool green grass there, where men may lie at rest,
And the thrushes are in song there, fluting from the nest.

"Will ye not come home, brother? ye have been long away,
It's April, and blossom time, and white is the may;
And bright is the sun, brother, and warm is the rain—
Will ye not come home, brother, home to us again?

"The young corn is green, brother, where the rabbits run,
It's blue sky and white clouds, and warm rain and sun.
It's song to a man's soul, brother, fire to a man's brain,
To hear the wild bees and see the merry spring again.

"Larks are singing in the west, brother, above the green wheat,
So will ye not come home, brother, and rest your tired feet?
I've a balm for bruised hearts, brother, sleep for aching eyes,"
Says the warm wind, the west wind, full of birds' cries.

It's the white road westward is the road I must tread
To the green grass, the cool grass, and rest for heart and head,
To the violets and the warm hearts and the thrushes' song,
In the fine land, the west land, the land where I belong.

"Isn't this going to look splendid?"

"—and to think we've escaped all the dust and muss of lath and plaster."

Ever so many home owners are finding Utility Wall Board just the building material they desire.

Three Sash Frame

Why Not a Winter Garden?

You will find it profitable to raise your own vegetables and flowers this winter. **Lutton** Miniature Glass Gardens show a profit the first season.

You can supply your table, during the long winter months, with crisp, curly lettuce, radishes, small white onions or Queen Louise Violets.

Start your seeds early in the Spring and have strong, healthy plants weeks before your neighbors. Try out some of those ideas you have on the early production of vegetables.

We have a large supply of frames, single and double glazed, in 2, 3 and 4 sash sizes, at exceedingly low prices. Carefully crated and shipped ready for immediate use. Easily erected and stored away compactly in the summer.

Send for pamphlet D, giving full particulars regarding these Frames and Lutton's Patented Greenhouses.

WILLIAM H. LUTTON

Office and Works — Jersey City, N. J.

John Drinkwater's poems are full of splendid optimism. Here is one of them—a gay song that Stevenson would have enjoyed. It appears in *The Spectator*.

Dominion

BY JOHN DRINKWATER

I went beneath the sunny sky
When all things bowed to June's desire—
The pansy with its stedfast eye,
The blue shells on the lupin spire,

The swelling fruit along the boughs,
The grass grown heady in the rain,
Dark roses fitted for the brows
Of queens great kings have sung in vain;

My little cat with tiger bars,
Bright claws all hidden in content;
Swift birds that flashed like darkling stars
Across the cloudy continent;

The wiry-coated fellow curled
Stump-tailed upon the sunny flags;
The bees that sacked a colored world
Of treasure for their honey-bags.

And all these things seemed very glad,
The sun, the flowers, the birds on wing,
The jolly beasts, the furry-clad
Fat bees, the fruit, and everything.

But gladder than them all was I,
Who, being man, might gather up
The joy of all beneath the sky,
And add their treasure to my cup,

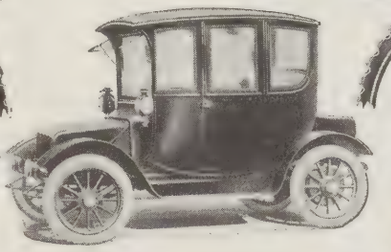
And travel every shining way,
And laugh with God in God's delight,
Create a world for every day,
And store a dream for every night.

A correspondent of the New York *Times Review of Books* gives high praise to Alanson Tucker Schumann's "The Rose and the Man," a book which was, he says, published in this country several years ago. We have never before heard of Mr. Schumann, but the excellence of the verse quoted in the letter makes us regret that the publisher's name is not given. Mr. Ranck says of the following sonnet: "Nothing finer has been done in this country." This is, of course, a wildly extravagant statement; it would not be difficult to find, in half an hour, a dozen better sonnets. But this does not alter the fact that "Guidance" is a splendid poem, admirable in craftsmanship and noble in thought.

Guidance

BY ALANSON TUCKER SCHUMANN

Upon the corner of a village street,
Close to the limits of my homestead lands,
An unpretentious upright firmly stands,
In workmanship plain, commonplace and neat:
To make its purpose clear, its form complete,
Below its top, like fingerless still hands,
A lettered board, transversely placed commands
To the right path the stranger's doubting feet.
And when the vision widens, and the stars
Majestically move across the night,
And God seems near in their eternal glow—
When no harsh voice the sacred silence mars,
I see, beyond the structure's slender height
The shadow of a cross upon the snow.



Riding in State

No royal coach builder ever lavished more infinite care and pains on a monarch's equipage. A standard developed through sixty years of unceasing endeavor has given Rauch & Lang Electrics an unchallenged prestige that commends them to those of ultra discernment. It is a matter of "not how many, but how good." Naturally our production is limited.

Three Types of Control

For All Driving Necessities

Front Control—Rear Control—Combination Control. The latter type is interlocking—also brakes. Protection against meddling from person seated in rear while car is being operated from Front, and vice versa. The Rauch & Lang Control System is the most wonderful protective item in the Electric Vehicle World.

The Climax in Electric Car Construction

The New Rauch & Lang Worm Drive

Rauch & Lang leadership in the making of electrics is again emphasized in the adoption of the Worm Drive—the greatest single advancement in the history of the electric car.

As utmost beauty and refinement have always distinguished Rauch & Lang Electrics, so does the worm drive mark their continued supremacy in respect to method of propulsion. It excels the advantage of the double chain over the single—of the bevel gear shaft over the double chain. It is the engineering world's latest and greatest offering in perfect driving mechanism. It means utter simplicity in driving, greatest power-economy, greater all 'round efficiency, better riding and coasting qualities, no adjustments, no misalignment, *and lower upkeep cost.* Its silence is soothing. The worm drive is the only practical direct drive in electrics, and the Rauch & Lang Straight Type Worm Drive is superior to all others.

Any Rauch & Lang Agent will gladly demonstrate. Catalog mailed on request.

A PERFECT FIGURE MAY BE YOURS

Your appearance depends greatly upon your figure. The beauty of your figure depends largely upon you.

How to Perfect Your Figure, Reduce or Increase Your Weight

Devote fifteen minutes daily to my system and you can weigh what Nature intended. You can reduce any part of your figure, burdened with superfluous flesh or build up any part that is undeveloped. It can be concentrated on your hips, waist, limbs or any other portions of your body.

It tends to make a figure perfectly proportioned throughout—a full rounded neck, shapely shoulders, arms and legs; a fresh complexion; good carriage, with erect poise and grace of movement.

You Can Improve Your Health

My system stimulates, reorganizes and regenerates the entire body. It helps transform the food into good, rich blood. It strengthens your heart, lungs and other organs, conquering all weaknesses and disorders, and generating vital force.

My latest book, "The Body Beautiful," should be read by every woman, and *I will send it to you free.* It explodes the fallacy that lack of beauty or health cannot be avoided. In it I explain how every woman can be VIGOROUS, HEALTHY and ATTRACTIVE.

I have practised what I teach. In childhood I was puny and deformed. I have overcome all weaknesses by my own natural, drugless methods. Millions of people have seen in me a living demonstration of my unique system of health culture and body-building. If you are weak, nervous, fat, thin, unshapely, tired, lacking vitality or in any other respect not at your very best, I can surely be of service to you.

My Guarantee

With my free book, "The Body Beautiful," which is fully illustrated with photographs of myself explaining my system, I give full particulars of my Guarantee Trial Plan, whereby you can test the value of my instruction without risking a single penny.

Send 2-cent stamp for "The Body Beautiful" and Trial Plan today

ROCHESTER ROTARY WASHER

Does the hardest part of housekeeping, and allows the housekeeper or maid to be doing something else at same time.

A cylinder laundry machine for domestic use—operated by Electricity, Water, Gas Engine or hand. Cleanses by tumbling and the suction of the hot suds in revolving wooden cylinder. (Patent wooden wings prevent packing.)

Does Not Wear Out the Clothes and Washes Clean without tearing or grinding action. Has a capacity of approximately seven sheets or equivalent. Washes everything from Blankets to fine linen. **A great time and money saver on wash day**

Write today for our descriptive booklet. Mention the kind of power you desire.

Rochester Rotary Washer Co., 614 Cutler Bldg., Rochester, N. Y.

PERSONAL GLIMPSES

TWO MONTHS A CAVEMAN

HENRY D. THOREAU was pronounced crazy when he built himself a hut on the bank of Walden Pond, near Concord, Massachusetts, and settled down to lead a primitive life for a couple of years. That a man capable of earning enough in some business pursuit to enable him to enjoy all the ordinary comforts of life should grow his own cabbages, raise his own chickens, chop his own fuel, do his own cooking, and make his own bed, looked like sheer insanity to thousands of people. The great naturalist's attempt to go "back to nature" was a sensation in his day, but, compared with what Joseph Knowles, a Boston artist, did a short time ago, the stunt was tame indeed. As we have already noted in these columns, Mr. Knowles went into the forests of Maine, August 4, to live like a real caveman. He entered the woods without clothes or any of the devices of civilized man, and returned October 4, fully clad and in good health. Reporters met him on his way back to civilization, and he told of some of his most interesting experiences. Here is the story as told in a dispatch to the New York *World:*

Knowles's actual exit from the woods was made at a point fourteen miles south of Megantic, Que., on the Canadian Pacific Railroad tracks.

Clad in rudely drest skins of black bear and deer, and carrying in a pack on his back a fire-machine and other tools he had fashioned to aid him in living in a primitive way, Knowles looked like a caveman. Thus ended a test of hardihood and endurance, of skill in conquering a hostile environment.

Knowles is in good physical condition, despite the fact that his final week in the forest entailed a test of endurance that was completely unforeseen and equally unnecessary. In his dread that the game wardens of Somerset County might seek him out in his forest lair and bring his struggles to naught by arresting him for a breach of the game-laws, he left his domain near Spencer Lake and struck out across the untracked wilderness, seventy miles, for the boundary mountains of Canada, overlooking Lake Megantic. He traversed seventy miles of the wildest and most inhospitable country.

He has lost thirty pounds of weight in the two months, dropping from 204 pounds to 174. His appearance clearly tells the tale of the hardships he has undergone. From head to heel, he is scratched and bruised by the briers and underbrush in which he has lived for sixty days. He is tanned almost black.

Over his neck and arms was a black bearskin, cleverly fastened with thongs of deerskin. His trousers were of deerskin, made Indian fashion, with the hair inside. His feet were encased in moccasins of buckskin, sewed with sinew. He wore no hat, no sleeves, no underwear.

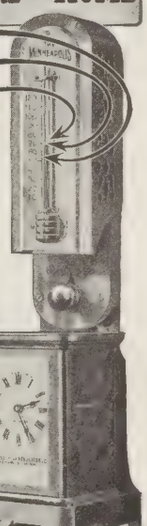
RIGHT TEMPERATURE IN THE HOME

Below Sixty While Asleep
Warm at Waking Time
Even All The Day



WITH this perfect device you can determine exactly the inside temperature regardless of outdoor conditions or variations—whether 20 below or 40 above. All adjustments are made instantly from the thermostat which has its place on the wall in living room.

The "MINNEAPOLIS" HEAT REGULATOR With Time Attachment

Relieves one of many steps. Prevents all extremes of temperature and waste of fuel. Maintains an even, healthful temperature day and night. The "Minneapolis" is the "original" and "best" heat regulator—the standard for over 30 years.

Two styles of clock attachment:
Model No. 60—8-day clock.
Model No. 47—1-day clock.

Clock attachment enables one to secure automatically a change of temperature at any set hour. Model No. 60 (shown here) is the 8-day model. Used with any heating plant. Sold and installed by the heating trade under positive guarantee of satisfaction.

Write for booklet. Shows models, explains details, gives prices.

MINNEAPOLIS HEAT REGULATOR CO.
2754 Fourth Ave. So., Minneapolis, Minn.

On his back was a knapsack of woven bark. It was filled with trophies from the forest. Slung over his arm were his bows and arrows. Sheathed in buckskin a crude knife of horn hung from his belt.

Little Miss Frienie Gerard, of Lake Megantic, a fourteen-year-old child of the woods, was the first person to greet him. She had wandered far out of the town, and then she stopt suddenly and gazed ahead. Walking toward her with long, swinging strides came a creature of fur, a different animal than she had ever seen before. She did not run, for somehow, she afterward explained, she thought it was a strange man, in spite of the fact that in the distance the figure appeared like a great bear.

When he reached Megantic, Knowles got a big reception. He went to a hotel. The first thing he did was to remove his bearskin covering. Then he saw the bed.

"A bed—a real bed! Let's see how it feels!" he said, and threw himself full length upon the mattress.

"How are you feeling?" asked a reporter.

"Never felt finer in my life. Say, is there a cigarette around here?" he said quickly, and in a moment Knowles, stretched out and comfortable, stript to the waist, was literally devouring his first smoke for many weeks.

"I ate a spruce partridge yesterday," he said; "nothing much since."

"Are you not hungry?"

"Not a bit." However, Dr. Gregory, who happened to come into the room a moment later with the Mayor and the Maine and Canadian game wardens, prescribed a glass of milk, which Knowles drank with great relish.

"My food largely consisted of fish, deer meat, bear meat, spruce partridges, and berries," said Knowles. "As late as last week I found blueberries in the burnt lands. I am feeling in fine condition. I do not believe every man can do what I have done, but I feel confident that a man with good health, a knowledge of the woods, and resourcefulness can accomplish the same thing. I believe any one of the game wardens could do it. I have satisfied a curiosity.

"The hardest thing of all was the awful lonesomeness, because of which I came near coming out twice. The isolation almost drove me crazy. Several times I have heard voices afar off, and that made it only the harder.

"The eating question is nothing, neither is the dress. I have not suffered any to speak of from the cold. It was that awful lonesomeness.

"For the last ten days I have done little. Up to that time I constantly aspired to accomplish something, but my ambition left me. During the last ten days I believe I have gained ten pounds because of this.

"On my trip up to Canada I simply used the moss on the north side of the trees to guide me. I started on this march to Canada the day after I waved the torch on the shore of King and Bartlett Lake. When I got out I was not sure whether it was Saturday or Sunday. It was a pretty rough country, but my trip to-day was largely downhill all the way.

"I came through the deepest forest because I did not dare to strike the roads,

Now comes the season when Comfort depends on the car

Five-Passenger Coupe, $2900 The Borland Electric *Either Front or Rear Seat Drive*

Here is the car that you will like—this car of delightful comfort; easy-riding and serviceability—this car of grace and sturdy build. Spacious; luxuriously appointed; accommodates five persons comfortably—*all* facing forward. Exclusive Borland arrangement of brake levers eliminates the opening in floor where cold draughts enter in most electrics. Neither wind or rain, snow or sleet can mar your enjoyment. The Borland Electric gives a superlative degree of comfort in all sorts of weather.

5 passenger coupe body; wheel base, 96 inches; left-side drive, with horizontal lever control from either front or rear seat. Six speeds forward and three reverse. Regular equipment includes "Exide" batteries; standard makes of cushion or special pneumatic electric tires. Price, equipped ready for service, $2900.

May we send you the handsome Borland Poster Book? Just write and say so.

INTENSE Distributed Draft Warm Air **FURNACE**

Not warmed-over air but warm air that has moisture and oxygen

Real heating economy is realized when you heat your home most comfortably and healthfully **and save fuel.** The INTENSE Furnace is made on a new principle of distributing draft through two rows of flues directly above the fire which means quick heating and no waste of heat units. **A patented check draft permits absolute control of fire.** The INTENSE burns any fuel and gets the most heat out of it. Made of cast iron and is practically indestructible. Stands only 51 inches high, permitting it to be installed in low cellars, thereby insuring proper elevation of heating pipes. Has revolving duplex grates; self-cleaning flues; simple hot water attachment; portable ash pan and other features explained fully in *literature sent free on request.*

View shows Jacket Removed and Draft Flues cut open.

for fear of being seen before time. Then from up in the mountains I heard a wonderful thing. I heard the whistle of a train. I prest toward it and finally came on the railroad tracks. Some one told me later it was a little after four o'clock."

When questioned about salt, he said he missed it very much for the first few weeks, but after that he never thought about it. When asked what he would have to eat he ordered fried salt pork and potatoes.

THE LONG ARM OF PATRICK FORD

THO a citizen and resident of this country since early childhood, Patrick Ford, founder and for forty-three years editor of *The Irish World*, is said to have done more than any other man in the fight against "landlordism" in Ireland. The New York *World* says that "by agitation and organization in favor of Home Rule in Ireland this citizen of the United States exerted an influence upon the British Government second to that of no other man." Parliament certainly never had many foes who fought longer and more persistently. The mere mention of his name used to cause excitement in the House of Commons. Five years ago the House was thrown into an uproar when a member demanded to know whether Premier Asquith meant to allow him to return to Ireland. Ford died September 23 at his home in Brooklyn. The New York *Sun* sketches his career:

In the United States he enacted no unimportant part in American politics. Under his leadership thousands of voters in 1884 broke away from the Democratic party and cast their ballots for Blaine, his personal friend. How Burchard's "Rum, Romanism, and Rebellion" saved the day for the Democratic party is a matter of history.

His influence exerted through the medium of *The Irish World* continued to be felt in subsequent Presidential elections.

While doing this work on this side of the Atlantic he was inspiring his countrymen in Ireland with his own irreconcilable hostility to Irish landlordism. Gladstone in a speech delivered in the House of Commons on April 18, 1882, declared, "But for the work *The Irish World* is doing with the money it is sending across the ocean there would be no agitation in Ireland."

Equally emphatic was the testimony of famous Irish patriots.

Born in Galway, Ireland, April 12, 1837, he immigrated to America with his parents in 1846. Boston was the field of his early activities. As a boy he obtained employment in the printing-office of William Lloyd Garrison, who at the time was editing and publishing *The Liberator*. In 1855 he began his journalistic career by writing for the Boston newspapers.

In 1860 he was the editor and publisher of the Boston *Sunday Times*. When the war came Mr. Ford enlisted in the Ninth Massachusetts. He took part in the desperate charge at Fredericksburg.

After the Civil War he removed to Charleston, S. C., where he founded the Charleston *Gazette*. Four years later he issued in New York the first copy of *The*

L. & C. HARDTMUTH
34 East 23rd Street New York City

Irish World, with which his name was to be identified for the next forty-three years.

When the Land League came into existence in 1879 he founded 2,500 branches of it in the United States. Through *The Irish World* he collected and forwarded to the treasurer of the Land League in Ireland almost half a million dollars.

Sir George Trevelyan once said he considered Ford "the greatest editor of all time." That was going pretty strong, even for an enthusiastic admirer, but *The Newspaper World* (London) says that, judging by results, the tribute was not so wide of the mark as it might seem. To quote this British estimate:

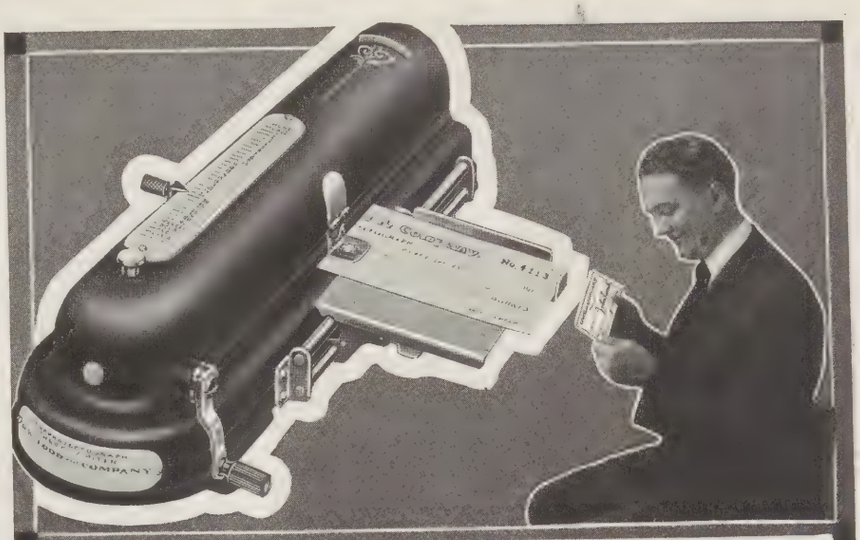
No newspaper editor of any nationality before Mr. Ford's time (nor, perhaps, since) had ever by the intrinsical power of his pen compelled a hearing from an English party; no editor had ever, till his day, had an audience so far-flung throughout the world and at the same time so intimately united on the given principle; without Patrick Ford, Parnell would not have entered into history, nor the historic Third party of the later Victorian age, without his paper's assistance, been able to maintain an unequal fight with circumstances that were naturally adverse to its cause. Surely this record by itself justified the words of Trevelyan, and remains a living tribute to the power of the press. Among the regular readers of the paper have been men so far apart in opinion as John Bright, Cardinal Manning, the late Dukes of Argyll and Westminster, Rhodes, and Chamberlain.

From a purely technical point of view it will interest newspaper men to hear that *The Irish World* is one of the few papers which have ever been able to flourish by their circulation alone. I once asked a prominent advertising man in New York if he could explain this phenomenon, and his answer is worth recording. He said: "It is one of the few papers in existence that was ever absolutely sure of its principles and couldn't be bribed to change them. Its existence independently of advertisers is an object-lesson in the value of sincerity and shows to what an extent that quality can find admirers in the world."

As exemplifying this tenacity of principle, the same advertising agent assured me that he had once on behalf of a whisky firm offered *The Irish World* five thousand dollars for space in one issue in which to advertise a particular brand of whisky. The advertisement was promptly refused, the proprietors of the paper being the most strenuous advocates of the temperance principle.

Again, *The Irish World,* till quite recent years, for long held the record for the biggest issue. During the height of the Nationalist campaign in the 80's a single issue numbered 1,600,000 copies the extra expense of this gigantic "pull" being borne by the proprietors for the principles of their movement.

Much has been written in the English press about the "arch-terror of the Fenian movement," as a London daily has described the late editor. The reality was altogether different, and in Mr. Ford there was incomparably more of the scholar and



★★★ FIFTEEN DOLLARS TWENTY SEVEN CENTS

SAVES TIME

THERE is a machine that writes "*and protects*" checks 25% faster than the fastest method heretofore known.

It saves time enough to repay the cost of the machine every 6 months or so (to the average business).

The business-like appearance and legibility it gives to the amount of your check is in itself worth the cost.

No check written by this machine can possibly be raised—and that may save your bank account.

Even the man or (woman) who never writes a check except to pay the grocer's bill is on the danger line without this

If you do not realize that every unprotected check you sign carries the possibility of being raised and wiping out the last dollar in your bank account, then let us remind you that there is at least Fifteen Million Dollars of loss on bogus checks yearly. When a crook gets hold of your check for a dollar or two, he has your official bank signature—he leaves that, changes the amount to suit himself, and your bank has to honor it—pay the cold cash right out of your account. If your neighbor has suffered, he wouldn't tell you—his pride and business credit are at stake.

The one method of Check Protection (in use 14 years) that has never yet been beaten, even by experts, is the Protectograph principle.

The Protectograph Check-Writer writes the amount in words—in two separate colors—a word at each stroke, fast as your hands can move.

Each word is cut into shreds and indelible ink is forced through and through the shreds under enormous pressure. Any attempt to alter the amount of the check *destroys it and makes it worthless.*

The amounts are written *in blue* denominations *in red,* plain as print. This makes mistakes impossible in reading the amounts.

If you saved only 15c to 25c a day in labor (we will demonstrate that) this little machine would pay for itself in a few months.

Write us and we will send you a new book by Detective Burns on the subject of Check Raising, showing "horrible examples" of the clever work of check raisers.

Pin the coupon to your business stationery, because banks expect us not to furnish this "confidential" information except to responsible business men who are entitled to know the dangers of signing unprotected checks.

With it, we send you samples of the beautiful work of the Protectograph Check-Writer. It will surprise you and may save your bank account.

student than of the agitator. He was one of the most authoritative American students of Shakespeare, while Newman was an open book to him. He found his practical vocation as editor of *The Irish World*, the editorials of which organ have, even to the present time, maintained an individual style which places them among the very highest type of journalistic work performed in America.

TOO YOUNG TO GET A HERO MEDAL

FIVE-YEAR-OLD Freddie Smith, of Columbus, Ohio, performed a deed of extraordinary heroism, and yet he is not a hero, according to the Carnegie Hero Fund Commission. The reason he failed to receive any reward was that the Commission ruled that he had "not yet reached the age of discretion." Freddie is the son of a non-commissioned officer of the Salvation Army, and his case was presented to F. M. Wilmot, manager of the Commission, at Pittsburg, by Col. John E. Margetts, national secretary of the children's department of the Army, with headquarters at 122 West Fourteenth Street, New York City. The little boy saved Tenia Daily, his playmate, from drowning. The particulars are given by the New York *Globe:*

Colonel Margetts' statement of the lad's bravery was supported by a number of persons who witnessed the deed. Freddie, according to these statements, jumped into the river in the rear of the prison at Columbus, and, just as the girl was sinking for the last time, seized her by the hair and dragged her to the shore.

For some time eye-witnesses said they feared both children would be drowned. Freddie, when the rescue was accomplished, was nearly unconscious and the little girl apparently dead. They were both revived, however, in a brief time. The women in the neighborhood screamed and the big boys looked helplessly at each other, fearing to follow the example of the devoted lad. Several men appeared on the scene just in time to see the children fall helplessly on the bank after escaping from the water.

Manager Wilmot's letter reads in part:

"The Carnegie Hero Fund applies to acts in which conclusive evidence may be obtained showing that the person performing the act voluntarily risked his own life in saving, or attempting to save, the life of a fellow being, or who voluntarily has sacrificed himself in a heroic manner for the benefit of others.

"This five-year-old child's act, I regret to say, is not of a character to bring it within the scope of this fund, as, thus far, the Commission has not seen its way clear to give favorable consideration to acts performed by children who have not reached the age of discretion."

"Of course," said Colonel Margetts, "the Commission has a perfect right to make any rules it sees fit. But if a child is to be denied a reward because it has not reached an age of accountability or responsibility, surely it would be wrong, according to the same process of reasoning, to punish it for wrongful acts until it

Get that boy you are interested in a set of MECCANO

The steel frame work that a boy bolts together today with pieces of

MECCANO

not only is a wonderful structure to him but it may become a giant skyscraper tomorrow.

See a set of the brass and nickeled steel pieces of Meccano at your toy or sporting goods store. Look through the book of designs at the wonderful things a boy can build with Meccano, yet these designs only hint at the possibilities of Meccano in the hands of a boy with originality.

Be sure name Meccano is on box

If your dealer does not keep Meccano, write to us for catalog showing models any boy can build and let us tell you more about this most instructive and most interesting Meccano.

reaches the age of discretion, whatever that may be.

"I am keenly disappointed. I was under the impression that no person was excluded from the benefits of the Carnegie Hero Fund who has performed deeds of the character mentioned."

Freddie lives with his parents at 139 South Scioto Street, Columbus.

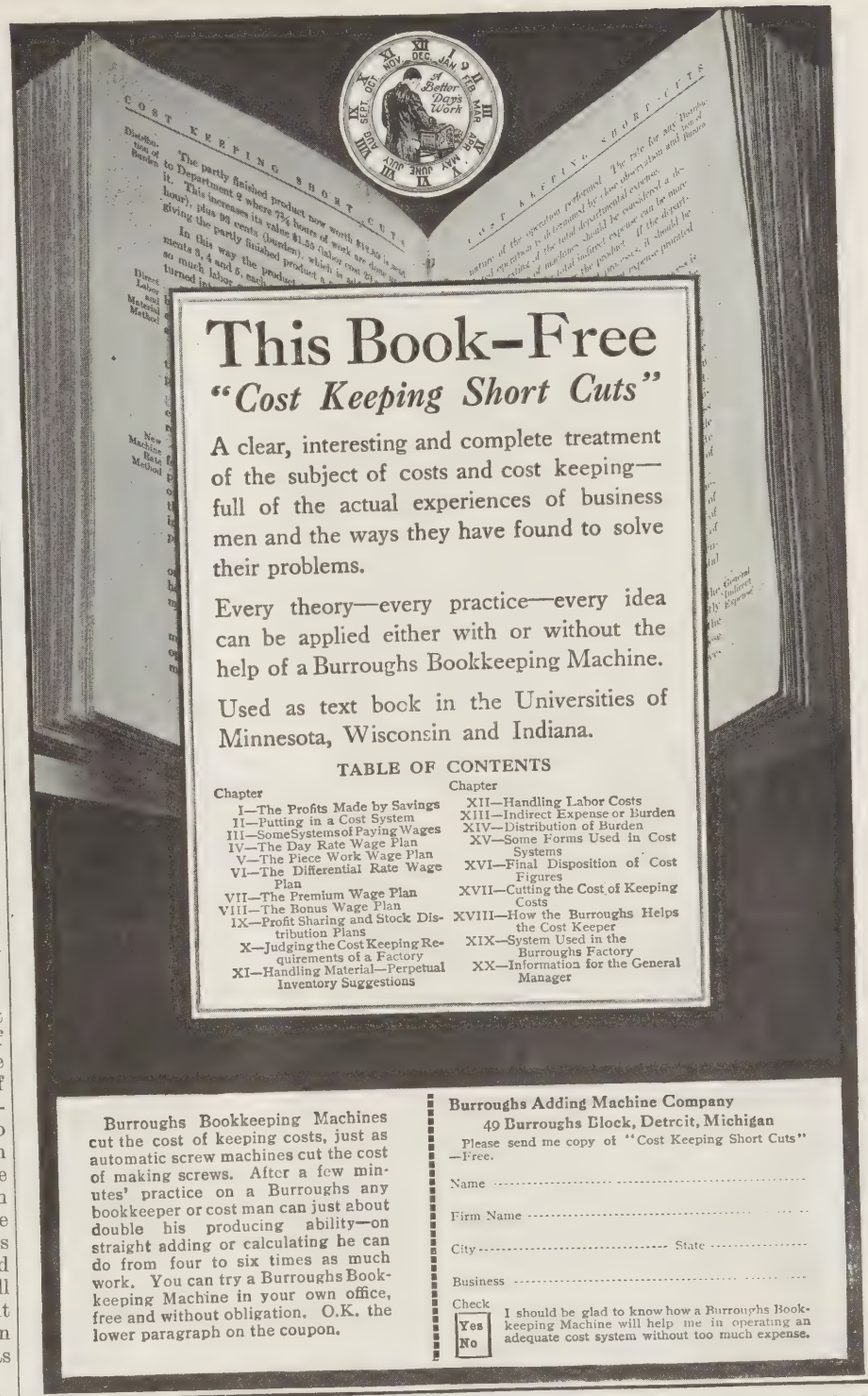
BOMBITA OF THE BULL RING

BOMBITA has retired. And since he was a successful Spanish matador, handsome, expert, and popular, he has amassed a fortune of perhaps a million dollars, according to an article in the New York *Evening Post*. But the news of his retirement is most interesting, we read, not because of the many dollars Bombita has amassed, or of the 3,000 bulls he has slain, but because this matador abandons his career while still in possession of all the agility of youth—while still "on the sunny side of thirty." A New Yorker is quoted in *The Evening Post* who tells of seeing Bombita twice. The first time was when this petted idol of Spanish femininity was leading a strike of matadors who wanted more money for meeting the particularly dangerous bulls raised by one Señor Miura. The second occasion was at the Plaza de Toros in Madrid, and here Bombita was seen in action. The "New Yorker's" vivid story of a typical bull-ring episode is given in *The Evening Post:*

It was when the last bull was brought on that the trouble began. He was one of Miura's, an agile, snappy, vicious little jabonera, and the toreros were wary of him from the start. He showed his gameness from the moment that he dashed into the ring with ribbon streamers flying from the cruel prong that is thrust into the shoulder of every bull as he goes through the gate leading from his pen into the arena. He galloped out with a toss of his horns and a lashing of his tail that seemed to say, "Just a moment, good people. I will have this ring cleared of these impertinent little creatures in satin and gold braid in half a jiffy!" And he made good, so far as one of the poor chaps was concerned.

The first incident that set the bull-fighters on their guard was the tossing of Gaona, a visiting Mexican matador, who took a turn with the capa among Bombita's crew. Luckily, the bull's horns did not penetrate his body, but he was tossed on the bull's nose, and came near to being gored as he lay quietly where he had fallen, before the other toreros could distract the animal with their capes.

Then came the tragedy of the afternoon. Lajartillo, which means little lizzard—all bull-fighters take the name of some animal or implement or weapon, such as Bombita, little bomb; Cuchillo, knife, and so on—was one of Bombita's banderilleros, one of the men who insert the gaily decked spindles in the bull's shoulders. He placed the banderillas beautifully, stepping aside with ever so slight and graceful a movement as the bull charged, and the crowd yelled its joy at his cleverness. It was



This Book-Free

"Cost Keeping Short Cuts"

A clear, interesting and complete treatment of the subject of costs and cost keeping—full of the actual experiences of business men and the ways they have found to solve their problems.

Every theory—every practice—every idea can be applied either with or without the help of a Burroughs Bookkeeping Machine.

Used as text book in the Universities of Minnesota, Wisconsin and Indiana.

TABLE OF CONTENTS

Chapter
I—The Profits Made by Savings
II—Putting in a Cost System
III—Some Systems of Paying Wages
IV—The Day Rate Wage Plan
V—The Piece Work Wage Plan
VI—The Differential Rate Wage Plan
VII—The Premium Wage Plan
VIII—The Bonus Wage Plan
IX—Profit Sharing and Stock Distribution Plans
X—Judging the Cost Keeping Requirements of a Factory
XI—Handling Material—Perpetual Inventory Suggestions
XII—Handling Labor Costs
XIII—Indirect Expense or Burden
XIV—Distribution of Burden
XV—Some Forms Used in Cost Systems
XVI—Final Disposition of Cost Figures
XVII—Cutting the Cost of Keeping Costs
XVIII—How the Burroughs Helps the Cost Keeper
XIX—System Used in the Burroughs Factory
XX—Information for the General Manager

Burroughs Bookkeeping Machines cut the cost of keeping costs, just as automatic screw machines cut the cost of making screws. After a few minutes' practice on a Burroughs any bookkeeper or cost man can just about double his producing ability—on straight adding or calculating he can do from four to six times as much work. You can try a Burroughs Bookkeeping Machine in your own office, free and without obligation. O.K. the lower paragraph on the coupon.

is to the ears what glasses are to the eyes. Invisible, comfortable, weightless and harmless. Anyone can adjust it." Over one hundred thousand sold. Write for booklet and testimonials.

THE MORLEY CO., Dept. 772, Perry Bldg., Phila.

evidently that applause which caused his undoing, for, thinking doubtless that the bull was safely by, he turned to bow. But the bull had not turned its attention to the other men in the ring, and as Lajartillo turned it charged him from behind, and one horn penetrated the base of his skull.

This didn't stop the show—it never does—and when Bombita ran out into the ring and "dedicated" the bull to some unknown in the crowd, there was an anxious hush over the entire arena. But Bombita was as nonchalant as you please. The bull had been teased into a fury. The matador advanced on him with the bright scarlet rag held out across his sword-blade, and talked to him in a quiet, conversational drawl, but, I was told, in most abusive language. There was a little preliminary play with the red rag, and then Bombita delivered the death stroke, beautifully, exactly between the shoulder-blades.

This done, the crowd leapt down into the ring, some to lift Bombita on their shoulders, some to kick and execrate the fallen bull, and more to rush to the spot where Lajartillo had fallen, and gather up handfuls of the blood-soaked sand as mementoes.

A PROFESSOR TURNED PEANUT-VENDER

EVERY now and then we read of a teacher of more or less prominence who has abandoned his profession because of poor pay and turned business man or bought a farm in the West, but it is indeed a rare thing for one to quit acting as transmitter between text-books and youthful brains in order that he may devote his time to peddling peanuts. Prof. A. E. Munier, formerly instructor in French at the Lake Forest Academy, Chicago, has not forsaken his books forever, but he has gone into the peanut business to make his fortune, and all the teaching he does is when children in the streets of the Windy City ask him to help them with translations. His own story is told in an interview printed in the New York *World:*

"There was too much monotony about the old job," he said. "It paid fair and the associations were pleasant, but I make more money selling peanuts.

"I am only twenty-six years old, so it is not strange that I should be adventurous. I love the road and its lure; the free air; the nomadic life of the gipsy. To be sure, tho, I do not sleep outdoors. When it rains I stay in my wagon.

"My adventures? They are of the simple kind. They are, let us say, 'adventures in contentment'—a barking of dogs, the wave of a pretty girl's hand, or a roguish smile, a passing machine-load of people made happy with popcorn or peanuts, and always stretching ahead run the reaches of the road. Who can say what may befall beyond the turn of a road? Perhaps I shall meet my fate some day around a bend. I am unmarried!"

"You have forgotten your books and your work in translations?" was asked.

"Not yet; I am trying to. I am on a vacation. Vergil, Horace, Cæsar, Homer, Cicero—they must all become dusty on my

BAKER'S COCOA

book shelves. I have the American fever for money-making, and when I have 'made my pile' I shall return to my books and be happy. I shall visit Europe again for pleasure purely.

"But I am not allowed altogether to forget my books. The students who know me and to whom I sell my wares, will not let me. Often they gather about my wagon and I help them with their French or their Latin or their Greek. In return they buy peanuts and popcorn and chewing-gum.

"You would be surprized, but I am able to put away more than $200 a month. I could never do that teaching. Therefore, I do not teach. It is a cheerful life; an honest vocation—and a big, comfortable splash of light in the darkness."

HOW HELEN KELLER "SEES" LIFE

MANY have been puzzled by Helen Keller's ability to write familiarly of things about which a person both blind and deaf would be expected to know very little, and not a few have doubted the authorship of some of the articles which have appeared under her name. Recently she wrote a Socialistic article for *The Outlook*, and a friend and literary adviser remarked to her that he had heard men say, "How can she know about life, about people, about affairs?" The question interested Miss Keller, and she wrote a letter to the editors of *The Outlook* explaining how she keeps in touch with humanity and its doings. The letter, published as a preface to her article, is a new chapter of the life-story of this remarkable woman, who, in the opinion of the late Mark Twain, is one of the two most wonderful personalities the world has known since the beginning of the nineteenth century—Napoleon Bonaparte being the other. She writes:

I must plead guilty to the charge that I am deaf and blind, altho I forget this fact most of the time. Occasionally I come into sharp collision with the stone wall out in my back field, and for a second or two there is not the slightest doubt in my mind that I am blind. When my friends tell me they can not hear me speak because a freight-train is passing, I realize that I am deaf. But I do not feel so very sorry; for it is not pleasant to have one's thoughts disturbed by the noise of a freight-train.

As for the other charges, they are groundless, they are ridiculous. My blindness does not shut me out from a knowledge of what is happening about me. True, I did not witness the recent dreadful wreck at Stamford; neither did most people in the United States. But that did not prevent me, any more than it prevented them, from knowing about it. To be sure, I can not hear my neighbors discuss the events and questions of the day; but, judging from what is repeated to me of those discussions—and all that they say is often repeated conscientiously—I feel that I do not miss much.

I prefer to use the eye and the ear of the world which the printed page makes mine. I prefer to read the opinions of well-informed persons, clear thinkers like Alfred Russel Wallace, William Morris, Bernard

WHITTALLS
·THE MARK OF QUALITY·

The Ancient Assyrian Conqueror

gloried in the gorgeous booty won by the strength of his good right arm—houris beautiful as the moonbeams, fabrics delicate as the spider's web, treasures as rich as Ali Baba's, but nothing so highly prized as the wonderful rugs from the looms of the Orient—fit to grace the halls of kings.

¶ These splendid old masterpieces have long since taken up their permanent abode in museums and private collections, but

Whittall Rugs

the modern reproductions of Oriental Art at its best, fortunately give us the same artistic effect—a perfectly balanced harmony of color, design and fabric, and at a price you can afford.

¶ They are made to satisfy our inherent craving for the beautiful—but, quite as important, to wear long and well. Everything about them is up to the highest standard that can be reached by unremitting expenditure of time, money and brains.

¶ And a Whittall Rug comes to you *clean*. Every step in the process of manufacture is under perfect sanitary conditions. Just think for a moment what this means to you.

¶ *A half hour with our latest booklet, "Oriental Art in Whittall Rugs," will go far toward making you "carpet wise." Sent free upon request.*

Wax Is the Finest Floor Finish

No other finish can bring out the lights and depths of the wood grain so beautifully. But you must use

Old English Floor Wax

to get the most beautiful and lasting effects on floors, interior woodwork and furniture, because:

There is much more of the hard imported (and expensive) wax used in the making of Old English than goes into other floor waxes. Therefore, Old English spreads over more surface, wears longer, polishes better and is, consequently, more economical. 60 cents' worth will cover the floor of the average parlor or drawing room. The floor will not be sticky, will not collect dust, will not show scratches or mars. Send for

Shaw, Sir Oliver Lodge, H. G. Wells, William English Walling, Judge Lindsey, Robert Hunter, Karl Kautsky, Herbert Spencer, Darwin, and Marx. You say, "But what do you know about life that enables you to judge of the competency of such men to give an opinion?" If books are not life, I do not know what they are. In the writings of poets, sages, prophets is recorded all that men have seen, heard, and felt. Having all this in the grasp of my two hands, my means of observing what is going on in the world is not so very limited, after all. I have all the keys to the doors of knowledge. I am benefited by every observation made by scientist, philosopher, prophet. The eyes of the mind are stronger, more penetrating, and more reliable than our physical eyes. We can see a lot of things with a little commonsense light to aid our perceptions.

I have never been a captain of industry or a strike-breaker or a soldier; neither have most people. But I have studied about them, and I think I understand their relation to society. At all events, I claim my right to discuss them. I also know something about gambling; for I gambled once, in stocks and bonds—once only; for I lost all I had in that one venture. But if I did not win, somebody else did, and I had a good deal of "first-hand experience."

I have worked for the blind. I have come into contact with them. I have taken an active part in meetings and spoken before legislatures in their behalf. I have studied their problems, and, in order to understand them fully, I found it necessary to study the problems of the seeing among whom the blind live and work. I have found that the needs and difficulties of the sightless are similar to the needs and difficulties of all who are handicapped in the struggle for a livelihood, for education, for equal opportunity. If this work for the blind is not "first-hand experience," I do not know where you or I can get it.

Finally, I have visited sweat-shops, factories, crowded slums of New York and Washington. Of course I could not see the squalor; but if I could not see it, I could smell it. With my own hands I could feel pinched, dwarfed children tending their younger brothers and sisters while their mothers tended machines in near-by factories. Besides the advantages of books and of personal experience, I have the advantage of a mind trained to think. In most people I talk with thought is infantile. In the well-educated it is rare. In time their minds become automatic machines. People do not like to think. If one thinks, one must reach conclusions, and conclusions are not always pleasant. They are a thorn in the spirit. But I consider it a priceless gift and a deep responsibility to think. Thought—intelligent thought—gives new eyes to the blind and new ears to the deaf.

Silence Best Policy.—MRS. NEWED—"I am in an awful fix, mama."

MRS. EAGLEBEAK—"What is the matter?"

MRS. NEWED—"I went through George's pockets last night to hunt for change, as you advised me to, and I found some letters which I gave him to post last week, and now I dare not scold about the letters for fear he'll scold about my going through his pockets."—*Puck.*

The New Age

Of the iron age we often hear,
And the fabled age of gold,
But now the income tax brings near
An age of wealth untold.
—*New York Sun.*

The Wisest Goddess.—When entertaining some school children at her country house a certain famous spinster took them round the rooms and pointed out the beautiful things in them. "This," she said, indicating a statue, "is Minerva." "Was Minerva married?" asked one of the little girls. "No, my child," said the spinster, with a smile; "Minerva was the Goddess of Wisdom."—*Sacred Heart Review.*

A Diver's Disease.—"What," inquired the Sunday-school teacher of her youthful pupils,—"what are divers diseases?"

Bashful or ignorant, the scholars clung tenaciously to the doctrine that little boys should be seen and not heard.

"Come," pursued the teacher, "can't any of you tell me?"

Then Johnnie's arm shot up.

"Well," asked the teacher.

"Please, miss," answered Johnnie, "water on the brain."—*Sacred Heart Review.*

THOUSANDS OF ACRES OF RICH, PRODUCTIVE LAND IN MONTANA FREE

Congress has now made it easier than ever before to take up free land in the Great Northwest. The period of "homesteading" residence has been reduced from five years to three years, with five months' leave of absence each year. Thousands of acres of highly productive land are as yet untouched. Here lies independence for you, health and vigor for your children, happiness for all. Government tests have proved this land in Montana 30% to 50% more productive than lands of the Middle West. Literature giving details and full information of how to procure government land sent free on request. Write for descriptive folder N. Address O. E. Shaner, Immigration Agent, Chicago, Milwaukee & St. Paul Railway, 750 Marquette Bldg., Chicago.

MONEY-MAKING FARMS—17 states, $10 to $50 an acre; live stock, tools and crops often included to settle quickly. Big illustrated Catalogue No. 36 free. E. A. Strout Farm Agency, Station 14, 47 W. 34th St., N.Y.

The Finest Resort Hotel In the World has been built at Sunset Mountain, Asheville N. C.

Open all the Year
Absolutely Fireproof

Mr. E. W. Grove, of St. Louis, Mo., has built at Asheville, N. C., the finest resort hotel in the world. Built by hand of the great boulders of Sunset Mountain, it is full of rest and comfort and wholesomeness. The front lawn is the hundred-acre eighteen-hole golf links of the Asheville Country Club, and with it sixty acres belonging to the hotel.

The purest water obtainable is piped seventeen miles from the slopes of Mount Mitchell.

Biltmore milk and cream exclusively, supplied from 200 registered Jerseys on the estate of Mr. Geo. W. Vanderbilt.

Four hundred one-piece rugs were made at Aubusson, France. Seven hundred pieces of furniture and 600 lighting fixtures of solid copper were made by hand by the Roycrofters.

For the golfers there are lockers and shower bath rooms with a forty foot swimming pool that is not excelled by the finest clubs in existence.

Mr. Wm. S. Kenney, formerly manager of the Mount Washington Hotel, at Bretton Woods, N. H., is manager of the Inn.

Especially available for northern guests in the Spring, Fall and Winter, going and returning from farther southern resorts, or for an all Winter resort. Persons with any form of tubercular trouble will not be received at the Inn.

Rates — American Plan — $5.00 a day upwards.

Reached by the Southern Railway.

GROVE PARK INN

I Love You California

FREE—This thrilling song of California. Its joyous swing and rhythm will fascinate you, just as the beauty and grandeur of California fascinate all who enter its domain.

"I Love You, California," the song adopted by the Shriners and given its debut by Mary Garden of Grand Opera fame.

You can have it FREE—simply send a written request to

Mr. H. B. GURLEY, Ass't Sec.
Chamber of Commerce, Los Angeles, Cal.

Jefferson Was Right.—"Do you truly and honestly believe that all men are born free and equal?" asked Jimpson of the genial philosopher.

"I sure do," replied the G. P. "Free of all responsibility, and equal to not less than three square meals a day."—*Life.*

Getting Even.—"Why do you insist on trying to sell me beefsteak and beans and buckwheat cakes?" demanded the barber. "I told you all I wanted was two fried eggs."

"Well, I was in your shop yesterday," retorted the restaurant man. "All I wanted was a shave, but you bulldozed me into a shampoo, a foam fizz, and a tonic rub."—*Louisville Courier-Journal.*

High Speed.—The old mountaineer, who was standing on the corner of the main street in a certain little Kentucky town, had never seen an automobile.

When a good-sized touring-car came rushing up the street at about thirty miles an hour and slowed down just enough to take the corner on two wheels, his astonishment was extreme.

The old fellow watched the disappearing car with bulging eyes and open mouth. Then, turning to a bystander, he remarked solemnly:

"The horses must sho'ly ha' been traveling some when they got loose from that gen'leman's carriage!"—*Philadelphia Ledger.*

Not Any More.—They were gazing out of the window of the Pullman car. The thin man was rapturously admiring the sunset.

"Ah, Nature is a real artist," exclaimed the thin man, addressing the fat man who sat in the opposite seat. "Have you never gazed at her wonders? Have you never watched the lambent flame of dawn life leaping across the dome of the world? Have you never watched the red-stained islets floating in lakes of fire? Have you never been drawn by the ragged, raven's-wing, sky-fantoms as they blotted out the pale moon? Have you never felt the amazement of these things?"

"Not since I swore off," replied the fat man, as he prepared to hunt another seat.—*Cincinnati Enquirer.*

Experienced.—During an Episcopal convention in Boston, one of the bishops had an experience he will long remember. He was a portly man, weighing over three hundred pounds. One afternoon while walking through Boston Common he sat down on one of the benches to rest. When he attempted to get up, he failed in the effort. He tried again and failed. About this time a little girl, poorly clad, came along and was attracted by the struggles of the bishop. Stepping up to him, she exclaimed:

"Don't you want me to give you a lift?"

The bishop gazed at her in amazement and exclaimed:

"Why, you can't help me. You are too little."

"No, I am not," she replied. "I have helped my pa get up many times when he was drunker than you are."—*Homiletic Review.*

October School Days.—"What do you know about Ceres?"

"Do you mean de world's series?" asked the new kid in school.—*Washington Herald.*

Too Rural.—ART DEALER—"This is a beautiful scene from 'Hamlet.'"

MRS. NEWRICH—"I don't care for hamlets. Show me a good-sized city."—*Judge.*

Domestic Repartee.—"You're kinder to dumb animals than you are to me, your wife."

"Well, you try being dumb, and see how kind I'll be."—*Tit-Bits.*

A Long Wait.—"Johnny, I don't believe you've studied your geography."

"No, mum; I heard pa say the map of the world was changing every day, an' I thought I'd wait a few years till things got settled."—*Brooklyn Life.*

Eliminating Death's Horror.—The Excelsior fiddling band has started on its rehearsals to get ready to play for the hog-killings this fall. With this music being rendered the hogs seem not to care to live any longer.—*Hogwallow Kentuckian.*

Reconsidered.—"Judge," said the forewoman of the jury of ladies, "we want to speak to you about that sealed verdict we just rendered."

"Well, ladies?"

"Can we unseal it and add a postscript?"—*Washington Herald.*

Fire-Drill.—FACTORY PROPRIETOR—"Fire-drill, if you please, ladies! Division A will endeavor to batter down that locked iron door; Division B will leap from the windows; Division C will remain quietly at the tables until suffocated—all just as you would have to do in case of an actual fire. March!"—*Life.*

Doubled Order.—A salesman had taken a large order in the north of Scotland for a consignment of hardware, and endeavored to press upon the canny Scottish manager who had given the order a box of Havana cigars.

"Naw," he replied. "Don't try to bribe a man. I couldna tak' them—and I am a member of the kirk."

"But will you accept them as a present?"

"I couldna," said the Scot.

"Well, then," said the traveler, "suppose I sell you the cigars for a nominal sum—say sixpence?"

"Weel, in that case," replied the Scot, "since you press me, and no' liking to refuse an offer weel meant, I think I'll tak' twa boxes."—*New York Mail.*

Premature.—A New York lawyer tells of an English widow who, by reason of certain legal complications, found it necessary to retain a distinguished attorney to represent her in the adjustment of her late husband's estate.

"You will," said the attorney, during the course of their consultation, "you will get your third out of the estate."

"Oh!" exclaimed the widow, aghast, "how can you say such a thing, with my second scarcely cold in his grave!"—*Green Bag.*

CURRENT EVENTS

Foreign

October 2.—President Menocal calls an extra session of the Cuban Congress to deal with finances, public works, and army reforms.

The price of radium is advanced $10,000 a gram. A pound would now cost more than $52,000,000.

October 4.—The Peruvian Congress votes an amendment to the Constitution granting religious toleration.

October 5.—It is announced that the Mexican Constitutionalists have set up an independent government, with Hermasillo, Sonora, as its capital, and General Carranza as President.

It is announced that more than 1,000 business concerns in Germany have promised to participate in the Panama-Pacific Exposition.

October 6.—James W. Gerard, the new United States Ambassador to Germany, arrives in Berlin and informally assumes the duties of his office.

October 7.—Without firing a shot, Mexican Federals take possession of Piedras Negras, erstwhile provisional capital of the Constitutionalists.

E. J. Chamberlain, of Montreal, is reelected president of the Grand Trunk Railway system.

General Li Yuen Heng is elected Vice-President of the Chinese Republic.

Count Vincenzo Macchi di Cellere is appointed Italian Ambassador to Washington.

October 8.—The American Minister to Santo Domingo, James M. Sullivan, induces the warring factions in the Republic to sign a peace pact.

Domestic

WASHINGTON

October 2.—The Democratic Tariff Bill is passed by the Senate by a vote of 36 to 17.

October 3.—Attorney-General McReynolds confirms the report that he will institute civil suit for dissolution of the merger of railroad, steamship, and trolley lines comprizing the New Haven system.

President Wilson signs the Underwood-Simmons Tariff Bill at the White House before a gathering of the Democratic party leaders, and it becomes a law at midnight.

October 4.—The Senate passes the Urgent Deficiency Appropriation Bill with the amendment to abolish the Commerce Court, but with it the Walsh Amendment by which the Commerce Court Judges will become auxiliary Circuit Judges.

It is estimated that the Government will lose $10,000,000 of revenue under the new Tariff Law by the withdrawal from bonded warehouses of $100,000,000 worth of commodities.

Representative Oscar W. Underwood, majority leader in the House, issues a formal statement announcing his candidacy for the United States Senate from Alabama, to succeed the late Joseph F. Johnston.

October 5.—The Republican National Committee is summoned to assemble in Washington December 19, with a view to considering the question of calling a national convention, the need for which, it is said, will be determined by a decision on the committee's power to change the party rules.

October 7.—President Wilson intimates that a powerful lobby is trying to defeat currency legislation along the lines laid down in the Administration Bill.

GENERAL

October 3.—Colonel Roosevelt and party sail for South America, where he will first lecture in the larger cities and then explore regions hitherto untrod by white men.

October 6.—At the convention of the American Bankers' Association in Boston, representatives of country banks having capital ranging from $25,000 to $250,000 go on record, with practical unanimity, against the principal provisions of the Owen-Glass Currency Bill.

The City of Nome, Alaska, is almost destroyed by a storm. Five hundred houses are demolished, but no lives are lost.

Francis Burton Harrison, the new Governor-General of the Philippines, in an address delivered on his arrival at Manila, announces that the policy of the Wilson Administration is to give the people of the islands a greater voice in their government, with a view to ultimate independence.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"T. B.," Richmond Hill, New York.—"(1) Would it be right to say that *division* was a diversion of *vision*? (2) Is the root affinity the same in the following words: *division*, *revision*, *provision*, and *vision*?"

(1) *Division* is from the Latin *divisus*, pp. of *divido*, divide, from *di-*, for *dis-*, apart, and *uidere*, to part (a lost verb from the same root as the Latin *uid-ua*, a widow. Its Indo-Germanic root *vidh*, means to part, split; Sanskrit *vidhyati*, to penetrate. *Vision* is from the Latin *visus*, pp. of *videre*, see. Its Indo-Germanic root is *vid-*, know, Sanskrit *vêda*, knowledge, *vindâmi*, find. In view of this it would not be right to make the statement suggested, for the word *diversion* means "turning aside from an accustomed course or line of action already established," and, as is shown above, the two words referred to follow separate and distinct courses.

(2) The root affinity of *vision*, *provision*, and *revision* is the same. *Provision* is from the Latin *provisus*, pp. of *providere*, from *pro*, forward, and *videre*, see (compare *vision*, above.) *Revision* is from the Latin *revisus*, pp. of *revidere*, see again, from *re-*, again, and *videre*, see.

"C. F. A.," Hot Springs, Ark.—"(1) In the following sentences, which are the correct verbs? (a) The chair *sits* (*sets*) in the corner; (b) The hen *sits* (*sets*) on her eggs; (c) I *set* (*sit*) the table and it *sits* (*sets*) there. (2) Is 'set' ever properly used intransitively except in denoting *below or at the horizon* or *beginning a journey*?"

(1) The verb *sit* is intransitive; its forms are (1) *sit*, (I) *sat*, (I have) *sat*. The verb *set* is transitive; it is the "causative" of *sit*, and means "to cause to sit," "to make sit." The sentences you quote should stand as follows: (a) The chair *sits* in the corner [*stands* would be much better]. (b) The hen *sits* on her eggs. (c) I *set* the table and it *sits* [*stands* is better] there.

(2) The verb *set* is used as an intransitive verb in three or more senses: (1) "to settle" (as of the sun or moon); (2) "to become set" (as of mortar); (3) "to take a position" (as of a hunting-dog called setter); and along with adverbs and prepositions: to *set out* on a journey, to *set* to work, etc.

"B. H. G.," Monroe, La.—"Kindly explain the difference in the meaning and use of the terms 'suffragist' and 'suffragette.'"

Suffragette is the narrower term. It means "an advocate of suffrage for women," applies only to women, and is generally used to refer to the *militant* type at present conspicuous in England. *Suffragist* has several meanings: a *suffragist* is (1) one who is a voter; (2) one who advocates some special narrowing or broadening or other modification of the suffrage; and (3) one who advocates suffrage for women (but in this sense the phrase is generally *equal suffragist* or *woman suffragist*). A *suffragist* may be man or woman.

"W. S. R.," Temple, Texas.—"Kindly advise as to the correctness or incorrectness of the use of 'nor' in the latter clause of the following sentence: 'New currents are springing up and new creations in thought are constantly developing that change our modes of living and our views of thinking, so that in the course of years we find ourselves doing things and saying things that we did not do *nor* say before.'"

Unless it is desired to set forth two or more things as individual and distinct things, it is better after a negative to use *or* than *nor*. In the sentence quoted, *doing* and *saying* are used somewhat loosely to refer to physical and mental activities, not as separate things but as together constituting what we do. The idea would, we think, be exprest better by writing, "doing things and saying things that we did not do or say before." If the phrasing "*neither* did *nor* said before" expresses what the writer meant, then "did not do *nor* say before" is appropriate.

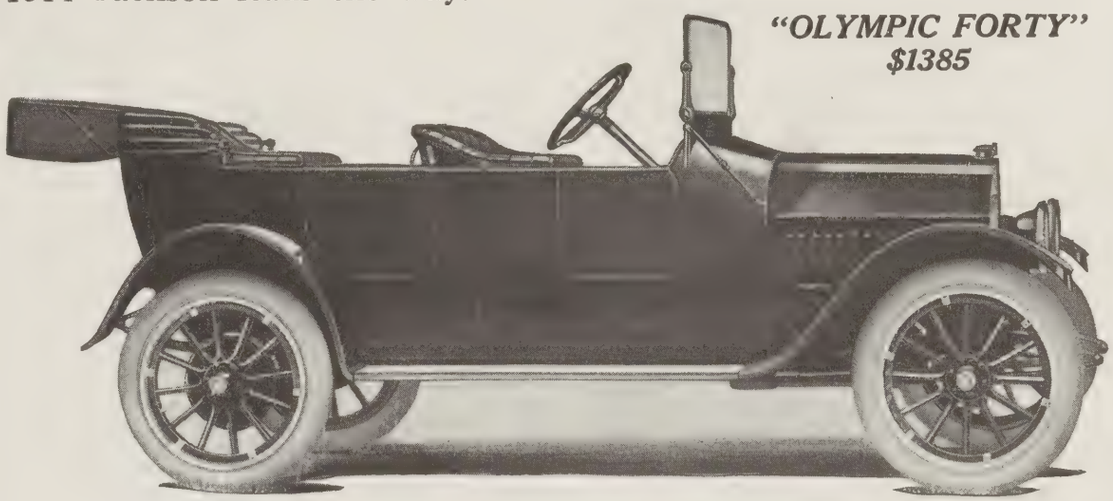
Jackson

Three Great Models for 1914

No Hill Too Steep—No Sand Too Deep

THE twelfth year of Jackson automobiles brings three great models, ranging from a really wonderful four-cylinder value at $1385 to a big high-powered "Six" at $2150. By every basis of comparison these three models are *leaders.* Consider their size, power, unusual comfort and their elaborate equipment, then consider the long Jackson record of superior mechanical construction and you will understand *why* the 1914 Jackson leads the way.

"OLYMPIC FORTY"
$1385



Look at the "Olympic's" size,—115-inch wheel base. Look at the power,—a full 40-horse motor. Look at the spring suspension,—full elliptic both front and rear. Look at the equipment,—every detail that you would expect to find on *any* car. Then, besides, there's the highest grade electric cranking and lighting system!

All for $1385, with honest value and honest workmanship in every part.

For quiet running we would put this "Olympic Forty" against the field. You *can* hear it running *if you listen* but it is just that sweet purr that you get from the highest price cars ever built.

Notice the long, clean running board, the graceful curve of the fenders, and the sweeping lines of the car as a whole.

The bodies are made in the Jackson factory, from high grade lumber seasoned in our own kilns, and finished in the Jackson paint shops. And they *are* finished. On every body there are nineteen separate and distinct operations in the paint shop. It is *old-fashioned,* you know, to finish bodies that way, but it's the method that gives the deep, rich, permanent finish that critical people so much desire on their automobiles.

Full elliptic springs, both front and rear, give *real* ease of riding. Wide seats and deep cushions add a wealth of comfort. Big tires, 34 x 4, help too. Equipment includes mohair top, top hood, ventilating windshield, speedometer, gasoline gauge on dash, Firestone demountable rims, extra rim, tire holders, foot rail, coat rail, pump, tools and *jack,* electric cranking and lighting system, electric horn.

Jackson "Majestic" $1885

Long stroke, four-cylinder motor, 4½ x 5½, 45 horse power, electric cranking. Wheel base 124 inches. Tires, 36 x 4. Full elliptic spring suspension front and rear. Full floating rear axle. Extra roomy body. Wide seats, wide doors, 10-inch cushions. Completely equipped.

Jackson "Sultanic" $2150

Long stroke, six-cylinder motor, 55 horse power, electric cranking. Wheel base, seven passenger, 138-inches; five passenger, 132 inches. Tires, 36 x 4½. Full elliptic spring suspension front and rear. Full floating rear axle, ball bearing throughout. Completely equipped. Seven passenger model, $2300.

A Matchless Line for 1914

The Mitchell 1914 Line is being produced by Engineer John W. Bate, *the man who created the Mitchell car*, and the famous Mitchell *Baby Six*. After a year's rest he returns to Racine to place the Mitchell in a *stronger position than it has ever occupied.*

The Mitchell-Lewis Motor Company, *with unlimited capital at its command*, has surrounded Mr. Bate with the best facilities and the finest factory that it is possible to build. It will back the car with the most liberal *Service-Policy for car owners* that the business mind can conceive.

Eighty years of faithful service to the American public is the Company's Guarantee

This Means for the Mitchell Car for 1914

Quality—Efficiency—Long Life

The Mitchell Little Six is the most logical value on the market. It is a six-cylinder car of aristocratic design. It has fifty horse-power, 132 inch wheel-base, five passenger capacity. It has a long, low, rakish streamline body, is luxuriously upholstered, is equipped with electric self-starter and generator, electric lights and all modern conveniences and sells for the reasonable price of **$1,895**

The Mitchell Big Six is very much the same design as the Little Six. It has sixty horse-power, 144 inch wheel-base and seats seven passengers. It has big tires and the same splendid finish throughout as the Little Six, likewise the same fine equipment. Price, - - **$2,350**

The Mitchell Four has 120 inch wheel-base, forty horse-power and seats five passengers. It is a splendid family car for little money. It is equipped precisely the same as the two sixes and sells for - - - - - - - **$1,595**

No matter which one of the Mitchell cars you select, *you will make an investment.* You have *Bate's* word for it. You have *our* word for it. And the *service* that lies behind it is *ten times better than a guarantee.* We are going to make you like the car, like us and like the agent you deal with. In all respects this is to be a Mitchell year and you will love

The Car You Ought to Have at the Price You Ought to Pay

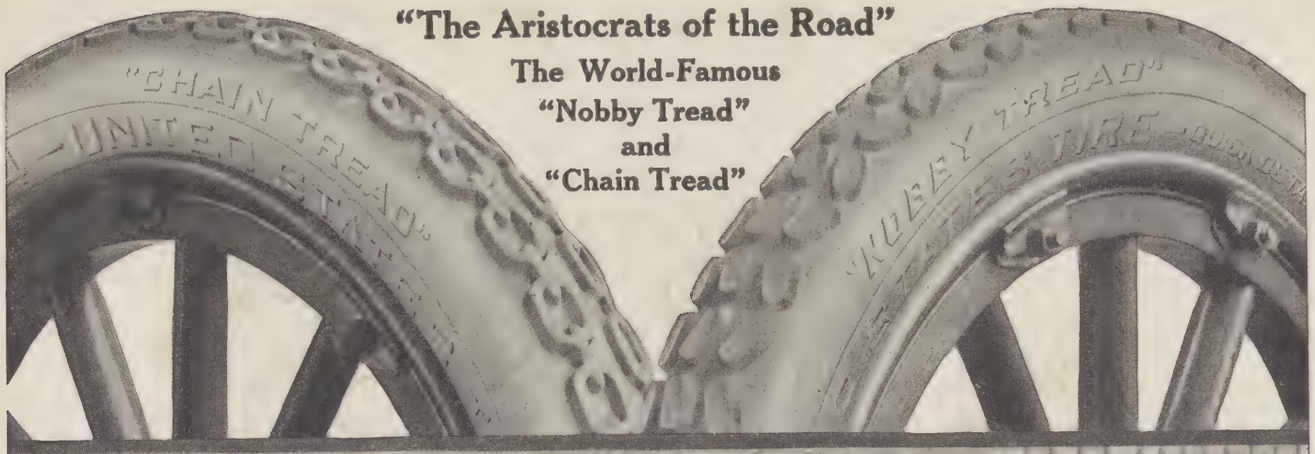
The World-Famous
"Nobby Tread"
and
"Chain Tread"



The Vast Resources, the Unlimited Experience and the Specialization of Methods of These Four Famous Factories Have Made United States Tires the Most Popular Tires in the World

In the History of the Motor Vehicle No One Industrial Move Has Meant So Much to the True Lovers of the Automobile

The United States Tire Contracts written with automobile manufacturers for the equipment of 1914 cars represent a greater volume of business than any other make of tires.

No arguments or comparisons avail against this undeniable and absolute fact — which is positive proof of the satisfaction that United States Tires give.

When you purchase United States Tires you are sure of these vitally important facts:

1. Of the organization behind these famous tires.
2. Of vast experience in tire building.
3. Of a tremendous company that actually backs up its tires and has real service branches.

Note This:—Dealers who sell UNITED STATES TIRES sell the best of everything.

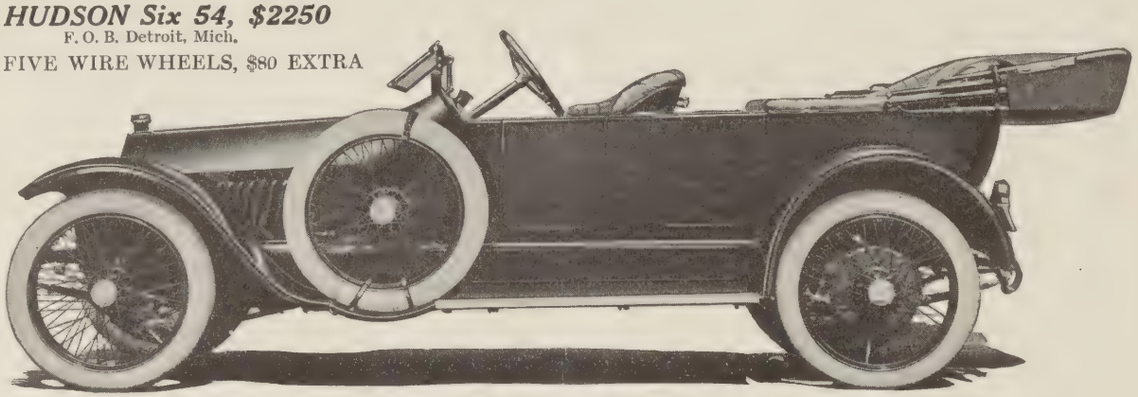
Price 10 Cents

HUDSON Six 54, $2250
F. O. B. Detroit, Mich.
FIVE WIRE WHEELS, $80 EXTRA



Experience Six-Cylinder Smoothness in Your Four

—But This Is The Only Way You Can Get It

SPEED your Four up to 30 miles an hour or more on a smooth road. Then throw out the clutch and close the throttle.

Or coast down a long smooth hill with the motor running idle.

The feeling is that of flying. There is no vibration. In this particular the sensation of riding in a Four approaches that felt in a Six.

But, in a Six, the smoothness is ALWAYS there. You ride like constant coasting. In the HUDSON Six 54, up hill and down, on rough roads or smooth, fast or slow, the feeling is always the same.

No Four—no matter how powerful or through what combination of gears its power is transmitted—can be made to ride so smoothly.

Come, take a drive in the HUDSON Six 54.

If you enjoy driving, take hold of the wheel and feel for yourself the full meaning of that much-talked-about "smoothness and flexibility of the Six."

In no other will it have such a meaning for you.

Try coasting with your Four on a run of 100 feet.

Then come, see us, we'll show you how to do it for 300 miles, all day, without fatigue. It must be in a HUDSON Six 54.

New Features in HUDSON Six 54

True streamline body—the handsomest car you ever saw. Highest standard of HUDSON design and construction. The very best we know in beauty and finish. Left side drive. Right hand control. Entrance to driver's seat from either side. Electrically self-cranked and electric lighted.

Accept Howard E. Coffin's 1914 Automobile Review—We'll Send It!

No automobile buyer should fail to read Mr. Coffin's Automobile Review.

He shows why six cylinder cars are now so popular.

He explains the reasons for their smoothness, and why they are so desirable. With diagrams, and in the clearest language, he makes you understand why so many makers are now manufacturing sixes exclusively.

He tells about left side drive and right side drive—about gasoline economy—electric and other gear shifts—streamline bodies—speedometer drive—new things in lighting, and other features embodied in the 1914 designs.

No man is more eminently qualified to prepare such a review. Mr. Coffin's reputation as an engineer, and his many contributions to the progress of the automobile industry, both as a designer of many successful cars and a contributor to engineering literature, make his review authentic.

Of course he refers to the HUDSON Six 54. No discussion of automobile tendencies would be complete that omitted mention of this new car.

Can you afford to consider the purchase of any car costing $1,500 and over without knowing what such an authority as Mr. Coffin has to say upon the subject?

Send your name and address.

HUDSON Motor Car Company
7746 Jefferson Avenue **Detroit, Michigan**

Oratory That Made Men Famous in a Day

Copyright, Underwood & Underwood

THE brightest thoughts of the world's most famous orators—the wittiest sayings of the wittiest men of the Nineteenth Century—epoch making speeches that moved not only audiences but nations. They are all here just as they were delivered by these distinguished speakers, and gathered in such form as to instruct and entertain you where and when you will.

Modern Eloquence

Each Speech, Lecture or Address is Complete

Everything is of proved value and interest, and is printed in its *entirety.* Speeches that have been flashed around the world, lectures that have been repeated again and again to never-tiring audiences, "occasional" addresses that have made men famous in a day, masterly orations that have moulded public opinion and directed the march of progress—these are brought together for the first time in this remarkable library.

From the Great Commoner

Hon. Wm. J. Bryan says: "In commending your work MODERN ELOQUENCE, which I do most heartily, I feel that I am doing a favor, not so much to you as publishers, as to those who may be led to purchase and read the work. It is a valuable addition to any library."

300 After Dinner Speeches

by Joseph H. Choate, Benjamin Disraeli, James G. Blaine, Wm. M. Evarts, John Hay, Oliver Wendell Holmes, Sir Henry Irving, Chauncey M. Depew, Henry Ward Beecher, Mark Twain, Henry W. Grady, Joseph Jefferson, Robt. G. Ingersoll, Seth Low, Albert J. Beveridge, Woodrow Wilson, etc.

150 Great Addresses

by Lyman Abbott, Charles Dudley Warner, William Cullen Bryant, Rufus Choate, Theodore Roosevelt, Arthur J. Balfour, Jonathan P. Dolliver, Edward Eggleston, William E. Gladstone, Charles Francis Adams, John L. Spalding, Joseph Chamberlain, Grover Cleveland, Fisher Ames, Lawrence Barrett, Henry Drummond, James A. Garfield, Hamilton Wright Mabie, William J. Bryan, etc.

60 Classics and Popular Lectures

by Charles A. Dana, Robt. J. Burdette, Russell H. Conwell, Canon Farrar, John B. Gough, Andrew Lang, Wendell Phillips, Josh Billings, John Tyndall, Geo. William Curtis, Artemus Ward, Paul DuChaillu, John B. Gordon, Newell Dwight Hillis, John Morley, John Ruskin, Henry M. Stanley, Wu Ting Fang, etc.

2,000 Short Stories and Anecdotes

by Mark Twain, Chauncey M. Depew, Horace Porter, Champ Clark, Joseph H. Choate, John M. Allen, etc.

A Wonderful Bargain

Send us the attached coupon *at once,* and we will tell you how to get the Library on *Easy Monthly Payments,* and with our terms we will also mail you Henry W. Grady's Great Lecture, **"THE RACE PROBLEM"**—*FREE.* Reprinted from the work itself. Champ Clark says—**"THE MOST FAMOUS AFTER-DINNER SPEECH WITHIN THE MEMORY OF ANY LIVING MAN."** Sending the coupon places you under no obligation to buy. If you are interested tear it off and send in NOW. Don't wait. The offer is limited.

Are YOU ever asked to Respond to a Toast, to Write an Address, or to Make a Speech? If so, you will find these volumes the greatest help imaginable, because they contain nearly every variety of good pattern for the various classes of oratory. And many an inexperienced banquet chairman, toastmaster or honored guest, casting helplessly about him for a good story or appropriate remarks, has found here just the inspiration needed.

This Great Work is Sole Occupant of a New Field

It has neither predecessor nor competitor. The most brilliant men of the world today endorse it unqualifiedly. To read it is a liberal education—a treasure trove of information accessible in no other form. No intelligent man or woman can fail to be moved by the words gathered here—words which have brought men to tears or laughter, to pity or scorn, to indignation or repentance. Each address is a separate gem and from the standpoint of inspiration alone is priceless.

CONSISTS OF TEN BEAUTIFUL, RICHLY BOUND VOLUMES

elaborately indexed, beautifully illustrated with over 80 photogravures on Japanese vellum; paper, presswork and bindings of very highest quality.

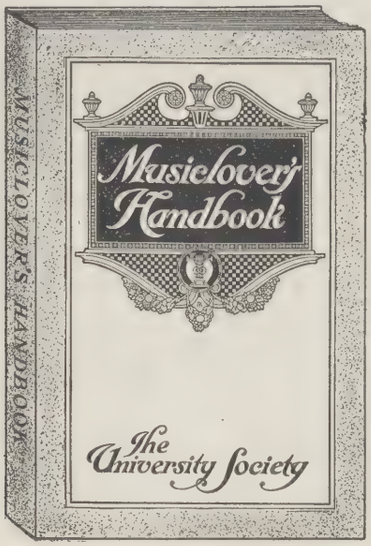
Conception. Pregnancy. Confinement. Nursing. How a Happy Married Life is Secured.

Descriptive circular giving full and complete table of contents mailed FREE.

Special Offer

The regular price is $3.00. In order to introduce this work into as many neighborhoods as possible we will, for a limited time, send one copy only to any reader of this Magazine, postpaid, upon receipt of $2.00.

J. S. Ogilvie Publishing Co., 57-1 Rose Street New York City



Our 194-Page "Musiclover's Handbook" Sent Free to Literary Digest Readers

CAREFULLY fill out with your name and complete address the coupon furnished below. You will receive in return a free complimentary copy of our MUSICLOVER'S HANDBOOK. This is a 194-page book, such as sells in the shops for 50c. per copy. It contains a pronouncing dictionary of musical terms and is the most satisfactory little reference book of musical information that has ever been compiled. It contains full definitions of all those musical terms for which any one would have occasion to look; the pronunciation of foreign words is given according to a special phonetic system. This little book will be treasured by all those interested in music. To *LITERARY DIGEST* readers and their friends we are distributing copies absolutely without charge.

No Obligation on Your Part

THE sending of this coupon does not in any way obligate you. You are presumably interested in music. A small edition of the HANDBOOK is at your disposal, and we wish to place one copy in the hands of every inquirer. The HANDBOOK is not for sale and cannot be obtained in any way except through a direct inquiry sent to this office. We send the HANDBOOK postpaid; and with it we shall take pleasure in also sending full information in regard to the UNIVERSITY MUSICAL ENCYCLOPEDIA, the first important American encyclopedia on musical matters. This 10-volume work has been edited by Prof. Louis C. Elson, of the New England Conservatory of Music, Boston, internationally known as a musical critic and historian. Dr. Elson has been assisted by a number of eminent experts. The UNIVERSITY MUSICAL ENCYCLOPEDIA should find a place in every home in which instrumental or vocal music is ever heard.

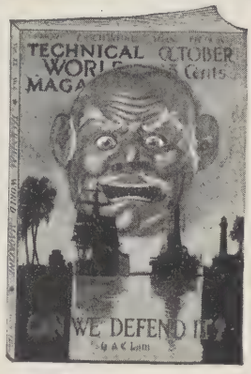
YOU NEED IT

You need it because it tells of the world's advance in a fascinating way all its own—because you cannot keep fully informed without it—because, as Jack London said, there is "Nothing like it," and because, as Luther Burbank said, "It is really indispensable." It tells of things you can find in no other magazine, and yet they are things upon which the future progress of the world is to be founded. It covers fully the discoveries of science, the achievements of inventors, the feats of engineers and explorers, and the opening of every new field of human endeavor.



TECHNICAL WORLD MAGAZINE

"More Fascinating Than Fiction"

On All News-stands

Fifteen Cents Per Copy

Flatiron Building, New York

You'll like it because it is profusely illustrated—because it tells of things real, living men and women have done or are trying to do—because it tells its true stories in a simple and interesting way—because it makes real achievements, real events interesting—because it shows that the greatest romance in the world is the story of man's ceaseless fight to conquer and use the myriad forces of nature—because it is clean and clear and always far more interesting than the average run of fiction, because it is wonderfully illustrated.

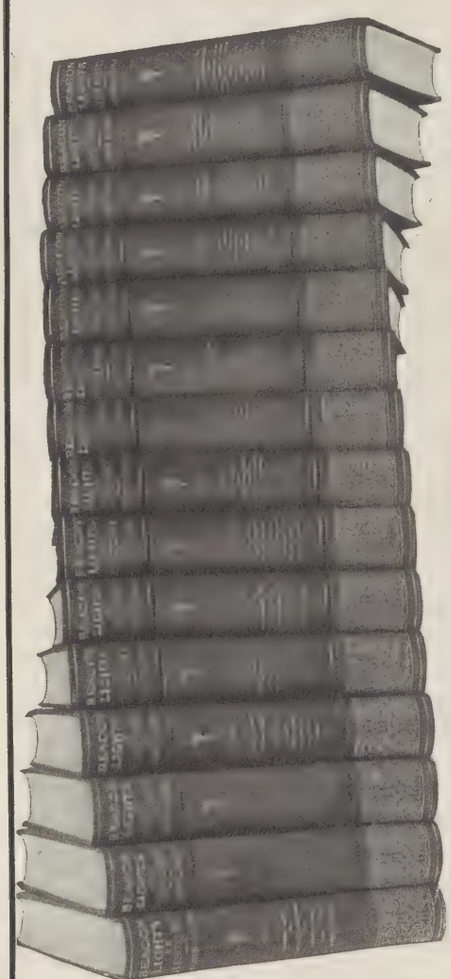
The Curtain Lifted Upon the Drama of History

The noted beauty, in the apex of her glory, concealed in a costly rug, obtains by this means an interview with the great Conqueror at a time when, together, they are the most famous couple of the age. Dr. Lord seems to have found the key to the subtle character of the faithless queen, and his interpretation is one of his masterpieces. The illustration is from his vivid study of Cleopatra and the voluptuous era in which she lived.

No drama ever was more brilliant or crowded with human interest than this actual drama of the world's unfolding. No romance so pulsates with flesh and blood as this masterly story of real men and women. To read it is to feel the thrill of human action, to build within one's mind the abiding knowledge of history. **No man or woman can know the present nor build for the future, without clear knowledge of the past.** Here is a veritable library of history depicted with the charm of a great narrator, Dr. John Lord.

CLEOPATRA OBTAINS AN INTERVIEW WITH CAESAR

BEACON LIGHTS of HISTORY



A New Idea in History Writing

Dr. Lord discovered that there was one man, or in a few instances one woman, who dominated his or her time or country to such an extent as to stand forth as a sun in the historic firmament around which all other personages, and the events they controlled or influenced, revolved. He found that by a sort of natural law the pre-eminent man was the real key to the historic story, and in describing his personal relation to his surroundings the author was able to make a spirited picture of the period.

History Made Interesting as Brilliant Fiction

A vivid, accurate, authoritative pen picture of the lives, the thoughts, the passions, the deeds of the great men and women who have made the world what we see it today; a fascinating narrative that grips the attention, charms the imagination, inspires noble impulses, entertains as though it were a romance, fills the storehouse of the mind with the great events that have shaped the lives of men, nations and dynasties.

Most Vivid World History Ever Written

Have you ever watched history's procession from its starting point? **Have you seen** Egypt rearing her pyramids and other world wonders? **Have you looked** upon Assyria, Babylonia and Persia rising to their zenith, pour forth their radiance and then sink again into oblivion? **Have you marked** Greece, her chiseled temples crowning a thousand hills, her genius endowing the world? **Has Rome risen** before you pre-eminent, her laws supreme, her army invincible, her science mature, and then under the fever of luxury sunk into decay? **Have you lived** through the cruelty of the middle ages? **Have you thrilled** over the romance of the age of chivalry? **Have you watched** the ennobling influence of the Renaissance? **Have you stood** by as France received her baptism of blood? **Have you seen** that God-guided group of patriots draft the American Constitution? If you have not, then **the pages of this work hold much in store** for you. If you would quicken your pulse, enlarge your horizon, cultivate your imagination, stimulate your patriotism, **study the world's story—Beacon Lights.**

Great Price Concession to Digest Readers

Nelson's India Paper Standard Authors

Over 900 Pages this size type in one volume that fits your pocket

The works of all the best fiction writers of the English language—Dickens, Thackeray, Scott, Eliot, Shakespeare, Hugo, Dumas, Poe, Stevenson, and others—are now procurable in these handy, handsome, little volumes.

They are pocket size (4¼ by 6¼ inches) and only one-half inch thick—but the use of Nelson's India Paper permits us to embody the largest two-column editions of the old-style in one of the new, without reducing the size of the reading type.

Both in the home and out of it, these dainty, convenient, readable little books are most attractive, and we suggest that you just obtain one to see how it appeals to you.

This New Century Library is bound in soft, smooth, limp leather; the price is but $1.25 per volume, sold in single volumes or complete sets.

Slip One In Your Pocket

Nelson's Editions De Luxe of Standard Authors are the same as the New Century Library in better binding, full genuine Morocco, red under gold edges, marbled end papers and special illustrations. These are sold in complete sets only.

Send to us for sample pages and full list of standard authors.

For sale at all Booksellers **Thomas Nelson & Sons** 381 G 4th Ave. New York

We also publish The American Standard Bible and Perpetual Loose-Leaf Encyclopædia

Is There a Bookstore In Your Town?

THAT many cultured communities are without good bookstores is certain, and we cannot herein explain why it is.

That new books lack proper distribution is a fact, and thousands of educated people cannot buy the new publications in their own town.

We shall be glad to refer those of our readers living in small towns or in cities that are without good bookstores, to the nearest book centre where they may obtain without delay the newest and most worth-while books. There is no charge whatever to our readers for this service.

The Literary Digest

The Lure of the City
A NEW BOOK FOR YOUNG MEN
By David James Burrell, D.D., LL.D., New York
12mo, cloth, $1.00 *net*. By mail, $1.10.
FUNK & WAGNALLS COMPANY, NEW YORK

WASHINGTON: ITS SIGHTS and INSIGHTS
A chatty, entertaining guide to the National Capital, full of anecdote and unconventional description. 12mo, cloth, 184 pages of text and 40 pages of inserted illustrations, $1.00 net. Funk & Wagnalls Company, New York and London.

TRUE MOTHERHOOD
Helpful talks on the ideals of true motherhood and woman's sphere as a home maker. By JAMES C. FERNALD. 12mo, leatherette, 60 cents.
FUNK & WAGNALLS COMPANY, Pubs., NEW YORK

Helps for Ambitious Teachers

These books will be of inestimable service to you in your school work. They already have helped thousands of teachers to brighten and enlighten their school lives and to teach more satisfactorily. They will facilitate and effectualize both your school-room and home-preparation work. No other books are more helpful.

The Student's Standard Dictionary

is the first abridgment of the *Unabridged Standard Dictionary*—which cost more than $1,000,000 to produce, was made new from the ground up, and had 257 specialists as its editors (three times the number of its nearest contemporary).

The Student's Standard Dictionary defines over 61,000 words, contains 1,225 definitive illustrations, also a marvelously complete appendix—all compressed into a handy 8vo volume of 922 pages.

Taken altogether, it is the most complete and perfect abridged dictionary extant—with many exclusive features.

This dictionary will help you constantly in your work, if you make it your daily companion, placing one copy on your school desk and another conveniently on your reading-table at home

Price in strong cloth binding with leather back, $2.50; or in full leather, $4. *The Denison Thumb Index* facilitates quick reference—50 cents extra. Limp leather, thin-paper edition, indexed, $5.

Successful Teaching

The most advanced and successful methods of teaching are told by the Prize-Winners in *the National Educational Contest* held by the publishers in 1905. Among the prize essays to be found in this suggestive volume are: "Personality as a Factor in Teaching;" "How Best to Develop Character in Children;" "How to Teach Children to Think;" "How to Develop the Conversational Powers of Pupils;" "How Best to Acquaint Pupils with What is Going on in the World." Introduction by J. M. Greenwood, superintendent of Public Schools, Kansas City, Mo.

198 pages, strong cloth binding, with handsomely embossed cover, $1 postpaid.

A Working Grammar of the English Language

By James C. Fernald, L.H.D., Synonym Editor of the Standard Dictionary

This most modern of grammars (published November, 1908) is true to the name it bears—a *Working Grammar*—quick and easy to consult, containing concise, definite rules, easily understood. *Many complex constructions can be easily explained after consulting this grammar.* Particular grammatical points may be quickly looked up by means of its very complete index. Admirably suited for teachers' regular (or auxiliary) use.

Well and strongly bound in neat cloth, price $1.50 net; postage 14c.

English Synonyms, Antonyms and Prepositions

Also by Dr. Fernald

This new synonym book places all the words of similar meaning in *one group*—then defines each word by comparison of use and meaning with the others of the same group. Thus it is a veritable treasure-house of *careful comparisons* and *accurate distinctions between words*. Antonyms and Prepositions follow each group of Synonyms. President Cochran of the Polytechnic Institute, Brooklyn, wrote us: "I do not hesitate to say that there is no book yet offered which is its equal in imparting a mastery of words."

Strongly bound in neat cloth, price $1.50 net; postage 13c.

Literature, Its Principles and Problems

By Theodore W. Hunt, Ph.D., Professor of English Literature, Princeton University

This volume is a veritable library of literary criticism, pointing out the methods of the masters and their aims, their particular style and their art. It is solid and profound without being heavy, and will suggest many interesting points to teachers of literature and allied subjects. A clarifying and stimulating work, critical and widely informing.

427 pages, bound in neat cloth with titles in gold-leaf, $1.20 net; postage 15c.

Connectives of English Speech

By Dr. Fernald

Coleridge says that a *master* of our language may be known by his skilful use of Connectives. This book gives the definitions and correct usages of prepositions, conjunctions, relative pronouns and adverbs, indicating the prepositions to be used after certain verbs and those about which questions are liable to arise, with numerous quotations sustaining the decisions as to correct or incorrect usage. A valuable teachers' helper.

Strongly bound in neat cloth, price $1.50 net; postage 13c.

A Desk-Book of Errors in English

By Frank H. Vizetelly, F.S.A., Associate Editor of the Standard Dictionary

When the vernacular of the street invades the home and school, when colloquialisms, slang and vulgarisms are used by your pupils, refer them to this "*desk-book*"—have it convenient on your desk for instant reference. This book of 232 pages answers many questions not treated in the dictionaries—and it makes innumerable *nice* distinctions in speech. All arranged *alphabetically*.

Neat cloth binding, titles in gold leaf, price 75c. net; postage 8c.

The United States in the 20th Century

By Pierre Leroy-Beaulieu. Authorized translation by H. Addington Bruce

This book is considered the most noteworthy work on the United States since the publication of *Bryce's* "*American Commonwealth.*" It is, in the words of the author, "An inventory of the economic resources of the United States at the beginning of the twentieth century." The *New York Evening Mail* calls it "an amazingly instructive volume—a mine of information," etc.

Dark blue cloth, 396 pages, price $2 postpaid.

The Teacher's Practical Philosophy

By George Trumbull Ladd, D.D., LL.D., Author of "Elements of Physiological Psychology," "The Philosophy of Conduct," etc. Ex-Professor of Mental and Moral Philosophy, Yale University

Prof. Ladd, of Yale, stands high as an educator and lecturer, and as an author of several works on philosophy, psychology and pedagogics. He has lectured several times, by invitation, on these topics before Harvard, the University of Tokio and other institutions. This work embodies the essentials of his methods and ideas on the moral element in teaching. 8vo, cloth, 340 pages, $1.25 net; postage 9c.

Funk & Wagnalls Company, Publishers, New York and London

PUTNAM'S NEW BOOKS

BY THE AUTHOR OF "THE ROSARY"

THE BROKEN HALO

By FLORENCE L. BARCLAY

With Colored Frontispiece. $1.35 net. By mail, $1.50.

A novel full of fine qualities of the soul, that substantiated idealism of transforming beauty of thought that makes Mrs. Barclay's characters the most lovable in present date fiction and that have endeared her to hundreds of thousands of readers.

BY THE AUTHOR OF "THE POPPY"

WANDERFOOT

By CYNTHIA STOCKLEY

With Portrait of Author. $1.35 net. By mail, $1.50.

Like the "Poppy" and "The Claw" the present story is written in a sweeping, dramatic, intensive and colorable style, commensurate with the big issues of life that the characters confront.

THREADS OF GREY AND GOLD

By MYRTLE REED

Author of "Lavender and Old Lace," "The Spinster Book," etc.

With Colored Frontispiece. $1.50 net. By mail, $1.65.

The volume is rich with the personality of Myrtle Reed. It is characterized by the combination of humor and sentiment that belongs to all the writings of the gifted author and that has endeared her to a world-wide circle of sympathetic admirers.

THE LURE OF THE LITTLE DRUM

By MARGARET PETERSON

With Portrait of Author. $1.35 net. By mail, $1.50.

The Melrose Prize Novel. Awarded Prize of $1,250.00.

A dramatic and exciting story of Anglo-Indian life.

MEMOIRS OF A PRIMA DONNA

By CLARA LOUISE KELLOGG

(Mme. Strakosch)

8vo. With 48 illustrations. $2.50 net. By mail, $2.75.

Clara Louise Kellogg was the first American prima donna to win recognition abroad. She was received in every country with acclaim and she returned to her native land covered with honors showered upon her by the best audience afforded by the old world. Her Memoirs are filled with anecdotes of the interesting people whom the prima donna met on and off the stage.

"Another True American Story."—*N. Y. Globe*

VAN CLEVE

By MARY S. WATTS

Author of "Nathan Burke," "The Legacy," etc.

In her new novel, "VAN CLEVE: His Friends and His Family," Mrs. Watts adds new characters of fiction to American literature as life-like and entertaining as her previous great successes, "Nathan Burke," "Letty Breen," "Mrs. Ducey," etc.

VAN CLEVE will doubtless be regarded as Mrs. Watts's most popular creation, and the real and vivid account of her hero's life, and that of his family and associates, as her best loved story.

"Oddly photographic . . . a knack of frank and impartial description . . . avoidance of romance. . . . Mrs. Watts is so good a craftsman that her new novel has something very human and very real about it."—*The Independent* (*N. Y.*).

Cloth, 12mo, $1.35 net. At all bookstores

A Great Novelist's Plea for the Emancipation of Women

HAGAR

By Mary Johnston

In "Hagar" Miss Johnston has written the book that her admirers have always wished for, and, latterly, expected—a powerful story of the present day. She brings her heroine from secluded Virginia to the whirlpool of New York.

"Hagar" realizes the breadth, the narrowness, and finally the full proportion of a woman's life, passing through poverty and wealth to find her happiness.

A glowing argument for feminism, a stirring human drama, a piece of noble literature—in each of its three aspects "Hagar" marks an epoch in Miss Johnston's career as a thinker and a writer.

At all bookstores. $1.40 net.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

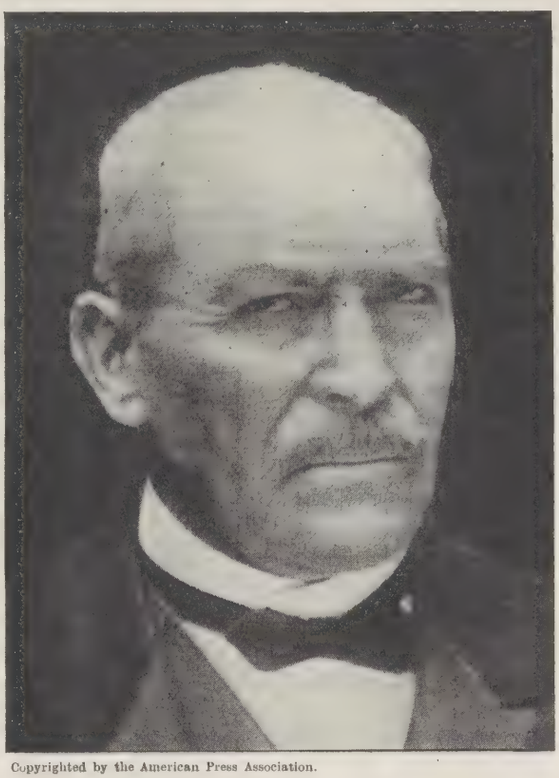
Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 354–360 Fourth Ave., New York

VOL. XLVII., No. 17 NEW YORK, OCTOBER 25, 1913 WHOLE NUMBER 1227

TOPICS OF THE DAY

HUERTA AS A DICTATOR

WHATEVER THE FINAL OUTCOME of Victoriano Huerta's armed invasion of the Mexican Congress, his imprisonment of half the members of the Chamber of Deputies, and his assumption of the rôle of military dictator, the immediate effect, in the opinion of a great majority of our editorial observers, is a dramatic vindication of President Wilson's refusal to recognize the Huerta Government. This aspect of the case is not affected by the rumors from Mexico City as we go to press that General Huerta has since found his position so difficult that he is willing to surrender the reins to a successor. "His defiance of liberty is at once an explanation and a justification of the policy the Washington Administration has pursued toward this beneficiary of assassination," declares the Brooklyn *Eagle* (Ind. Dem.), and this view is shared by such papers as the Chicago *Inter Ocean* (Rep.), *Tribune* (Prog.), and *News* (Ind.), Philadelphia *Telegraph* (Rep.) and *Inquirer* (Rep.), Springfield *Republican* (Ind.), St. Louis *Republic* (Dem.), Boston *Advertiser* (Rep.), Baltimore *Sun* (Ind.), and the New York *Globe* (Rep.), *Tribune* (Rep.), *Evening Post* (Ind.), *World* (Dem.), and even *The Times* (Ind. Dem.), which not long ago reproached President Wilson for turning an obstinately deaf ear to the "popular demand" for Huerta's recognition. "Practically as well as politically, the policy of the President has been justified," declares *The Globe;* and *The Times*, after echoing this opinion, goes on to explain that



Copyrighted by the American Press Association.

HUERTA.

"Until lately, General Huerta has seemed to be a wise executive, conciliatory with his political opponents in the capital, and intent on serving the best interests of the Republic. But he has taken his place now in the line of Santa Anna and the other soldiers who, when in power, governed in spite of, and not in accordance with, the will of those of their fellow citizens who had the welfare of their nation at heart."

No matter to what political fiction Huerta may resort "to smooth the edge of usurpation," it can not now conceal his "determination to rule in fact," remarks the Boston *Transcript* (Rep.):

"He may pretend to hold a free election and to allow the nomination of candidates representing various parties or factions, but his intention to remain the power behind the presidential chair greater than its occupant is manifest. What kind of an election can be expected in a land where the representatives of the people can be bundled off to jail for having protested against the arbitrary arrests of several of their number? An election controlled by Huerta will only be prevented from becoming a tragedy by its conversion into a farce."

The story of Huerta's *coup d'état* and of the events leading up to it, as gathered from the dispatches, is briefly as follows: On the 23rd of September Dr. Belisario Dominguez, Senator for the State of Chiapas, openly attacked the Provisional President in a speech before the Senate, accusing him of having obtained his power by treason and assassination, and declaring it to be the duty of the National Assembly to depose him. The immediate sequel of this speech was the mysterious

If instructions are given to this effect, they will receive attention at the proper time.

Published weekly by Funk & Wagnalls Company, 354–360 Fourth Avenue, New York, and Salisbury Square, London, E. C.

Entered at the New York Post-office as Second-class Matter.

disappearance of Senator Dominguez. Then a number of Liberal Deputies signed a resolution demanding that the disappearance of the Senator from Chiapas be investigated, and warning Huerta that unless the members were assured of their personal safety the Chamber would adjourn and hold its meetings elsewhere than in the capital. Huerta demanded the withdrawal of this resolution, and when the Deputies refused,

MEXICAN LAWMAKING.

—Barclay in the Baltimore *Sun*.

his soldiers entered and marched 110 of them to the penitentiary. Huerta then declared both branches of the National Assembly suspended, and issued a proclamation calling for new elections of Senators and Deputies on October 26, the date set for the Presidential election. He also proclaimed himself in charge of the Departments of the Interior, Administration, Finance, and War.

These events drew two notes from Washington, the first virtually demanding that the lives of the imprisoned Deputies be safeguarded, the second stating that this Government would not recognize the constitutionality of any elections held in Mexico under present conditions. The latter, after stating that "the President is shocked at the lawless methods employed by General Huerta" and "finds it impossible to regard otherwise than as an act of bad faith toward the United States his course in dissolving Congress and arresting the Deputies," goes on to say:

"It is not only a violation of constitutional guaranties, but it destroys all possibility of free and fair elections. The President believes that an election held at this time and under conditions as they now exist would have none of that sanction with which the law surrounds the ballot, and that its result, therefore, could not be regarded as representing the will of the people. The President would not feel justified in accepting the result of such an election or in recognizing the President so chosen."

"This incident," declares Querido Moheno, Huerta's Foreign Minister, "marks a new epoch in our diplomatic relations with the United States."

Meanwhile it is admitted on all sides that the Mexican situation is tense and critical. Its possibilities, says the Washington correspondent of the New York *Tribune*, "range from a débâcle in Mexico City to American intervention." Even in Mexico City, according to a *Herald* correspondent, "there has developed a deep-seated, if not yet openly pronounced, revulsion against Huerta's methods." Surveying Huerta's course from the overthrow of Madero to the present crisis, the Philadelphia *Record* (Dem.) says:

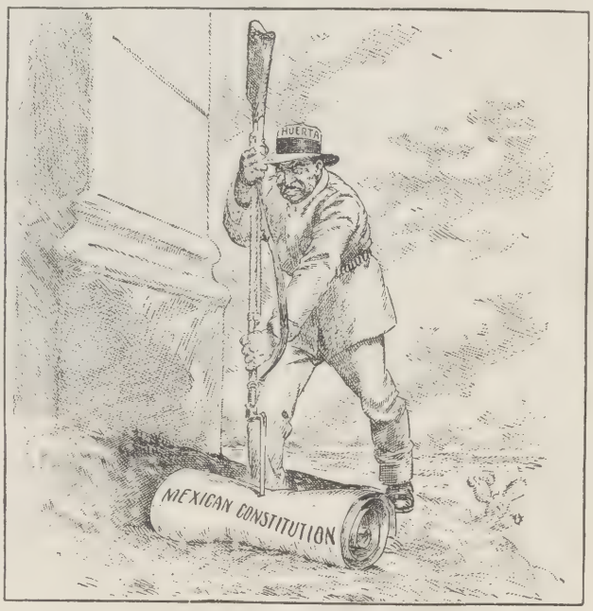
"He was abashed a little by the cry of horror which arose throughout the civilized world when President Madero was assassinated in the Governmental Palace and his mutilated body thrown into the street near the prison, under the pretext that he had been killed there during an effort at rescue. Huerta was disconcerted by the refusal of this Government to recognize him, because of the violent means used by him to gain power. He was going to provide a fair election and would seat his successor, whoever he might be. Thus he said, and he hoped thereby to propitiate public opinion in the United States. A court martial appointed to investigate the cause of Madero's death found a verdict of 'nobody to blame.' To be sure, the rebels in the North were not being subdued with the expected celerity; but, perhaps, this world, and particularly the United States Government, could be induced to accept Huerta's word for the deed.

"It was impossible to keep up the deception, however. When the Liberals of Mexico nominated a candidate for the Presidency in opposition to Huerta's man, the pretense that the whole country, excepting Carranza and a few other bandits, stood by the provisional régime had to be abandoned. Then came the victory of the insurgents at Torreon and the probability that the banners of the Constitutionalists would soon be waving in front of the capital city—for Torreon is the last strategic point of defense against a Northern invasion. The querulous Deputies who wanted to know why Huerta had deceived the country about conditions in the rebellious States were marched to jail and the dictator showed his true colors, emerging as 'the man on horseback.' The time for this dénouement was very ill-chosen. The situation preceding the abdication of Porfirio Diaz has been almost exactly reproduced. That the further development will be identical is by no means certain. What is certain is that Huerta is further from the realization of his ambition and nearer his downfall than he ever was before."

And in the New York *Commercial* we read:

"Events will move swiftly in Mexico during the next ten days, and it may be that the United States will be involved in serious trouble with that country, but we have at least the satisfaction of knowing that everything was done to keep the peace and to help the people of Mexico to establish a constitutional government."

The present situation, significantly remarks the Philadelphia *Telegraph*, "makes it difficult to see anything but turmoil and



MURDERING MEXICAN LIBERTY.

—Macauley in the New York *World*.

disorder in Mexico until other than internal influences are brought to bear upon the affairs of that country." On the other hand, it is suggested in some quarters that Huerta is deliberately trying to provoke us to intervention in the belief that that is the only thing that will unite Mexico behind himself. Yet another guess at the future is hazarded by the Baltimore

Copyrighted by John T. McCutcheon.

IF HUERTA CAN DISPOSE OF LEGISLATIVE OPPOSITION BY SUCH A SIMPLE AND EFFECTIVE METHOD—

WHAT A LOVELY CHANCE THE OPPOSITION WILL HAVE AT THE POLLS!

McCutcheon in the Chicago *Tribune*.

HUERTA'S INVINCIBLE METHOD.

Sun, which is convinced that Huerta's course must "intensify the popular opposition and arouse the fierce resentment of every Mexican who has begun to see the light of constitutional liberty." The Baltimore paper goes on to say:

"The act shows desperation rather than strength, and sows the seed of certain ultimate disaster for the Huerta Administration. A large part of the Mexican population are still in a condition of political and intellectual darkness, but the determined revolutions of the last few years indicate the rapid growth of progressive ideas and true conceptions of free government, and there is no reason to suppose that a country which drove out a strong man like Diaz will long tolerate the usurpation of a smaller and weaker man like Huerta."

The New York *Evening Post* is another paper which believes that it was weakness rather than strength that spurred Huerta to override the constitution. Says *The Post:*

"Repeatedly we have protested in these columns against the superstition which confounds brutality with efficiency. Because a successful dictator, like Porfirio Diaz, must be ruthless in his policies, people embrace the converse of the proposition and assume that crime and violence are the proofs of efficient despotism. Because Huerta attained power through a succession of acts of revolting perfidy and outrage, very respectable people jumped at the conclusion that Huerta must be the heaven-sent man for Mexico. It would have been sentimental to look beneath the surface of things, to try to ascertain whether the democratic uprising that drove Diaz from power had really spent itself, or whether Madero's death did not altogether extinguish the spirit of resistance to despotism. But President Wilson did look beneath the surface."

But while Huerta seems to have few friends among the American papers, he does not lack zealous champions among the Americans in Mexico City. Thus on the day that he sent his Congress to the penitentiary he received from twenty-one American residents in the capital a remarkable document eulogizing him, scoring President Wilson for his policy of non-recognition, and defending the assassination of Madero. Heading the list of signers was the name of Maj. Cassius C. Gillette, U. S. A., retired. This document contains the following arguments against holding a "free election" in Mexico:

"The peons' political capacity is not better than that of our unfranchised reservation Indians, and really is below that of our disfranchised Southern plantation negroes. During the period before Diaz, government never changed, except by force. At that time the lynching of Madero would not have caused a ripple on the political sea. In the Philippines we do not let natives vote. Why should we try to force a full, free election on Mexico, with its inevitable horrors of peon domination?

"If there could be a full, free election, Mexico to-morrow would not have a shadow of doubt that Gaona, the leading bull-fighter, would be overwhelmingly elected, just as Jack Johnson would be elected Governor of Mississippi under similar conditions."

"The document is valuable," remarks the Philadelphia *Record*, "only in showing whence Huerta drew the inspiration that the American people did not support the Mexican policy of their President." On the other hand, the New York *World* describes it as "the most significant document that the Mexican situation has yet produced," and denounces its signers as "a score of Benedict Arnolds." Remarking that these signers are "for the most part concessionaries or representatives of Big Business," *The World* goes on to say:

"This memorial has been presented to General Huerta, but it is also to be transmitted to Washington. It proves that great American business interests in Mexico are murderous as well as tyrannical and treasonable. It shows, furthermore, the sort of advice on which the usurper Huerta has been acting.

"What punishment is adequate for such a troop of Benedict Arnolds? Is there an affront to the American name and the American Government that our adventurers in foreign lands will not perpetrate in the hope of gain?"

But for unreserved eulogy of Huerta these twenty Americans are entirely eclipsed by *El Independiente*, the Government organ in Mexico City, which compares Huerta dissolving Congress with Christ casting out the money-changers from the temple. This paper goes on to explain that Vera Estanol and Rodolfo Reyes, who were expelled from Huerta's Cabinet for "incompetence and disloyalty," carried their plotting to the Chamber of Deputies, which "soon began to seethe and bubble with intrigue, to boil with the impotent rage of a legion of idiots who are a heap of demagogic dirt cast up by a revolutionary vortex into high political places." "Huerta," declares *El Independiente*, "is the man of the hour."

"His is the falchion whose gleam lights the national chaos. His will is the will of iron that will exterminate rebellion. He is the only hope of the return to peace and civilization."

A large element in Mexico City, the correspondents report, believe that Huerta took the only possible course with his disaffected Deputies, who were actively conspiring for his overthrow. This point is also brought out by Mr. Oliver Herbert Thomas, of Richmond Hill, Staten Island, in the following letter to the New York *Sun:*

"If the Southern Congressmen before the Civil War had remained or been permitted to remain in Congress after the secession and had taken advantage of their position to conspire actively and openly against the Federal Government while drawing their pay from that Government, would they not have been arrested and held for treason?

"And yet we profess to be painfully shocked because President Huerta has jailed the Maderist members of the Mexican Chamber of Deputies conspiring against the central Government and the peace of the country. He wouldn't be much of a man if he had not taken the action he did. In fact, if he has made any mistake at all it has been in the direction of too much leniency toward the antagonistic political intrigues of these men.

"It is to be noted that in explaining his action President Huerta made the point that if he knew of one other man on whom all these political intriguants could unite for the benefit of the country he would gladly resign and turn the reins of power over to him. The fact is, as he said, that there would be as many contenders for his position as there are parties and groups in the Chamber. And that would mean anarchy."

THE LOSS OF THE "VOLTURNO"

THE DESTRUCTION of the *Volturno* instantly calls up memories of the *Titanic*, and tho the death list is shorter in the case of this second great sea disaster within eighteen months, it seems to the New York *Sun* that the details of the story are "equally tragic and perhaps actually more painful." The earlier catastrophe did not surpass the later in dramatic quality, agrees the New York *Evening Post*, for there was never before on the ocean such a scene as that of the night of October 9—"a great steamer burning helplessly in a gale, which prevented the safe launching of life-boats, with ten or eleven ocean liners rolling in the high seas nearby in the hope that the gale might abate in time to save some of the hundreds of lives menaced by the waves and by fire." The cry for a really "unsinkable" ship that went forth after the loss of the *Titanic* now gives place to the demand for a ship that is truly "fire-proof." There was no lack of life-boats on the *Volturno*, but they were rendered useless, and became, indeed, a source of peril; and these circumstances call out many an editorial utterance on the need of better fire-fighting apparatus and more satisfactory methods of transshipping passengers in a heavy sea. The only cause for congratulation found by the press, save for their acknowledgments of the seamanship and courage displayed in the work of rescue, is the work of the wireless. It seems to be the unanimous opinion that, had there been no S. O. S. call, instead of the rescue of 532 from a total company of 657, there would have been none left to tell the tale of the loss of the *Volturno*, save by the rarest chance. As the Philadelphia *Record* remarks, "there was no confusion in the working of the wireless, no interference and breaking into the conversations between the calling vessel and those who answered, and every ship within hail responded with alacrity, so that at the time of the rescue there were ten steamers standing by." Evidently, concludes *The Record*, "the lessons of the earlier disaster have been heeded, and the wireless has become a well-managed life-saving device."

CAPTAIN FRANCIS INCH,

Who for twenty-four hours personally directed the fighting of the flames, until, exhausted and nearly blinded by heat and smoke, he was taken to the *Kroonland*, the last to leave the *Volturno*.

But as the world realizes its debt to Marconi for his great invention, it is at the same time, as the New York *Globe* observes, compelled suddenly to recognize in the *Volturno's* loss the fearful menace of fire—fire at sea. According to figures compiled in Paris, we are told, "in the last seven and a half years a ship a day has either been damaged or destroyed by fire," while "those that have been lost by shipwreck are comparatively few in proportion." Hence, to be safe, says the Philadelphia *Inquirer*, "we must have not only the unsinkable ship, but the fire-proof ship." Now, it continues,

"The *Volturno* was not only not fire-proof, but its supply of apparatus for fighting fire was wofully deficient. The fire-fighters were practically helpless, and the guilt that burdens the shoulders of the management of the line was in sending out a vessel so poorly prepared to cope with flames."

While the final investigation may or may not substantiate *The Inquirer's* charge, there is now no disposition to question newspaper assertions that the disaster has its lesson for ship-owners and ship-builders. "The fact that builders virtually have obviated the perils of tempest, that foundering in a storm is, for the great steamships, a danger not to be considered, makes it," in the Chicago *Tribune's* opinion, "the less excusable that they should be destroyed by man-made dangers." "The brains of the world" should now be enlisted in an effort to make ocean liners absolutely fire-proof, declares the Washington *Post*. "Cabin and gangway partitions should be built of steel on passenger ships as they are on battleships," adds the New York *Times*. Nor are improved materials and methods of construction the only things needful, thinks the Syracuse *Post-Standard*, and it suggests "means of fire prevention by something at sea corresponding to the automatic sprinkler used in large buildings" as a necessary step in the direction of perfect safety.

If, in spite of all precaution, disaster does come, we may now feel assured that "in the ocean lanes other steamers can usually be brought to the spot by wireless"; but, asks the Springfield *Republican*, "has the utmost been made of this fact in the way of providing apparatus for transshipping passengers?" We must be prepared for any eventuality, *The Republican* reminds us—

"It is useless to try to predict what form danger will take—the thing is to be prepared for any contingency. If a ship sinks in still water, life-boats for all are needed. If she is destroyed slowly in a storm, with other ships standing by, a life-saving service is the vital thing, and should not be beyond the resources of inventors. The need of such an equipment seems to be the lesson most urgently brought home by this shocking catastrophe."

The wireless possibilities for rescues at sea should, in the Brooklyn *Eagle's* opinion, persuade all governments of the necessity of having liners supplied with guns or rockets for carrying lines to another vessel or to the shore. "When a line is thus thrown over a vessel, sinking or burning, a cable can be hauled aboard, a 'breeches-buoy' service established, and one by one every human being can be saved." It should be stated that American regulations compel the carrying of such equipment, and Captain Garden, of the United States Life-saving Service, believes that in the light of this disaster the forthcoming international conference at London to consider safety at sea "will recommend that each passenger steamer carry appliances of this sort."

But it may be well to turn from this discussion to consider the actual history of the *Volturno's* loss, as far as it may be gleaned from the mass of statements by survivors of the burned ship, and the officers and passengers on the rescuing fleet. The *Volturno*, a vessel of about 3,600 tons, built in 1906, owned by the Canadian Northern Steamship Co., but leased to the Uranium Steamship Co., left Rotterdam for Halifax and New York on October 2. Beside her crew of 93, she carried 564 passengers, mostly immigrants. She carried also a miscellaneous cargo of freight, of an unusually inflammable character, as the New York *World* and *Evening Post* now point out. The latter paper is inclined to think that the perusal of the *Volturno's* manifest sheet goes far to explain what happened later:

"Among other things, she carried 90 drums and 740 casks of various kinds of oils, 1,189 bales of peat-moss, 125 drums and

THE BURNING SHIP AND PART OF THE RESCUE SQUADRON.

This picture shows the burning *Volturno*, with her passengers crowded together at the stern, and at the right two of the ships which came to the rescue. It also shows clearly how the high waves prevented the taking off of passengers by the boats of the waiting steamers before the oil-tank steamer arrived. The insert is a picture of Mr. Arthur Spurgeon, who sent the first graphic story of the disaster by wireless.

207 casks of chemicals, 1 case of celluloid plates, 559 casks and 1,003 cases of wines, 310 cases of gin and other liquors, 120 packages of straw envelops, 160 bales of burlap, 278 bales of rags, 370 packages of straw envelops, and 6 cases of cottons. There were plenty of things in her hold that might have exploded spontaneously, and a fire once started in such materials must have been almost impossible to check with the best fire-fighting apparatus in the world, let alone on a ship that was pitching violently in a heavy storm, with a gale of wind to fan the flames."

According to the wireless dispatch sent by Capt. Francis Inch of the *Volturno* to the company's headquarters in New York, fire was discovered in a forward hold at 6.55 A.M. on Thursday, October 9. The flames rapidly gained despite the strenuous efforts made to extinguish them. A wireless call for help was sent out. Several life-boats were lowered, but all were smashed by the heavy seas, except two, which were probably lost with their occupants. At 11 A.M., the *Carmania* arrived, and during the afternoon the other ships which had heard the wireless call made their appearance. The fire on the *Volturno* was steadily tho slowly gaining. Efforts made by the other ships to take passengers from the *Volturno* failed because of the gale and high seas. During the evening passengers were induced to jump and they were saved by the boats from the rescuing squadron. Early in the morning, the wind having abated and the waters being further smoothed by oil from the tank-steamer *Narragansett*, the remaining passengers, who had been huddled in the stern all night, were easily taken on board boats and carried to the various ships. According to figures still subject to correction, 532 persons, of a total ship's company of 657, were saved by the *Carmania*, *Grosser Kurfürst*, *La Touraine*, *Asian*, *Narragansett*, *Seydlitz*, *Minneapolis*, *Devonian*, *Czar*, and *Rappahannock*. One who saw the rescue from the deck of the *Kroonland* noted that:

"It was a strange company that filled the last boat to put off from the side of the flame-swept *Volturno*. It carried Captain Inch, it carried the officers, it carried a dog. And it carried a cook who was one of the big heroes of the tragedy, for he stood at his post and baked and made coffee until the flames were so close that his shoes were literally burned off."

We have also the vivid stories told by the rescuers and the rescued. The bravery of Captain Inch, half-blinded after twenty-four hours of fire-fighting, and the daring of Second Officer Lloyd and the crew who went with the last sound boat to the *Grosser Kurfürst* as an experiment to see whether other boats could live in that sea, are nearly equaled by the valor of other officers and members of the crew during that day and night of combating the perils of fire and storm. Then, too, the splendid seamanship displayed by the navigators of the helping ships, and the nerve of the sailors who manned the boats and saved lives in a raging sea are fully acknowledged in the many stories that filled the front pages of the newspapers last week. Earlier reports of cowardice and panic on the *Volturno* seem to be disproved by later news. There is debate as to the relative shares of the different vessels in the work of rescue. But the work that had to be done was well done, all who remained on board the burning ship till the storm abated were saved, and, as the New York *Sun* observes: "The best reassurance of the safety of ocean travel is in the fact that ships are officered by men of the type of the captains who played their part in the rescue of the *Volturno*."

THE BATTLE.
—Carter in the New York *Evening Sun*.

A GREAT STORE LEFT TO CHARITY

A NEW PAGE in the gospel of wealth is written in the last will and testament of Benjamin Altman, the New York merchant, who provides that the profits of his share in the great business he founded and built up shall be used for the benefit of its employees and for the public charities of the city. The bequest of his important art collection to the Metropolitan Museum may well be left for special treatment in a later issue, but the transformation of a department store into a charitable institution is treated as something that is probably unprecedented, tho attempted in some measure, and unsuccessfully, by A. T. Stewart. Mr. Altman's "establishment of his great business house as a foundation to be administered for the benefit of his partners and employees" is envisaged by the New York *World* as "a remarkable monument to his benevolence." The will, declares *The Globe*, "is an instrument whose contents make for social peace and for a lessening of the uncharitableness and detraction too often manifested toward men of wealth." Every purchase of steel, of course, might be said to contribute toward the Carnegie Foundation for the Advancement of Learning, and every kerosene lamp or gasoline-engine may aid the various Rockefeller boards and funds for this or that, but scarcely before could the purchase of ribbons and lace be made with the feeling that it was an act of sweet charity. Mr. Altman's bequests are thus summarized by the Springfield *Republican:*

"To his relatives Mr. Altman left comparatively small bequests, in most cases $100,000. To the Mt. Sinai Hospital he left $100,000 and smaller sums to other hospitals. To the mutual benefit association of B. Altman & Co. he left $50,000, and also remembered the older employees individually in sums of from $1,000 to $5,000. But the greater part of his fortune goes to the Altman Foundation, with a fund estimated at from $25,000,000 to $30,000,000, a device which was carefully worked out for the double purpose of keeping the business going and of applying its profits to the support of such philanthropic institutions as the trustees may choose. The dry-goods business, however, is to be kept quite distinct from the foundation which it supports."

Mr. Altman's purpose, according to his attorney, Mr. John L. Cadwalader, was to continue his business so that it would do the greatest public service, and so that the large income derived from it should be a means of doing good. Hence he established the Altman Foundation,

"To use the income of the business on the one hand for the benefit of his employees and on the other for the public charities of the City of New York. In this way, he provided for compensation to those who should continue to uphold the ideals of B. Altman & Co. as a public-service institution and to make return to the people of the City of New York, from which B. Altman & Co. drew its patronage. It was the thought of a big-hearted, broad-minded man."

To quote Mr. Cadwalader's summary of the paragraph in the will providing for the foundation:

"It then gives to the Altman Foundation, a charitable corporation incorporated by a special act of the legislature, all his capital stock in the corporation of B. Altman & Co. not otherwise disposed of by his will, to be disposed of and the income applied pursuant to the terms of the act above referred to. Under this act the trustees of the Altman Foundation [only one of whom may be an officer in B. Altman & Co.] will have the power to distribute the income on this stock for the benefit of the employees of B. Altman & Co., from time to time, and any surplus to such charitable institutions of the City of New York, according to the judgment of the trustees of the Altman Foundation."

To carry out this plan, "The Altman Foundation" has already come into being under the laws of the State of New York as a corporate body existing for the

"Receiving and maintaining a fund or funds, administering the same and applying the principal and income thereof, and either of them, to promote the social, physical, or economic welfare and efficiency of the employees of B. Altman & Co., a New York corporation, by such agencies and means as from time to time shall be found appropriate therefor."

The aims of the foundation and the duties of its trustees are further described in the charter:

"The corporation hereby formed is not established and shall not be maintained or conducted for pecuniary profit, or for the pecuniary profit of its members, and no member of the corporation shall be entitled to or shall receive any such profit; provided, however, that reasonable compensation may be paid to an officer or member for service actually rendered to the corporation. . . . . .

"They shall have the power to adopt some general and effective system of profit-sharing by which the employees of any corporation, a considerable amount of whose stock is held by this corporation, may receive a benefit from the profits of the business of such other corporation or an interest in its stock, and to give and dispose of such stock or portions thereof in carrying out the same on such terms as such trustees shall approve."

REMOVAL OF GOVERNOR SULZER

THAT THE CONVICTION of Governor Sulzer for high crimes and misdemeanors by the Court of Impeachment sitting at Albany is a just verdict would seem to be the prevailing opinion of the New York press. For even those who insist upon the political animus in the presentation of the charges of wrong-doing agree with the New York *Sun* (Ind.) "that this has been a criminal and not a political prosecution ever since it reached the court." That is, as the New York *World* (Dem.) succinctly phrases it, "William Sulzer was impeached by Murphy's Assembly, not for what he had done, but for what he had refused to do," while "he was convicted by the Court of Impeachment not for what he had refused to do, but for what he had done." Even such solace as Mr. Sulzer may have drawn from the division of the Court of Appeals judges on the question of his guilt and the vote of the presiding Chief Judge against his conviction vanished, in the opinion of many, when a more than three-fourths vote of the entire Court affirmed his guilt on one of the counts of the impeachment, and when, in the New York *Herald's* (Ind.) words, Chief Judge Cullen himself "lasht the impeached official" in "cold, merciless phrases" for "unmoral conduct which makes him unfit for high place in the state." On the part of all, declares the New York *Sun*, "the perception of Mr. Sulzer's turpitude and moral unfitness was clear. There is no comfort for him in the variance of opinion as to the proper interpretation of the law of limitations." There can be no substantial differences of judgment about the facts in the case, *The World* tells us:

"Mr. Sulzer as a candidate for Governor collected in secret large sums of money which he diverted to his private use. He knowingly swore to a false statement of his campaign contributions, he nullified the Corrupt Practises Law of the State, and as Governor he used his influence and power to smother the proof of his transgressions.

"Not only are the facts fully established, but when Mr. Sulzer refused to take the witness-stand to meet the charges against his personal and official honesty he confest his guilt and invited his removal from office. . . . . .

"Mr. Sulzer's moral unfitness for the office of Governor was established before the Assembly impeached him. His legal unfitness is now established by the Court of Impeachment after a full and fair trial. When the Court completes its work to-day nothing of him will remain to vex the Governorship of New York except the continuing shame and humiliation in which he has involved the State."

The vote of the Court on the two articles of impeachment declaring that Governor Sulzer made false statements regarding his campaign contributions and that he committed perjury in so doing, was: Guilty—39 to 18. Article IV, declaring "that he suppress evidence by means of threat to keep witnesses from

testifying before the Legislative Committee" relative to his acts, was likewise affirmed, but by the more decisive vote of 43 to 14. The later vote for removal from office, 43 to 12, was foreshadowed in the balloting on Article IV. The other charges were not sustained. In the case of Article IV, the negative votes were due to inability to find in the evidence submitted to the Court the facts necessary to sustain this particular charge. The two articles dealing with the Sulzer campaign funds did, however, bring out a fundamental difference of opinion, which is clearly indicated by the statement by which the nine judges of the Court of Appeals (who with the Senate composed the Court of Impeachment) explained their votes. The venerable Chief Justice Cullen wrote a long opinion in which he asserted his belief that the accused committed no legal crime in using his campaign contributions as he saw fit, nor did he commit legal perjury in swearing to the truth of his statement of campaign receipts. Judge Cullen was willing to say plainly that "if these acts had been committed during his incumbency in office, I should have regarded his moral offense great enough to require his removal." But, he continues:

Photograph by Gessford.

MR. WILLIAM SULZER.

"I am of opinion that it can not be considered as ground for impeachment, and that it would be an eminently dangerous doctrine to treat them as such.

"If the doctrine contended for is correct, a man guilty of any offense in his past life of sufficient gravity to justify his removal, if committed when in office, may be removed from office without an opportunity to show that both his official conduct and his private life during his official term have been of the most exemplary character. There is no statute of limitations on impeachment. The rule here contended for amounts in reality to an ex-post-facto disqualification from office for an offense which had no such penalty when committed, without affording an opportunity for showing either repentance or atonement."

Three of the associate judges reasoned in like manner, but the position of the majority is indicated by this excerpt from Judge Cuddeback's statement:

"I say that the violation of the Corrupt Practises Act, proved beyond dispute, under the charge in the first article of impeachment, does reach into and affect the officer after he takes his office in the discharge of his duty. The people have the right to know what influences are being brought to bear upon an officer after his election. They have the right to know who put him there, who will control him there, or who will at least exercise influence over him there, and to that end they have passed this statute."

Another judge explained that he voted "guilty" because he "extended the power of impeachment under our Constitution to acts of misconduct by officers prior to their induction into office in some way related to or connected with the office which they were about to assume and limiting its application to the time of the selection of the candidate."

But the New York *Tribune* (Rep.) regrets that in treating the offense as impeachable the Court so "greatly widened the scope of the impeaching power." As it remarks:

"If a Governor can be removed for doing something as a candidate for office, is he not liable to removal for something he has done as a candidate for nomination, or even years earlier in his business or professional career? Is the impeachment process to be made a drag-net for moral delinquencies running away back to early youth? If this is good law, it conflicts with practical sense."

The World, on the other hand, regards "the new precedent as sound and wholesome," believing that "this country needs more impeachments, not fewer impeachments." It adds:

"If the broader powers of impeachment are ever abused, it is for the people to deal with that offense, just as it is for the people to deal with the motives of Sulzer's accusers, which the Court of Impeachment did not and could not take into account."

And, continues *The World*, tho so far Sulzer alone has been punished, these accusers who, as has been said, impeached a Governor, "not because he was venal, but because he was not venal enough"—these accusers, we are told, will not escape.

"It is their turn next. If New York is fit for self-government, if it is fit for liberty and justice, the wrath of an outraged people will never be quenched until the political corpse of Tammany is likewise hanging upon a gibbet of shame."

After this frank acceptance of the Sulzer conviction as an incident in a war on Tammany, it is well to consider the viewpoint of a supporter of the regular Democratic organization in New York State and City. Sulzer is deposed, declares the New York *Telegraph*; "thus has the Democratic party purged itself." And his fate shows to all men "that happiness and respect of compatriots go hand in hand with right living and high honor."

But, declares the ousted Governor, "I have a lot of fight left yet, and they'll find the fight has just begun." His friends speak of lectures and magazine articles and activity on the stump. As against this we read in the New York *Herald's* Albany correspondence that while Tammany is satisfied with having taught "a lesson for all future time to all ambitious politicians who would throw themselves against the organization walls," they still hold a club over Mr. Sulzer's head—"he will be invited to retire from public life quietly if he would avoid criminal prosecution."

SKETCHES BY THE WAY ON THE ROAD TO CURRENCY REFORM.

FOREIGN COMMENT

ULSTER'S DEFIANCE OF HOME RULE

THINGS ARE becoming pretty hot in Ulster, and in Ireland generally, over the question of Home Rule. Lord Loreburn's proposal for a conference between Unionists and Home Rulers to reach some amicable compromise has been swept off into the waste-basket, for Mr. Redmond, in a speech at Cahirciveen, County Kerry, "giving his commands to the Cabinet as blunt as a bludgeon," declares the London *Daily Mail*, "has killed all prospects of a Home Rule conference." In his speech this persistent Irish leader declared that "Our ship is at the harbor's mouth, the glass is 'set fair,' and the orders are 'full steam ahead.'" To quote further from his remarks:

"We know that we have won our fight. They know that they have lost it. One of them recently said—I think it was that warlike lawyer, Mr. F. E. Smith, from Liverpool—that 'their argument had failed.' It is true. Their argument has failed everywhere. It has failed throughout the length and breadth of the Empire, which is to-day unanimous in favor of Ireland's claim. They have failed in the House of Commons. There, an overwhelming British majority, far greater than those which carried every great reform of the last century, has twice passed the Home Rule Bill, and, in a few short months, will finally pass it into law.

"Will the British people submit to coercion by a minority of the inhabitants of one province in Ireland and deny justice because Sir Edward Carson says justice shall not be done? With this confessedly the only remaining issue in this Irish problem, it is no wonder our opponents are exhibiting the recklessness and the hysterics of despair."

Copyrighted by the Topical Press Agency.

CARSON'S ATTITUDE ON HOME RULE.

On which Mr. William O'Brien, M.P., a Nationalist who stoutly advocates the policy of mutual conciliation in Ireland, writes in the Cork *Free Press:*

"Is this, we ask, the asininity of a blundering windbag, or is it the deliberate betrayal of a scheming hypocrite, whose service to the Irish cause has been to make his son-in-law chief turnkey of Kilmainham?"

A sentiment which finds an echo in the following editorial comment of the organ in which it appears:

"Whether Mr. Redmond has the power to wreck the national cause for the time being remains to be seen. Whether he has or not, we have the power to make life unbearable for his place-hunters at the next election."

The only ministerial statement of any importance which has been reported in the London press is that of Mr. Winston Churchill to the effect that "a satisfactory compromise is likely to be accomplished," and that "the question of Home Rule will be decided by the nation at the impending General Elections." Meantime Sir Edward Carson seems to be making preparations for a second Battle of the Boyne for what he styles "the liberation of Ulster." In Belfast, on September 28, there paraded before him "15,000 well-drilled men," says the Belfast correspondent of *The Daily Mail*, "who are rapidly making themselves efficient in military pursuits for the purpose of resisting Home Rule by armed force. And Belfast, in its scores of thousands, knowing what was in the minds of these men, cheered them as the heroes of a nation are cheered."

But the London *Daily News* (Liberal) has no sympathy whatever with the Belfast Unionist projects. It applauds Mr. Redmond's last utterance to the echo and speaks of Sir Edward's cry of "no compromise and no conference" as follows:

"If Sir Edward Carson will not have a conference of this kind

THE ULSTER ARMY, WHICH THREATENS ANOTHER CIVIL WAR IN IRELAND: UNIONIST LEADERS

it is simply because he wants his own decrees registered and will be content with nothing else. How much reality there lies behind his bluster time will make plain; but the absurdity of his position cries aloud. He professes to fear that in North East Ulster, where the Protestants are in a majority, they will be harried, opprest, deprived of their liberties; and he is making arrangements to sever the destiny of this area from the rest of Ireland. But if the Protestants ought to fear Home Rule where they are in a majority, they should be doubly panic-stricken where they are in a minority. There should be wailing from the South, and the Orangemen of the North should be even more concerned for their brethren in the South than for themselves. What we see is precisely the reverse. The Protestants of the South are perfectly calm; the Orangemen in the North are cutting themselves and their support off entirely from the Protestants of the South. The very acts of Sir Edward Carson and his colleagues reveal their own complete lack of faith in the very perils of persecution which they make the pretext of their threats of civil war."

The London *Standard* speaks with grave impartiality of the present crisis and condemns all those, whether Home Rulers like Redmond, or Unionists like Carson, with his army of Ulstermen marshaled under the command of that sturdy veteran of the Afghan and Egyptian Wars, Sir George Richardson, who oppose a conference. To quote this paper:

"It is of little profit to exclaim weakly against the wickedness of Ulster and the unreason of the whole business. To such futile protests Sir Edward Carson and his followers have their own answer. The important thing is to recognize that the facts, however unwelcome, are facts; that this passionate resolve of a whole people never to submit to what they regard as an unjustifiable invasion of inalienable rights is bound, if unheeded, to lead to trouble of the gravest kind. It is beside the question to discuss whether Sir George Richardson's volunteers will be able to face Regular troops, whether the Regular troops will consent to face them, or whether British officers will strike against orders to suppress an Ulster rebellion. Nobody knows. But everybody does know that persistence in a policy of drift can only mean disaster for Ireland and Great Britain too, and possibly for the Empire itself. Public opinion will not hold guiltless any party which opposes unnecessary obstacles to a settlement."

THE TWO GREAT "NOES"—THE OBSTACLES IN THE WAY.

BOTH—"It's all very well to say 'kiss,' but how can we?"
—*Evening News* (London).

THE GERMAN MENACE TO RUSSIA

THE GERMAN military maneuvers have aroused the attention of Europe to the splendid equipment and administration of the Army, not only in its fighting spirit, but in its commissariat and its medical service. We read in the foreign papers that the English maneuvers have fallen short in the last two particulars, that men left the ranks faint and overspent for want of food and drink. The efficiency of Germany in managing a large mass of men marshaled in fighting order is calling out the admiration of Europe. It is even spreading alarm. The Russian press regard with considerable uneasiness what the *Novoye Vremya* styles "a new eruption of German militarism." This newspaper, commenting upon Germany's increase of armament, says:

"The grave period which Europe is living through has already borne fruit. Germany has announced the coming new increase of her military forces. And the increase, it appears, will be enormous. Of course, the new project has caused alarm almost all over Europe: one such law is sufficient to change considerably the existing balance in Europe."

Stating that, according to the new project, the German Army will number 865,000 before 1918, possibly in 1914, it goes on:

"There is no need to insist that this fact will have an immense political significance. Why, the German Army . . . will, in time of peace, exceed the French Army to the extent of one-third. Militarism is a terrible thing. Germany forces Europe to make new, unheard-of additions to their armies. May she not have to regret it!"

But while condemning Germany, the *Novoye Vremya* urges France to increase her Army, and indorses the law for three-year military service. To quote again:

"The Franco-Russian Alliance pursues a defensive policy. From this point of view the allied armies must coordinate their work in time of peace, so that when the hour of trial arrives the mutual defense should prove effective. Under the present

REVIEWING A FORCE OF 15,000 MEN AT BELFAST ON SEPTEMBER 28, PLEDGED TO RESIST HOME RULE.

conditions the French Army, with all its high qualities, is hardly equal to the task which may fall to its share.

"The Russian Army, owing to the enormous distances of our country, is mobilized very slowly. Therefore in case of a sudden attack the first weeks of the war will be spent in concentrating the reserves and transporting them to their respective quarters. . . . The Central-European armies—our probable adversaries—will take advantage of this period of our enforced inactivity, rush their forces against our ally, crush his advance posts, occupy as much territory as possible, and thus prevent the French mobilization. . . . . .

"For political, social, and psychological reasons neither Russia nor France will, under any circumstances whatever, it seems, be the first to start war. The war, if it ever comes to a war, will be started by the Central European States, which have not lost their fighting instincts. It will begin suddenly, without warning, for only taking the Dual Alliance unawares can they expect to overpower it. France will have to withstand the first assault with her Army on a peace footing. And wo to her if she shall not hold out! To increase her Army in time of peace is a problem of gravest importance. France can count on the powerful assistance of Russia, but it rests with herself to have that assistance come in time. What consolation will she find in Russian victories if, owing to her improvidence, she lets the enemy penetrate into the heart of the country, if her cities and villages are burned, fields, vineyards, and forests destroyed, the population disarmed? On the other hand, what use shall we have from the alliance with France if our ally shall not be able to check our common adversaries long enough for the complete mobilization and concentration of our forces?

CAPITAL AND LABOR.

A Duel to the Death (of both).

—*Pall Mall Gazette* (London).

"Having come out victorious in a struggle with a score of tongues a hundred years ago, we shall be able to overpower, without outside help, two nations if they venture to go in the path of the great Napoleon. But our alliance with France has another import. If she will do her plain duty in time of peace, war will become impossible, for the very simple reason that the Central European Governments will not decide upon an attack which does not promise any successes even in case of its suddenness.

"The introduction of a three-year military service in France will increase the numbers and strengthen the fighting qualities of the first line of defense upon the reliability of which the safety of France and the speedy and successful outcome of a possible war will depend."—*Translation made for* THE LITERARY DIGEST.

DO STRIKES PAY?

THE STRIKE of the "dockers" in Dublin which not only paralyzed industry in the Irish capital, but brought hundreds of families to the brink of starvation, was the occasion of a remarkable demonstration of practical sympathy on the part of English workers. The steamer *Hare* was chartered at Manchester, loaded with food and dispatched to Ireland to supply the needs of the hungry dependents of those who had left off work at the dictation of the labor leader, Mr. James Larkin. His name, by the way, has given rise to the use of a new word, "Larkinism," and his sole weapon against capital, declares the London *Tablet*, consists in "wild and revolutionary appeals" to the populace. The incident of the *Hare's* dispatch and arrival are thus picturesquely related in *Justice* (London), which professes to be the organ of Social Democracy:

"The most striking event of the week to the world of labor has been the departure of the ship *Hare* from Manchester last Friday. She left with a cargo of food to the value of £5,000 obtained by the parliamentary committee of the Trade-Union Congress from the Cooperative Wholesale Society at Manchester. For three days before the dockers, who had been on strike, had been working as hard as they could to load the vessel at the Pomona docks with the 60,000 food parcels for the locked-out men at Dublin and their wives and families.

"The *Hare* arrived at the South Quay, Dublin, a little before two o'clock on the Saturday afternoon. She had been delayed by the fog in the voyage down the Manchester ship canal and across St. George's Channel. But when she did arrive what a sight it was! The ship was gaily decorated with flags and streamers; she was welcomed by the blowing of sirens and the ringing of bells; the quayside was black with thousands of men, women, and children who had gathered to watch her coming, and who sang and cheered and cheered and sang until their throats must have been hoarse. From Messrs. Haworth & Company's mill on the canal bank a group of men were waving hands, and one of them pulled out a red handkerchief, at which more cheering went up. It need scarcely be said that that red handkerchief was taken as symbolical of the red flag."

The terrible suffering and riots which have made the recent Dublin strikes so black a chapter in British industrial history have elicited from several specialists their opinion on the expediency or profit of such defiances on the part of labor of strongly entrenched capital. Their arguments apply to labor wars everywhere, here as well as in England. Mr. W. J. Davis, president of the recent Trade-Union Congress, says in the London *Morning Post* that the employers, not the workers, are to blame for strikes, and as *The Post* is the organ of wealth and aristocracy, his message goes to the ones he aims to reach. As he puts it:

"Trade-unionism took its rise more from the employer than the labor leader. It came from the unjust employers, who, not satisfied with unfair conditions, placed indignity after indignity on the worker until one of their number had the pluck to rebel, and who, by the timid murmurings of the opprest, was secretly proclaimed a leader. By common consent of the employers, and as they or their friends made and administered the laws, he was persecuted. The persecution, however, instead of annihilating the leader, produced leaders. . . . . .

"The 'down-tools' action may be a mistake, and if it is, employers are as much responsible for its adoption as the officials of trade societies.

"Instead of keeping to a bargain, they often by divers means set off men for no other reason than to set on cheaper labor. Many of them are unfriendly to any form of industrial combination and openly and tacitly approve a manager, and especially a working foreman, who coerce men out of their various unions. This is why the 'down-tools' policy is so rife with men who are either not members of a trade-union, or who have been members for only a few weeks. This policy is in many instances a great mistake, as strikes do both harm to commerce and cause much ill-feeling between not only employers and workmen, but between workmen and workmen."

TAKING HOME HER SHARE FROM THE RELIEF SHIP.

"Strikes do not pay," says Mr. Philip Snowden, an earnest advocate of labor's rights, a brilliant journalist and lecturer, whose voice is frequently heard in the House of Commons pleading the cause of the proletariat. To quote from his article in the same paper:

"They do not pay the workmen; they do not pay the community; the employers are the only party who can be said in any way to gain by them. They have powers in their hands by which they can speedily more than recoup themselves for any temporary loss a strike may inflict upon them.

"The irresponsible section of the trade-unions to-day exercise an influence altogether beyond their numbers. They are mainly responsible for the strikes which have taken place in the last two years. . . . . .

"The first lesson to learn is that the strike is not a means by which any substantial and permanent improvement in the lot of labor can be secured. The second matter arising out of modern economic developments is that the public are now a third party to every big strike, and their interests are quite as important as those of the other two parties. The trade-unions will have to accept this fact. After all, the community is bigger than organized labor, and it is a mistake for trade-unionists to suppose that the methods for dealing with labor disputes and the regulation of wages will be just what they desire them to be."

Writing of "the sympathetic strike" as prompted by "a sense of brotherhood among workingmen," "an unselfish readiness to run risks . . . for men in another trade," Prof. W. J. Ashley, Dean of the Faculty of Commerce, Birmingham University, acknowledges that these are "sentiments in themselves fine and noble," but, he continues in his article in the London *Daily News:*

"It would be too much to expect the employers affected to see it in this light; but it is important that the public should realize this aspect of the matter. Moral condemnation of sympathetic strikers is worse than wasted; it does but strengthen them in their principles; and the abused idealist is apt to become a fanatic.

"In the first place, the sympathetic strike is usually unsuccessful. And this for several reasons. Unless the grievance of the original strikers can be presented vividly and effectively to the public, a sympathetic strike is pretty certain to be unpopular. Moreover, a sympathetic strike is exceedingly difficult to make effective on a large scale. The less enthusiastic of the members of the union, and especially the middle-aged men with families, will be slow to come out and quick to go back. And under modern conditions there are often so many alternative commodities and ways of getting things done, so little inconvenience occasioned by the temporary lessening of some particular service, that it is nothing like so easy to alarm the public as the inexperienced suppose. And, in the second place, the sympathetic strike is, broadly speaking, incompatible with collective bargaining—the policy by which trade-unions have gained most in the past, and are likely to gain most in the future."

STARVING DUBLIN STRIKERS ON THE QUAY CHEERING THE ARRIVAL OF THE £5,000 RELIEF SHIP.

SCIENCE AND INVENTION

FLYING UPSIDE DOWN

FLYING UPSIDE DOWN, "looping the loop" in the air, rolling over sidewise from the upside down to the upright position, as done by the French aviator, Adolphe Pégoud, are not "stunts," according to the French and English newspaper men who have seen Pégoud in action and talked with him in his leisure moments. His real purpose, says a New York *Times* editorial, based on statements appearing in the British press, "is to give practical demonstration that even when an aeroplane capsizes, control of it can be regained and death escaped if its operator retains his self-possession and knows exactly what to do." Or, in other words, explains *The Times*, "Pégoud intentionally puts his machine in the positions that result from all possible accidents not structural, and shows that none of them is necessarily the beginning of a fatality." This aviator, who may have evolutionized the art of flying, writes an account of his exploits in a London daily, from which the weekly London *Sphere* quotes the following paragraphs:

Copyrighted by the Farringdon Photo. Company.

CARRYING PÉGOUD OFF THE FIELD IN TRIUMPH,

After his amazing aerial turns and twists.

"The air is a new ground for us human beings to work on, and what I have done I have done for my colleagues, the airmen of all countries, for the good of aviators and of aviation generally. I will tell you how it all happened. I was very nearly upside down one day and found that I could fly in that position without discomfort. I found, too, that by working gently I was able to right my flying-machine, and when I grounded I told M. Blériot what I was anxious to try to do. I explained to him that I felt sure it was possible for a man who would keep cool to turn right over in the air and fly in that position. I pointed out that we were often very nearly capsized by air currents, and that the knowledge that there was no real danger if we kept our heads would be of infinite use to my fellow airmen.

"A few days afterward he said I might try. Well, you know what I did. I flew up, turned over, flew upside down, turned over again to the usual position, and came down to earth perfectly safely. It was not any more dangerous than ordinary flying, except, of course, that it was the first time that it had been done, and I can honestly say that I never felt frightened for a moment.

"The sensation is rather a wonderful one. I strap myself to my seat with strong braces which leave me perfect freedom of movement and give me a sense of safety. At first, as the head of the aeroplane turns up and up, it is something like climbing a steep wall on wheels. There is no jar and no jerk. The aeroplane turns up obedient to the driver's hand and turns gently sideways."

According to an interview appearing in the London *Express*, Pégoud believes that

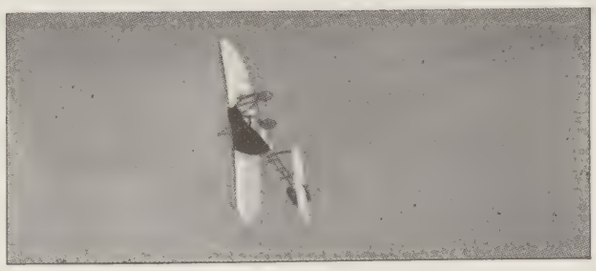
"Any airman flying in a similar machine, if he would only remain perfectly calm and trust in the machine, could do the same as I do. For myself, I feel as safe as a sailor would feel in a life-boat on the sea. I am in an air life-boat, which can not sink, and, even if it is overturned, could be easily righted again."

That is, comments the Parisian weekly, *L'Illustration*, now that Pégoud has actually tried practically all the positions that a falling aviator can find himself in, he feels certain that coolness, nerve, and experience can extract the airman from almost any predicament. The French writer would add, however, that one's machine must be strong and perfectly balanced and that the flier should always be strapped to his seat. Pégoud, of course, is held in his seat by straps and braces, and as *The Illustrated London News* tells us, "before he tried the feat in the air, his aeroplane was slung upside down upon trestles, he was strapped in head downward, and so practised working the controls." The editor of *Flight* (London), possest, perhaps, of greater technical knowledge of the problems involved, enlarges upon Pégoud's remarkable skill:

"Pégoud is marvelous because he understands precisely what his machine is going to do, and knows precisely how long he desires it to keep on doing the same thing. In a word, Pégoud is the perfect human automaton. Instead of controlling the machine, Pégoud lets the machine control itself. . . . He has the intelligence to eliminate himself at the moment that the machine enters upon its appointed task. He flies it with the utmost skill to the desired altitude, he turns it head downward toward the earth, he drops like a stone until he has acquired the momentum necessary to effect his purpose, and then he calmly and deliberately pushes forward his elevator lever and sits still while the machine flattens out on its back. . . . Pégoud is always on the outside of the circle. Even when he loops the loop . . . he himself is on the outside of the machine."

The fact that these experiments are carried out not on a "freak" machine, but on an old monoplane carefully strengthened, is what makes them so valuable, according to a leading editorial in the London *Evening Standard*. We read:

"Much as we may deprecate perhaps some of the more ostentatious parts of the performance, enough remains to give fresh nerve and heart to other aviators who find themselves in difficulties. It will be no particular consolation to an aviator whose engine ceases working when he is 5,000 feet up in the air to know that the loop has been looped, but to a man who finds a gusty wind playing tricks with his sails the remembrance that M. Pégoud can without danger 'rear his machine up like a restive horse and make it appear to sit on its tail in the air' will stimulate him to hope and try. The best and ablest of our aviators sometimes find themselves in a dangerous crisis. Even M.



PÉGOUD TURNING OVER.

Garros, who disdains the escort of a destroyer on his journey over the Mediterranean, has been terrified by hearing 'a fearful crackling sound' when soaring above the clouds. By his demonstrations of what a normal aeroplane is capable of doing M. Pégoud may be considered to have conferred a lasting benefit on all his confrères, from the veriest tyro to the hero of a hundred flights."

Pégoud's performances "bring forcibly before the mind" of this London editor "the rapidity with which events are moving in the latest science, the science of aviation." It was "only four years ago—tho it seems more like forty or four hundred—" that "Blériot sent a thrill through all England by flying across the Channel."

"Only four years ago! and here is M. Blériot again, urging his pupil to carry out all sorts of gymnastics in the air above the Brooklands aerodrome, urging him not from any desire to tickle the multitude with risky feats, but from a desire to show what immense strides the science of aviation has made in four years, when a thoroughly capable man is at the helm. To a superficial observer it may seem doubtful whether the science has really made such strides. He will complain that he can hardly open his paper without reading of some fatality in the air. But he forgets the great size to which the army of aviators has now grown. We hear much of the accidents to the careless or imprudent or to those who suffer from some specially unlucky concatenation of circumstances. We hear nothing at all of the vast number of ascents made in perfect safety. In one French school alone 400,000 miles were flown last year or the year before without a single accident."

These epoch-making flights of Pégoud have been made in France and England, and have been fully described in the press of those countries. The accompanying diagrams show clearly just what the aviator has accomplished. And a quotation from the *Pall Mall Gazette* (London) gives the spectator's point of view. To start in the middle of the reporter's account of a day at Brooklands:

"Then Pégoud went up again, and this time he justified all that has been written about his upside-down flying. For at least 700 yards he was in that position, the machine not in the least banked, and descending on a very gentle gradient.

"What, then, becomes of all the finely calculated plane curves, variations of tenth parts of an inch, prized by their designers as if upon them depended the secret of flight?

"Can anything fly? Does not the air, in order to provide the lifting support to the plane, require a concavity in which to cushion itself. In Pégoud's trick it had only a convexity! . . . . . .

"And, in the jargon of the aerodrome, where was the center of air-pressure? Somewhere about the second button of Pégoud's flying-suit—obviously!

"Pégoud's 'looping the loop,' on Tuesday, is really a backward somersault. It is performed in an almost leisurely fashion, and in a somewhat less diameter than the machine's own length; the machine is steadily falling all the time. Certainly not a 'loop,' but quite as wonderful as any 'loop' would be.

"The vertical falls to gain momentum are terrifying to see.

"Amazing are Pégoud's descent by a series of swings. Over and over again he swung to and fro in a short semicircle, at one end propeller vertically upward; at the other the tail up and the nose straight down. So he came down from aloft swinging to and fro like a parrot on an invisible perch. . . . . .

"'Should all aviators try the experiment?' I asked Pégoud.

"'There is no reason why all efficient aviators should not. It is not an indispensable part of training, of course; but doing it must increase an aviator's confidence. Others can do it if they make quite certain that their machine will stand the strain, and if they prepare carefully and act with caution.'"

MENTAL ELECTRICITY

CURRENTS OF ELECTRICITY are apparently set up in the body by sensations and mental operations. That these currents, which always flow from the right hand to the left, are not directly due to brain or nerve action, but to the mechanical contraction of the hand, is shown by recent experiment. The fact that the right hand should contract, while the left remains unaffected, apparently supports the view of those who contend that right-handedness is related in some way to our organic structure and is not simply the result of habit. We translate from an account in *Cosmos* (Paris, September 4) as follows:

"It was noted as early as 1888 that mental work and the emotions both produce electrical variations in the human body. Messrs. Philippson and Meuzerath have applied to the study of these psychoelectric phenomena the most precise methods of physiology and have employed, to measure and record the feeble differences of potential in question, the cord-galvanometer of Einthoven. . . . . .

"The subject, isolated in a dark room, holds in each hand one of the electrodes of the galvanometer, which is in an adjoining room.

"At a given moment a bright light is thrown on his eyes for two seconds; two seconds later the deviation of the galvanometric curve indicates that the right hand, after the luminous excitation, has become positive with respect to the left. . . . An instant afterward, a new excitation—auditive this time (the noise of a detonation)—occasions a new difference of electric potential between the two hands, larger than the first. Another experiment is this: A simple mental calculation (9 times 4) produces no appreciable electric reaction; another more complex calculation (3.5 x 2.5) occasions quite a considerable difference of potential between the subject's hands. There is the same intense electric variation between the hands of the subject one or two seconds after he has been reminded of an act of injustice of which he has been the victim and of which he had not thought in a long time. In all these experiments, it is the right hand that is always positively electrified, even when the subject is left-handed.

"Messrs. Philippson and Meuzerath have investigated the physical cause of these differences of potential accompanying the subject's psychic and emotive activity. They show that in their experiments the electric energy is engendered by the right hand of the subject. His mental activity causes a slight contraction of the right hand and the stretching of the skin on its back makes it electrically positive with regard to the other hand.

"This preponderant action of the mental activity on the

They are much more nervous than he is.

state of contraction of the right hand is of the highest interest from the standpoint of brain physiology."—*Translation made for* THE LITERARY DIGEST.

INEFFECTIVE INVENTIONS

THE COMIC PAGE of a well-known daily recently included a section of "useless inventions," in which humorous contributors competed for a prize to be awarded for the most senseless device. If we are to believe Dr. Robert Grimshaw, who writes in *Popular Electricity and the World's Advance* (Chicago, October) "On Heaven-born and Other Inventors," quite a number of the devices that we meet in daily use seem to have been intended for this page. The great trouble with some inventors, he says, is that they "attempt to evolve from the depths of their moral consciousness, as the German evolved the camel, something entirely foreign to their training and surroundings—and, may I add, mental capacity." He goes on:

"We laugh at the 'bull' in which the traditional Irishman, on learning that a certain stove would save half the fuel, announced his intention of buying two to save it all. But he is not more ridiculous than the inventor who, on learning of compound steam-engines, proposed a series of turbines on the same plan, and announced that with his system he would produce 150 horse-power from the exhaust tail-race of a 100 horse-power turbine.

"Then there is the inventor who proposed to prevent railway collisions by having in front of all east-bound trains an incline up which any opposing train would run, after which it would expend its speed along a track lying the full length of the train roof.

"I will start at home and mention a few familiar objects invented, designed, and made without due consideration of the fact that they were to be used and which are used.

"I have an extra large wash-pitcher of blue enameled, sheet steel, which I bought, not because it was dearer than a china one, but because it was likely to prove cheaper in the end than three or four of the latter. Now the handle is of such shape and so placed that it strains one's wrist to use the pitcher when the latter is full. The accompanying basin of the same material is an unconscious discovery of the theoretically correct curve for turbine blades—for water poured in at the center at maximum velocity emerges all around the rim at minimum rate. A gallon enameled sheet-iron pot has its handle of circular cross-section and outline fixt as near as possible to the upper rim, so that when the pot is full of boiling water one is sure of being scalded when lifting it with one hand without a 'holder.'

"My china teapot is a 'thing of beauty,' even if it will not be 'a joy forever'; but the tea, instead of pouring from the spout, climbs down the under side thereof, and dribbles around generally. An expensive, cut-glass sirup jug, with a silver lid supposed to cut off the golden stream, fails in this mission, and is always sticky outside; but I have one that cost only a 'quarter' that shuts off the current as cleanly as scissors sever a piece of tape.

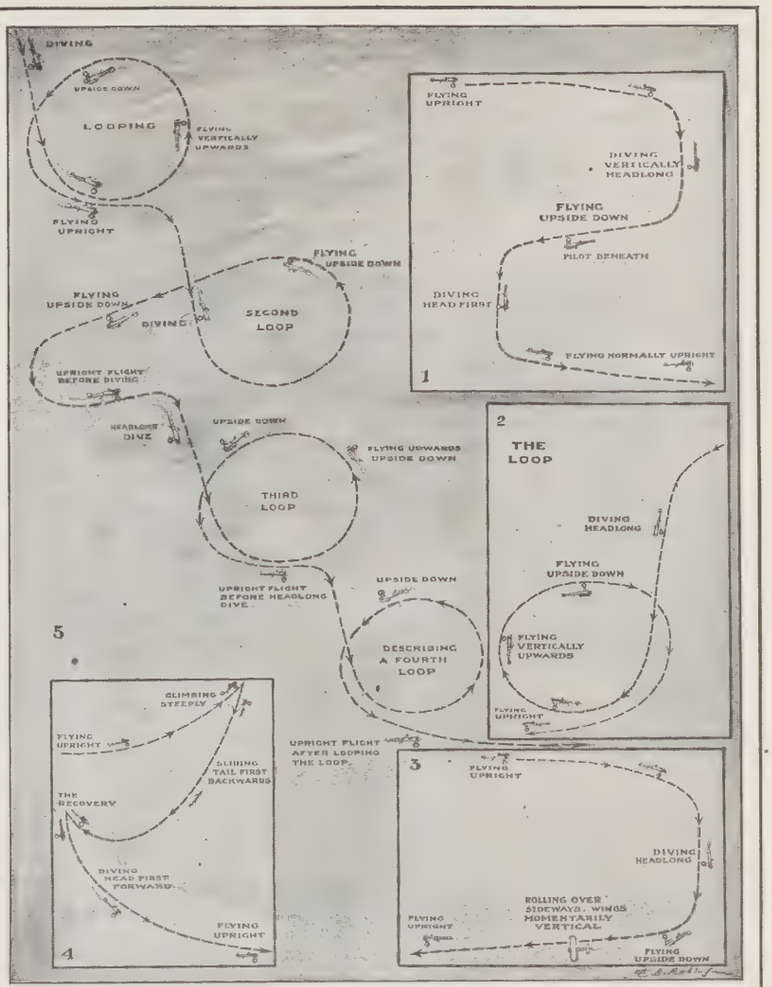
"The draftsman's compasses with which I literally tried my 'prentice hand were so constructed that either of the triangular points made an admirable reaming awl, and both together could serve as a wash-cutter. Those which I have now, which cost three times as much and are by celebrated makers, are so slippery and so slender that the average hand can not manage them."

Then there are the ingenious inventors who have devoted time and thought to getting up an apparatus that would extinguish petroleum lamps after a certain number of hours' burning—a very desirable thing in small towns to save the expense of a man to put them out. The problem was finally solved by finding out how much petroleum would run a lamp an hour, and making a few tin measures in accordance. When the oil was 'out,' the lamps just ceased to burn of their own accord. This, says Dr. Grimshaw, was one case where the inventor had a practical knowledge of the line in which he invented and a practical personal interest in the success of his invention. He goes on:

"The architects plan houses with insufficient space for bedsteads and tables, doors that open the wrong way, and closets that necessitate twice as many steps to reach them as should be necessary. The tool-makers turn out axes that stick in the tree and hammers that are badly balanced, the machine-builder makes machines that have to be taken apart in order to get out the piece that needs replacing or adjusting most frequently, or in which the 'breaking piece' is the most expensive part.

"I have just returned from a trip in which I stopt at a new and quite expensive hotel. My room had a stationary wash-stand with hot and cold water and marble top the same height from the floor as that of the usual wash-stand (perhaps a trifle lower), but the basin was sunken, so that, altho reasonably supple, washing my face properly would require some previous experience as contortionist in a circus.

"And so it is all along the line—things are invented and things are made by people who never use them, or who never either test them or have them tested before putting them on the market."



PÉGOUD'S PATHS.

"I FEEL AS SAFE AS A SAILOR WOULD FEEL IN A LIFE-BOAT ON THE SEA."

1. VERTICAL GLIDE FOLLOWED BY A "FLATTENING-OUT" UPSIDE DOWN. 2. LOOPING THE LOOP. 3. FLYING UPSIDE DOWN AND ROLLING OVER SIDEWAYS. 4. A TAIL SLIDE, RECOVERY, AND DIVE. 5. LOOPING THE LOOP FOUR TIMES IN SUCCESSION.

To quote from *Flight* (London), which prints this diagram: "To avoid confusion let us explain that . . . these diagrams (Nos. 1-4) are drawn in elevation. That is to say, they show the path of flight as it appears from the side of the machine. If this page . . . is held upright, then the diagram represents, as near as we can make it do so, what Pégoud may be expected to do against the background of the sky."

NERVES IN WAR

TOO MUCH EXCITABILITY spoils a soldier. An army of men with something "on their nerves" may be dispersed without firing a shot or inflicting a wound, if only those nerves be stimulated in just the right way. Dr. H. Nimier, the Surgeon Inspector-General of the French Army, advocates, in the course of an article contributed to the *Revue Scientifique* (Paris, September 6), that the soldier be systematically accustomed to certain sights and sounds that affect the nerves on the battle-field. A man will not be apt to shrink from the whine of a shell far above his head if he has heard it often before. It may not be necessary to subject one's troops to actual rifle-fire in practise maneuvers, as a Russian general is said to have done; but some steps may surely be taken toward the abatement of "nerves" in battle. Says General Nimier:

"In our epoch, when too many nervous systems, shattered by all sorts of poisons, react more and more suddenly, losing all control, it is natural that the psychic effects of arms and projectiles should acquire importance of the first order. Accordingly, depending on the point of view, it is our business to combat these effects or to foster them.

"It is through sight, and still more through hearing, that a man experiences this kind of action of modern armament. On the field of battle, in fact, the enemy is not in full view, except in hand-to-hand conflict; the bullets are small and pass swiftly, shells appear only by the cloud of smoke, dust, and fragments caused by their explosion; wounded comrades fall or drop back. But the totality of this spectacle amounts to little, compared to the infernal concert that accompanies it. Noise is the great factor in the psychic disorders of the battle-field, and nevertheless it has its good side. There are friendly as well as hostile noises. The fighting man hears the report of his own gun and of his comrades' guns—the whistling of the shells from behind him—and all this bolsters up his courage. In fact, his own cries, those of his friends, the sounding of the charge, these are the friendly noises that counterbalance in his ears the hostile ones—the sound of approaching bullets, the bursting of shells, sound-waves from the guns and artillery of the enemy, strange cries, unknown noises.

"Have we many nervous systems in our day so well organized that they can stand such stimulants without flinching? Military science takes due account of their effect on the morale of an enemy. He may give way suddenly and be seized with panic, like the Turks at Kirk-Kilisseh. The soldier may resist and even become used to it all; yet some day or other the panic gets him, as we also saw during the last days of the siege of Adrianople.

"Doubtless, in time of peace military instruction can not be given in conditions identical with those of the battle-field, but it is certainly a mistake not to educate the soldier's ear and leave it exposed to the surprize of the din of battle. As Descartes says: 'To stimulate one's courage and banish fear, it suffices not to have the will; one must apply himself to the consideration of reasons, objects, or examples that show how slight the danger really is; that there is more safety in defense than in flight; that there are glory and joy in triumph, and regret and shame for him who runs away.'

"Dragoniroff well understood this, who, following the example of his master Suwaroff, trained the Russian Army in exercises to inspire contempt of danger—marches and maneuvers of troops under actual fire from bullets and shell. Doubtless, with our present moral feelings, this would be hard to accept, but at least the soldier should be accustomed to see and hear shells passing over his head and bursting near by.

"The German relies on the moral influence that his dirigibles will exert, as well as on their destructive power. Possibly, they may fail as our *mitrailleuses* did in 1870. But any one who has seen the enthusiastic excitement of troops beneath the flight of aeroplanes] will regard it as incontestible that if they have been present in advance, at a contest between airmen and balloon, if they have seen 'the swallow fighting with the eagle,' on the decisive day, they will be less affected when they find themselves menaced with aerial bombs."—*Translation made for* THE LITERARY DIGEST.

SUPREME TEST OF A BRICK PAVEMENT.

When the Ohio floods showed the need of better bridges. this piece of pavement did its best to supply it and formed a structure that will support an automobile.

AN UNEXPECTED BRIDGE

THE ENGINEER who designed the brick paving on a road in Cuyahoga County, Ohio, south of Cleveland, and the workmen who laid it, did not expect that it would ever be called upon to remain in place when the solid earth had been washed away from beneath it. Pavements are not ordinarily laid through the air, and when Tinker's Creek rose in a freshet and undermined this particular road, no one would have been astonished if the crust of bricks on its surface had gone with the rest of the road into the stream. That it refused to do so, and remained hanging in mid-air as a bridge, simply indicates that the builders were not content with constructing a pavement of ordinary strength, but did a little more. Which goes to show that those who complain that all work nowadays is shoddy sometimes make a mistake. *American Industries* (New York, October), abstracting an article from *The Clay Worker* (Indianapolis), informs us that the hanging pavement is actually being used by some adventurous people as a roadway, and the road-builders will simply fill in beneath it, instead of tearing it down and making a new pavement:

"The water undermined a heavy retaining wall and ate its way under the pavement for a width of seven feet and a length of nearly eight feet. The concrete base split into small sections and fell away. Not a single brick of the wearing surface was disturbed, however, until two were removed with considerable difficulty to make post-holes for a safety fence. In spite of warnings there has been considerable use of the overhanging portion of the pavement. The man shown in the picture did not hesitate to entrust his auto upon it and then pose for his photograph beneath the auto.

"County engineers have abandoned their first plan to break down the projecting brick and will build the road up to the pavement instead. By the end of the present year Cuyahoga County will have more than 400 miles of rural brick highway, to say nothing of the 600 odd miles of brick pavement in Cleveland.

"'This object-lesson,' says Paving Engineer James McCleary, 'shows what we mean by monolithic construction. We pay especial attention to two features of road-building, the concrete base and the grout-filler. Neglect of these deprives brick of the greater chance to show its excellence as a road material.'

"The good-roads movement in Ohio is certainly booming. In no place in the United States has vitrified brick come more rightfully into its own than in the great State of Ohio. Cleveland has built hundreds of miles of fine brick-paved highways."

THE FIRST DIESEL LOCOMOTIVE

THE DISCOVERY of the body of Dr. Rudolf Diesel at the mouth of the river Scheldt, after his disappearance from an English Channel steamer, comes almost at the same time as the final triumph of his ingenious motor by its adaptation to railway traction on a large scale. The Diesel engine, it will be remembered, is an internal-combustion motor, like the ordinary gasoline-engine of the automobile or motor-boat, but, unlike it, the Diesel is not an explosion motor. The vaporized fuel is not ignited suddenly in the cylinder by an electric spark, but is consumed more gradually, under the heat generated by air-compression. At first regarded as an interesting laboratory machine and then as adaptable to certain small forms of stationary engine, it has made its way until now it drives the largest ocean vessels and hauls heavy freight-trains at high speeds. As we are informed by the Berlin correspondent of *The Scientific American* (New York, September 26):

DR. RUDOLF DIESEL.

Whose tragic death by drowning in the English Channel is almost simultaneous with the success of his engine for high-speed railway service.

"There can be no doubt but the increasing adoption of electric traction, tho ousting the steam locomotive from its unrivaled monopoly, is indirectly responsible for a number of improvements lately adopted in its design. However, a common competitor is now arising in railway traction to both types of prime mover, viz., the Diesel, or high-compression, oil-engine, which, after its recent achievement in ship propulsion, enters at length this field so far closed to its activities. It is significant of the high development reached by the oil-engine that the first Diesel-motor-operated locomotive should be, not some modest engine designed to haul a suburban or slow train, but an express locomotive destined for service on the Berlin-Magdeburg trunk line. This Diesel locomotive, the construction and trials of which have been watched with unusual interest in German engineering circles as well as abroad, was . . . constructed at the workshops of Messrs. Sulzer, who designed the engines.

"The motive part of the locomotive mainly consists of a driving engine direct-coupled to the driving-axles and an auxiliary engine working quite independently of the driving-axles. This has an output about one-fifth to one-quarter that of the main engine and serves to generate comprest air, for operating the main engine in starting, on heavy gradients, etc., with high charges. Moreover, in order to increase temporarily the output of the auxiliary engine, there have been inserted, between it and the driving engine, air-tanks from which a certain amount of air can be derived during standstills of the auxiliary motor or even while this is working. . . . . .

"In starting, the auxiliary engine is kept working, thus throwing a continuous supply of comprest air into the main engine. The latter can thus be given a considerable inflow, which may be even increased by supplementary air from the tanks. Comprest-air operation alone allows the train to be accelerated up to five or six miles per hour, after which fuel operation is proceeded with, the engine now working on the normal constant pressure. There is, however, another means of air supply available. Instead of deriving the whole of the comprest air from the pumps coupled to the auxiliary engine, part of the air required can be supplied by means of the auxiliary engine and part by the driving engine, these being likewise made to operate pumps. . . . . .

"At each end of the locomotive there is a driver's stand, comprizing the mechanism for reversing the main engine and the following arrangements: levers for throwing the starting- and fuel-valves in and out of gear, a lever for controlling the amount of fuel raised by the fuel-pumps, the starting-head, the braking-valve, and sander, the signal-whistle, and various gages."

EARTHQUAKE NOISES — The sounds that accompany earthquake shocks have been recently studied and analyzed by Charles Davison. From a brief account of his conclusions in *Cosmos* (Paris, September 18) we translate the following:

"These noises are made up of sounds so low in pitch that often they remain unnoticed by persons whose ears can not perceive very low tones. They sound like the passing of a heavy truck, the rolling of thunder, the roar of a tempest, the fall of a load of stone, or of some heavy body, an explosion, etc.

"In violent earthquakes, the area where the noises are heard coincides with the central region, but occupies only about two-thirds of the agitated surface. In earthquakes of average intensity the two regions have the same surface, while in feeble quakes the region of noise is greater than that of earth-movement.

"In general, the beginning of the noise precedes the shock and lasts somewhat longer."—*Translation made for* THE LITERARY DIGEST.

THE FIRST DIESEL LOCOMOTIVE.

"It is significant of the high development reached by the oil-engine that the first Diesel-motor-operated locomotive should be, not some modest engine designed to haul a suburban or slow train, but an express locomotive for the Berlin-Magdeburg trunk line."

LETTERS AND ART

NEW YORK REBUKED BY MR. BENSON

JUST WHAT FORM of sackcloth New York will don after the rebuke offered it by Mr. Benson and the Stratford players is not fully determined. This company, headed by the man who has in a sense conducted a Shakespearian kindergarten in England for many years, has landed on American shores with the project of a long tour in Canada and the United States. There were doubtless many in New York who planned to give him a hearty welcome, but they have been forced to read in the daily papers that he doesn't intend to play with them at all. The onus of the decision seems to rest largely with the Board of Governors of the Shakespeare Memorial Theater of England, who do not like "the general tenor of plays that are now engrossing New York"; but Mr. Benson is quoted by the New York *Sun* as saying that New York, on his non-professional visit of a year ago, "interested him the least of all American cities," and "judging from what is said of the present current of the theatrical stream in New York," he doubts if he should interest New York. Thus the much-advertised doings of two theaters outweigh in his view a whole city full of others, and it is nothing that his distinguished fellow countryman, Sir Johnston Forbes-Robertson is playing "Hamlet" and other Shakespearian parts to capacity houses, and Mr. Sothern and Miss Marlowe are reaping a golden harvest in a former opera-house with the works of the same bard whom Mr. Benson exploits. The American manager of Mr. Benson's tour, Mr. Charles F. Towle, is cited by *The Sun* as enforcing Mr. Benson's attitude by coupling him with Miss Horniman, who took her Manchester players last year to Canada, to Chicago, and to some Massachusetts towns, but passed by New York. Such, indeed was the case, but Miss Horniman was recently quoted by an English daily as saying that in the future she'd prefer to trust her fortunes to New York and its reputed commercialism than to the "high-brows" of her previous acquaintance. The New York papers are behaving quite calmly, however, *The Evening Post* finding the flaw in the Benson reasoning to consist in his not seeing New York's need of his healing ministrations if its case is as bad as he thinks. *The Times* remarks:

Copyrighted by Newspaper Illustrations Ltd.

MR. BENSON AND OTHER NOTABLE INTERPRETERS OF SHAKESPEARE.

Who gave him an enthusiastic "send off" on his American trip. From the reader's left are Sir Herbert Tree, Sir Squire Bancroft, Mr. Sidney Lee, the Shakespearian critic, and Sir Johnston Forbes-Robertson, who has no scruples against acting in New York. Mr. Benson is seated.

"We are supposed to infer that when the directors of that august institution, the Memorial Theater of Stratford-on-Avon, decided not to 'accept' time for Mr. Benson's 'fit-up' Shakespearian troupe in New York, in spite of the tearful remonstrances of the New York managers, they had in mind the cruel treatment this callous town has given in the past to visiting foreign artists of the stage. Rachel, Bogumil Dawison, Seebach, Janauschek, Ristori, Bernhardt, Haase, Sonnenthal, Possart, Mounet-Sully, Coquelin, Rossi—how sad that list of names of the poor victims of New York's neglect? As for their English brothers and sisters, Edmund Kean, Fanny Kemble, Charles Kean, Mathews, Irving, the Kendals, they nearly starved in our streets. A like fate was that of English actors of less renown, tho histrions vastly superior to Mr. Benson, such as Terriss, Montague, and Coghlan. Therefore, do the backers of Benson tender 'a slap in the face' to 'the many-towered Camelot of America.'

"Camelot, whose gross materialists are making the 'farewell tour' of Forbes-Robertson such a 'frost,' will not care. It is surfeited with theaters of all kinds. An ill-informed person would naturally infer that Mr. Benson, like *Augustus* in Pinero's comedy, is 'a London artist,' but nothing of the sort. The London critics who praise him most see him infrequently. His one long London engagement is remembered as a historic calamity. In the blest provinces he has been doing really good work for a long while. His traveling troupe is a school for actors. Naturally the great competition in theatricals in New York shuts him out, in the height of the season, but there is no reason why he should get mad about it. There are souls to be uplifted in Chicago, too."

The Times has taken the pains to test the managers on this theme and reports Mr. Charles Frohman as saying:-

"The simple fact is that Mr. Benson and his company will not appear in New York because New York is no more of a provincial city than London is. The Benson players know that they are too provincial ever to play in London, and realize that the same fact will militate against their appearance in New York. Mr. Benson's organization in England represents what Mr. Sargent's school of acting stands for in this country—only the Benson school is a traveling school of acting and the Sargent school is stationary. The Shakespeare Memorial Theater at Stratford-on-Avon is also a comic idea. A beautiful little town, where it is said Shakespeare is buried, has built a beautiful memorial theater, which is opened each year for a six weeks' revival of Shakespearian plays which people attend in great numbers, only because they are acted by stars from London theaters, like Sir Herbert Tree, Arthur Bourchier, Irene Vanbrugh, and the Terrys.

"If Mr. Benson could bring such actors as these to America, New York would receive him with open arms; but as his own organization is simply a traveling provincial company, there is no more reason for Mr. Benson trying to enter New York than for him to try to enter London. One realizes at once the primitiveness of the Benson organization when one knows that, on its travels about the little towns in England, the Benson company makes known its presence by parading through the streets, as American minstrels do. But one ought not to criticize the Benson announcement; for, after all, it is only Mr. Benson's best possible accounting for the fact that New York will not have him. And toward Mr. Benson personally, as toward Mr. Sargent in this country, every manager can not but feel grateful for the training both men afford amateurs, and for their frequent development of really good actors. However, we must be clear on one point—Mr. Benson will not avoid New York because our stage has fallen too low for him; on the contrary, New York will not have Mr. Benson and his organization because they are not sufficiently high up in the acting profession. But there are provinces in America as there are in England."

Mr. Benson's opening has been auspicious. The New York *Sun* informs us:

"F. R. Benson, the actor-manager, and his Stratford-on-Avon players began their first tour of America in Montreal on Monday night with a performance of 'Much Ado About Nothing.' At the end of the comedy the audience rose to its feet and cheered the company to the echo.

"In the afternoon at McGill University, Mr. Benson, with Sir Gilbert Parker, was made an LL.D. He is the first actor in England or America to receive this honor. Vice-Chancellor Peterson said that the degree was conferred in recognition of his services to the stage as an actor and a trainer of actors as well as for his work in producing in the Shakespearian Memorial Theater thirty-four of the thirty-six plays credited to Shakespeare."

"THE LITTLENESS OF GREATNESS"

IT'S ONLY HUMAN, probably, for great men to think little of one another. One Alp seems only ordinary to another Alp. But to the rest of us their mutual criticisms are merely amusing. There is a man out in Melbourne, Australia, who has been amusing himself in making a book which he confesses to be "a piece of pure devilment." In it he has brought together all the false criticisms he could find which men of letters have made upon one another—criticisms, explains the London *Spectator*, "which are at variance with the mature judgment of the world, and a few of which reveal jealousy, prejudice, and an almost wilful failure to understand." The criticisms almost all hit some vulnerable point in the armor of the man criticized, it is explained, and they reveal the strange thing that "while some err by reason of spite and superfineness, the majority of them are conspicuously human and appeal to the heart of the very plain man." The collection, which is called "The Littleness of Greatness," is made by Sydney J. Endacott. Of these judgments *The Spectator* continues:

"They are not true because they are not comprehensive, but they contain truth, the scraps of truth, and the qualifications of truth such as jump to the eyes of the man whose temperament or want of time or culture forbids him to comprehend, but who is a shrewd fellow all the same. In criticism, as in politics, there is a need for the representation of minorities, and whoever reads this little book will feel that a little thing has been done to satisfy this need. It is inadequate, it is very small indeed, but it is something. Mr. Endacott has found some great men to lead the erring few who fly in the face of recognized judgment."

The first which *The Spectator* quotes illustrates the very point it has been making:

"Horace Walpole likened Dante to a 'Methodist parson in Bedlam.' The criticism is as witty, as representative, and as trenchant as any false criticism can be. It expresses the sincere tho mistaken thought of a thousand clear heads. Dante's hypocritical admirers have made him enemies. We suppose no poet ever had so many true or so many false worshipers. The cruel side-hit at Wordsworth which comes into Bulwer Lytton's singularly meaningness criticism of Tennyson is another case in point:

> Jingling medley of purloined conceits,
> Outbabying Wordsworth and outglittering Keats.

"Outbabying Wordsworth! It is indeed the phrase of a leader of those who go astray. It took a man of first-rate talent, if not of genius, thus to bring forward an obvious defect, and set it in such a light as to make it overshadow for a moment the inspiration of the immortal bard. We hear the philistines rejoicing as they read, and ranging themselves behind a great (or moderately great) man in error. With a shudder we fix our mind upon Matthew Arnold's criticism of Wordsworth, 'He spoke and loosed our heart in tears.' There are a number of young philistines also who will be hugely delighted to read what George Meredith said about Tennyson. Of the 'Holy Grail' he wrote: 'The lines are satin lengths, the figures Sèvres china. . . . Why, this stuff is not the muse, it's musery. The man has got hold of the muse's clothes-line and hung it with jewelry.' He calls the 'Idylls of the King' 'yards of linen—drapery for the delight of ladies.' The criticism is piercing, it makes a rent in a thing of beauty which can never be mended—and that tho the critic pricks himself with his weapon when he adds, 'The praises of the book shut me away from my fellows.' An ill-conditioned criticism is never adopted as a final judgment. But the saying is so memorable and represents the minds of so many that it can not be forgotten when the judges sum up. Meredith did not understand Tennyson or 'the proud full-sail of his great verse.' The feeling, however, was mutual. Mr. Endacott is evidently not aware that Tennyson once said that 'reading Meredith was like wading through glue.' A great number, even from among those who have a right to be called well-read, will be—secretly—delighted to hear Hallam say of Carlyle's 'French Revolution,' 'The style is so abominable I could not get on with it.' There is, of course, no appeal from the recognized fact of the book's brilliance, but how many readers have been so dazzled and confused by it that, like Hallam, they could not get on! To them his criticism will seem 'the truth at last.' 'Eh! The poor miserable skeleton of a book!' sighed Carlyle as he put down Hallam's 'European History.' These literary great men can well be trusted to take their own parts!"

In what George Moore said of Meredith he seems "simply giving expression to what all who are not Meredithians think, but for once the world has decided that a coterie is in possession of the truth":

"Mr. George Moore has placed himself without the charmed circle, and there has spoken his mind in a manner to attract a crowd. 'In George Meredith there is nothing but crackjaw sentences, empty and unpleasant in the mouth as sterile nuts.' Meredith's greatest admirer could hardly say that this was a stupid criticism; he could only say it was false, in that it failed to grasp any part of Meredith's genius but its obvious defect. On the other hand, the criticism sets one thinking. Was any masterpiece in the world of letters ever supremely great which the average man of education had a difficulty in understanding? It is Browning who makes the answer a matter for doubt.

"Apart, however, from such very human bits of bad criticism as we have quoted, we find a few expressions of opinion, made coolly and without any emotion by great men, which are simply incomprehensible. To begin with, whatever made George Meredith call Matthew Arnold 'a dandy Isaiah'? What Tolstoy said of Shakespeare throws an interesting light upon the mind of that great Russian genius. His conclusions are simply astounding. He speaks of 'The Tempest,' 'Cymbeline,' and 'Twelfth Night' as 'senseless dramatized tales.' He has nothing

better to say of 'King Lear' than that it is 'absurd,' a production to evoke 'aversion and weariness.' One more quotation and we have done with the Russian; but what he says has a certain interest as proving the marvelously wide *lacunæ* which may exist in great minds. 'The works of Shakespeare—borrowed as they are and externally like mosaics artificially fitted together piecemeal from bits invented for the occasion—have nothing whatever in common with art and poetry.' Mr. Bernard Shaw has spoken in equal disparagement tho in less detail. 'With the single exception of Homer, there is no eminent writer, not even Sir Walter Scott, whom I despise so entirely as I despise Shakespeare when I measure my mind against his.' Is that a joke, or a bona-fide and very amusing mistake such as the poet Greene made when he called Shakespeare 'an upstart crow'? Greatness (in the person of Mr. Shaw) only knows! . . . . . .

"Some of the criticisms here set down are only of interest as throwing a light upon the intellectual shortcomings of the speaker. That Emerson should have said that Dickens had no 'dramatic talent' tempts the reader to declare that Emerson had no sense of the dramatic. There is, perhaps, a clarity about Dickens's atmosphere which struck disagreeably on Emerson's senses. He had accustomed his eyes to a certain roseate dimness, and he could not see properly in Dickens's sunshine or flaring gaslight."

HITTING THE PUBLIC TASTE

THE TEMPTATION to crucify experts, literary and dramatic, is a strong one, says a writer in the San Francisco *Argonaut*, and the temptation seems not to be mitigated by the amusingly frank confessions of one of the experts. Sir Herbert Tree has lately been telling his theatrical brethren that he had the chance of producing "Peter Pan" and refused it. Of course he refused a fortune with it. He gives as his reason that he could not see himself in the part, and we must imagine his tongue thrust in his cheek while so confessing. As if this were not humility enough, he adds that he refused "Kismet," "Diplomacy," "The Prisoner of Zenda," and "If I Were King." After the list of these follies—safely so labeled after the fact—it is easy for the *Argonaut* editor to moralize with the declaration that "the expert who is actually expert is one of the rarest things under the sun," and he cites the fact that "every now and then we hear that some triumphantly successful novel was hawked fruitlessly around the circle of publishers before it could find a resting-place and a welcome." *The Argonaut* really seems to have no mercy for the expert who is "very seldom expert," and it goes on in a mood that is generally believed to be common among authors of rejected manuscripts:

"It is usually the man whose business it is to gage the public taste who knows least about it. He is devoured by conservatism and caution. The magazine editor much prefers to accept drivel from a well-known writer to even the perusal of the manuscript by the unknown genius. The statement so often made that merit is sure of recognition is undiluted falsehood. Magazine editors are not ceaselessly watching, as they pretend, for originality. They dread it. They do not spend their time scanning the skies for new literary lights. They carefully snub and avoid them. It is usually the literary and dramatic expert who stands rigidly and uncompromisingly between the public and novelty."

The London *Evening Standard* takes up Sir Herbert's admission and reads a homily less trenchant but more merciful than *The Argonaut's:*

"One is reminded of James Payn's refusal of 'John Inglesant,' when reading manuscript for Messrs. Smith, Elder. Shorthouse's romance became the honor and profit of another publishing firm, and Payn was mortified on discovering what he had done. His mistake, however, was very natural. Philosophical romances were not in his line, and, from the commercial point of view, he could hardly be expected to anticipate the popularity of a book which was certainly not made for popularity. He was a victim to one of those twists of public taste which nobody can prophesy or understand.

"Sir Herbert Tree smiles over his rejection of 'Peter Pan,' but probably he wishes he had acted otherwise. We think, however, there is an even better excuse for him, and any other manager who may have imitated him, than there was for James Payn. 'Peter Pan' has now been performed—how many thousand times is it? The play is more familiar to the host of playgoers than 'Hamlet.' It is difficult to view it as a stranger, and not as an old friend. But, if that can be accomplished, it will seem wonderful, not that anybody should have refused 'Peter Pan,' but that any manager should have put faith in it. It is so different from other plays—and managers do not like what is different. It is so lacking in what is called coherent plot, and the interest can scarcely be described as 'cumulative'—qualities by which manuscript plays are judged. Moreover, the staging of it must have struck Sir Herbert Tree himself as exacting. Somehow—we have never quite satisfied ourselves how—'Peter Pan' arrived on the stage, and should be a lesson to theatrical managers, at least of this generation, that a talented author may be permitted all sorts of tricks with their revered deity, technic, and that the public do not care so much for the 'same old thing' as for human nature, fun, sentiment, and romance they can understand because they have gone through it.

"But, as we say, Sir Herbert Tree may be acquitted of any grievous error of judgment in rejecting 'Peter Pan.' Or, rather, he might have been acquitted on general grounds, if he had not 'given the show away' by reference to a personal and particular reason. 'I thought,' he said, 'that the leading part was unsuited to me.' The report follows this explanation with '(Loud laughter).' Yes, the theatrical managers received such a revelation from their erring colleague with loud laughter, when, in sheer inability to restrain their mingled anger and grief, they should have wept on one another's shoulders. To do them justice, we believe they would have acted not only as Sir Herbert Tree acted, but from the same motive. The leading part being unsuited, banish the masterpiece! Was not *Captain James Hook* enough for any actor-manager's ambition, tho *Peter Pan* may have been unsuited to his physique? Apparently not. . . . . .

"How are they to get good plays? First, by taking a hint from the history of 'Peter Pan' and keeping a good, broad, open mind on the subject. The playgoer does not care twopence whether or not a play is 'well made'—that is, made according to the narrowest and most conventional theatrical rules—so long as it interests, excites, or amuses him. The first great rule, then, for securing good plays and encouraging play-writers is to cultivate an adventurous taste. The next, which is really a corollary of the other, is not to reject plays wherein 'the leading part is unsuited to me.' When the public went to the theater to see this or that actor, there was some necessity for a distorted point of view which put the player above the play. People have now taken to going to the theater to see plays, not actor-managers in parts which are suitable to them."

Then, as if to confute the whole school of Jeremiahs, comes a brilliant instance of editorial insight and an entire reversal of the "who" charge. Says the New York *Evening Post:*

"In the October *Atlantic* is the beginning of a series of 'Letters of a Woman Homesteader,' which give promise both of freshness of theme and agreeable handling. How they came to the magazine is explained by the publisher. They were simply sent along to the office in a bundle. A lady in Denver who had the letters in her possession thought they would make interesting reading, and forwarded them to the editor for his opinion. To him it was like manna dropping out of the skies. As a rule, magazine 'features' are the result of planning and effort. The writer has to be selected and sounded; long preparations made; the right collaboration assured; the whole kept in hand for the psychological moment. But here, as the *Atlantic* says, was a 'gift of Providence' fairly flung at it. All that the editor had to do was to accept it and thank his lucky stars. It was like finding hid treasure.

"The instance is not of the highest importance in itself, but it has its light to cast upon certain current notions about writing and publishing. One of these relates to the difficulty of 'breaking into' a magazine. Everybody knows what is said. A new writer has no chance at all. The editor will give heed to no applicant unless he is a member of 'the old gang.' One knows, too, the stories that are circulated to prove that a manuscript submitted by a 'rank outsider' is not even read. The suspicious author lays a trap for the editor. He quietly puts a dab of paste between pages six and seven of his article, and when it is returned to him finds that they have clearly not been separated so as to be read. What better demonstration could there be that the work of the unknown writer is not so much as

considered? Of course, those who know what is really done in a magazine office know that it is not necessary to read every manuscript in order to decide that it is not 'available.' The subject alone may be sufficient to rule it out. And, as it has been rather brutally said, a single taste of spoiled fish is enough to show that it is bad; one is not compelled to eat the whole dish. But in spite of all the explanations that have been given, the literary superstition persists that a new talent meets with nothing but discouragement and rebuffs in the publishing world.

"In showing how unfounded is all this, the little *Atlantic* incident should have its value. It helps to picture what the editor's state of mind actually is. If any reader is tired of the routine article by the well-known hand, he is more so. If any soul longs for writing to break the conventions and to breathe an original spirit, his longing is greater. And when, as by some rare favor of the gods, his mail brings him something like what was thrown into the lap of the *Atlantic*, his delight is keener than that of any one else. 'Why,' he exclaims, 'here is novelty, here is life, here is vivid expression!' And he hugs the prize to his bosom. No, gifted young friends, it is not the fact that you are new writers that bars your way, but the fact that your writing has not the power to catch the eye of the jaded editor ever on the watch for fresh talent. Be sure that when he discovers it, he rejoices with exceeding great joy."

"PEOPLEIZING" THE MUSEUMS

THE FORBIDDING ASPECT of our museums and libraries in days gone by made the visitors glad to emerge into the open air again after a brief stay, but a new policy is now bringing their treasures invitingly to the minds of the people, beginning with the children. One of the newest innovations of the Metropolitan Museum of New York is a series of talks for elementary school pupils. In these gatherings children ranging in age from ten to fifteen years are brought together, but the School Art League, which is "seeking to develop among the children of the public schools a large clientele of those who are interested in art and wish to learn more about it," plan to extend their work to embrace more advanced classes for pupils of high schools. To these ends the League "hopes in time to develop a corps of lecturers particularly interested in working with children and equipped to present to children, in graphic and entertaining form, many of the different phases of art which the great collections of the Metropolitan Museum exhibit." In the *Bulletin* issued by the League, we find the account of the first lecture delivered by Dr. James P. Haney, Director of Art in the city high schools:

"He had chosen for his topic, 'Landseer,' and developed it through sketches which he made upon large sheets of paper before his audience. Dr. Haney told of Landseer's boyhood, and of his intense sympathy for animals. He sketched various forms of gamboling dogs and of crested stags. He questioned the young folk before him as to their own animal friends, and when he had thoroughly aroused their interest and sympathy in the lives of their domestic pets, he told something of the life of the animals of the woods and of the human quality that Landseer was so fond of depicting in the expressions of those he drew. After half an hour's informal chat with his class, Dr. Haney then turned to the pictures which Landseer had painted, and showed a number of these through lantern slides, following them with other pictures by other painters of animals, to the end that the children present might, in subsequent visits to the museum, understand better what the painter of animals tries to do in telling the story of their lives. After the talk was over, the audience of several hundred adjourned to the galleries above, where little groups of children went to visit their favorite pictures, or to make friends with other paintings of which the lecturer had spoken."

The same spirit of museum extension has taken hold of the London Board of Education, who have announced that a personal guide will be provided to conduct visitors daily around the Victoria and Albert Museum, and the Minister of Education states that he has obtained a grant from the Treasury for "educational experiments." The British Museum has a brief history in this respect which the London *Times*, quoting with approval the precedents set by our school authorities, reviews with suggestions for extended applications:

"It is now about three years since it was suggested in our columns that the usefulness of museums might be largely increased at very little cost. Instead of their merely serving the purposes of professional students or casual sightseers, they ought to be recognized as important agencies in national education, and for this purpose it was essential that competent guides should be provided. We warmly approved of this suggestion, and shortly afterward it was put into practise. In April, 1911, the British Museum set the example, which was followed in 1912 by the Natural History Museum, of instituting popular expositions of their priceless treasures by guide demonstrators. The experiment has been entirely successful. No fewer than 60,000 people have been taken round these museums by the official guides in the short time that the system has been in force. Instead of the old system under which visitors were obliged to spend their time in a dreary hunt among labels and guide-books, and at last had to go away deprest and without having gained much knowledge, they have had the opportunity of learning the value of the collections, and having their interest stimulated, under the direction of a competent and sympathetic lecturer. . . . . .

"Mr. C. Hallett, the official guide at the British Museum, has shown in his report last year that a certain number of elementary schools have sent classes of boys and girls at specially arranged hours, apart from the public tour, and that considerable interest has been shown by the London education authority in these visits. There has, however, been a greater demand for such instruction among the Council schools than among secondary schools. But the sending of occasional classes of elementary school children is not nearly sufficient. What is wanted is that visits to the museums, with their unparalleled apparatus for education, should form part of the curriculum in as many schools as possible."

From the Bulletin of the School Art League.

CHILDREN WHO WOULD UNDERSTAND ART.

A School Art League meeting at the Brooklyn Institute Museum having the mysteries of some great painter revealed by an expert. Similar classes are planned for advanced pupils.

RELIGION AND SOCIAL SERVICE

REBIRTH OF RELIGION IN RECENT FRENCH POETRY

FRANCE'S PERSISTENT EFFORTS to eliminate religion from the lives of its people seems to succeed only in their material aspects. She may confiscate the churches and dedicate them to all sorts of secular interests, she may choose a Premier who would congratulate France upon driving Christ out of her schools, but she can not still the voices of her poets; and these, we are told, are turning, perhaps as a natural consequence, to religious expression. Ferdinand Brunetière, fifteen years ago, predicted a religious renascence in French poetry, and his prophecy has already reached fulfilment. So declares Mr. Carl Becker in the *Literarische Echo* (Berlin). He sees the twentieth-century French lyric poets influenced by the old school of the symbolists, both in the form and the content of their verse; their form being freer, more flexible, and more musical because of this influence, and the matter with which they deal showing a strong tendency toward the invisible and the mystical. We read:

"Baudelaire, Verlaine, and Rimbaud, the chief exponents of symbolism, were mystics; others, like Samain, Moréas, Rodenbach, were, despite their unbelief, deeply religious, and indeed it is inconceivable that symbolism could have arisen without religious feeling. The most recent French literature to-day shows similar aspirations . . . and it is not surprizing that modern poetry should show a religious and spiritual rebirth at the very time when the French nation itself seems to withdraw more and more from the religious life."

Mr. Becker warns us, however, against regarding this spiritual renascence as in any way identical with a revival of Catholicism, observing that it has as little in common with Catholic dogma as had the religious feeling of Renan. A second influence favorable to the expression of spiritual emotion he finds in the rich development recently of lyric poetry:

"In the French poetry of the nineteenth century, romanticism as well as symbolism—that is, a rich blossoming of the lyrical—always goes hand in hand with an awakening of religious sensibility. How could it be otherwise? Poetry which should exclude itself from the life of emotion and dream, from the invisible and the unknowable, would cut the ground from under its own feet. . . . . .

"When we examine the movement more nearly we naturally find that it concerns chiefly verse, and is but little evident in prose-writing or the drama. . . . Since the public is not religious, the theater, which makes a direct appeal to the great masses, shows few works based on religious themes. There are, of course, a few, such as Rostand's 'La Samaritaine,' Verhaeren's 'Le Cloître,' and the dramatic works of Paul Claudel. . . . Hence there remains only one domain for religious feeling, that of the lyric. . . . Most of the younger poets exhibit traits of a spiritual or idealistic, *i.e.*, of a religious, renascence. They have renounced determinism, show a manifold optimism, and have an unshakable faith in human freedom as well as in life itself. They set themselves, for the most part, against the heart-and-soul-crushing intellectualism of our time and are dominated by Bergson, who has created a foundation for them with his principle of intuition. Bergson may be regarded as the somewhat tardily appearing philosopher of symbolism, who has had a strong influence on modern lyricists because of his doctrines of emotion and sensation."

He divides the lyric writers of the present day into three groups. The first is composed of those who are religious, tho "unbelievers." The second contains those who are mystics in the sense that Verlaine and Baudelaire were mystics. Finally, there is the group of orthodox Catholics, who express their dogmatic views in their works:

"As regards the first group, poets who are unbelievers, yet animated by strong religious feeling, it may be said that it contains the most celebrated names as well as the greatest number among the lyricists of the present day. Most of the symbolists are in sympathy with them, and many of them indeed are a product of symbolism. Among these may be mentioned Samain, that early-dying heathen who was always tortured by the mysterious Beyond, and pursued by the horror of death; Rodenbach, the sorrowful singer of Bruges, likewise dedicated to an early death; Verhaeren with his monk-cultus; Retté—in his first 'manner'—with his Christ-hate; Mme. de Noailles, with her pantheism and her fear of death; Maeterlinck, with his mysticism; J. Romain, a disciple of Verhaeren and possessing talents of rich promise, with his pantheistic 'Unanism'; further, a whole row of poets: H. de Régnier, C. Mendès, Max Elskamps, J. Cocteau, Larguier, Porché, Abel Bonnard, Maurice Magre—all poets of emotion, and mostly having great religious sensibility and feeling themselves drawn toward the unknown and the invisible. The latter of these have nearly all grouped themselves about Bergson.

"The second group, that of the mystics, likewise displays some notable names, who are able, as were Verlaine and Rimbaud in other days, to stamp this tendency with a strong personal impress. Here, above all, should be named the early-dying and talented Charles Guérin, the friend of Jammes, a mystical enthusiast and, like the latter, torn between sensual lusts and heavenly joys. At the head of modern mystics stand Jammes and Paul Claudel, both much lauded by the Catholics, and both poets whose great lyrical gifts can not be denied. Jammes has already founded a school, and one speaks to-day of Jammism and the Jammists.

"Claudel is the very center of interest at the present moment—deified by some and opposed or even ignored by others. Both are true mystics, constantly in the presence of their God and in communion with him; they are in intimate converse with him, behold him always and everywhere, either him or the immaculate Virgin, and hence all their works are penetrated by this strong mysticism. Claudel's mysticism is purer, but vaguer than that of Jammes, which has a strongly sensualistic background. Associated with these, but of lesser poetic status, are Louis le Cardonnel, a priest tortured by his conscience, and Asket, who may possibly achieve greater heights of mysticism than the two first named.

"At a further distance follow Retté, the Christ-hater of yesterday; Charles Péguy, with his Jeanne d'Arc cult, with Poimarol and Schuré.

"The third group finally contains those poets who identify their religious feeling with Catholic dogma. . . . They are much inferior to the first two groups both in poetic gifts and poetic creation. Since they neither inform and deepen their work by an intensive religious feeling nor behold it objectively like the mystics, they are confined and straitened by external formalism and rigid dogma."

In closing this interesting classification of French lyricists, the critic observes that in general the poets considered tend to affiliate themselves with some one of the many periodicals founded in France during the last decade, and marked by a strong tendency toward the spiritual or religious attitude. Thus the Catholic poets are grouped about the *Revue du Temps Présent*, founded in 1896. The most important of the non-churchly journals include the *Mercure de France*, the *Nouvelle Revue Française*, the *Revue Critique des Idées et des Livres*, *La Plume*, *Les Loups*, *Les Guêpes*, *Les Rubriques Nouvelles*, *Les Entretiens Idéalistes*, *La Phalange*, *Pan*, and *La Renaissance Contemporaine*. Finally:

"It may be said that nearly all the French lyric poetry of the present issues from the editorial rooms of these periodicals, a fact which makes it rather difficult to make a complete survey of all the various tendencies. But almost all show the imprint of idealism and bear witness to a lyrical awakening of religion:

hence the lyric itself is colored with religion."—*Translation made for* THE LITERARY DIGEST.

PROTESTANT DECLINE IN GERMANY

THE PROTESTANT CHURCH in Germany is in a discouraging state, according to one of its pastors. "I know that vital religion is ebbing from among us," he declares, "and every detail of statistics proves to me that we are receding." The name of the writer, whose words appear in *The Christian Work and Evangelist* (New York), is not given, but he is described as "one of the best known Protestant pastors in Germany." The editor, to draw attention to his reflections, blue tho they be, prefixes a note to say that he is one "in whom everybody has greatest confidence"; that his words are "always heeded." His sorrow over the decline of Protestantism is made more bitter, as he asserts, "by the undoubted fact that Ultramontanism is growing in our midst, and that the grave symptoms of decay or stagnation—whichever you like to call them—which affect us are not affecting Rome." He continues with his comparative views of the two churches:

"Wherever we turn we find visible proof of the activity and living growth of German Catholicism. A fortnight ago at Metz, in Lorraine, the Clerical Ultramontanes held their annual congress, and never before was there so much enthusiasm displayed, or were such glowing accounts rendered of progress all along the line of the Church's efforts. Prince and peasant, cardinal and deacon, rich and poor, were alike filled with a zeal and a belief in the destiny of their church wholly unknown in Protestant Germany. When we turn to the outward and visible signs of progress, to numbers and results, what do we find? A few details will make clear the reasons which lie at the bottom of Catholic hopefulness and Protestant depression. Taking the entire population of the Empire, the census returns show that Catholicism is growing more rapidly than Protestantism, that the faith of Rome absorbs a greater share of the increasing population than the faith of Luther. In the great Catholic fastness of Bavaria and the Rhenish provinces, Lutheranism has failed in its attacks on Rome, while in the hitherto exclusively Protestant regions, like Pomerania, Mecklenburg, and Brandenburg, we find the proportion of Catholics steadily mounting. In the question of mixed marriages between Catholics and Protestants the number of persons born in the Church of Rome who embrace the faith of the Reformation is hardly noticeable, while in the vast majority of such mixed marriages the Protestant man or woman either becomes wholly neutral or embraces Rome. That the children of such mixed marriages become Catholics goes without saying.

"There are only imperfect statistics available for the past two years with regard to the birth-rate, but they all point in the direction of larger Catholic families. In Berlin and other large towns the general decline in the birth-rate has become so remarkable that social reformers are at their wits' end to account for it; but when this phenomenon is more narrowly examined we find that the decreasing birth-rate is almost altogether confined to Protestant families. In the important Catholic provinces, where a majority of the population is of Slavic blood, families, in fact, are increasing in number. The Catholic priests take care that their people marry early, that they respect their marriage vows, and that they eschew the suicidal two-children system. The celebration of marriages within the churches is decreasing in Protestant Germany, the registry-office taking the place of the church ceremony. Protestants in greater number than ever confine themselves to the civil function, which in all cases is compulsory. It is rare for a Catholic to neglect the offices of his priest in marriage. The same principle holds good at burials. More and more the Protestant, especially among the working classes, declines to ask the services of his pastor at the graveside. To a Catholic this would be impossible. The number of confirmations among Protestants does not keep pace with the increase in population. Among Catholics it does. Finally, we have the test of participation in the communion. Here there is a distinct decline in the Protestant churches. In Berlin and other huge centers of population this decline begins to be at a calamitous rate. There are big Berlin churches where it is rare for a man to be seen at communion, churches where during the past ten years the number of male communicants has sunk 50 and 60 per cent. In Catholic churches, on the contrary, the number of communicants of both sexes is well maintained, and the priests have no complaints to make of decreasing numbers."

There is, moreover, a "startling difference" between the influence of the pastor and the priest on the daily affairs of life. The case seems worse to a clergyman in a country where paternalism is a vital idea:

"I do not think I exaggerate when I say that the Protestant pastor has absolutely no influence on his flock politically. In olden times he possest this influence and abused it. Now he has lost it, and will never regain his hold on the political conscience of his people. In Catholic regions the hold of the priest on his people is as great as ever. Every voter who votes the Center 'ticket' gives his vote for the power of the Catholic Church. Every Clerical voter almost is an Ultramontane. The consequence is that the assumption of power by the priest is a tremendous factor in the life of the Catholic German."

PROFANITY IN MAGAZINES AND PLAYS

THE MAGAZINES WE READ are calculated to encourage a renewal of the disgusting and wicked habit of swearing, believes the editor of the New York *Christian Advocate*. He had been congratulating himself upon the almost complete disappearance of profane language in this country, "especially among cultivated people." But as he himself had begun to be alarmed at the frequent appearance of irreverent and profane language in some of the magazines, he received a letter from a prominent Methodist minister preaching in New Jersey, with some emphatic comment on the same point. We give the letter as it appears in the editorial columns of *The Christian Advocate:*

"Should a magazine swear to sell? Do the people swallow its contents more readily if seasoned with profanity? Do oaths render it more taking and impressive? We are familiar with swearing magazines, because they all do it. At least we are so imprest because the September number of the last magazine we should have thought capable of it, a magazine that sells at more than twice the price of most of them and lays claim to the highest literary quality, contains the first part of an elaborately illustrated story which is soaked with it. The article is twenty-one pages long and contains thirty profane expressions besides a long list of 'blankety-blanks,' 'darns,' 'deuces,' and 'thunders.' And then it is written by a woman!

"Swearing men, who lay any claim to respectability, suppress their oaths or choose their auditors, and swearing women, we trust, are few and far between. But a swearing magazine insinuates itself into our homes and among our children under the guise of respectability, professing to be above the use of slang and yet swearing like a gamin or a pirate. Is this literary? Is this realism? Is this entertaining? Is a magazine above the commandment which says: 'Thou shalt not take the name of the Lord thy God in vain; for the Lord will not hold him guiltless that taketh his name in vain'? And should not parents be as careful to exclude it from their homes as a swearing graphophone?"

It seems that the question came up in England a short time ago, whether the frequent use of the word "damn" on the stage was desirable or not. The querist also wondered why people always laughed when the word was uttered. The dramatic critic of *The Westminster Gazette* undertook the answers, beginning with the second first:

"There is, of course, nothing witty or amusing in the word itself, and any fool could fill a pepper-pot with 'damns' and sprinkle them over his play; and yet it is quite certain that the 'damn' almost always wins a hearty laugh. Probably the reason is that the employment of it by the author at a suitable moment is a successful means of bringing sharply to a point the whole state of annoyance, confusion, or wrath of an important character. It is a kind of top note in a crescendo, and perhaps if the character were to say 'hell' or use the old-fashioned term 'zounds' the result would be the same. For from a theatrical

point of view it is important to concentrate the expression of emotion into one word, preferably a monosyllable, and therefore an oath, or, to use the more genteel term, an expletive."

This critic thinks a dramatist, "if he seeks to be a realist or a slice-of-lifer," is rather helpless in the face of modern life, for "nobody, unless his ears are stuffed as completely as those of the sailors of Ulysses, can ignore the fact that a tremendous amount of swearing goes on nowadays."

There is no such easy tolerance of the habit by *The Christian Advocate*, for in another issue of this Methodist weekly we find an editorial denunciation of the language used in our magazines that may surprize their regular readers. To quote:

"When a magazine once edited by Richard Watson Gilder introduces into its pages stories which evoke a protest because of the excessive use of profane and vulgar speech embodied in their dialogs; when a weekly which once printed the name of George William Curtis as the head of its editorial staff unblushingly degrades itself by printing cartoons which are positively immoral, and with unabashed effrontery tells its indignant subscribers that it proposes to continue its present course; when many other hitherto reputable periodicals reek with lurid descriptions of marital infidelities and sex irregularities; when nearly all the best known weekly and monthly publications fairly riot in vice problems, with such a particularity as would have induced their readers of ten years ago to throw them in the fire, it looks as tho there was still a field for religious journalism which is not likely to be fitly occupied by the secular literature of our times.

"Will the ministers who read these lines please observe that this is not pleasantry. It is the duty of the pulpit to denounce the putrid mass dumped upon the not too careful public by the publishers of our day. Under the guise of an alleged conscientious frankness an incredible amount of filth is being doled out in such a way as to accomplish irreparable injury to the young."

BOYCOTTING JEWS IN POLAND

THE BOYCOTT against the Jews in Poland is a matter of serious moment to the two million Hebrews in that country. For, explains the editor of *The American Hebrew* (New York), it seems to be no transitory movement, but one based upon a strong Polish national sentiment, which "will grow with the development of Polish national feeling." The economic status of the Jews in Poland, adds this editor, as he summarizes the views of the Hebrew investigator whose article has the leading place in the current issue of his paper, "was supposed to be secure owing to the lack of industrial and commercial enterprise among the Poles." But if the present boycott continues, "the Jews will inevitably be displaced and the Poles themselves will occupy their places." There is a movement on foot to organize protest meetings in this country. But Dr. N. Syrkin, who writes the article describing the situation, suggests no remedy. He says:

"The aim of the boycott is the organization of the Christian population toward the economic and social elimination of the Jews. Christian consumers shall not buy at Jewish stores. Christian manufacturers shall not engage Jewish workingmen and clerks. Christian banks shall not loan money on Jewish real estate. Christians shall not call in Jewish physicians or consult Jewish attorneys, or read books published by Jews, or, in general, tolerate a Jew in their midst. Christians shall not take a carriage which is driven by a Jewish driver, or buy an apple from a Jewish pedler. That is the practical program of the boycott, and its final aim is the total expulsion of the Jews from Poland.

"In many villages the anti-Semites collect the signatures of the peasants and send collective petitions to the Government in St. Petersburg that the Jews shall be expelled from their midst. And it is superfluous to say that the Government pays attention to this kind of popular voice. Abuse and maltreatment of Jews, in the cities as in the villages, in public places, in the streets, and even in the synagogs, has become a normal thing. There are numerous cases of murders of Jews, of incendiarism, and riots as the effect of the boycott.

"A special press has been founded for the sake of propaganda of the boycott, and the daily paper of Warsaw, *Diva Grosha*, is leading the barbarous campaign. And this boycott press is seething every day with hatred, contempt, and inciting lawlessness against the Jews."

The causes of it, this "war of extirpation," are said to be social and economic. In the first place the Jews in Poland are rapidly increasing in numbers, both absolutely and as compared with the Poles. They are immigrating in large numbers from Russia. So, observes Dr. Syrkin,

"The Polish nation, which is now organizing itself and is more and more awakening to the ideal of national independence, now faces the Jewish problem in all its gravity. The country has 15 per cent. of Jews, who are mostly concentrated in the cities. More than 50 per cent. of the population in the towns are Jews. Poverty and the political persecution of the Jews in Russia are bringing yearly new floods of Jews to the more industrially developed Poland."

Not that the Poles are under the influence of "the old nightmare that the Jews are exploiters, parasites, living on the organism of the other nation," which has prompted similar boycotts in other countries. Nor is it like the anti-Semitism of Germany, where the rivalry between the Jewish merchant class and the gentile does not greatly excite the mass of working people. As this Jewish writer goes on to explain:

"The Jews in Poland are a hard-working population; artizans, workingmen, unskilled laborers, small traders, and pedlers who are necessary for the distribution of goods, form the bulk of the Jewish people. The number of Jewish capitalists is a limited one and will probably not exceed the percentage of Polish and German capitalists: The landowners and the officials are naturally gentiles. Nobody among the Poles claims that the boycott is a protest against Jewish social excesses. It is a national struggle in all its barbarous nudity and shamelessness. The Polish majority is organizing itself to expel from the country the Jewish minority, which became an important factor in economic competition. It is not a question of right, but a question of power. Whether it is morally right and historically justified is not to the point. The Jewish people, which is the minority, must be extirpated in the process of national revival of the Poles."

In the cities, we read, the Gentile artizans and workingmen are "competitors with the Jews"—

"They are all, therefore, trying to take away from him his bread and his work through the boycott organization. 'Every man shall keep to his own,' is the characteristic war-cry. The boycott in Poland is based on real interests and opposition, on a national and racial war, which is in its essence a social and cultural one."

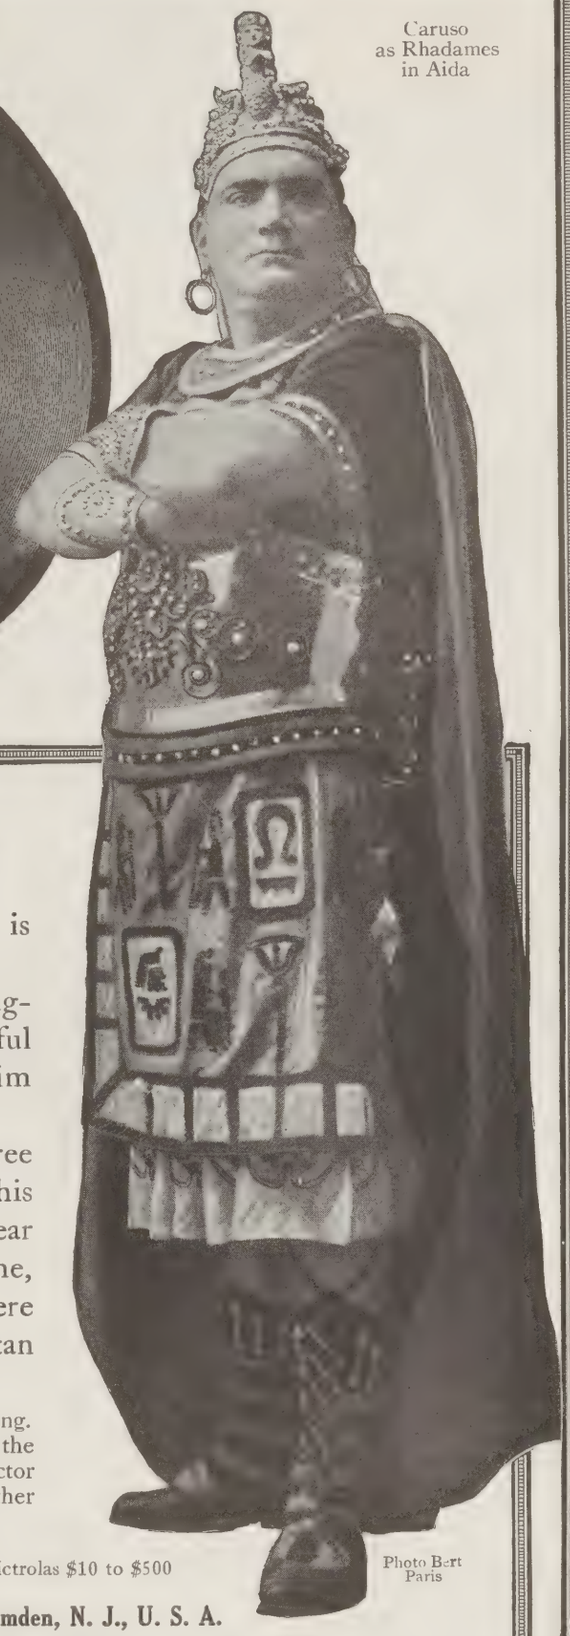
Last, but worst of all from the Jewish standpoint, the boycott movement in Poland has a patriotic basis. Naturally, says Dr. Syrkin, the despised Jew is not a Polish patriot "and is usually indifferent to the national struggle which Poland is leading against Russia." He is not a particularly ardent supporter of the Polish language and culture. Jews in Poland, and especially those who are coming from Lithuania and the Prussian districts, "are not a resisting force against the policy of Russification which the Russian Government is leading." And the writer continues:

"The Jews are therefore accused of being an alien and unpatriotic element in Poland, which is an obstacle to the national unity and political revival of Poland. The boycott movement is further nourished by Jewish indifference to Polish patriotism."

Bad as the situation now is, from the Hebrew standpoint, it is likely to be worse, concludes Dr. Syrkin, pessimistically:

"The boycott movement is in the germinating stage of its development. It is growing in intensity in Poland and spreading beyond the frontiers of Poland. It is the most pernicious form of anti-Semitism, not of transitory character, but is organizing itself to even stronger and more dangerous blows. And the greatest tragedy is that the five millions of Jews in Russia are helpless and bewildered, watching the gathering clouds of the coming storm."

Victor Record of "Celeste Aida" sung by Caruso



Caruso as Rhadames in Aida

Both are Caruso

The Victor Record of Caruso's voice is just as truly Caruso as Caruso himself.

It actually *is* Caruso—his own magnificent voice, with all the wonderful power and beauty of tone that make him the greatest of all tenors.

Every one of the hundred and three Caruso records brings you not only his art, but his personality. When you hear Caruso on the Victrola in your own home, you hear him just as truly as if you were listening to him in the Metropolitan Opera House.

The proof is in the hearing. Any Victor dealer in any city in the world will gladly play for you Victor Records by Caruso or any other of the world's greatest artists.

Various styles of Victors and Victrolas $10 to $500

MOTOR TRUCKS

MOTORS INSTEAD OF HORSES IN THE NEXT EUROPEAN WAR

AS A RESULT of trials in recent French army maneuvers, it is predicted that in the next European war the horse will be relegated to a place far in the rear. In its place will come the tractor and other motor vehicles. These tests were made over rough ground in a hilly country. One important fact by them shown was that the tractor can draw big 6-inch artillery guns over any road on which horses have drawn them. They can go wherever horses can go, and one tractor can handle a 6-inch gun on rough and heavy ground as easily as 25 or 30 horses. Tractors with these guns can make a speed of eight miles on roads and five miles across country.

In other ways, motor vehicles were made to supersede horses in these maneuvers. Fresh-meat supplies were carried by them from abattoirs to points within the lines. They transported aeroplanes along highways to points from which ascents were to be made. Motor-vans were converted into repair-shops and moved to any point where needed. Motor-buses from Paris, altered to meet conditions, were used as officers' headquarters. Ambulances were of the motor class. In fact, *Automobile* declares that the army, in these maneuvers, "was a motorized army from advance guard to rear-guard." Other interesting details of the maneuvers are given in the same paper as follows:

"Perhaps of the greatest interest was the four-wheel drive gasoline tractors used in the heavy artillery work. There were seven tractors, one of them being held in reserve, taking part in the maneuvers. Each train consisted of the tractor, an ammunition-wagon, the 155-millimeter cannon, and an ammunition-wagon. From ten to twelve men were carried on the tractor, and on each of the ammunition-wagons there was a brakesman. The tractor has a four-cylinder motor under a bonnet with separate cylinders of 4.8 by 5.9 inches. There is a single differential for the four wheels, contained within the gear-box and provided with a differential lock. The drive is by means of propeller shafts without universal joints, each shaft being rigid and all the gearing enclosed. The four wheels are not only positively driven, but are steerable. Twin rubber tires are mounted on the front and rear wheels, but provision is also made for fixing auxiliary ribbed steel bands for operation in soft ground. A sand-box is mounted ahead of the rear wheels with facilities for opening it from the driver's seat. Placed across the front of the motor is a winding drum with 300 feet of steel cable, the drum being driven from the motor and allowing vehicles to be hauled or the tractor to haul itself out of difficult ground at the rate of about 1.25 miles an hour. The weight of the tractor is about 2.5 tons and its useful load during the maneuvers was 6 to 7 tons. The total weight of the train was between 15 and 16 tons.

"With each army corps were several wireless telegraphy installations mounted on automobiles. A central post was established at Toulouse and another at Agen, and auxiliary posts at various points. These auxiliary stations were able to transmit messages distances of 150 to 180 miles, and the main stations kept in constant communication with the Eiffel Tower at Paris, a distance of 500 miles. Each installation consisted of two automobiles, the motor of the first driving the dynamo and generating current which was transmitted to the second vehicle equipped with the wireless telegraphy plant.

"Fresh meat was brought to the troops by means of transformed Paris motor-buses. The army has an agreement with the Paris motor-bus company whereby a large number of its vehicles can be taken over for military use in case of mobilization, and it is in connection with this agreement that motor-buses take part in the maneuvers. These vehicles are single-deck, with a 35-horse-power motor under the driver's feet. For army work the glass windows are replaced by wire-gauze screens and a wire-gauze sliding door is fitted. Meat racks are placed down the full length of each vehicle and the seats are removed. A load of 2.5 tons is carried.

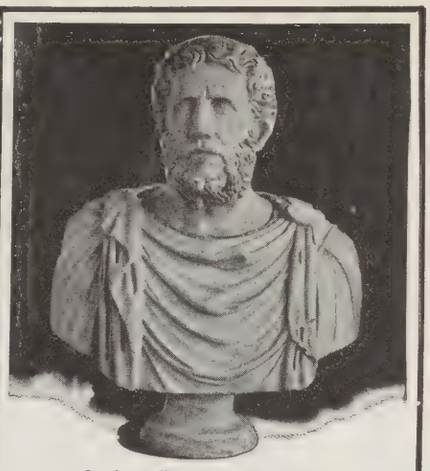
"During the maneuvers cattle were parked behind the line of troops about 30 to 40 miles behind the actual fighting line, and each morning the meat wagons were loaded and sent out to the troops. It was found advisable, in most cases, to unload the meat at a determined point amid the body of the troops and have the final distribution take place on the regimental horse-drawn wagons. By this means the driver of the automobile was not obliged to make journeys over narrow lanes and across country in search of scattered and hidden groups of men. This distribution of meat by automobiles made it possible to maintain the abattoirs in a suitable position near a railway station from which the cattle were unloaded.

"Practically all supplies were brought to the troops by means of automobile-trucks. These were either army trucks or army subsidy types belonging to private firms and requisitioned for the period of the maneuvers. In this latter case the drivers were reservists who habitually drive these trucks, or they were reservist mechanics supplied from the automobile factory. The owners are accorded an indemnity for the use of the vehicles, fuel and oil being provided by the army, while the drivers receive the ordinary army pay. The trucks worked in sections of nine, altho in actual warfare the sections number eighteen vehicles.

SIDEWALK GASOLINE-PUMPS

A familiar feature to motorists during the past season, and in some places for a longer time, has been the sidewalk gasoline-pump. They have drawn much transient trade, prices in many of them being below those charged at prominent garages. Some of these pumps have been made especially attractive by illuminated posts in which the pumps are contained, these posts serving as excellent advertisements. Small villages, as well as some of the larger cities and even the suburbs of New York, have shown these gasoline-pump posts doing duty at once as signals to the passer-by and as a convenience in filling gas-tanks on cars while the car stands at the roadside, the necessity of entering a garage being avoided.

(*Continued on page* 764)



In the collection of C. W. Post.

"*When bread is baked, some parts are split at the surface, and these parts are beautiful, and in a peculiar way excite a desire for eating.*"

—*MARCUS AURELIUS—Roman Emperor*

How this wise old Roman would have enjoyed

Grape-Nuts
FOOD

The bread of the Romans was whole wheat bread. That was centuries before millers, in order to make flour white, began robbing it of the outer shell of the wheat containing the vital mineral phosphates.

Many present-day foods lack these mineral elements, and the lack is largely responsible for various ailments.

In making Grape-Nuts of whole wheat and malted barley, the outer shell of the wheat with all its rich mineral content—the phosphates—is retained.

Grape-Nuts food comes from the ovens baked through and through—is ground into granules—crisp, sweet and ready to eat direct from the package with cream or milk.

Grape-Nuts food is delicious and wonderfully nourishing.

"There's a Reason"

Those who are within the world of Cadillac ownership are enjoying luxuries to which you must remain a stranger so long as you are outside that world

Motoring, as you know it, and motoring as the owner of a 1914 Cadillac knows it, are two distinct and different things.

The new Cadillac neither rides nor drives like any other motor car.

It is not that the two speed direct drive axle has changed the principle of the Cadillac engine.

But it has conferred upon it, powers which it did not possess without it.

It has altered the performance—changed the character of that performance—and changed the sensations resulting from that performance.

So, those who are within the world of Cadillac ownership, are enjoying luxuries to which you must remain a stranger so long as you are outside that world.

And they are marked, these differences—these peculiar luxuries of the Cadillac.

So marked, that we doubt if you can drive the memory of them out of your mind after a single ride in the Cadillac.

They are not easy to describe—though you will be conscious of them before the car has travelled half a mile.

But, let us see if we can give you an idea.

You know what the Cadillac—and the Cadillac engine—were before the advent of this 1914 car.

You know that it was notably free from tremor.

You know that it did not lunge forward, but forged forward, majestically, like a battleship.

These were the natural fruits of Cadillac construction—refined and developed to an extraordinary degree.

And now, new qualities and new functions have been conferred upon it, by means of a second—supplemental—principle.

This other principle—the two speed direct drive axle—takes the Cadillac at its high point of development and extends it.

The new Cadillac axle has two direct drive gear ratios.

Eliminating all technicalities from the subject, the advantage of the high direct drive gear ratio consists in the fact that through it, a given speed of the engine produces an increase of 42 per cent in the speed of the car.

Out of this central improvement grow those differences in operation to which we have referred.

Keeping in mind the more slowly moving engine, *you sense at once that infinitely greater steadiness must follow.*

Holding fast to the same mental picture, *you see that vibration must be reduced almost to the vanishing point.*

Imagine the car with the low direct gear, operating at an engine speed of 700 revolutions per minute.

The car will travel 21 miles per hour.

Shift the electric switch and pass into the high direct drive gear ratio, and the speed of the car increases to 30 miles an hour *with no increase in the speed of the engine.*

Unconsciously, when you change gears, you look forward to the apparent effort and labor of the engine to be increased.

It does not come.

The trembling does not come.

No shock, no disturbance is communicated to the car or its occupants.

The steady pressing onward of the car is uninterrupted—the smoothness is continuous.

You forget the engine, you forget the car. There is only quiet—and a soft swinging through space.

Is it any wonder that Cadillac owners are volubly enthusiastic?

They have this velvety mode of travel of which you have yet to learn.

They have attained it by methods which lower the fuel consumption, decrease friction and reduce appreciably the cost of operation.

They have artistic body designs which make it difficult to suggest any sense in which their beauty could be heightened.

They have progressive, scientific engineering development.

They have the certainty of the Cadillac Delco system of electrical cranking, lighting and ignition.

They have the improved Cadillac carburetor, hot water jacketed and electrically heated.

They have entrance and exit for front seat passengers on either side,—right hand drive and right hand control with all of its advantages and no disadvantages.

They have the simple electric switch for shifting from high direct to low direct gear, or vice versa.

They have Cadillac standardization, true alignment and interchangeability of parts.

They have the product of an organization inspired by the highest ideals.

They have the Cadillac glorified and refined.

They have a car entitled to the distinction,

"Standard of the World."

Baker Electric Trucks

Cost more than any other make of electric truck manufactured, and they should. Every extra dollar put into their construction is worth ten to the owner in the saving of repair bills.

Two Sets of Double Brakes

One set *might* do, but two sets are *safer.* Think of the risk to life and property in handling a six ton rolling weight on a ten per cent grade, with a single brake! The Baker truck is protected not only by *two sets* of powerful brakes, but also by their superior construction. Every important joint is bronze bushed to prevent freezing, and the shoes are lined with a quality of asbestos fabric which will not burn or wear to the danger point.

Pressed Steel Chassis Frame

Another example of Baker superiority is the pressed steel chassis frame which combines lightness and strength. Compare this standard gasoline pleasure car construction with the commercial angle, channel or eye beam iron used in many electric trucks, at one tenth the cost.

Baker brakes and frame construction materially add to the cost of the truck but save this difference every year in repair bills and protection against accidents. There are a dozen other advantages in the Baker which make it cost a little more to purchase and a good deal less to run.

MOTOR-TRUCKS

(*Continued from page* 762)

Another advantage of this system is its safety and the saving in insurance. None of the gasoline is handled indoors, or in portable cans and funnels. With the pump comes a measuring device, so that seller and buyer may both know the number of gallons poured into the tank. The system, besides the pump and decorative pillar enclosing it, includes an underground tank, sometimes under the sidewalk, more often on private ground outside the walls of a garage, a pipe connecting this tank with the pump several feet away. At least ten makers of tanks and pumps of this sort here described are now in business. In general, the outfit is the same in principle; altho the pumps and parts differ in details. Each is described in *The Automobile* of October 9. Makers of them do business in various parts of the country, including Fort Wayne, Ind., Cincinnati, Cedar Rapids, Iowa, St. Louis, Milwaukee, and Springfield, Mass.

THE TROUBLED FUTURE OF THE MOTOR-TRUCK

Much interest has been shown in a recent communication, sent out by the Automobile Chamber of Commerce, as a statement of conditions and prospects in the motor-truck industry. These conditions, as described in *The Horseless Age* in comments on this communication, "are not entirely satisfactory." That paper does not deny that "there has been too great a rush into the commercial-vehicle industry during the past three years," for the rate of technical progress has not warranted the rapid expansion that has taken place. It is because boards of trade have offered building sites free and makers of parts have extended too liberal credit to motor-truck factories that factories have grown up "in mushroomlike fashion and competition has become so very keen."

Under these conditions unbusinesslike habits of price-cutting and giving unreasonable guaranties have grown up. The writer does not question the great future that awaits the motor-truck business. The truck-horse "will just as surely disappear from the business thoroughfares of our city as the carriage-horse has almost disappeared from our boulevards." External conditions are therefore favorable enough for this industry; where improvement is needed is in internal conditions. One of the most crying needs is for fixt prices for single vehicles and fixt discounts for numbers of them.

An impression once prevalent that to make motor-trucks was the easiest of roads to wealth has been, or should soon be, dissipated. The fact is that this industry is "even more difficult and exacting than the pleasure-car industry was at the same stage of its development." This is mainly due to the fact that, with pleasure cars, "the enthusiasm of the motorist prompted him to put up with many inconveniences and tribulations, which the commercial-vehicle owner will not endure."

These troubles in the motor-truck industry have been aptly described as "its growing-pain." *The New York Journal of Commerce*, in commenting on the subject, apropos of the shutting down of the Alco truck plant, remarks that "there are too

many truck-makers—over 400, according to one well-known list." Of these about three-quarters could be eliminated "as not very serious attempts." But they contribute to an unhealthy situation. They come and go overnight, as it were, and in the trade a belief is growing that five years hence not more than twenty responsible companies will be making trucks."

That motor-trucks cost too much is also contended by this paper. Far-seeing men agree that motor-trucks must more and more be adopted in business, but "the immense sums necessary to install them are holding back the demand from attaining its ultimate magnitude." If two-thirds of the present manufacturers would go out of business, permitting the fittest to survive, "every one would be better off." Production would then be cheaper, sales would be made at less expense, and competition would assume far more healthy conditions.

A distinct need in the industry is "education among users of trucks," as to how to use them—how to get from them the greatest possibilities. Ignorance in these lines is one of the chief causes of the halt in progress in the industry, but above all things else stands the fact that "too many men, not interested heart and soul in the business, are still floundering in blind ignorance of its complex problems and holding it back." The communication from the Automobile Chamber of Commerce referred to contained among others the following interesting points:

"While tremendous strides have been made, especially in the last three years, in the truck business, it must be remembered that the truck industry is still much younger than the passenger-car business. The motor-car business has grown to be one of the leading industries of America within a space of time so short as to be almost incredible, were not the actual figures on hand to substantiate it. What, then, must be the future of the truck industry? It is definitely assured, and there is little doubt that when the truck industry reaches the same business-development stage as the passenger-car industry has reached to-day, it will have a tremendous volume.

"So far as actual mechanical development is concerned, the motor-truck has derived a great deal of benefit from the fact that the passenger-car industry was first in the field. On the other hand, it has been handicapped at times by this precedence, owing to the unbusinesslike principles pursued by many of the companies engaged in making and selling motor-cars, a condition for which the rapid growth of the business has been directly responsible.

"Unbusinesslike methods, such as price-cutting, absurd guaranties, and extravagant promises of free service; time payments without adequate security and insufficient financial resources to finance such payments; extravagant overhead and sales expense, and such kindred evils, have been indulged in time and again by short-sighted companies, and some of these have actually survived in the passenger-car business, and are still struggling along. But when the same methods are applied to the truck business, the result brings swift and certain disaster.

"Nevertheless, some truck companies, in their anxiety to force their product upon the market, have resorted to the above-mentioned disastrous methods, and the result has been that not only the companies

(*Continued on page 767*)

SKIDDING INSURANCE
that's always there!

The non-skids that you can trust are the kind that's **always** on the wheels. Most skidding accidents happen because the chains are in the tool box or at home, instead of on the wheels.

Sudden showers—wet places in a dry road—freshly watered streets—oily roads—how often do you stop and put on non-skids for these? You know you ought to, but it's easier to take a chance! Your passengers may worry, but they seldom say anything—till you chance it once too often.

You wouldn't take a chance **even once** if you had the modern non-skids—the kind that's always ready for business, and that prevents not only skidding, but punctures and road wear as well, and prolongs the life of the tires.

Woodworth Treads

Woodworth Treads are put on the tires and then simply forgotten till they wear out. They enable the motorist to enjoy the benefits of pneumatic tires without the penalties of rubber. By preventing punctures and cuts, they avert premature fabric decay and the resultant blowouts, without resort to fussy vulcanizing. They are always ready for wet roads: instead of chafing the tires like loose non-skids, they actually **save more than their cost** by the mileage they **add** to the tires.

Woodworth Treads differ from all other so-called protectors in the method of their attachment, by which chafing is made impossible. Instead of being fastened to the rims, they are drawn **permanently** snug by strong coil springs going around each edge. Hence they can never stretch loose; and **chafing, which is due to looseness, cannot occur.** They are tire protectors in fact as well as in name.

Don't spend money on troublesome loose non-skids, which shorten instead of increasing tire life! Put on **Woodworth Treads**, enjoy skidding insurance that's always there, and save money!

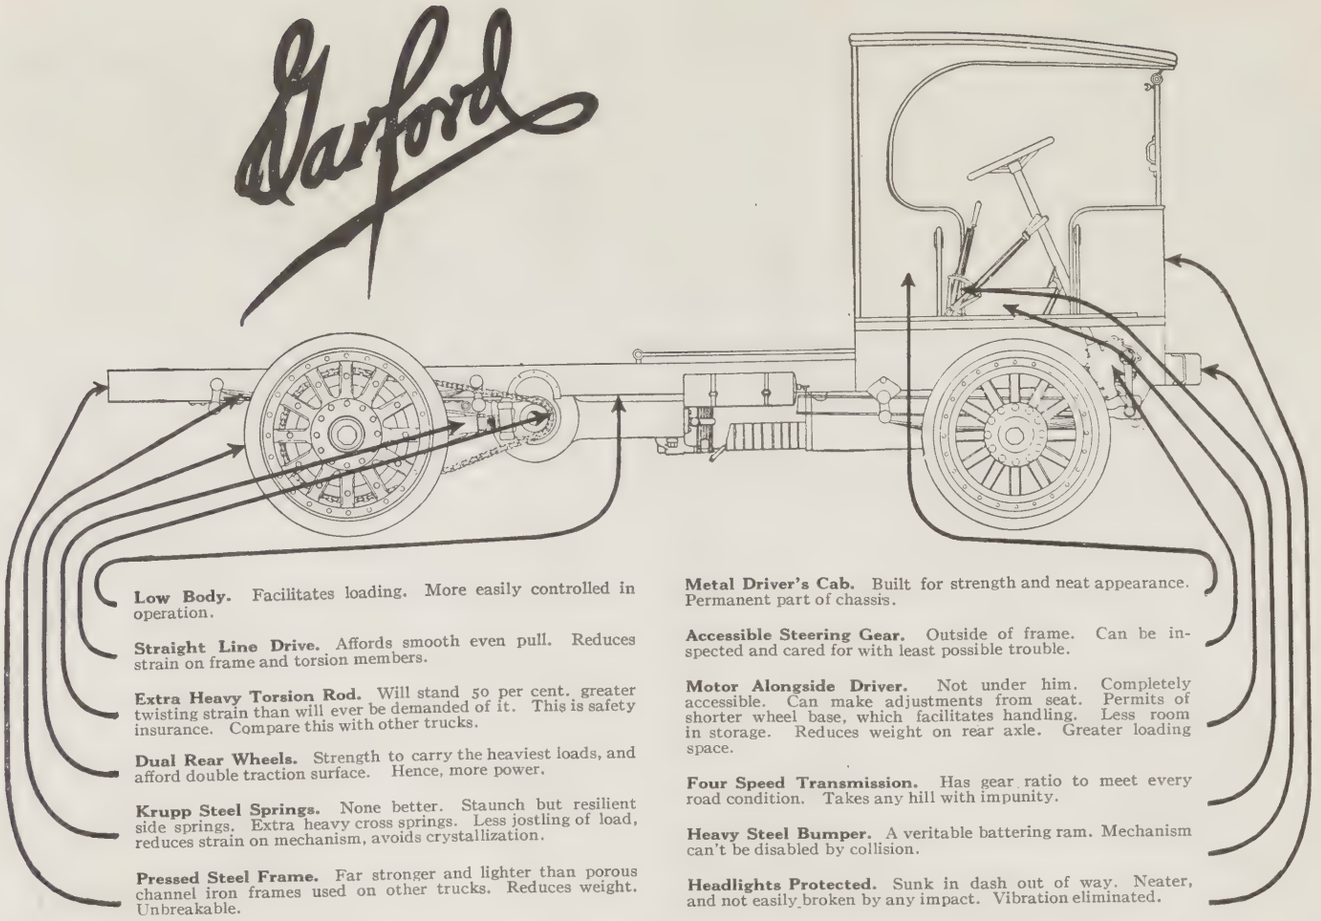
WE GUARANTEE Woodworth Treads not to injure the tires, and we will repair or replace free any tire so damaged. We guarantee them to outlast any other style of protector, and we will refund the full purchase price within 60 days after purchase on any pair that does not do all we claim.

All the large supply houses—those that stand back of the goods they sell—carry **Woodworth Treads.** If not convenient to order of them or through your dealer, we will ship direct, express prepaid.

Write your name and address on the margin of this page, and mail to us for booklet on tire preservation, useful to any motorist.

LEATHER TIRE GOODS COMPANY
2006 Whirlpool Street NIAGARA FALLS, N. Y.
New York Store, 1608 Broadway

Garford



Low Body. Facilitates loading. More easily controlled in operation.

Straight Line Drive. Affords smooth even pull. Reduces strain on frame and torsion members.

Extra Heavy Torsion Rod. Will stand 50 per cent. greater twisting strain than will ever be demanded of it. This is safety insurance. Compare this with other trucks.

Dual Rear Wheels. Strength to carry the heaviest loads, and afford double traction surface. Hence, more power.

Krupp Steel Springs. None better. Staunch but resilient side springs. Extra heavy cross springs. Less jostling of load, reduces strain on mechanism, avoids crystallization.

Pressed Steel Frame. Far stronger and lighter than porous channel iron frames used on other trucks. Reduces weight. Unbreakable.

Metal Driver's Cab. Built for strength and neat appearance. Permanent part of chassis.

Accessible Steering Gear. Outside of frame. Can be inspected and cared for with least possible trouble.

Motor Alongside Driver. Not under him. Completely accessible. Can make adjustments from seat. Permits of shorter wheel base, which facilitates handling. Less room in storage. Reduces weight on rear axle. Greater loading space.

Four Speed Transmission. Has gear ratio to meet every road condition. Takes any hill with impunity.

Heavy Steel Bumper. A veritable battering ram. Mechanism can't be disabled by collision.

Headlights Protected. Sunk in dash out of way. Neater, and not easily broken by any impact. Vibration eliminated.

Why This Truck "Delivers"

THE Garford chassis is scientifically correct. It is not merely a truck made to haul things to and fro. It is built to meet existing conditions, exactly as they are—and to meet them with the utmost economy. That is why it gives five to six miles to a gallon of gasoline and *not* two or three.

Study the analytical diagram above. Every part is constructed and designed for the utmost commercial efficiency. The frame, the axles, the springs, the motor, the steering knuckles, the torsion rod construction, the straight line drive, —every individual piece and part is made to cope with to-day's conditions. That is why the practical Garford "delivers."

Over 65% of our business is "repeat" orders. This is probably the highest percentage of "repeats" any manufacturer can show. It's a tribute.

Garford Trucks come in two, three, four, five and six ton capacities. For larger sizes we advise the famous Garford trailers.

Representative or complete literature and information on request. And it will pay you to investigate.

MOTOR-TRUCKS

(*Continued from page 765*)

themselves have quickly become bankrupt, but their methods have produced a bad effect on the entire industry.

"Probably no other piece of machinery is subject to the same amount of neglect and abuse as a motor-truck, on the average. For this reason it is essential to the purchaser that the company producing the truck remain in business if the customer is to receive the maximum service from the truck. Therefore, it is of the utmost importance and ultimate benefit to the purchaser of motor-truck equipment to deal with a company which is sound financially, and conducts its business on a conservative and businesslike basis.

"Within certain limits, a reduction in the price of trucks is justified by an increased volume of business, but at the present time no truck manufacturer has reached the point where any appreciable cut in prices is safe. Consequently, when a company suddenly announces distinctly lower prices on its products, it is safe to assume that this company has been experiencing difficulty in marketing its trucks, due to constructural defects, obsolete design, or other causes, and is taking the price-cutting method of unloading, with more than a probability of going out of business, or abandoning that make or model, plausible explanations to the contrary notwithstanding. When these so-called bargains are offered, the prospective purchaser should take pains to inform himself as to the financial condition of the company, as such an investigation will be pretty sure to explain the reason for the sudden drop in price.

"Suppose there are five thousand trucks of one make in a certain city, a supposition which will certainly be true inside of ten years. Every truck should be thoroughly overhauled at least once a year; and the average time for such an overhaul is about two weeks; longer when repainting is done. This means that there will be almost two hundred trucks constantly in the shop for this purpose, without taking into account the number that will come in between time for adjustments, minor troubles, damages from collisions, etc. And five thousand is not the limit, by any means; it is only the beginning. When the realization of the amount of floor space necessary to accommodate several hundred trucks, with room enough around each one to work, is grasped, the utter impracticability of taking care of them at any central service station is apparent.

"Users of motor-trucks, especially those who have gone into motor equipment on a large scale, are beginning to realize that the benefits derived from the employment of trucks is in direct proportion to the care and system with which the trucks are handled. The large department stores of the United States, with their elaborate delivery service, probably have studied the motor-truck problem more carefully than any other of the large classes of business. At the present time, practically all of the largest stores in the various business centers of the country are handling the bulk of their delivery business by motor-trucks, and many of them have completely motorized their delivery equipment, with extremely satisfactory results in increased service at lower cost, and a resultant increase in business.

"The stores that are making the most marked success with motor-trucks are those which are handling their trucks on an intelligent and businesslike basis. Where there are enough trucks to warrant it, a more or less complete service garage is maintained for the proper care of the trucks, with carefully trained men in charge. Detailed records of the operation of every truck are scrupulously kept; and the human element of the driver is eliminated as far as possible by an accurate checking system. These stores understand thoroughly the importance of keeping their motor equipment up to its greatest efficiency; and to this end they maintain service departments and keep accurate records of every truck, making their purchases judiciously, with their own experience as a guide."

CROSSING ALASKA IN A MOTOR-TRUCK

By the middle of September a corps of army engineers completed an expedition into Alaska by motor-truck. They reached a point within two degrees of the Arctic Circle. This is declared to be "the farthest northern point ever reached by a motor vehicle." On this journey the truck made its way among glaciers and ice-clad mountains. Giant boulders had to be blasted away and dense forests penetrated after routes had been cut through them. Snowslides were encountered and quicksands presented problems. By the new route established by this trip over a month is saved in reaching the headwaters of navigation on the Yukon. Stirring incidents of the trip are contained in a letter, intended for the press, dated at Valdez, the point of departure on the southern coast:

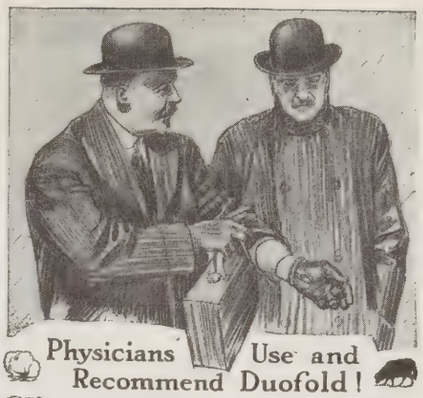
"Fording scores of glacial streams, running through cañons and crevasses of solid ice from 800 to 1,000 feet in depth, crossing the Alaska and Chugach mountain ranges on steep and icy trails over unused passes, blasting their way through forests and giant boulders, the party drove from Valdez to Fairbanks and return, a distance of 826 miles in 19 days. Thrilling experiences with snowslides, washouts, and quicksand were reported.

"The expedition was typical of Uncle Sam's method of getting important information. A 1,500-pound truck had been shipped to the Alaska road commissioners early in the summer. It was delivered in Valdez on July 26, and two days later it was started on the trail to Fairbanks, there to be joined by Lieutenant-Colonel Richardson, president of the board of road commissioners, and other engineers.

"The truck left Valdez with a load of supplies and a quantity of mail for camps along the military telegraph line. Considerable mail was carried to points where none had been received in over a year. In order that the trip might reveal average conditions, the truck was not especially equipped, except in the matter of fuel and road tools. Food was carried for use only in the desolate regions where there are no 'road houses' or settlements.

"Leaving Valdez in a drizzling rain, the party crossed the delta of the Valdez glacier and almost immediately entered Keystone Cañon, 14 miles long, whose walls of ice and rock rise nearly a thousand feet above Lowe River, a typical glacier stream. The entire region is volcanic, showing great outcroppings of mineral, with rock of weird formations and varied colors. Great ledges of iron ore gave a reddish tinge to the walls. The surface was covered with a thin blanket of volcanic ash.

"At the finish of the trip on August 19, the truck was again placed on the trail to carry supplies and mail to road camps and settlements in the vicinity of Valdez. Colonel Richardson said he believed that the road work contemplated by the Alaskan commissioners will make it possible to go from Valdez to Fairbanks in four days next summer."



Physicians Use and Recommend Duofold!

Physicians—who must be ready at all times to leave fireside warmth for the blizzard's blast — are the most enthusiastic users of

Improved Duofold Health Underwear

For *Duofold* is virtually two garments united in one —an *outer* fabric of warmest *wool* that insures protection from the bitter winds, and an *inner* fabric of softest *cotton* for the perfect comfort so essential to the calmness of professional men.

And many a man, to whom winter heretofore meant discomfort, disease and ill-health finds *Duofold* a most efficient protection against ills that follow winter chills.

For *Duofold* not only retains heat and shuts out cold—but the air-spaces between widely placed stitches ventilate the skin pores, absorb perspiration and moisture, and insure at all times soft, dry, chill-proof undergarments that promote and protect your health.

Eminent physicians freely give you this advice—"Wear *Duofold*." It means *better health* and *winter comfort* for *you*.

Write us today for Free Sample of DUOFOLD material, and illustrated DUOFOLD Booklet. Get DUOFOLD garments from your dealer.

REVIEWS OF NEW BOOKS

HISTORY AND BIOGRAPHY

Guardia, Ricardia Fernandez. History of the Discovery and Conquest of Costa Rica. Translated by H. W. Van Dyke. Illustrated. Map. Cloth, pp. xxi–416. New York: Thomas Y. Crowell Company. $3 net.

Investigation into the archives of Spain and of the Spanish-American countries has been very fruitful of late—especially in the archives of the Indies at Seville. From his studies there and in other collections, Señor Guardia has prepared a popular record of the discovery and conquest of his native land, dealing with the period from the voyages of Columbus to 1821. Many a step in the winning of this new west by Spanish arms and Spanish crosses is here told that has not been generally known, and many a valiant conquistador and heroic friar makes his reappearance after long years of oblivion. It is worth noting that in spite of outbreaks of cruelty and of bloodthirsty conduct on the part of some of the leaders, the explorers and conquerors in the main followed the injunctions of his Catholic Majesty the King of Spain against the spoliation and barbarous treatment of the Indians. One wishes that Señor Guardia's narrative had been so constructed as to give one a more unified picture of the period as well as a mass of valuable but easily forgotten detail.

Douglas, James. New England and New France. 8vo, pp. 560. New York: G. P. Putnam's Sons. $3 net.

The subtitle, "Contrasts and Parallels in Colonial History," is a sufficient description of the book. Mr. Douglas compares the motives of the French in Canada and the English settlers in New England, and shows wherein they differed in the treatment of the Indian, in the status of women, in educating the young, in the position taken by the Church. The chapters showing how the failure of the New England colonists' experiment in theocracy led to the building of a nation, and how the French, with their greater influence over the natives and their greater zeal for exploration, were handicapped as founders of a permanent colony, are especially interesting. Mr. Douglas makes no effort to tell in a consecutive narrative the history of either new France or Colonial New England, but he succeeds in giving, largely from contemporary documents, clear accounts of the facts and influences most important to that history. The portraits, maps, and other illustrations are well selected, and add to the value of a work which will probably be appreciated by the American reader who has been in Canada and would know more of its past.

Grinnell, George Bird. Beyond the Old Frontier. Pp. 363. New York: Charles Scribner's Sons. $1.50.

This book deals with "explorations, hunting, the taking of fur, and Indians in peace or war," in all of which there is excitement and intense interest. It looks back at some of the happenings in the forgotten West, the vast territory lying between the Mississippi River and the Pacific Ocean, which fifty years ago had few white inhabitants. Fur traders of the Northwest Company and the Hudson Bay Company, in pursuit of beaver and other skins, had thrilling and adventurous lives. No story-book could furnish more hairbreadth escapes than the chronicle of the every-day existence of these pioneers. The commercial ventures of John Jacob Astor and his assistant, Alexander Ross, involve dramatic episodes, as do those of such men as McKay, McKenzie, McDougall, and Stuart. There are chapters in the book devoted to frontier forts, uprisings of Indians, the tactful skill in dealing with the different tribes, and a comprehensive account of the Bents and George Ruxton. While a record of historical facts appreciatively described, it is as fascinating as the most startling "Boy's Book." It records wonderful changes that were necessary in producing present conditions in the widely populated West.

Shelley, Henry C. The Tragedy of Mary Stuart. Pp. 389. Boston: Little, Brown & Co. $3.

There are few who have not studied some phase of Mary Stuart's life, but it is difficult to find a strictly unpartizan estimate of her character and life, even tho she lived only a little over forty-four years. Mr. Shelley has thoroughly familiarized himself with the scenes associated with Queen Mary's development, and has had access to all the documents penned during the fateful months of the tragic part of her life. It is those fifteen months of swift-moving destiny that he has chronicled with faithful accuracy, giving, in a prolog and epilog, the years of preparation and the closing scenes of her tragic existence.

Perhaps Mary Stuart is only what her inheritance and environment made her, but the events of the years 1566–67 give one little in her to admire or commend. She was always a "bewitcher" of men, but it is not proved that she was beautiful, tho she was certainly fascinating. All the revolting details of Rizzio's murder, her marriage to Darnley and her part in his murder, and her espousal of Bothwell, are stated without attempt to conceal Mary's true character, which was always grossly sensual; but, even after her intrigues and plottings, imprisoned or free, she was a commanding figure in history and an interesting study. This book is especially valuable for its direct method, concise form, and its accurate adherence to historical fact.

Austen-Leigh, William and Richard Arthur. Jane Austen, Her Life and Letters. Pp. 428. New York: E. P. Dutton & Co. $3.

This new addition to the "Lives" of Jane Austen, whose popularity shows no sign of diminishing in either England or America, is issued for the purpose of laying new facts before the reader, placing old facts in new light, and removing some misconceptions. It is what the title implies, "A Family Record." The family was large enough to furnish engrossing and dramatic incidents to those vitally interested in its fortunes. Our information

NATCO·HOLLOW·TILE

ALL the advantages that you associate with Hollow Tile construction are the achievements of the one brand, **Natco Hollow Tile.** The skyscrapers that have established the standard in fireproof construction are built of **Natco Hollow Tile.** The safety from fire that you may have seen demonstrated in other hollow tile homes or industrial structures is the safety contributed by **Natco Hollow Tile.**

There is no chance for you to go wrong in the selection of **Natco Hollow Tile.** We stamp each block **"Natco".** Each **"Natco"** block represents a perfection in Hollow Tile, which only an organization of our great dimension and years of persistent improvement could offer. The whole idea of Hollow Tile construction is to eliminate entirely the risk of fire and weather-deterioration, and such a risk is just what you take upon yourself when you accept a substitute for **Natco Hollow Tile.**

The advisability of **Natco Hollow Tile** construction is confined to no type or types of buildings. In its various designs it makes a practical material for all buildings. Its use involves a little, but only a little, more expense. Partitions, floors and roofs need fireproof material as much as walls, and the specification of **"Natco Throughout"** is a precaution every builder should take.

Before defining your building plans, send for our 64-page handbook, "Fireproof Houses," fully describing, with illustrations, every detail and phase of **Natco** construction. Contains 80 photographs of **Natco** buildings. Mailed anywhere for 20 cents to cover postage. *Write for it today.*

Two New Ideas About Painting Factory Interiors

IF you understand the subject of giving a factory interior the most suitable finish, you are one of a small (but increasing) minority. There are, mainly, two wrong notions about it.

Most owners realize the many advantages of coating the walls and ceilings of their factories. They know it will improve the light in the rooms, give a clean, attractive appearance, help their employees to a better frame of mind, etc., etc.

But they have learned by experience—their own or that of other persons—that the ordinary paints sold for this purpose are highly unsatisfactory. Most of them are cold-water paints. These are little better than whitewash. They usually contain organic matter; hence are likely to mold, developing germs and producing an unpleasant "damp" odor. Lead-and-oil paints, on the other hand, contain a poisonous pigment, and soon turn yellow, losing considerable of their power to reflect.

So much most persons already know about the subject. But there are these two important facts, which many are now learning for the first time:

1. There is a product on the market—not a cold-water paint, not a lead-and-oil paint, but an *enamel*; a real, durable enamel with all that the name implies. It affords a finish not unlike tile or porcelain—glossy-white, long-lived and perfectly sanitary. It does not soil easily, but even should it become grimy, it can be readily cleansed with soap and water.

2. Still more surprising, it is as cheap or even cheaper than the ordinary paints. The initial price is not any greater—it sells for $1.50 a gallon, the usual price of lead-and-oil paints. But it brushes out so freely, it has such great covering power, it has such long life—that in the long run its use is a decided economy.

The name of this product is Trus-Con Industrial Enamel. Made by a new process, it is the result of long and careful scientific experiment in modern technical laboratories. The product has been used under severest conditions by various prominent industrial concerns, who have expressed their full satisfaction with it.

If you write on your letter-head to the address below, you will receive full details about Trus-Con Industrial Enamel. Write today—it will pay you.

N. B.—The margin of profit on Trus-Con Industrial Enamel is small—it does not permit giving samples unnecessarily. If, however, you describe your requirements, we will send you a demonstration without charge.

The Trus-Con Laboratories
1136 Trus-Con Building, Detroit, Mich.

REVIEWS OF NEW BOOKS

(*Continued from page 768*)

in regard to Miss Austen's life and character, we are supposed to absorb from her letters, and most of those are written to her elder sister Cassandra, to whom she was unusually devoted and from whom she was rarely separated. The letters reveal no startling brilliancy, no especial literary enthusiasm or inspiration, but, in the intimate expressions of every-day life and gossip of balls and people, we find a unique sense of humor and an element of appreciative fun so markedly characteristic of Jane Austen's style. Jane Austen was a woman of normal, lovable disposition, sweetness of temper, and of a retiring disposition; she disliked notoriety, and was in keen sympathy with brothers, sisters, nieces, and nephews. Only in her later letters does she allude to her writings, and then she speaks of her characters as live personalities, seeing resemblances to them in chance acquaintances and even in pictures.

D'Aulnay, Baroness, Marie Catherine. Memoirs of the Court of England in 1675. Translated by Mr. William Henry Arthur. 8vo, pp. 445. New York: The John Lane Company. $4.50 net.

These memoirs show that the comedies of Wycherly and Farquhar were accurate and literal descriptions of the manners and morals of their licentious age. The author herself is a type of the unfettered of the seventeenth century. When she was thirteen years old she was in love, or thought herself in love, with a man of forty whose acquaintance she had sought by addressing him in letters of love and passion copied word for word from romances. This was while she was being educated in a convent. M. de Blossac, the object of her flame, behaved very badly to her. Of course it was to be expected that she would revel in all the scandals of the Restoration Court. She has really produced a sparkling and vivid picture of which Charles II., "who never said a foolish thing, and never did a wise one," is the center. The Duke of Monmouth, his son, Prince Rupert, Buckingham, and many of the reckless and ruffianly bucks of the day pass swaggering over the scene. Amid her maids of honor is set forth the figure of the Queen. The career of Nell Gwynn is delineated with the enhancement gathered from matter hitherto unpublished, and there are sixteen illustrations, the frontispiece being a photogravure portrait of the baroness herself. Those who have known Madame d'Aulnay merely as the authoress of fairy-tales which are to be considered, both in French and the English version of them, classics of fine water, will welcome a book which shows her as a very gifted describer of actual persons whose wit or wickedness she so keenly appreciated.

Halliday, W. R. Greek Divination: A Study of Its Methods and Principles. London and New York: Macmillan Company. Cloth. $1.60 net.

This is a volume for the specialist in anthropology or comparative religion only, and for one who is thoroughly up in his Greek and Latin. It is evidently a by-product, but a worthy one, of the author, who is lecturer in Greek history and archeology in Glasgow University. The sources are original and the frequent citations are untranslated, so that the reader is on his classical mettle throughout. The scope of the book is not fully indicated by

A Record Value

THE body, designed with cowl dash and full U doors with concealed hinges, is low, long and unusually graceful. The improved lines and additional grace is the result of a *longer* wheel base. For the wheel base has been *increased to 114* inches.

But the price is lower than ever.

THE body is finished in a warm, dark Brewster green, with delicate and lighter green stripings, and green running boards to match. It is trimmed in highly polished nickel plate and aluminum. The hood is jet black baked enamel.

But the price is lower than ever.

THE motor is more powerful, having been *increased* to 35 horsepower. With five passengers it easily develops more speed than you will ever need. This car is particularly economical in gasoline consumption.

But the price is lower than ever.

THE 1914 Overland has *electric lights throughout*—head, side, tail and under the dash. The steering wheel has been *increased* to 18 inches. Then there is a jeweled Stewart Speedometer placed under the cowl so that the driver can always see it.

But the price is lower than ever.

THE tires are larger—33″ x 4″ Q.D.—all around. Even in the finishing touches you find nothing but high grade and standard materials, such as Timken bearings, electric horn, deeper upholstery and genuine hand buffed leather.

But the price is lower than ever.

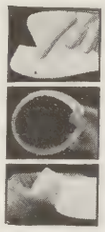
See this car. There is an Overland dealer in your city. Look him up at once. Handsome catalogue on request. Please address Dept. 17.

$950 *completely equipped, f. o. b. Toledo.*

The Willys-Overland Co., Toledo, Ohio, U.S.A.

$1075 *with Gray & Davis electric starter and generator, f. o. b. Toledo*

'SHADOW'—the season's smartest collar—the style that *leads* wherever the clever dresser is seen. 'SHADOW' is a LION collar with all the exclusive LION comfort features—



The "Pliable-Points." Cannot injure the shirt.

The "Slip-Over" button-hole. Fastens in a second. Cannot easily tear out.

The "Easy-Tie-Slide" space. Gained by special LION design. Gives a comfortable channel for cravat to slide easily.

The patented "Lock-that-Locks." Keeps a closed-front collar *closed*. It's the thing that makes all the difference between a stylish collar and a careless one.

See your haberdasher today and order your 'SHADOW' collars. Everybody will be wearing this style a year from today. Why not buy *now* when all the smart dressers are wearing it.

If you cannot get the new 'SHADOW' collar from your dealer—send us his name and 75c—if in Canada send $1.00. We will mail you, by return, a box of six collars in the style and size you specify, for 75c—or as usual 2 for 25c.

HON. BRAND WHITLOCK, Mayor of Toledo Ohio, after examining the manuscript, wrote thus: "They have accurately analyzed conditions in our own cities, and with most of the conclusions they express I am entirely in accord. . . . . I know of nothing that has been written or printed that would make a more valuable text-book on this whole vital problem."

All Students of Governmental Science Will Find This Volume Essential.

REVIEWS OF NEW BOOKS

(*Continued from page* 770)

its title, in that it takes in Roman as well as Greek divination. Moreover, the modern point of view is taken and sustained, since the subject of divination is reached only after discussion of magic, ritual, mantics, and the ordeal. After this broad and necessary foundation has been wisely laid in six chapters, in six more the author treats learnedly but briefly of Divination at Sacred Springs, Lekanomancy, Omens and Subrites, Cleromancy, Necromancy, and Augury. There are also an appendix, a bibliographical index (unfortunately incomplete in its bibliographical detail), and a general index. The comparative and illustrative methods are followed. The modern student will find throughout the spirit of recent inquiry and a good acquaintance with the findings of recent science.

Roman Farm Management. The Treatises of Cato and Varro Done into English, with Notes of Modern Instances, by a Virginia Farmer. Pp. xii–365. New York: The Macmillan Company. $2 net.

Altho the Roman farmer could not turn to the bulletins of a Department of Agriculture for advice or send to his togaed senator for packages of seeds, he at least had some very excellent treatises on the art of farming, written by men no less distinguished as farmers than as senators and authors. A cultivated Virginia farmer has made translations of two of these treatises in a form which will delight both the classical student and the reading farmer. The first is Cato's "De Agricultura," a rather pithy collection of shrewd precepts ranging from recipes for cakes and salad to advice on buying a farm and suggestions for the duties of a housekeeper, who should *not* "gad about." The second is the longer treatise of Varro, from which Vergil, so our anonymous editor demonstrates, drew the material for his Georgics—the "Rerum Rusticarum Libri Tres." This is much more systematic and inclusive, reaching nearly three hundred small pages of careful descriptions and regulations for all manner of farm practise, whether for live stock, grain, fruits, game, or farm-hands. To the rendering of these the translator has added some very delightful foot-notes which reveal an intimate acquaintance with many other agricultural treatises of both classical and medieval as well as modern farm life. One would like to urge him to give us more of these refreshing breezes from across the fields and years. There are much pleasure and profit in the well-printed pages of these country gentlemen.

Ferguson, William Scott. Greek Imperialism. 8vo, pp. 258. Boston and New York: Houghton Mifflin Company. $2 net.

In this fresh and original work Professor Ferguson has thrown a new light on the principles of Greek politics. He shows how the city was originally the unit of government as represented, for instance, by Athens and Sparta. The idea of a Greek Empire was never realized by Thucydides or even by Plato. The city and state of Athens proved an imperial democracy, which was expanded by means of the thalamocracy. But the hegemony of this city which was wrested from her by Sparta never constituted an empire. The city-states in the time of Pericles were isolated nuclei of

The All-Weather Tread

Another Goodyear Invention

A Smooth Tread on Dry Roads—An Invincible Grip on Wet

Now comes the solution of the All-Weather tread. The tread for all wheels and all seasons.

As smooth as a plain tread on dry roads. Equally economical. Yet grasping wet roads with a most tenacious grip.

It outsells smooth treads now with users on the largest-selling tires in the world.

Deep, Sharp-Cut Flat-Top Blocks

Safety suggests, to every motor car driver, the universal use of anti-skids.

But smooth treads were better and more economical for 90 per cent of one's driving. So many added chains on wet roads.

Now Goodyear has an anti-skid which presents a smooth tread to dry roads. The projections are broad and flat. They are regular, so they cause no vibration.

The blocks widen out so they meet at the base. Thus the strains are distributed over the fabric the same as with smooth-tread tires.

It was separate projections—centering the strain at one point in the fabric—which ruined so many anti-skids.

This All-Weather tread is an extra tread, giving double thickness. It is made of very tough rubber—toughened by a secret process—immensely wear-resisting.

The blocks are so deep—the rubber so tough—that the grips last for thousands of miles.

The block edges are sharp, and they stay sharp. Sharp edges alone can afford a firm grip. The edges are set at 45 degrees to face the skidding direction. Cars skid, we find, at 45 degrees.

Compare it point by point with others—its thickness, its toughness, its sharpness, its grip. Its regular projections, avoiding vibration. Its distributions of strains, its smoothness, its angles.

We don't need to argue that this tread excels any other anti-skid created.

The result is a universal tread. A smooth tread ready for any emergency. A durable tread. A cool tread, because of the swish of air.

Our sale is enormous. Men who know them will use nothing else.

Note the deep blocks, the sharp edges, the flat tops. Note the broad bases which distribute the strains. Note the perfect alignment to avoid vibration and give the smooth-tread effect.

This All-Weather tread is one of the many exclusive Goodyear features.

Here are three others—costly, vital features which no other maker offers.

These are the reasons why No-Rim-Cut tires dominate in Tiredom. After years of tests, no other tire compares with them in sales and popularity.

Things Found Only in No-Rim-Cut Tires

We control by secrecy the only feasible way to end rim-cutting.

No-Rim-Cut tires can't rim-cut—that we guarantee. Hundreds of thousands have proved this.

With old-type tires—clincher tires—31.8 per cent are discarded for rim-cutting only. Almost one in three. That is proved by statistics gathered for us by certified public accountants.

No-Rim-Cut tires are final-cured on air bags, under actual road conditions. This is done to save wrinkles in the fabric—wrinkles which shirk the strain. They cause countless blowouts.

This "On-Air-Cure" adds to our tire cost $1,500 daily—just to save blow-outs for you. All other tires are vulcanized on iron cores alone.

No-Rim-Cut tires employ a patent method to prevent tread separation. It cost us $50,000. Hundreds of large rubber rivets run down through the breaker fabric, making the tread an integral part of the tire. This adds 60 per cent to the tread hold as proved by careful tests.

Thus we combat the three greatest tire ruins, in costly ways which no one else employs. Thus we save motorists millions of dollars.

Yet No-Rim-Cut tires now cost no more than other standard tires. They used to cost one-fifth extra.

Our multiplied output and modern equipment have brought the cost down and down. And the savings all went to our users.

Go see these tires—see why they rule. One glance will show you a dozen advantages, and our dealers are everywhere.

The Twofold Pleasure
of the
ANGELUS
The Pioneer
PLAYER-PIANO
For more than fifteen years the Angelus has been the pioneer in the development of the player as a means to enable anyone to play the piano artistically. Now is added another enjoyment—the listening to the playing of the world's most eminent pianists—by means of our newest invention,
Voltem Music Rolls
which are actual personal records played specially for repetition with the Angelus. With the Angelus and Voltem Rolls
Tina Lerner Gottfried Galston
Ethel Leginska Rider-Possart
and others are ever present in your home to entertain you with their masterful interpretations of the great composers. Thus the Angelus becomes a twofold source of pleasure—an instrument that anyone can play with personal expression, or by which he or she can reproduce the playing of artists. The Melodant, Phrasing Lever and Diaphragm Pneumatics (exclusive features of the Angelus) make possible these marvelous results.
Knabe-Angelus—Grands and Uprights.
Emerson-Angelus—Grands and Uprights.
Lindeman & Sons-Angelus Upright
Angelus-Piano—an Upright built expressly for the Angelus.
In Canada—The Gourlay-Angelus and Angelus Piano.
Any of these instruments can be played by hand in the usual manner.

REVIEWS OF NEW BOOKS

(*Continued from page* 772)

independent power. Their confederation of these units was only perfected in the time of Alexander and his successors.

Professor Ferguson has included in this volume seven lectures which he delivered in Boston as Harvard Professor of Ancient History. In the first lecture the main lines of imperial development in Greece are indicated. The Professor proceeds to describe the several imperial growths which appeared in Greece during the transformation of city political units into members of a confederated whole. Very learned and very valuable is this writer's treatment of the Theory and Practise of Government in the empires, from that of Athens and Sparta to those of the Diadochi. We believe the student of Greek, and indeed of all ancient and even modern politics, will find instruction and food for reflection in this lucid and well-reasoned exposition, which is a distinct credit to Harvard and its schools of history.

Standing, Percy Cross. Guerrilla Leaders of the World. Pp. 294. Boston and New York: Houghton Mifflin Company. $1.75.

The popular conception of a guerrilla fighter is inclined to error. It confounds him with the brigand or freebooter. As a matter of fact, he is a soldier, attaining his ends by ways and means diametrically opposed to those of the military school. His methods include "the surprize, the raid, the ambuscade, the night attack, and notably the feint." From Biblical times down, the irregular warrior has been a striking figure. Hereward the Wake, William Wallace, Bruce, and Du Guesclin have been noted exponents of relentless methods in war. Mr. Standing has given us an exhaustive account of famous guerrilla leaders of all countries. Each chapter portrays a different type. Brittany and LaVendée, the Tyrol, Germany, South America, North and South Africa, India and Italy—all had episodes of irregular fighting which have been made famous in history and fiction. Such men as Charette, Hofer, Schill, Bolivar, Abd-el-Kader, and Garibaldi, prepare us for an enthusiastic account of our own Mosby, Morgan, and Forrest, of whom the writer speaks in words of unstinted appreciation. In view of the late troubles in Mexico, the account of Porfirio Diaz is alive with interesting and instructive details and pertinent descriptions. Guerrilla warfare has never been the subject of serious history and discussion. This book recognizes and satisfies a curiosity which is inspired by a serious desire to understand all phases of successful defense as well as acquisition. Pictures and maps are added to help the reader in a comprehensive understanding of an intensely interesting subject.

TENNYSON'S COUNTRY

Huckel, Oliver. Through England with Tennyson. Illustrated. Pp. 249. New York: Thomas Y. Crowell Company. $2.

This beautifully illustrated volume is a record of things actually done, a story of three months spent by the author and his family among Lincolnshire hedge-rows,

GREAT BEAR SPRING WATER
50c per case of 6 glass stoppered bottles

Devonshire lanes, and Cornish cliffs, with an occasional incursion into the more populous places of men and cities. It is the chronicle of a summer journey to the haunts and homes of the royal laureate "in order to learn more about the man and his moods, and the inner meaning of some of his great lines, by the new interpretation that the places lent the poems." Somersby, his birthplace; Louth, the scene of his school-days, and Cambridge, where he spent his college years, are all visited and studied in connection with his poems. The style of the narrative is both intimate and fluent. The account of his life in London, and the description of his intimacy with a large coterie of celebrated men, make fascinating reading. It is most satisfactory to find the poems themselves introduced to show the influence upon them of places and people. The value of the book does not lie in its presentation of new facts—we are all fairly conversant with the poet's life—but in the connecting of his greatness with his poems, his personality with its expression.

The chapters on Shiplake and his wedding; Farringford, in the Isle of Wight, and the description of Aldworth, in the Surrey Hills, make every traveler long to duplicate this pilgrimage with book in hand. Tennyson will then become a more vivid person than ever before.

SAFETY METHODS IN INDUSTRIES

Tolman, William H., and Kendall, Leonard B. Safety Methods for Preventing Occupational and Other Accidents and Disease. Illustrated. Cloth, pp. xxii–422. New York: Harper & Brothers. $3 net.

It would be hard to overestimate the value and importance of this book in its potential relation to American industry. Not that it might not be somewhat better systematized and indexed, but that its subject is such that a little practical attention to it along any of the lines suggested would bring results out of all proportion to the trouble involved. Dr. Tolman, who is the Director of the American Museum of Safety, has filled the pages of the book with countless hints, illustrations of devices, and examples of good practise, so that every industry is sure to find valuable pointers for the efficiency and safety of its employees. He has not confined himself, however, to gear-casings and guard-rails and the mechanics of safety, but has wisely made much of the training of workers, the formation of "safety committees," and the wider aspects of industrial disease, shop sanitation, and social welfare. Not the least important chapter is the final one on the American Museum of Safety. Of the twenty-three such institutions in the world, the one in New York is the only one in the United States. Germany has six. Not only does such a museum afford a place for the exhibition of safety devices and the dissemination of information, but it also conducts impartial investigations into plant conditions and is prepared to make recommendations for improvements. Were it more largely used and supported, and this book more widely read, there would be much less trouble over the complicated operations of Workmen's Compensation Acts and much more happiness and health for all American people.

Electric Trucks for Every Service

TODAY the Electric Truck is used in 125 different lines of trade—in 41 of the 48 states. It has followed the sun around the world and the faithful, efficient Electric is doing yeoman service in Canada, Cuba, England, Germany, China, South Africa, Brazil, Siam, Australia and the Philippine Islands.

From an engineering standpoint, it is conceded that the Electric is setting the pace in simplicity of design and construction—*economy.*

Electric Trucks are cutting costs where hills are unknown as well as in such hilly centres as Pittsburgh, Cincinnati, Kansas City and San Francisco — *efficiency.*

BULLETIN
Issued by the
Hampshire Paper Co.
Makers of
Old Hampshire Bond

How Would You Judge a Man You Have Never Seen?

Suppose you have only a few letters from a man or firm with whom you are contemplating business relations. You know nothing but what the letters tell you, but do you know *everything* a letter can tell?

The kind of stationery a man employs is a powerful index to his character.

For example: Almost without exception the man who selects OLD HAMPSHIRE BOND for his letter paper and office forms does so for reasons that would influence only a reliable man, a man proud of his business, jealous of its reputation, and seeking always a higher standard for all things associated with his business.

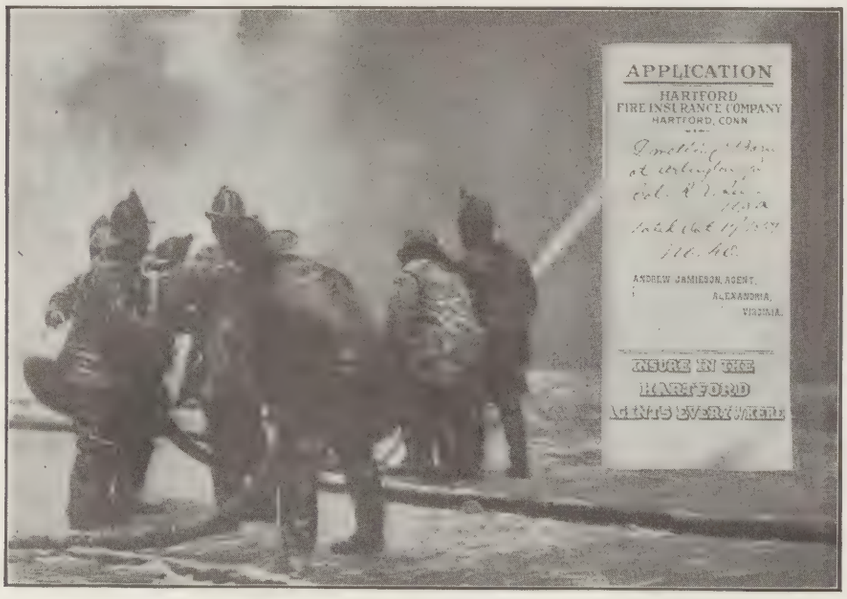
OLD HAMPSHIRE BOND is not bought by accident. It is made "a little better than seems necessary," and stationery of this character has little appeal except to men who do their own work more carefully than ordinarily expected. Those who use OLD HAMPSHIRE BOND want the best for themselves, which might indicate that they would expect you to want no less.

So, too, the printer who likes to use such paper as OLD HAMPSHIRE BOND will be found one who takes pride in doing his work "a little better than seems necessary"—one whom you would do well to trust.

Send for Liberal Sample

So that you may know OLD HAMPSHIRE BOND, we will gladly send you some sample sheets showing examples of modern letter-headings. Better still, enclose 10 cents in stamps and we will mail you a liberal sample box of OLD HAMPSHIRE BOND SEMI-BUSINESS STATIONERY—a form of paper and envelopes which every business man should have both in his office and at home, for there are many letters that should express a feeling impossible to secure from business stationery.

HAMPSHIRE PAPER COMPANY, South Hadley Falls, Massachusetts
The only paper makers in the world making bond paper exclusively



CURRENT POETRY

BRIEF lyrics, making convenient "fillers" at the bottoms of pages, were a few years ago the form of verse which magazine editors preferred. They are still in evidence, but they no longer monopolize the field. During the past year there has been evident in the periodicals of England and America an increasing tendency to print poems of considerable length. Credit for this innovation is generally given to Mr. Austin Harrison, who published in *The English Review* two long poems by Mr. John Masefield at a time when such an act was not at all in accord with editorial traditions. It must not be forgotten, however, that *Scribner's Magazine* printed Dr. Henry Van Dyke's "The House of Rimmon" two or three years ago, and that "Drake," as well as "Tales of the Mermaid Tavern," ran serially in *Blackwood's Magazine*.

Whatever may have been its origin, this tendency is surely a thing for which lovers of poetry should be grateful. It is gratifying to find "The Winepress," by Alfred Noyes, a stirring ballad against war, filling sixteen pages of the October *Blackwood's*. *The Forum* for October prints a long poem by Percy MacKaye, a poem so genuinely American in thought and expression, so full of the very breath of New England, that we regret that we have not the space to quote it entire. Mr. MacKaye has written charmingly of the Canterbury pilgrims, but he is at his best when interpreting the descendants of these Pilgrims who came to the eastern coast of America. "The Candle in the Choir" was strikingly effective, but "School" is perhaps a better poem. The last five stanzas, with their splended spiritualization of commonplace objects—even of bean-poles—are in our opinion the most nobly beautiful poetry that has appeared in any American magazine during the present year.

School

BY PERCY MACKAYE

Old Hezekiah leaned hard on his hoe
And squinted long at Eben, his lank son.
The silence shrilled with crickets. Day was done.
And, row on dusky row,
Tall bean-poles ribbed with dark the gold-bright afterglow.
Eben stood staring: ever, one by one,
The tendril tops turned ashen as they flared.
Still Eben stared.

O, there is wonder on New Hampshire hills,
Hoeing the warm, bright furrows of brown earth,
And there is grandeur in the stone wall's birth,
And in the sweat that spills
From rugged toil its sweetness; yet for wild young wills
There is no dew of wonder, but stark dearth,
In one old man who hoes his long bean rows,
And only hoes.

Old Hezekiah turned slow on his heel.
He touched his son. Thro' all the carking day
There are so many littlish cares to weigh
Large natures down, and steel
The heart of understanding. "Son, how is't ye feel?

What are ye starin' on—a gal?" A ray
Flushed Eben from the fading afterglow:
He dropt his hoe.

He dropt his hoe, but sudden stooped again
And raised it where it fell. Nothing he spoke,
But bent his knee and—crack! the handle broke,
Splintering. With glare of pain,
He flung the pieces down, and stamped upon
them; then—
Like one who leaps out naked from his cloak—
Ran. "Here, come back! Where are ye bound
—you fool?"
He cried—"To school!"

. . . . . .

Now on the mountain morning laughed with
light—
With light and all the future in her face,
For there she looked on many a far-off place
And wild adventurous sight,
For which the mad young autumn wind hallooed
with might
And dared the roaring mill-brook to the race,
Where blue-jays screamed beyond the pine-dark
pool—
"To school!—To school!"

Blackcoated, Eben took the barefoot trail,
Holding with wary hand his Sunday boots;
Harsh catbirds mocked his whistling with their
hoots;
Under his swallowtail,
Against his hip-strap bumping, clinked his dinner-
pail;
Frost maples flamed, lone thrushes touched their
lutes;
Gray squirrels bobbed, with tails stiff curved to
backs,
To eye his tracks.

Soon at the lonely crossroads he passed by
The little one-room schoolhouse. He peered in.
There stood the bench where he had often been
Admonished flagrantly
To drone his numbers: now to this he said good-by
For mightier lure of more romantic scene:
Good-by to childish rule and homely chore
Forevermore!

All day he hastened like the flying cloud
Breathless above him, big with dreams, yet dumb.
With tightened jaw he chewed the tart spruce-
gum,
And muttered half aloud
Huge oracles. At last, where thro' the pine-tops
bowed
The sun, it rose!—His heart beat like a drum.
There, there it rose—his tower of prophecy:
The Academy!

. . . . . .

Once more old Hezekiah stayed his hoe
To squint at Eben. Silent, Eben scanned
A little roll of sheepskin in his hand,
While, row on dusky row,
Tall bean-poles ribbed with dark the gold-pale
afterglow.
The boy looked up: here was another land!
Mountain and farm with mystic beauty flared
Where Eben stared.

Stooping, he lifted with a furtive smile
Two splintered sticks and spliced them. Never-
more
His spirit would go beastwise to his chore
Blinded, for even while
He stooped to the old task, sudden in the sunset's
pile
His radiant Herdsman swung a fiery door,
Thro' which came forth with far-borne trumpet-
ings
Poets and kings,

His fellow conquerors: there Vergil dreamed,
There Cæsar fought and won the barbarous tribes,
There Darwin, pensive, bore the ignorant gibes,
And One with thorns redeemed
From malice the wild hearts of men: there surged
and streamed

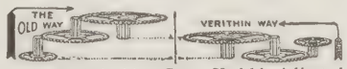
The most admired of timepieces

ONLY half as thick as the ordinary watch—compact, perfect in proportion and finish—a "Style" with accuracy, possessed by no other watch has made the

GRU-EN VERITHIN WATCH

The Most Admired of Timepieces

How we secured this beautiful and practical thinness, yet retained the highest timekeeping standards—is explained by the wheel train illustration below, and by the careful hand finishing and adjusting of skilled Swiss workmen which each part receives after the machines have done their work.



The result is this: Gruen Verithin Adjusted models, priced from $25 to $60, are guaranteed to come within what is known as accurate railroad time requirements. Grades marked "Precision," priced from $45 to $250, are guaranteed to come within best observatory time requirements, which are much more exacting than railroad time inspection rules.

Go to the best jeweler in your town and see this watch. The minute you do you will realize that you, too, would take a world of pride in possessing it. If your jeweler should happen not to have the Gruen Verithin, ask him to get you one to see.

Write today for the interesting "Story of the Gruen Verithin." With it we will send you the names of those jewelers who have the Gruen agencies in your locality.

Prices: Men's and Ladies' Sizes $25 to $250

How the *Standard Bible Dictionary* HELPS the Sunday School Superintendent, Teacher and Worker—

Likewise the Ambitious Bible Scholar who aspires to become an Active Worker in the Sunday School and Church Societies

Many Sunday School Officers, Teachers and other Workers have not had the benefit of a technical education in Bible study, and yet desire and appreciate all that Biblical scholarship can give them of its results. What more natural and helpful than to refer the many vexing problems arising in the preparation of Sunday School lessons, Bible talks and discussions, etc., to the ***Standard Bible Dictionary*** for explanation and light?

In no other way that we know of can you obtain so complete an understanding and *talking familiarity* with Bible persons, places and events through *only a few minutes' reference* than by means of the Standard Bible Dictionary, which James E. McCurdy, Ph.D., LL.D., University College, Toronto, calls "The best single-volume handbook for Bible study that has ever appeared in any language."

Rev. F. N. Peloubet, author of "Peloubet's Notes (on the International S. S. Lessons)" writes (in part): "The Standard possesses some very great advantages over other Bible Dictionaries—460 unusually good explanatory illustrations—colored maps, a real help—*pronunciations* of proper Biblical names—labor-saving thumb-index—clear print," etc. Prepared under the editorial direction of Melancthon W. Jacobus, Andrew C. Zenos and Edward E. Nourse. 920 large pages. Handsome cloth binding, price $6 including index, carriage prepaid; ½ morocco $10. Full morocco $12.

The Jersey

—a pound of butter every day

That's putting it conservatively. A good Jersey cow produces 500 pounds of butter a year.

The Register of Merit shows an average yield of 482 pounds butter by 2062 cows. A Jersey has just tested (officially) 1132 pounds butter in one year.

Richness of milk is an outstanding and universal Jersey quality. With her richness of milk go persistency in milk and economy of production—large yield in proportion to feed consumed.

Add to these useful qualities her unique beauty and her gentleness, and you have the ideal dairy cow.

Why not get the best and most beautiful?

May we send you more Jersey facts?

The AMERICAN JERSEY CATTLE CLUB

324 W. 23d St., New York City

With chemic fire the forges of old scribes
Testing anew the crucibles of toil
To save God's soil.

So Eben turned again to hoe his beans,
But now, to ballads which his Herdsman sung,
Henceforth he hoed the dream in with the dung,
And for his ancient spleens
Planting new joys, imagination found him means.
At last old Hezekiah loosed his tongue:
"Well, boy, this school—what has it learned ye to know?"
He said: "To hoe."

From Charles Scribner's Sons come the "Last Poems" of Julia C. R. Dorr. Mrs. Dorr's work has for many years been known and admired by a large company of readers: it is good to have this representative volume. There are in this collection poems more serious in tone, more elaborate in structure, than the one we quote, but its simplicity and the vivid beauty of the description appeal to us strongly.

Homesick

BY JULIA C. R. DORR

O my garden, lying whitely in the moonlight and the dew,
Far across the leagues of distance flies my heart to-night to you,
And I see your stately lilies in the tender radiance gleam
With a dim, mysterious splendor, like the angels of a dream!

I can see the stealthy shadows creep along the ivied wall,
And the bosky depths of verdure where the drooping vine-leaves fall,
And the tall trees standing darkly with their crowns against the sky
While overhead the harvest-moon goes slowly sailing by.

I can see the trellised arbor, and the roses' crimson glow,
And the lances of the larkspurs all glittering, row on row,
And the wilderness of hollyhocks, where brown bees seek their spoil,
And butterflies dance all day long, in glad and gay turmoil.

O, the broad paths running straightly, north and south and east and west!
O, the wild grape climbing sturdily to reach the oriole's nest!
O, the bank where wild flowers blossom, ferns nod, and mosses creep
In a tangled maze of beauty over all the wooded steep!

Just beyond the moonlit garden I can see the orchard trees,
With their dark boughs overladen, stirring softly in the breeze,
And the shadows on the greensward, and within the pasture bars
The white sheep huddling quietly beneath the pallid stars.

O my garden, lying whitely in the moonlight and the dew,
Far across the restless ocean flies my yearning heart to you,
And I turn from storied castle, hoary fane, and ruined shrine,
To the dear familiar pleasaunce where my own white lilies shine—

With a vague, half-startled wonder if some night in Paradise,
From the battlements of heaven I shall turn my longing eyes
All the dim, resplendent spaces and the mazy star-drifts through,
To my garden lying whitely in the moonlight and the dew!

PERSONAL GLIMPSES

COURAGE THAT MEANT SOMETHING

CAPTAIN FRANCIS INCH is the most talked-of hero of the tragedy of the liner *Volturno*. Every one is praising his extraordinary courage and self-possession during the long fight to save the passengers and crew and to put out the fire, but it seems that no single act of bravery exceeded that of Second Officer Edward Lloyd when he went to the *Grosser Kurfuerst* in a small boat, with two seamen, a fireman, and a steward, to convince the officers of the liners standing by that rescues were possible. But that was not all he did. The story is told in the New York *American:*

Lloyd, in telling his story, says he had been awakened at 7 o'clock on Thursday morning with the ship's fire-alarm ringing in his ears. He had staggered, half-drest, half-awake, to the deck and reported to his captain.

Inch and Lloyd—chums they are outside of official duty—manned a hose-nozle. They cut a hole through the deck and jammed the nozle through.

The first explosion came sudden, terrific. Flame-seared and half-blinded, they were hurled twenty feet down the deck.

First Officer Miller had gone over the side by now with the first life-boat full of passengers. That boat has never been heard from, nor the one that followed it.

The wireless was sending across the waters in merciful monotony the call for help. The day was well advanced.

Then the flames reached the rigging of the wireless mast, and the only means of rescue was threatened.

The flames were put out, but the rig was crippled.

Lloyd climbed the mast to reattach the ropes. He did it, but descending, exhausted from his previous work, he fell twelve feet to the deck. He hit on head and shoulders and was dragged away unconscious.

For a moment Captain Inch, with his left eye seemingly burned away and his right eye bulging, swollen, stooped over his friend and aid; then went on with his awful battle.

Lloyd came to.

The wireless was flashing Inch's last appeal. The gray hulks of six ships were tossing on the waves within a mile or two-mile radius. No boats had come from them.

The last appeal was: "For God's sake, try to come to us."

They waited. Lloyd had moved over to his captain's side.

"What are they doing?" asked Inch. "I can't see, Ed. I can't see."

"Nothing," said the stolid Welshman. "Just nothing they're doing. But—"

"Yes—that's it!" The Captain had caught the meaning in the tone.

"We've got to show them it can be done. Ed, will you try it?"

"I only need four," said Lloyd.

He got them quickly—two seamen and a fireman and a steward. The boat put off.

It was the *Grosser Kurfuerst* they made for. She lay two miles away—two miles of the bitterest sea that ever men tried to

There is one name by which you can identify QUALITY in *every* kind and style of the most desirable material for outside walls. It is

Hy-tex Brick

You want a brick you can identify—the maker's name makes him directly responsible to you. And Hy-tex is the only name which stands for universal quality in brick and for that only. All other brick trade-marks mean some *one* color or some *one* texture. The Hy-tex trade-mark means simply best brick. And there's a Hy-tex Brick in *every* color and *every* texture.

You surely want brick for your home—you want it even if you think you can't have it. Too expensive? No, the most economical!

Write today for the most valuable book ever printed for home-builders. It is called "Genuine Economy in Home Building." Sixty-four pages. Forty beautiful four-color reproductions of Hy-tex homes. Sent for ten cents.

"Suggestions for Small Hy-tex Homes" is a helpful book of plans. Sent for four cents. Write for both these books today. Address

Are You Satisfied to Remain a "One-Language Man"—or Woman?

Or do you realize the immense advantage possest by the man or woman who can talk with foreigners in the *foreigner's own tongue*—when traveling abroad, when transacting business with foreigners, or when meeting them in a social way!

Thousands of American men and women spend two or more years studying one of the four important foreign languages—German, French, Spanish, Italian—in a public or private school, and at the end of their study find themselves *wholly unable to maintain a casual conversation on ordinary matters in the foreign language!*

If you really want to *speak* and *understand* one of these common foreign languages, use the *ROSENTHAL METHOD* for private study, or organize a *ROSENTHAL CLUB* among your friends. By the

Rosenthal Method of Practical Linguistry

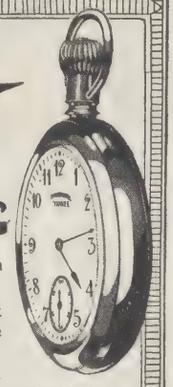
you can learn to converse in a new language as *naturally* and easily as a child learns to speak. Like the child—or like a foreigner learning English here—*you learn first the most necessary and most useful words and sentences.* You quickly get a mastery of ordinary, necessary conversation and correspondence in the new language you wish to USE.

The *ROSENTHAL METHOD* is for BUSY men and women—ten minutes three times a day will lead within a marvelously short time to complete mastery of every-day business and social conversation. The study is a pleasure—never a task.

If you want to learn to *think* and *talk* in idiomatic French, German, Spanish or Italian, quickly, pleasurably, and FOR PRACTICAL USE, send a postal for *DR. RICHARD S. ROSENTHAL'S* **Free booklet, "Revolution in the Study and Teaching of Foreign Languages."** Address Dept. R,

Funk & Wagnalls Company, New York.

The Ingersoll Army
33 MILLION STRONG



All the Armies of the World are Only a Fraction of the Ingersoll Army

Who can tell what the distribution of 33 million watches has meant to society?

For 21 years the Ingersoll watch has done its work of upbuilding—it has given time an added value and helped civilization to measure its work.

It gave to the world an accurate, reliable timepiece—priceless when measured by service—yet priced at a single dollar.

A GUARANTEED Ingersoll watch is yours for a dollar bill.

"THE WATCH THAT MADE THE DOLLAR FAMOUS"	$1.00
THE ECLIPSE—a thin model for men	1.50
THE MIDGET—a model for women and girls	2.00
THE JUNIOR—a small thin model watch	2.00
THE WRIST WATCH—for men and women	2.50

Send for the Ingersoll booklet, "Pointers"—it's free

ROBT. H. INGERSOLL & BRO., 17 Ashland Building, New York

$250 BUYS THIS GREENHOUSE

Price includes everything—benches, boiler, radiating pipes, ventilating rods, and all.

No foundations needed as it is bolted to iron posts set in the ground. As easy to take down as to put up. Goes together like a sectional bookcase. No fitting to be done—shipped all glazed, ready for immediate erection.

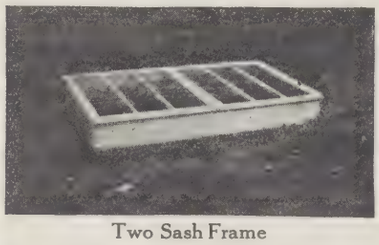
It will save your flowers from frost in the Spring and Fall; give you vegetables and blooming plants all Winter. Buy now and be ready.

Send for booklet fully describing it.

It contains valuable growing hints.

Hitchings & Co.

NEW YORK 1170 Broadway
PHILADELPHIA Penna. Bldg., 15th & Chestnut Sts.
Factory—ELIZABETH, N. J.



Two Sash Frame

A Real Winter Pleasure

Gardening is more fascinating in winter than in summer. What real enjoyment you can have, gathering delicious fresh vegetables and sweet scented flowers when the thermometer is below freezing.

This is possible with this miniature glass garden. You can have with the three sash size, as illustrated, 54 sq. ft. of garden under glass. Plenty of room for both vegetables and flowers. You can supply your Christmas table with small white onions, radishes or crisp curly lettuce. Pick fine bouquets of Queen Louise Violets for decoration. Start your Spring seeds early and have healthy plants weeks before your neighbors.

These frames are made in 2, 3 and 4 sash sizes, single or double glazed. Any size will more than pay for itself with the first crop. You can have numerous crops in a season. Carefully crated and shipped. Easily erected and stored away compactly in summer.

Write for pamphlet D, describing these frames and Lutton's Patented Greenhouses.

WILLIAM H. LUTTON
Office and Works Jersey City, N. J.

put a small boat through. It was the last able boat on the *Volturno*. It had no rudder.

The *Volturno* had wired all the ships to look out for the boat and to stand still so she could steer for one or another. Lloyd, with an oar for rudder, steered for the *Grosser Kurfuerst*.

The almost superhuman feat was accomplished. The boat, half full of water, sank as Lloyd, the last to leave it, was hauled aboard the *Kurfuerst*. But they had shown that it could be done.

As Lloyd sank on the deck of the steamship in a dead faint the crew of the vessel were inspired. Captain Spangenberg shouted an order for "All men to the boats!"

They manned them. They set out. The rescue began there.

Lloyd told the story—but you had to drag it from him. Men like Ernest Peixotto, the artist, and John M. Adams, editor of the Baltimore *Sun*, told it, and you couldn't drag them away from it.

EXPLAINING THE ATHLETICS' VICTORY

IT is sometimes said that the element of luck in the average baseball game is 30 per cent., but nearly everybody seems to agree that the Philadelphia Athletics won the world's championship this year because they were superior to the New York Giants, at least at the time the two teams met. American League teams triumphed in other important postseason series, the Chicago White Sox beating the Cubs in the city championship games and the Cleveland team winning from Pittsburg in an intercity contest. The two St. Louis teams quit even as a result of a dispute which could not be compromised. The Philadelphia papers are jubilant over the Athletics' victory, and some of them are particularly joyous because they think it humbled the pride of New York fans. "The victory," says *The Record*, "is all the sweeter because it crumbles into bits some very inflated ideas about the invincibility of certain so-called Giants who, when the test of strength came, went down like Goliath before the well-directed aim of David. And *The Telegraph* has this to say:

We hate to rub it in, but—"the brainiest manager in baseball" does not live on Manhattan Island, but in Slow-town-on-the-Schuylkill, notwithstanding the fact that, according to the Little Old New York scribes and player-pencil-pushers, the man who has brought five American League and three World Championships to his town "pulled off a bonehead play" on Wednesday last in keeping young Mr. Plank on the job till the bitter end of the ten-inning tilt.

We congratulate the Athletics on every count. They have kept their home town on the map; they have played unbeatable ball; they have acted like gentlemen, and they have said little about their achievements. Our only complaint is that most

of their recent victories were won on alien soil. But Little Old New York has actually seen with its own eyes what other than Little Old New Yorkers can do, and we trust that the ocular demonstration will have an effect upon the "big town" whose perspective is in need of revision.

The Inquirer believes the Athletics have "the best pitchers, the best fielders, and by all odds the best hitters." This from *The Public Ledger:*

The four games we took out of the five games played were won upon the merit of the players, owing nothing to a favorable turn of "fortune's giddy wheel." It was another triumph of the scientific management and the Napoleonic strategy of one Cornelius McGillicuddy, better known to the world and the rest of the admiring solar system as Connie Mack.

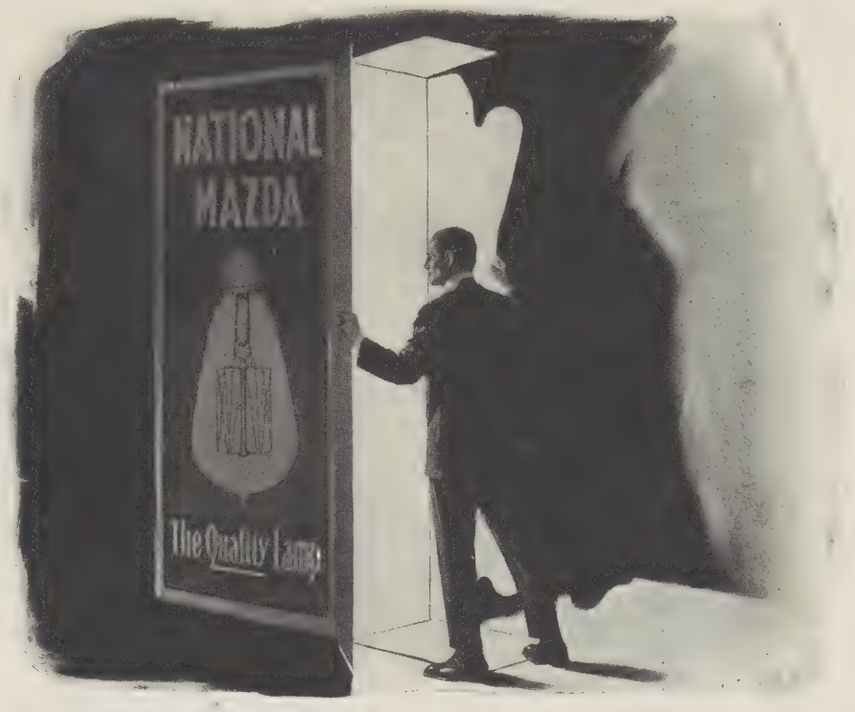
For a single day in their victorious progress pennantward the Athletics stood lower than the first place in the American League. All through the season, and not merely in the world's series, they played "championship ball." They did not win by browbeating umpires, by foul tactics on the diamond, by "tricks of the trade." Bender and Plank and Bush, Collins, Baker, Schang, and the others whose names are in luminous letters in the roll of fame, paid strict attention to business, obeyed their orders, did their best and bravest on the firing line, and the pennant and the more tangible reward of their skill and their fidelity are theirs deservedly.

No better ball team has appeared upon the diamond than the Athletics of Philadelphia in 1913.

New York baseball writers acknowledge the superiority of the Philadelphia team. *The Times*, one of the few New York papers to comment editorially on the series, accounts for the result in one paragraph and points to evidence of honesty in the game in another:

Philadelphia's victory in the baseball contest was well earned. The Athletics deserve every cheer and every dollar they have received. The New York team played well, but not so well as its opponents, who constitute jointly the best baseball machine ever known. We must admit, of course, that the Giants were sadly handicapped by the injuries of Merkle and Meyers, but even if the former had retained the normal use of his limbs and the Chief had been able to fill his place as catcher, it is not likely that the result would have been very different. In the five games played New York won only one, and that small victory was due entirely to the matchless skill of Mathewson. If New York is to win world's-series pennants it must have more Mathewsons. Philadelphia has none quite like him, but it has a fine lot of pitchers and "swatters," and the harmony of its play is extraordinary.

Friday some hundreds of thousands of generally fair-minded American citizens remarked that the Giants would surely win Saturday, because Monday was to be a holiday and an enormous profit would be in a sixth game at Shibe Park. The result of Saturday's game is a severe rebuke to this cheap cynicism. Baseball is an honest game. "Yippodroming" is very



The Way to Better Light

Your hours of ease are easier hours when your lamps are National MAZDAS. Your bills for light are lighter bills. You don't waste current in heat.

The light you get is whiter than any carbon lamp will give. It costs less per candle power, heightens the hospitality of your home, adds life and cheerfulness without expense, and triples the lighting value of every dollar you pay for electricity.

You pay no excess fare on the National MAZDA way to better light. With equal current a carbon lamp gives only one part light out of three possible parts; a National MAZDA Lamp gives all three parts in light—two-thirds absolutely free.

NATIONAL MAZDA

THE QUALITY LAMP

The way to better light opens wherever you see the Blue Convenience Carton that contains five new, rugged National MAZDA Lamps ready for you to take home. Every lamp has the name "National MAZDA" etched on the bulb,—a guaranty of National Quality,—a guaranty of three-fold light for a one-fold bill,—a guaranty of the best lamp for homes, offices, stores, factories, automobiles, and for any use at the least expense in the hardest service.

The way to better light is away from carbon lamps. They have not been materially improved in thirty-five years. They are wasteful, hot, murky and yellow. They are without exception the most expensive lamps you can use, even when you get them free.

We make carbon lamps. We test them with the same instruments as are used in testing National MAZDA Lamps. Under identical conditions National MAZDA Lamps give three times as much light as carbon lamps. They burn in any position, fit any socket, are not fragile, stand shocks and vibrations as well as, and, in many cases, better than carbon lamps, and have been adopted by illuminating engineers everywhere as the most efficient lamps made today.

NATIONAL LAMP WORKS
OF GENERAL ELECTRIC COMPANY

23 Nela Park, Cleveland

Any of these labels on a lamp opens the way to better light. Each is a guaranty of National Quality.

The Habit of Punctuality

Punctuality and precision become a hobby with the owner of a Hamilton Watch. The Hamilton constantly sets an example of right-to-the-second accuracy.

Hamilton Watch

"The Railroad Timekeeper of America"

Over one-half (56%) of the railroad men on American railroads where Official Time Inspection is maintained carry the Hamilton Watch.

Hamilton Watches are made in correct sizes for men and women and sold by jewelers everywhere.

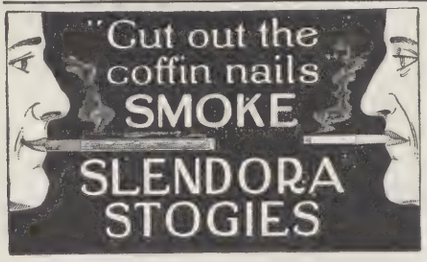
Movements only are $12.25 and upward. Complete watches, certain sizes, are $38.50 to $150.00. Ask your jeweler about them; also about fitting your present watch case with a Hamilton movement.

Write for "The Timekeeper"

It illustrates and describes the various Hamilton models and is a book well worth reading if you are thinking of buying a fine watch.

HAMILTON WATCH COMPANY Dept. L Lancaster, Pennsylvania

Engineer John Kryselmeier of the Missouri-Pacific Railroad. He has carried a Hamilton Watch 14 years.



They are Strictly Sanitary and Harmless Medical Men Endorse Them

Slender, hand-rolled long filler stogies, without paste, hand-curl head, self-holding, unsurpassed for a short smoke. Long filler, we said—not ground sweepings found in some so-called all-tobacco cigarettes and small cigars, the dust of which settles on the lungs. No dust or scrap in Slendoras.

The business man going from home to cars, where smoking is prohibited; the traveling man, to store or office, where smoking is bad form, can enjoy a quality smoke instead of throwing away an expensive cigar. Get your money's worth in smoking Slendoras; they are an ideal in-between smoke.

If you want to wean yourself or somebody dear to you from cigarettes, try Slendoras.

Ben C. Nance, Nashville, Tenn., writes: "Send one box of Slendoras to my address, one to Miss Susie ——, —— St. Susie doesn't smoke, but she is trying to teach her brother to quit cigarettes."

Slendora XXX, genuine Havana filler, 6 inch, 100 to box $3.00
Slendora XX, 6 inch, 100 to box . . . 2.00

Make a perfect cigarette size if cut in half. Charges prepaid. "From the home of the stogie to the home of the smoker." Order a box. Specify light, medium or dark. Smoke some. If not convinced, return the rest and get your money back. Write for booklet describing our other high grade stogies and Havatoba Clear Havana Cigar, the latter equal to any 10c smoke. $2.50 for 50.

easy to arrange and very hard to detect. But the Athletics and the Giants went into Saturday's game with sincerity of purpose and each team played the best ball it could play without a thought of trickery for profit. There will be less talk in the future of possible dishonesty in the national game.

WHEN RILEY REACHED SIXTY-FOUR

STORIES of birthday celebrations do not always make interesting reading-matter, but when so beloved a person as James Whitcomb Riley reaches a mile-stone well along the highway of life and the people of his home city turn out to honor him, and a clever writer like Strickland Gillilan happens to be on hand to write about the affair, a good many of us will skip the latest news from Mexico or the most sensational crime story to read about a simple demonstration of love and esteem. The famous Hoosier poet celebrated his sixty-fourth birthday at his home on Lockerbie Street, Indianapolis, on October 7, and several thousand children and ever so many grown-ups came to pay tribute.

Thinkers and Brainworkers

need the *stimulation*—without reaction—that is given by hot bouillon, the bouillon that is made by dropping an **ARMOUR BOUILLON CUBE** in a cup of hot water. Made in an instant. Beef and chicken flavor blended with vegetables and seasoning.

ARMOUR AND COMPANY
CHICAGO

Mr. Gillilan, who recently left Baltimore to reside in the Middle West, reported the occasion for the Indianapolis *Star*, from which we quote:

Nobody ever saw a finer day. Nature was petting her spokesman; was smiling approval on the singer of her own songs in her own way. The sunshine was as golden as even the Riley pen could have made it sound in his mystically expressive—almost imitative—rime; there was the sweet autumn haze without the bitter autumn tang.

And the crowd came out. Lovers of poetry and lovers of the poet thronged the thoroughfares en route to Lockerbie, and actually filled the little street itself. Not a mad, flower-bed trampling, gaping mob impelled by morbid curiosity—that was not in their faces. I know, for I saw into every face. It was wide open. There were wealthy people there, as well drest as people can be in any circumstances; there were the poorly clad, to whom the Riley messages had meant as much as to the erudite and highly literate. And there were children; children everywhere, who had learned from their parents the bear stories and the "Orphant Annie" story and all the other stories that had charmed the parents in their own childhood—they were all there who could get within seeing distance; there were older ones, who had wept over Old Aunt Mary's demise.

There were litterateurs there whose world-wide success has been immeasurably augmented by the literary impetus given the State through the poet whose honored guests they were grateful to be for the morning. And not one of them had to do any posing in order to be a part of the background. They placed themselves there naturally and with a feeling that they were in a presence—a gentle, kindly, unassuming presence, true enough, but by that same token all the more a presence.

On a thick rug near the high coping his chair was set, right out in the wonderful sunshine. His face—so familiar to every eye, and which seems so to shine from every line he has written—wore a boyish smile of contentment—he was the "elderly child" he called himself. He was placed there by loving hands, and there he awaited the coming of the children to whose happiness and to whose parents' and grandparents' happiness he has contributed so lavishly.

His face was a benediction to the crowd. He made me think of something he said to me yesterday when we were discussing "Bob" Burdette, the old-time sunshiny humorist. I had chanced to remark:

"When Bob Burdette says 'God bless you,' he means it."

"Yes," said the poet, looking up quickly, "and so does God when Bob says it."

It was the face of a man who thus loves and can pay tribute to his friends that beamed on the multitude that greeted him. Simple nature that Mr. Riley's is, and irksome as was the strain through a long two hours of downright adulation, he endured it patiently because of the sincerity that he knew lay beneath it. And long after the weariness of the ordeal passes away, the heart-warmth enacting from this knowledge of the occasion's spontaneity will live with him and keep him young.

INVESTMENTS AND FINANCE

BUSINESS UNDER THE NEW TARIFF

SINCE the new tariff bill, on the night of October 3, became a law, financial and commercial interests have been closely watching the course of business. Most reports indicate a state of hesitancy and caution—at least among retailers. Retailers in almost every line, says *The Wall Street Journal*, have been "withholding orders, in expectation that concessions in prices will be made." Consumption, however, seems not to have materially diminished, thus far, nor has production—at least in iron or steel. It is orders that have diminished, but this is attributed mainly to the attitude of expectancy as to what prices will be when foreign competition has fully set in. In general, opinion differs widely as to the ultimate effects of the lower duties. Most students of the subject are inclined to think several months at best will be required to determine the real effects, good or bad of the new bill.

Dun's Review reported, on October 11, that the adjustment of trade to new conditions, already under way, had resulted in "some regularity," altho, in a broad sense, the situation "reflected continued improvement." Many reports had been received of a gradual enlargement of trade, the increased activity being due mainly to the necessity for replenishing depleted merchandise stocks. In both jobbing and retail circles, demand for many products continued "brisk at the highest prices of the year." The cotton-mills were reported to have orders on hand "for a full output for the next three months."

Bradstreet's found "noticeable cross-currents in trade matters." At the same time, trade sentiment was "optimistic." Most reports indicated a trade generally in advance of, or even with, trade at this time last year, when jobbers and manufacturers alike "were enjoying especial activity." One of the best signs of this activity was the prospect of shortage in cars.

President Wood, of the American Woolen Company, declared that, while he had not been enthusiastic over the new bill, "free wool would be of inestimable value to cloth manufacturers." Free wool promised to give "a wide field for the employment of manipulating ability." Mr. Wood believed that after adjustments have been made to new conditions, his company "would be able to compete successfully with similar manufacturers abroad." The long delay in passing the bill had had "a damaging effect on the industry this year," but all the same, he was "very anxious to get at the enemy."

While some decline has occurred in the stock market since the tariff bill went into effect, this seems not to be attributed to the bill so much as to depressing European conditions, of which note is made elsewhere in this column. Added to those conditions, which involve a likelihood of further sales of American securities by foreign holders (in so far as they may still possess any), came the decision of the Union Pacific Railway directors not to cut at the present time the much-expected "melon," coupled with a statement that none of the plans that were under consideration by the directors contemplated a distribution of assets which would have resulted in larger income to stockholders from their capital—that is, any distribution of assets would have been accompanied by a reduction in the dividend. According to belief in some well-informed quarters, the decision was due directly to the action of the Attorney-General in deciding to institute his long-expected suit against the Southern Pacific Company, compelling it to sell its Central Pacific stock. This suit was actually begun within a very few days after the announcement by the Union Pacific directors that at present they would not cut any "melon." In case the Attorney-General should succeed with his suit, the probability is that the Union Pacific would become the purchaser of the Central Pacific, and, in that event, would need a very considerable part of its liquid assets in order to pay for the stock.

EYES ON BRAZIL

Return of confidence is still checked in European financial centers by continuance of the trouble in the Balkans. The London correspondent of the New York *Evening Post*, in noting this, adds that a new factor in the situation, and an apparently portentous one, is a threatened economic crisis in Brazil which may become one of considerable severity. To Europe the general problem is whether the situation thus influenced will end in something properly to be called a crisis, or whether it will be "rectified through the ordinary machinery of drastic liquidation, with reaction in trade and a return to national and personal retrenchments and economy, with an ultimate revival of interest in sound investment stocks."

The correspondent is of the opinion that the present caution in European financial centers favors the latter outcome—that is, liquidation as a remedy, followed by retrenchment on the part of nations and individuals. For at least six months, however, borrowing must continue, in order to finance the Balkan War and meet other pressing necessities. These views are shared by a writer in *The Wall Street Journal*, who says wise financiers here are of opinion that London should be "closely watched" for the next fortnight. There exists in Wall Street "apprehension of serious financial difficulties in Brazil and other South American countries." Into those countries Europe "has been pouring capital rather indiscriminately for years past." In fact, Latin America has become "the spoiled child of the European financier." The writer says further:

"Evidently, the Europeans thought the development down there was akin to that in the United States years ago; but they did not make sufficient allowance for the difference in racial temperament. The ideas of advancement in South America are esthetic, while in the United States they run along practical lines.

"As an indication of the uses to which capital has been applied in South America, and the difference in temperament of the

people of that part of the western world, as compared with the inhabitants of the United States, a story is told of a meeting between a Brazilian promoter and an American prospector at one of the new cities which have recently sprung up on the banks of the Amazon. The native pointed with pride to a pretentious opera-house overlooking the mighty river and asked the stranger if the site was not superb. 'Well,' said the man from one of our Western States, 'I think it would be a hell of a fine place for a sawmill.'

"There is consolation in the knowledge that any disturbance which may be caused in foreign markets by a collapse in a few South American enterprises can not result in heavy selling of American stocks for foreign account. Usually in the case of a selling movement of that kind, the things which are most salable are sold to protect those of little salability; but on the present occasion Europe has few Americans to sell and can not, therefore, flood New York with our securities. Following the outbreak of the war in the Balkans there was a great liquidating movement in American stocks, and rebuying has not since been done to any extent.

"'In the long run, the uneasiness now being felt in the financial markets over conditions in South America will benefit our securities. Foreign capital will find its best opportunity here, to obtain a good return, compatible with safety; and the buying movement, long delayed, will result in the absorption of the stocks sold within the past year."

These anxieties about Brazil reached London in the midst of conditions that were already producing anxiety. New flotations of capital issues had been "going very badly," says a correspondent of the New York *Journal of Commerce*. Indeed in the middle of October there were expectations of "an early repetition of a former severe congestion of securities in underwriters' hands." For example, it had become known that 88 per cent. of a loan put out by the Province of Alberta in Canada had been left with the underwriters, the public not taking it. Other Canadian bonds, some provincial, some municipal, and amounting to $6,362,000, had been offered, and only 30 per cent. of them were subscribed for by investors. Some industrial issues met the same fate. A power company in Vancouver placed on the market debenture bonds to the amount of $650,000, of which 70 per cent. fell back on the underwriters' hands. Debenture bonds issued by a trolley line in Buenos Aires completely failed, the underwriters taking back over 90 per cent. of them. A proposed loan from New Zealand was another failure. It was believed that this state of affairs could not long continue in London "without causing an acute money stringency." Until conditions improved the banks "must not put out new capital issues." Fears were entertained of a further increase in the bank-rate before the end of the year. The stock market on October 13 was reported to be "extremely nervous."

MR. VANDERLIP ON THE CURRENCY BILL

Among bankers who have appeared in Washington before the Senate Committee on Banking, particular mention has been made of Frank A. Vanderlip, president of the National City Bank of New York. He appears to have made the best impression

Why Do You Invest Money?

"Because I wish to obtain the largest income yield consistent with perfect safety of my capital," would be the answer of the great majority of investors to this question.

Safety, of course, comes first and foremost, and the investor should assure himself of the unimpeachable soundness of a security before he even considers any of its other features.

Income is next in importance to safety, in the belief of most investors, and an interest yield of 6%, backed by solid security, is an investment ideal sought by thousands.

The First Mortgage Bonds we own and offer, in denominations of $100, $500, $1,000 and $5,000, meet this general demand for a sound, non-fluctuating, attractive 6% investment.

We will be pleased to explain the merits of these securities and the thoroughness of the system of safeguards with which we surround them, based on an experience of thirty-one years.

Short Term Securities

Well secured notes, with liberal income yield and maturing in a relatively short time, are attractive investments for those who do not care to invest their money for a long period. Such securities, as a rule, are not subject to extreme fluctuation in price and are apt to have a closer and quicker market owing to the early maturity.

The third edition of our book, "Short Term Securities," containing brief descriptions of the current issues, is now ready. We will be glad to furnish copies on request.

on the committee that has thus far been made by bankers. At the end of the first hearing, which lasted all day, members of the committee are said to have been convinced that Mr. Vanderlip really wished to aid them in the work of perfecting the bill. Some even declared that he had proved himself "the most instructive witness who had appeared before them." They had received from him "more valuable information than from any other witness." Brief reference was made to his first day's testimony in our issue of October 18.

Mr. Vanderlip declared to the committee that the bill was based on sound principles, and that, with a few amendments, it would become "an excellent measure." While without these amendments, he would not care to see it made into a law, he insisted, according to the New York *World*, that "the great opposition to the bill was based on the consummate selfishness of some bankers and the ignorance of others, and not on any inherent weakness in the measure." Summarized in *The World*, Mr. Vanderlip pointed out as follows the benefits which the bill, properly amended, would give:

"It will minimize Wall Street gambling by reducing the amount of money that will be loaned upon speculative collateral.

"It will divert the money that is now being loaned in Wall Street to legitimate channels of trade so that legitimate business ventures may go forward.

"It will tend to equalize the general rates of interest and discount and will mobilize the reserves of nations. It will prevent repetitions of the panic of 1907.

"It will open the way for Americans to finance their own foreign transactions, thereby saving millions annually.

"It will tend to smash the Money Trust as far as its interior ramifications are concerned, by separating the great banks from their country correspondents.

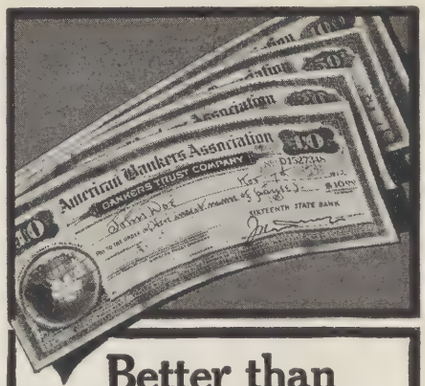
"The bill would accomplish elasticity of note issue if adequate provision were made for retiring the present bond-secured notes and if notes could be kept out of State bank reserves.

"It provides a system of reserves superior to the present system, but readjustment will be trying. Few banks will suffer as much as the National City Bank, which will probably lose $50,000,000 in deposits."

Mr. Vanderlip pointed out that one of the troubles in this country to-day arises from the absence of any discount market for commercial paper. As a result New York banks are compelled to loan money on Stock Exchange collateral to the benefit of the stock gambler, while legitimate business goes without it. He added:

"The bill will tend to create a discount market which is desirable. It will minimize the importance of call loans and will turn hundreds of millions from such loans to commercial channels. Capital will be freer for larger financial operations."

Mr. Vanderlip was satisfied that while the bill would tend to make New York stronger as a financial center, many national banks, in his opinion, would not join the system—the smaller ones particularly—and he suggested that they be allowed to open branches as an inducement to come in. The number of regional reserve banks he thought should be reduced from twelve to a lower number. He favored a central bank, but as that is not possible, he sug-



Better than money for travel

These cheques are making money matters *easy and safe* for American tourists in all parts of the civilized world.

gested that four might do. Mr. Vanderlip has since said that 80 per cent. of the bill had his approval. He hoped the remaining 20 per cent. would be amended before the bill becomes a law.

The New York *Times Annalist* cites Mr. Vanderlip's appearance before the committee as an evidence of "the spirit in which a fair compromise can be effected." It finds "among bankers of the first rank a widening belief that currency legislation will pass, probably not in the special session, but, if not, then certainly in the regular session." Finally, the writer remarks that it "behooves bankers rather to get what they fairly deserve than to stand in an attitude of obstinate opposition to everything on the other side."

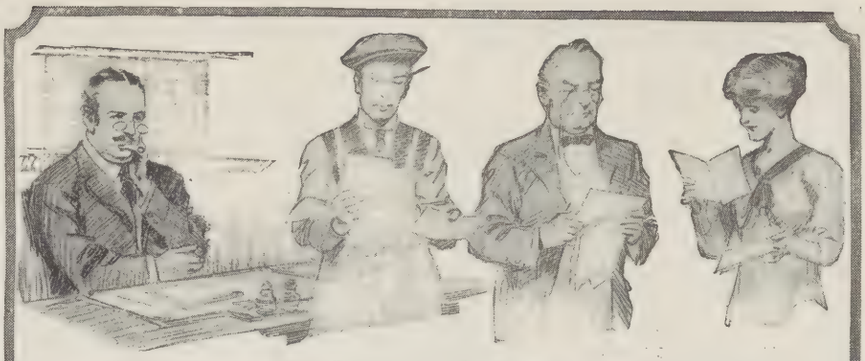
THE HEAVY INCREASE IN IMMIGRATION

Following is a table showing the arrivals of immigrant aliens in this country during each month for the past three and a half years. It will be noted that the figures show a marked increase for the four months, April, May, June, and July of this year, the figures for May, June, and July being the largest for any month during these three and a half years:

	1913	1912	1911	1910
January	46,441	38,453	36,361	50,242
February	59,156	45,380	42,826	57,980
March	96,958	91,185	81,687	136,745
April	136,371	99,839	98,036	135,052
May	137,262	113,635	95,361	133,544
June	176,261	92,425	71,019	105,025
July	138,244	78,101	51,737	73,153
August	....	82,377	50,110	78,574
September	....	105,611	65,599	83,931
October	....	108,300	69,418	83,805
November	....	94,739	61,765	74,353
December	....	76,315	61,626	59,481
Total	790,693	1,026,360	782,545	1,071,885

The fiscal year, ending on June 30, showed a greater number of arrivals than any other of the ten preceding years, except one. Much interested comment has been evoked by these figures. That 1,197,892 immigrants should have come into this country in the last fiscal year, as compared with 838,172 in 1912; 878,587 in 1911, and 1,285,349 in 1907, when the climax of an upward movement was reached and then broken by the panic in the autumn of that year, starts the question whether a rising tide of prosperity in this country is not indicated. Likewise it could be asked whether these figures do not indicate that the crest of a prosperity wave has been reached and will soon break, as one did in 1907.

The Wall Street Journal, commenting further, remarks that, whether the year 1913, which ranks with the five biggest years in immigration, is going to mean more than a temporary high-water mark, still remains to be seen. It may be said, however, that immigration is promoted by a demand for labor. Nowhere now in this country is there any serious want of employment. A steady demand for unskilled labor exists. In the South large companies of immigrants are being put to work at once. Lumber camps are making provisions for winter work, and many manufacturers and mines are in a position to absorb considerable numbers. At the Immigration Conference in New York in September it was made known that complaints from Western and Southern sections of a scarcity of labor were constant. Hence the close relations between a rising



Determine the Quality, Weight and Finish of Your Sales-Letter Paper by the Class to Which You Are Appealing!

That is the only way you can get best results. It has been proven by the experience of advertising men and other shrewd paper-buyers.

A high grade grocer writing to a selected list of clients should use a finer grade of paper than a small banker writing to small investors.

In other words, the results from a sales-letter are invariably better if the quality of the paper is selected according to the class to which it goes rather than merely by the trade it represents.

This scientific analysis of paper-values is worth looking into.

For your guidance, we have had prepared an analysis covering years of experience in sales-letter work.

It eliminates guess-work and theorizing.

tide of immigration and prosperous general conditions.

THE NEW ALPINE RAILWAY AND TUNNEL, THE LÖTSCHBERG

In the early summer of this year was opened a new Alpine railway called the Lötschberg, which provides a shorter route to Italy from the north of Europe. By this route, Brig, the last point on the old route before the Simplon tunnel is entered, can now be reached from the north by a direct route south through the Bernese Alps. Its northern terminus is Spiez, on the Lake of Thun. It goes thence, almost directly south, to Frutigen, and thence to Kandersteg, Kandersteg being the northern portal of the Lötschberg tunnel, which is nine miles long. The train emerges from this tunnel at Goppenstein, and thence proceeds along the narrow Lotschen valley until it enters the Rhône Valley, between Leuk and Visp, at a point one thousand feet about the stream. From here a descent is gradually made along the mountain side until Brig is reached.

A writer in *The Scotsman* declares that the construction of this new line to Italy is one of the greatest of modern feats in engineering. The work has been going forward for more than six years amid difficulties at times almost insurmountable. Altho its length is only 48 miles, it has cost about $20,000,000. More than 40 lives were lost during its construction. To Italy from northern and northwestern Europe heretofore there was no very direct route. Travelers had to choose between the western route by the Mont Cenis tunnel, the route with the détour necessary in reaching the Simplon tunnel, the eastern route through the St. Gothard, and the more easterly route via Innsbruck. The barrier to a more direct route was the Bernese mountain range, which has now been overcome. The net result from the new route to travelers is a reduction of from one to five hours in time, according to the point of departure. Spiez, the northern end of the line, can be reached from Basle or Bern, whence communication with northern central and western Europe is at once direct and expeditious.

A nine-mile tunnel is by no means the one notable feature of this line. Much of the line proceeds through a wildly precipitous country, as difficult to engineers, perhaps, as the famous route from Chamouni to Martingy over the Tête Noire. Every foot of the track in some places had to be wrested violently from nature. Numerous deep ravines were bridged and many small tunnels constructed. Of tunnels built to the north of the great tunnel there are twelve, and to the south there are twenty-one. Following are details of this great work from a writer who passed over the route early last summer:

"The journey had to be accomplished by means of the service trains which transport materials and men from one part of the line to another, but all the inconveniences of this mode of conveyance were counterbalanced by the innumerable points of interest—both technical and esthetic—which unfold themselves before us. Soon after leaving Frutigen the road passes over the immense viaduct of thirteen arches which spans the valley, destined to serve as a landmark for centuries to come.

The viaduct is overlooked at one end by the ruins of the medieval castle of Felsenburg, the two structures affording a striking contrast of the old and the new. The line follows the left-hand side of the valley, and is carried by magnificent granite embankments as far as Blue Lake, where it describes an immense loop in order to overcome the steep gradient. The line crosses and recrosses three times, reminding one of the similar point in the St. Gothard Railway.

"Thence it is carried over great chasms by picturesque bridges and soon reaches Kandersteg, the northern portal of the great nine-mile-long tunnel. Taking our places in the open trucks which were at our disposal, we started on our long journey through the darkness of the tunnel. The uncertain light from an acetylene lantern carried by an engineer showed us a memorial tablet in the tunnel wall which will be seen by few of the passengers who will later rush through in the luxurious corridor trains—a memorial tablet erected to the memory of the twenty-five workmen who met their death here on July 24, 1908.

"A journey through the tunnel with the service train is seldom quite uneventful. We had not reached the center of the vast burrow when a chorus of excited shouts and exclamations arose in the trucks ahead, which were filled with Italian workmen. In the dim light dark forms could be seen jumping from the train on to the permanent way, and then we stopped dead while the engineers went to investigate. It transpired that a wagon had jumped the rails, and without much ado it was uncoupled and hauled on one side, when we proceeded on our jolting way as tho nothing had happened. After nearly two hours spent in the gloom of the tunnel, we emerged at last in Goppenstein, amid the wild, barren scenery of the lower Lotschen valley. The construction of the railway in this avalanche-swept place has been accompanied by almost insurmountable difficulties, and here also the Alps have exacted their toll of human life, a fact of which one is grimly reminded by the trim graveyard near the tunnel mouth, filled with the victims who have met their death during the construction of the railway. Avalanche barriers have been constructed high on the mountain sides above Goppenstein, and the line is guarded by a wall like one of those which girdle medieval cities at the point where it emerges from the tunnel.

"The line is now carried along the left side of the narrow Lotschen valley, where every foot of ground has been veritably wrested from Nature, and after passing through a number of smaller tunnels leaves this uninhabitable region and enters the smiling Rhône valley. With the Rhône stretched like a broad ribbon a thousand feet below, we continued our journey along the edge of dizzy precipices and over frail wooden temporary bridges thrown across apparently bottomless ravines—a journey fraught with many dangers and accompanied by many exciting incidents when made with the service train on a temporary set of metals, but which will be one of the most interesting in the Alps when accomplished with the fine electric trains of the Bernese Alps Railway. Many of the great steel bridges and granite viaducts were not yet quite completed, and the service train made many a détour which will be later unnecessary.

"Gradually descending, the line, which commands magnificent views of mountain peak and valley, at last reaches Brigue; here we exchanged our primitive conveyance for a comfortable carriage in a Simplon express, and in the space of a brief hour or two were basking in the sunshine which bathes the shores of Lago Maggiore."

To the Millions of Loyal Users of Dioxogen

The loyalty of millions of friends means much to Dioxogen. When Dioxogen was first made we counted solely on the loyal support of the medical profession and the army of reputable druggists who would realize instantly the value of a pure Peroxide of Hydrogen — always the same — retaining its strength indefinitely without the aid of acetanilid as a preservative. We did not count on You. But you came. First in hundreds, then thousands and now there are millions in addition to the doctors and druggists who claim

Dioxogen

as their safeguard against infection—who appreciate its value as a mouth wash and for scores of other toilet uses. To you we issue a word of

Warning: Look out when some one offers you a peroxide "just as good" as Dioxogen. Ask to see the label. If you find the word "Acetanilid" on it you will know that the so-called "just as good" is impure and inferior because it requires this questionable drug to preserve it. Acetanilid is put in Peroxide of Hydrogen to make it keep, but it also makes it rank, affects its color and gives it a disagreeable taste and smell. Without Acetanilid ordinary Peroxide would not keep long enough to move it off the druggists' shelves.

You have trusted Dioxogen in the past. You can always trust it. We will never cheapen it by adding impurities. The work Dioxogen has to do is too important to permit of any lowering of its standard of purity.

PERSONAL POWER

By Keith J. Thomas

A cool and logical analysis of the question of personal success. The author explains processes of mental development and gives ideas for the discovery and enlargement of natural talents. Throughout the book he suggests the pleasures of life, of hope, of friendship, and all the enjoyments to be derived from culture and wisdom.

"Mr. Thomas's suggestive book avoids the error common to books of its kind, most of which acknowledge no limit to the possibilities of any man who is convinced of his own powers. He shows how to develop the natural talents, explains the uses of failure, and suggests the best ways in which to make sure of the pleasures of life."—*The New York Times.*

Octavo, cloth, over 300 pages. $1.75 net; postpaid $1.85
FUNK & WAGNALLS COMPANY, 354-360 Fourth Ave., New York

PERSONAL GLIMPSES

(*Continued from page* 783)

And then the children came by.

They came in platoons, boys with faces that had accumulated much since the morning ablutions, spick-and-span boys, who had almost killed themselves keeping clean for the parade; girls full of the self-confidence and poise of their sex, ready and eager for this public display of their inborn man-worship; temperamental children who felt the occasion so profoundly that they could not even grin, but gazed popeyed and breathless at the man who had warned them against the goblins that might get 'em unless they were eternally vigilant; there were children who have the vague ideas that characterize so many children—gelatinous, nebulous, protoplasmic ideas that will crystallize later into concrete things, but who, for the moment, had no definite or expressive idea as to what it was all about.

But the children came, and passed, and cheered, and greeted, and smiled, says Mr. Gillilan. Some of them stubbed their toes, while others grinned foolishly or pertly or lovingly. We read on:

I think Mr. Riley missed no face in the throng. I believe he saw every smile and answered it, and saw and understood sympathetically every averted face and downcast head, and every self-centered little fellow who was so busy trying to trip the boy beside him or tramp on the heel of the boy ahead of him that he couldn't spare time for the poet at all.

I believe he saw it all. And while the sympathetic strain and the embarrassment of the overwhelming adulation were great, yet he stood it bravely and sweetly, because of the heartiness of it all, which I have previously emphasized.

Some little girl brought him a bouquet of old-fashioned zinnias, interspersed with a few marigolds and a black-eyed susan or two. And he loved them, keeping them in his lap and holding them all through the parade.

Another little girl brought him a huge bunch of killarneys, fragrant, half blown with their golden and fragrant, thick-stemmed hearts pulsing up into the face of him who understands their language, can speak it like a native, and interpret it to kindred others.

Many fond mothers came and brought their Riley-story-fed babies for the dear poet's blessing, and every one of them got what she came after.

It was a sweet, fine, mellowing morning; a turning-aside from the ordinary vocations and avocations of life and paying tribute to things of the heart; to the gentle ripples of kindly laughter, and the scarcely less kindly tear—it was a soul-Sabbath on a week day.

It made me think of an unintentionally truthful answer once given me when I asked an Indianapolitan just where Mr. Riley's home was. He replied;

"Mr. Riley lives in the heart of Indianapolis."

He might have said "hearts," and been still more truthful; and he might have added that, even as Indianapolis lives in the heart of the nation—populationalistically speaking—just so Mr. Riley lives in

A Perfected Picture Machine for Home Entertainment

The foremost lens makers of America have solved the problem of satisfactorily projecting enlarged pictures from the pictures *themselves* as well as through lantern slides.

Bausch and Lomb HOME BALOPTICON

Shows colored pictures, photo prints, type matter or solid objects, such as coins, minerals, etc., with a clearness and brilliancy heretofore impossible except with lantern slides.

Shows Type Without Reversing. With no other popular priced instrument can you project written or printed matter without the extra expense of a reversing mirror. You will realize how this increases the opportunities for pleasure and entertainment.

Shows Solid Objects. Owing to the fact that the object holder is on the *floor* of the light chamber rather than on the wall as in other home instruments, it is possible to show solid objects. The works of your watch, pieces of jewelry, botanical specimens are all subjects possible to project readily in the Home Balopticon only.

Scientific Illumination. The fact that the Home Balopticon is equipped with one of the famous B & L *achromatic* lenses and that years of laboratory experiment are behind its wonderful system of illumination and reflection, accounts in a large measure for the superior clearness and brilliancy of its pictures.

Another advantage is that each outfit includes two adjustable picture holders and an aluminum coated wall screen which makes the image many times more brilliant than can the ordinary sheet.

That this is the best of all home picture machines will be apparent if you compare demonstrations with any other similar projector at any price. At photographic dealers—not toy stores.

***For lantern slide users** the Home Balopticon can be supplied in a model combining lantern slides with opaque pictures giving instant interchange between the two.*

"Fun—and Better" *Free*

Note the possibilities of the flat object holder

A book about the possibilities of original home entertainment with the Home Balopticon. If you doubt that this picture machine is to the eye what the talking machine is to the ear, send for this book and read how the Balopticon can be used for pleasure and profit in scores of different ways.

the heart of hearts of his country. The tribute yesterday morning was but a visible indication of the love that is his in equal degree everywhere in the English-speaking world. He has found a short cut to the finer human feelings, and those are fortunate (and jubilant proportionately) who are physically near enough to trudge to their heart-shrine and greet, and be greeted by, the face and hand that have so sweetened their lives and humored their emotions by expressing them deathlessly.

I wouldn't have missed it for a purty. I am going away somewhere, about the time I reach Mr. Riley's stage of youthfulness, and write poetry just like his, and see if I can't get the love of children in the degree he has won it—for I think—(no, by heck, I know!)—that that is the greatest thing in the world.

THE SPICE OF LIFE

A Reason.—"Is your mother a suffragette?"

"You bet she ain't. Me father's a prize-fighter."—*Life.*

Sure Sign.—"Your teeth are in pretty bad condition," said the dentist.

"They must be," sighed the patient. "You look so happy."—*Judge.*

At Least One.—"Every one has some secret sorrow," says a philosophizing friend. "Even the fattest and jolliest of us has a skeleton in his midst."—*Cleveland Plain Dealer.*

Unselfish.—HENRY YALLERBY—"Aftah we's married, we'll hab chicken foh dinnah ebery day, honey."

MELINDA JOHNSON—"Oh, yo' deary! But I wouldn't ask yo' to run no sech risks foh mah sake!"—*Puck.*

Earning His Pay.—SPORTSMAN (who has missed everything he has fired at)—"Did I hit him?"

KEEPER (anxious to please)—"Not 'xactly 'it 'im, sir; I can't say that. But, my word! I never see a rabbit wuss scared."—*London Tattler.*

Inherited Superiority.—"The Declaration of Independence states that all men are born free and equal, I believe?"

"Something of the sort."

"Then why do you hold yourself so aloof?"

"My dear man, I'm descended from one of its signers."—*Washington Herald.*

Limited Advice.—An Irish priest had labored hard with one of his flock to induce him to give up the habit of drinking, but the man was reluctant.

"I tell you, Michael," said the priest, "whisky is your worst enemy, and you should keep as far away from it as you can."

"My inimy, is it, father?" responded Michael. "And it was your riverince's silf that was tellin' us in the pulpit only last Sunday to love our inimies!"

"So I was, Michael," rejoined the priest; "but was I anywhere telling you to swallow 'em?"—*Tit-Bits.*

TRADE BEAVER BOARD MARK

Give More Thought to Your Walls and Ceilings

TOO little attention is usually given to walls and ceilings. Yet upon them depends the interior beauty and comfort of your home.

A well-designed Beaver Board room has a beauty of its own—it is individual; and it has a durability that cuts out repair-expense.

This is because Beaver Board permits endless variation in the panel effects demanded by the best modern taste. It is admirably adapted to painting and does away with the unsanitary features, frequent renewal and common-place appearance of wall-paper. It has in all 41 great advantages over lath and plaster.

Sold by lumber, builders' supply and hardware dealers in sizes to meet all your needs.

Be sure it's the genuine, patented Beaver Board, with trade-mark on back and cream-color all through.

Send for free booklet, "Beaver Board and its Uses," and free painted sample.

The Beaver Companies

United States: 116 Beaver Rd., Buffalo, N. Y.
Canada: 316 Wall St., Beaverdale, Ottawa.

LITERARY NOTICES

HIGH CLASS RESEARCH
For Lecturers, Speakers, Writers, Clubwomen, Debaters. Outlines, briefs and other literary assistance. BUREAU OF RESEARCH, New Albany, Ind.

The Real Latin Quarter
Racy sketches of life and character in the famous Bohemia of Paris. By F. BERKELEY SMITH. With 100 drawings and camera snap shots by the author, two caricatures by Sancha, and water-color frontispiece by F. Hopkinson Smith. 12mo, Cloth, $1.20. Funk & Wagnalls Company, Pubs., New York.

Usually.—" What is frenzied finance? "
" Financing your friends."—*Judge.*

No Let-up.—KNICKER—" Life is hard."
BOCKER—" Yes; by the time your mother stops forbidding you to eat jam, the doctor begins."—*New York Sun.*

Well Posted.—" You seem to be very intimate with the Digbys. I didn't know you had met them."
" I haven't met them. I patronize their dressmaker."—*Judge.*

Belying Appearance.—EDITOR—" Did you say you evolved this joke yourself? "
ARTIST—" I did, sir."
EDITOR—" H'm, and yet you don't look more than thirty years of age."—*Punch.*

Regularly.—" Your 'air's getting thin, sir. Let me sell you—"
" That's all right. I put something on it every morning."
" May I ask what you put on it, sir? "
" My hat! " (Operation finished in silence.)—*London Opinion.*

Evident.—In a registration booth in San Francisco an old colored woman had just finished registering for the first time.
" Am you shore," she asked the clerk, " dat I'se done all I has to do? "
" Quite sure," replied the clerk; " you see it's very simple."
" I'd ought to knowed it," said the old woman. " If those fool men folks been doing it all dese years, I might 'a' knowed it was a powerful simple process."—*Life.*

Climbing Out of a Hole.—Every one has heard authentic stories of the man who asked another, " Who is that old frump over yonder? " and got the reply, " She is my wife." But the story doesn't go far enough.
Jones observed an old lady sitting across the room.
" For heaven's sake! " he remarked to Robinson, " who is that extraordinarily ugly woman there? "
" That," answered Robinson, " is my wife."
Jones was taken aback, but moved up front again.
" Well," he said persuasively, " you just ought to see mine! "—*New York Evening Post.*

Last Ditch Fight.—An old gentleman, now deceased, never seemed to be satisfied unless he had several cases pending in court. He left surviving a son who seems to have followed in his footsteps and has continued to keep up his father's record of proceedings in court.
Several of the attorneys were talking about his court troubles one day, when one of them told the following about the old gent:
The old gent had just won a case in the justice court, when the loser, in a very combative frame of mind, exclaimed: " I'll law you to the circuit court."
OLD GENT—" I'll be thar."
LOSER—" And I'll law you to the Supreme Court! "
" I'll be thar."
" I'll law you to 'ell! "
" My attorney'll be thar."—*The Docket.*

THE power to think precisely—the power to accomplish—these are always directly dependent upon mental and physical energy.

Brain fag—mental confusion—indecision—lack of vim and chronic weariness are always evidences of something wrong.

To determine the causes of ill-health by a careful " inventory " of the whole body is the first and most essential feature of the Battle Creek Sanitarium System.

Every muscle and group of muscles are accurately measured: chemists and bacteriologists examine body excretions; the blood and stomach contents; a thorough study of the heart, lungs, stomach and other vital internal organs is made by means of the X-ray.

Then follows a course of health building especially adapted to each patient's needs—simple diet properly regulated, health building exercises, fresh air, sunshine, physiological medical treatment and rest for body and mind.

The Battle Creek Sanitarium System of examination is fully explained in our booklet "The Reason Why." The Illustrated Prospectus comes with it. Write or use the coupon.

The Finest Resort Hotel in the World has been built at Sunset Mountain, Asheville, N. C.

Open all the Year
Absolutely Fireproof

Mr. E. W. Grove, of St. Louis, Mo., has built at Asheville, N. C., the finest resort hotel in the world. Built by hand of the great boulders of Sunset Mountain, it is full of rest and comfort and wholesomeness. The front lawn is the hundred-acre eighteen-hole golf links of the Asheville Country Club, and with it sixty acres belonging to the hotel.

The purest water obtainable is piped seventeen miles from the slopes of Mount Mitchell.

Biltmore milk and cream exclusively, supplied from 200 registered Jerseys on the estate of Mr. Geo. W. Vanderbilt.

Four hundred one-piece rugs were made at Aubusson, France. Seven hundred pieces of furniture and 600 lighting fixtures of solid copper were made by hand by the Roycrofters.

For the golfers there are lockers and shower bath rooms with a forty foot swimming pool that is not excelled by the finest clubs in existence, and the players are less than 100 yards distant when on the links.

Especially available for northern guests in the Spring, Fall and Winter, going and returning from farther southern resorts, or for an all Winter resort. Persons with any form of tubercular trouble will not be received at the Inn.

Rates — American Plan — $5.00 a day upwards.

Reached by the Southern Railway.

Sympathetic.—"Her husband drinks, doesn't he?"

"I hope so, poor fellow!"—*Life.*

The American Drama

Theaters we have, but lack three trifling factors:
Some dramatists, a public, and good actors.
—*New York Evening Mail.*

Dead Slow.—"My dear," said Mr. Bickers to his wife, "I saw in the papers to-day a decision of a Virginia court that the wife may, in some cases, be the head of the family."

"John Henry," replied Mrs. Bickers, "the courts are sometimes very slow in finding out things!"—*Puck.*

CURRENT EVENTS

Foreign

October 9.—Mendel Beilis pleads not guilty to the indictment for murder at the "ritual murder" trial in Kiev, Russia.

October 10.—One hundred and four members of the Mexican Chamber of Deputies are arrested and thrust in prison at the order of President Huerta when they refuse to rescind their resolution ordering an investigation of the alleged murder of Senator Dominguez.

Yuan Shi-kai takes the oath as President of China.

Prince Taro Katsura, thrice Premier of Japan, dies in Tokyo.

October 11.—The liner *Volturno*, of the Uranium Line, sailing from Rotterdam to Halifax and New York, is burned at sea and more than 100 lives are lost.

David Lloyd-George, Chancellor of the British Exchequer, inaugurates his land campaign with a speech at Bedford, England.

Russian explorers engaged in investigating the territory north of Siberia report the discovery of a narrow body of land 200 miles long.

October 12.—Thomas Nelson Page, the new American Ambassador to Italy, presents his credentials to King Victor at Pisa.

October 14.—Four hundred and seventeen lives are lost in a mine explosion at Cardiff, Wales, 74 men being killed outright and the rest cut off from rescue.

October 15.—The diplomatic representatives of Great Britain, France, Spain, Cuba, Guatemala, and Norway, at a conference in Mexico City, decide to recommend that their respective governments send warships to Mexico to afford legation guards should conditions require.

Domestic

WASHINGTON

October 10.—President Wilson touches an electric button in the White House, blowing up Gamboa dike of the Panama Canal.

At the request of President Wilson, Representative Clayton formally withdraws as a competitor of Congressman Underwood in the Alabama senatorial fight.

October 12.—President Wilson lets it be known that he opposes a recess of Congress before it passes the Currency Bill.

GENERAL

October 10.—The Philadelphia American League baseball team wins the world's championship from the New York Nationals.

October 13.—The legality of the Arkansas prohibition election is upheld and the State will be "dry" after January 1.

October 14.—The House of Deputies of the Protestant Episcopal Church votes to change the governing methods of the Church by grouping the several dioceses into eight provinces after the custom that prevails in England.

Trade organizations of the country, in session at Detroit, approve the Owen-Glass Currency Bill, but recommend seven important amendments.

By the terms of the will of Benjamin Altman, filed in New York, his $15,000,000 art collection is left to the Metropolitan Museum of Art.

Balboa's Dream Realized

The dream of Balboa is at last to be realized. Exactly 400 years from the date when that great Spanish discoverer crossed the Isthmus of Panama on foot, other men will cross it in ships. That was Balboa's dream—to "cross it in ships." American men, his equal in courage and perseverance, have made his dream come true.

Every patriotic American citizen should esteem it a proud privilege to see this crowning glory of American industry, and see it in the making, as it can never be seen again.

NORTH GERMAN LLOYD

Panama—West Indies Cruises

enable the American people to see this monumental work now approaching completion with the maximum of comfort and enjoyment. The voyages will be made by the spacious, elegantly appointed S. S. GROSSER KURFUERST, going and returning through the West Indies, and stopping at all the most interesting and attractive points in that picturesque, romantic archipelago.

Duration of 21 or 29 days, sailing from New York Jan. 14th, Feb. 12th, and Mar. 19th, calling at Havana, Santiago, Kingston, Colon, La Guaira, Port of Spain, Brighton, Barbados, Fort de France, St. Pierre, St. Thomas, San Juan, Nassau.

The Cost is $160.00 up.

We have acquired the Cassell (London) line of Medical Books which includes some of the best books for the specialist and general practitioner in the English language. There are several new titles in the list as well as revisions of standard works. We now have a catalog of forty-two books appealing directly to Doctors. Let us send it to you. Ask for Medical List B.

FUNK & WAGNALLS COMPANY, New York

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"J. A. S.," Worcester, Mass.—"(1) Where is the warrant for giving the President of the United States the appellation of 'His Excellency'? (2) Is there any good reason why the period should be required after the Roman numeral when citing the name of a sovereign; as, 'George *V.*'?"

(1) The forms of address are only in part prescribed by law. In certain professions—as the military—etiquette is exacting; but in America people in general follow customs that have grown into use rather than been set up by law. Custom has adopted several ways of addressing the President of the United States: (a) *To the President* (or simply, *The President*), Executive Mansion, Washington, D. C.; (b) *The President of the United States*, etc.; (c) *His Excellency the President of the United States*, etc. The salutation at the beginning of a letter may also have more than one form; namely: (a) *Mr. President*, or (b) *Sir*.

(2) The Roman numeral after the name of an emperor or king, as in *George V.*, is really an abbreviation, the inflectional *-th* being omitted. The full form would be *Vth*. If the Arabic numeral were used, there would be the same reason for inserting a period: we might write either *George 5th* or *George 5.* for *George the Fifth*. But the tendency is constantly to drop *needless* punctuation. The English write and print *Mr* Jones, not *Mr.* Jones. We could do without the period after *V*, and write and print *George V*, if we agreed to do so.

"J. R. L.," Fort William, Ont.—"In the sentence, '. . . they should not be ready and waiting *to be availed of* at the very instant . . .' is not the phrase 'to be availed of' a very awkward construction? What would be the suggested amendment, if any?"

R. W. Emerson wrote: "Power must *be availed of*, and not by any means let off." But this use of *to avail of* in the passive voice is recognized by the Oxford Dictionary as especially American, and by the Standard Dictionary as colloquial. The Lexicographer does not feel that there is *great* awkwardness in the expression. Since English lost its inflections and its power of making new words by composition of its own elements the language has become increasingly free in using a verb plus a preposition as a new compound verb; and the Lexicographer would have to be talked to and reasoned with pretty convincingly before he denied this liberty to the language.

"I. C.," Colorado Springs, Colo.—"Kindly inform me of the origin of the following sayings: 'Drest up to the nines'; 'Hard up!'"

The phrase, "to (or up to) the nines (or nine)," meaning "to perfection," "to the highest degree or point," is of long standing. It may have had its origin in connection with some game, or may have arisen from the fact that *nine* is in popular superstition a perfect number. "Drest to the nines" is "drest to perfection—drest to kill."

"Hard up," meaning "in difficulties, in want—especially of money," is of slang origin. It may be an extension of the nautical term "hard up," applying to the tiller and meaning "as far as it will go—to the limit of its movement (on one side or the other)."

"R. S. P.," Galesburg, Ill.—"Is 'that' properly used in the following sentence? 'It is a small college, but there are those *that* love it.'"

Yes, it is altogether proper. The clause is a restrictive clause, and *that* (as distinguished from *who* and *which*) is the restrictive relative pronoun. There is a tendency to substitute *who* for *that* when the antecedent refers to persons, and *which* for *that* when the antecedent refers to lower animals or to things; but it is better to keep up the distinction between the restrictive relative clause and the additional (or explanatory) in form as well as in punctuation. Only when the use of *that* would offend against euphony should *who* or *which* be substituted.

The Coward Shoe

"REG. U. S. PAT. OFF."

It Doesn't Touch the Sore Spot

The easement of the Coward Bunion Shoe is immediate and lasting, because the bunion pocket is shaped—not stretched—to protect the sensitive joint.

Why Should I Smoke Tuxedo?

TUXEDO is the logical smoke for *millionaires* because it is impossible to buy a *better* tobacco.

Tuxedo is the logical smoke for the economical man because there are 40 pipefuls in a ten-cent tin—making the *average cost per pipeful only one-fourth of a cent!*

To buy cheaper tobacco means to get less pleasure out of smoking, because it is impossible to *make* a tobacco as good as Tuxedo at less than the Tuxedo *price!*

HON. GEORGE CURRY

Hon. George Curry, Ex-Governor of New Mexico, says:

"Tuxedo appeals to me strongly on account of its cool, mild, pleasant flavor. Therein lies its superiority to all other tobaccos."

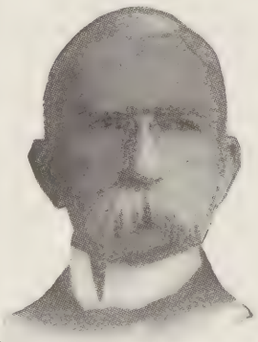
Geo Curry

IRVIN S. COBB

Irvin S. Cobb, Humorist, and Author of "Back Home," says:

"I can't think of any reason why I shouldn't say I like Tuxedo—because I do like it, very much."

Irvin S. Cobb



L. S. BROWN

L. S. Brown, General Agent of the Southern Railway at Washington, says:

"Tuxedo has gained and maintained a high reputation for superiority. Its coolness, mildness, and genuine soothing qualities are unrivalled."

L S Brown

Tuxedo

The Perfect Pipe Tobacco

Tuxedo is made of only the finest, choicest, selected leaves of perfectly aged Burley tobacco. It is made by the *original* Tuxedo process which takes all the *un*pleasantness *out* of tobacco and leaves all the pleasantness *in!*

Tuxedo has a deliciously mild, fragrant aroma, that is pleasant to all. It is a tobacco you can smoke in a room full of lace curtains without leaving even a trace of an odor.

A trial will convince you that Tuxedo is superior to every other tobacco you have ever smoked. Buy a tin—today.

HENRY STUCKART

Henry Stuckart, City Treasurer of Chicago, says:

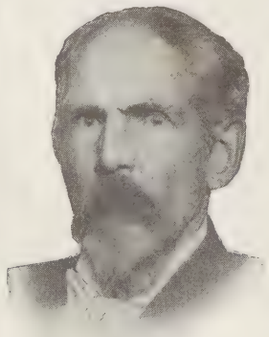
"I regard Tuxedo as not only absolutely harmless, but genuinely beneficial. Tuxedo goes in my pipe always."

Henry Stuckart

YOU CAN BUY TUXEDO EVERYWHERE

Convenient pouch, *innerlined* with moisture-proof paper 5c **Famous green tin, with gold lettering, curved to fit pocket 10c**

In Glass Humidors, 50c and 90c



JAMES WILLIAM PATTISON

James William Pattison, Artist, Leader in Municipal Art, and now Editor of the Fine Arts Journal, Chicago, says:

"A pipe, a book, and an open fire! These are three delights I can recommend to any man, but be sure the pipe is filled with mild, fragrant Tuxedo, if you wish to enjoy the three in the highest sense."

James William Pattison

Illustrations are about one-half size of real packages.

The Book of Knowledge

The Children's Encyclopædia

10,000 Educational Pictures — 350 Colored Plates — Complete Index

A New Key to the World Wonderful

"I think, therefore I am" is the most important sentence ever spoken by a human tongue, and the thinking mind of a little child is the most important thing in all the world, and until a very short time ago the least understood. It has remained for the Twentieth Century to put into the hands of the children a new and wonderful key to the world. THE BOOK OF KNOWLEDGE has come to show and explain to the eager inquiring mind of the child the whole wonderful world, in hundreds of striking, educational pictures, with brief, simple and fascinating talks and descriptions.

The Gathering Place of the Family

THE BOOK OF KNOWLEDGE has invaded the home and established itself so firmly in the hearts of the children and their parents that no other work is likely ever to fill its place: in fact, it bears no comparison to any other work. It is first of all ***a delightful reading course in all the great departments of knowledge,*** but it is so useful as a complete work of reference that adults often prefer its short and simply written articles and descriptions to those longer and duller ones of the adult encyclopædias. THE BOOK OF KNOWLEDGE has become the gathering place of the entire family, where the entertainment and instruction so much needed in the home are ***found in endless variety.***

One of the foremost educators of this country says:

"Suppose a boy of ten were to spend fifteen minutes a day in reading these pages . . . . . he would at thirteen know more about the earth and life on it, than the wisest men knew a few generations ago."

Pictures Which Stimulate the Mind

The child who owns THE BOOK OF KNOWLEDGE is going to know and understand all the things about him,—he is going to know processes by means of series of striking pictures which illustrate every step: the making of iron and steel; the operation of the telephone and telegraph; the flight of an airship; how a light-house is built; how a book is made; how we obtain salt, tea, rubber, leather and coal, *all the familiar things he wants to know and ought to know.*

More than 350 beautiful plates are in colors. **Pictures of the starry universe, pictures of animals, birds, fishes and flowers; pictures of our country and a hundred other countries, showing the cities, their people and customs; portraits of famous men and women, inventors, authors and statesmen; reproductions of beautiful paintings and sculpture; illustrations of things to make and do indoors and outdoors** *impress upon the plastic memory of the child all the important facts of life.*

The Open Door in Life-Insurance

INSURANCE PROTECTION
POSTAL LIFE INSURANCE COMPANY
HEALTH CONSERVATION

The Postal Life is the only company that opens its doors to the public so that those desiring sound insurance-protection at low cost can deal **directly** for it, either personally or by correspondence.

Whether you call or write, you make a **guaranteed** saving corresponding to the agent's **first-year** commission, less the moderate advertising charge. This first-year commission ranges up to

40% of the premium on whole-life policies

In subsequent years, you save the Renewal Commission other companies pay their agents, namely, 7½%, and you also receive an Office-Expense Saving of 2%, making up the

Annual Dividend of 9½% Guaranteed in the Policy

If you were to call at the office of any other company, or write to it, you might secure insurance, of course, but not **direct**; the policy would go to you through some **agent** or **agency** that would get the commission. **You** wouldn't get it.

In fact, the **other** company wouldn't be permitted to give it to you, unless everyone else got it: it would be **illegal discrimination.**

The Postal Life, however, dispenses entirely with agents. Its policyholders—**all of them alike**—get the benefit of the saving thus effected by **direct** insurance.

STRONG POSTAL POINTS

First: *Standard policy reserves*, now $10,000,000. *Insurance in force* nearly $50,000,000.

Second: *Old-line legal-reserve insurance* — not fraternal or assessment.

Third: *Standard policy provisions*, approved by the State Insurance Department.

Fourth: Operates under *strict State requirements* and subject to the United States postal authorities.

Fifth: *High medical standards* in the selection of risks.

Sixth: *Policyholders' Health Bureau* provides one free medical examination each year, if desired.

Such is the POSTAL way: the door is open to **you.** Call at the company's offices, if convenient, or write **now** and find out the exact sum it will pay you at your age—the **first** year and **every other.**

See How Easy It Is

In writing simply say: "*Mail me insurance particulars for my age as per LITERARY DIGEST for November 1.*"

In your letter be sure to give
1. **Your Full Name.**
2. **Your Occupation.**
3. **The Exact Date of your Birth.**

No agent will be sent to visit you: the Postal Life employs no agents.

Do You Know the eight psychological principles which when applied will unlock the door to success in **any** line for which one has aptitude? Edward B. Warman, A.M., makes them plain in a booklet which is given with three months trial subscription to NAUTILUS magazine of New Thought, all for 10c. **The Elizabeth Towne Co., Dept. 068, Holyoke, Mass.**

Is There a Bookstore in Your Town?

THAT many cultured communities are without good bookstores is certain, and we cannot herein explain why it is.

That new books lack proper distribution is a fact, and thousands of educated people cannot buy the new publications in their own town.

We shall be glad to refer those of our readers living in small towns or in cities that are without good bookstores to the nearest book centre where they may obtain without delay the newest and most worth-while books. There is no charge whatever to our readers for this service.

The Literary Digest

Two Great Books on Character Building

The Education of The Will

By JULES PAYOT, Ph.D.

JULES PAYOT, PH.D.

Educate Your Will. Dr. Payot shows how one may begin to educate the will, and how the habit, once formed, will grow stronger each day. He is no *theorist;* he is intensely *practical.*

"His treatise is the most thoughtful, the most systematic, and, if we may so express it, the most business-like we know of."—*New York Evening Sun.*

"It must be declared in uncompromising terms that this is a valuable, perhaps a great book. . . . In this haphazard, nervous age such a book as this is a tonic. It preaches the gospel America needs."—*The Brooklyn Times.*

Cloth. 450 pp. $1.50 net; by mail $1.60

The Education of Self

By Dr. PAUL DUBOIS, author of many STANDARD works on mental science

PAUL DUBOIS, M.D.

"This book shows the priceless value, mental, moral and physical, of the habit and power of self-control. It tells the ordinary man or woman just how to go to work and how to continue, in order to secure the benefits of such a valuable habit of life. The discussion is always philosophical and charmingly direct and personal."—*New York Times.*

"Such a work by so eminent an authority is certainly needed in this age when nervous debility and consequent lack of self-control are so prevalent. Succinctly stated the cure for the individual deficient in self-control from any cause is to be found in the carefully formed determination to govern ourselves—to be masters of our own thoughts and actions. Dr. Dubois offers valuable suggestions to this end."—*Overland Monthly.*

Cloth. 350 pp. $1.50 net; by mail $1.60

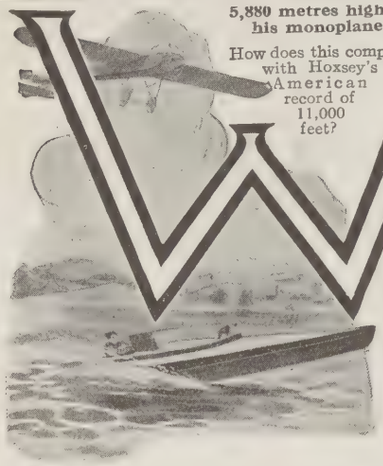
PANAMA
AND WHAT IT MEANS
By JOHN FOSTER FRASER

A delightfully readable book and the only one which treats the subject from an Englishman's viewpoint. Mr. Fraser has spent much time at Panama, and writes with great human interest of the enormity of the undertaking; of the men who are engaged in it, of how they live, work, and play; of the seemingly impossible feats of engineering which have been performed; of the question of treaty interpretation which has arisen to mar the project; of this, that, and the other—all of keen interest; and finally of what the whole project means to the world at large.

THE SCIENTIFIC AMERICAN, New York, says: "His way of putting things, and his instructive photographs, enable the reader to look on from a point of vantage. The men, the machinery, the accomplished work, will be sharply defined and real to him who reads the story."

Large 12mo, cloth, beautifully illustrated, with 48 full-page plates and a map. $1.75 net; by mail, $1.85

FUNK & WAGNALLS COMPANY, Publishers, New York



5,880 metres high in his monoplane.

How does this compare with Hoxsey's American record of 11,000 feet?

WINSTON'S CUMULATIVE
The up to date ENCYCLOPEDIA

An entirely new work on which the United States Government has issued three patents.

Going 30 nautical miles an hour. How fast is this in land miles?

How do they vulcanize rubber?
Why is the sea always in motion?
Why does milk turn into butter?

Can you answer these simple questions—and the hundred and one others that arise every day.

Winston's Cumulative Encyclopedia

is indispensable for your office, for your home, and for your children in school

Leading educators, and business and professional men everywhere, use it in preference to the old-fashioned encyclopedias which cost so much more money.

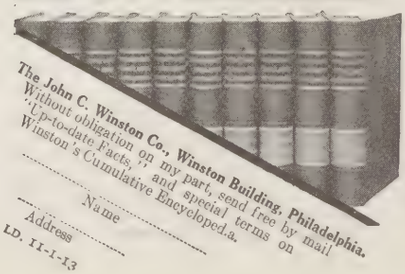
Winston's Cumulative Encyclopedia has been adopted by the Boston, Mass., and other leading schools, because it is always as new and up to date as the day it was printed.

Prepared especially for easy reference, its typography and its clear, concise statements make this encyclopedia a wonderful aid to children in school, and a practical work of reference for the busy man or woman.

"Up-to-Date" Facts Free

Send attached coupon at once for this unique, illustrated book and our Special Introductory Offer on Winston's Cumulative Encyclopedia. Remember that only a limited number of sets will be sold on these special terms, so act quickly. Mail this coupon now. You assume no obligation. The book is FREE.

10 vols. 5,600 pages. 40,000 subjects. 2,750 illustrations, colored plates and maps. Covers the whole range of human knowledge.



The John C. Winston Co., Winston Building, Philadelphia.
Without obligation on my part, send free by mail "Up-to-date Facts," and special terms on Winston's Cumulative Encyclopedia.
Name .....
Address .....
LD. 11-1-13

Complete, compact, authentic—it gives *all the latest facts on any important subject.*

Made for Americans, *it gives special attention to American subjects.* Its Editor-in-Chief, Charles Morris, has had longer experience and greater success in editing works of this kind than any other living American.

Kept Constantly Up to Date

While other encyclopedias, costing about three times as much, start to grow old and unreliable the day they are published, Winston's Cumulative Encyclopedia gains every year in value and reliability.

Without loosening a single printed page, without affecting the binding or shape of the book, our simple patented method of adding new material assures you the latest information on every important topic.

China is now a republic—though the encyclopedia in your home probably calls it a monarchy. Winston's Cumulative Encyclopedia always records the very newest developments in the world's progress.

Why Pay $50.00 or $100.00 for an Old-Fashioned Encyclopedia

when for a small fraction of that amount you can get an encyclopedia that is always up to date.

A Special Offer and easy terms are being made now to quickly put Winston's Cumulative Encyclopedia in the hands of people who will learn its great value by use, and who will recommend it. The offer is open only for a limited time, and is mailed only in a *direct letter* to those who **send this coupon at once.**

Applying the "Selling Power" of Electricity

TWO men stood in front of a department store in an Iowa town, and the younger one, speaking decisively to his companion, said:

"Masterson, I'm going to rip out that front. It's very respectable, and there is a history behind it, but now that this property has descended to me, I think I can do most for my father's name by doing now what he did when he started—by striking out on up-to-date lines. We've fallen away behind the two other department stores. And there's good reason. See how gloomy the place looks—respectable but gloomy. The goods look dull. There's nothing to call people in, nothing to cheer them up and put them in a buying mood after they get in. We've got the goods, Masterson, and you're the best sales manager we ever had. But I've been around the country looking at the livest places, and I tell you that the best salesman of all is *Electricity*.

"I'm going to put in a new display arrangement and light up that new front so as to stop people as they come up the street. I'm going to make it invite them in. I'm going to light the whole interior so that every bit of floor space will have a real selling value. Good modern lighting will not only make the goods look interesting, will not only make people want to buy, but I tell you, Masterson, it will make the salespeople feel like selling. It will put ginger into the entire force.

"Then I'm going to open up for better ventilation at the back. I'm going to put in more electric fans—you'd be astonished to know how they freshen up the air in a place.

"Another thing: there are a thousand and one electrical devices—there's a good dozen for us anyway—that will transform our ways of doing business, put snap in it, make it smoother and more comfortable for the customers and ourselves. I'll be able to do a lot more work with the same people—and it's simply a matter of plain cause and effect that we'll forge ahead. We'll keep all our good traditions—and make some new ones."

This young man who had been "around the country looking at the livest places" held a conference with his architect, then called in an electrical engineer. He knew what he wanted done and wanted to learn how he was going to do it. This was a little over a year ago. Today that department store is doing 85% more business than it was doing on the day the new owner made his declaration, with only a 12% increase in its force, and has taken the lead in the volume of sales.

Maybe you who read this have retail selling problems that make it worth your while seriously to consider the kind of service you can get from electricity—the kind of service you can get from your outfit and your people with electricity to help.

Good light not only means more customers and more sales, but it means greater economy. Good light means more sales in all parts of the store—dark, unprofitable corners are banished—it means more frequent turning over of stock—more profit.

Good air means good working conditions, more productiveness for each human unit, and it means agreeable conditions that affect the customer happily in conjunction with the cheery power of good light.

How these great advantages may be carried out in your case is a matter for the electrical man to lay before you. You will be astonished at the ease and the economy with which modern outfits can be installed and operated.

Take up the matter today with your electric power and light company, or any General Electric Company agent in your vicinity. You will find them more than glad to co-operate with you, and no matter how complex your problem may be they have at their command the service of any part of our organization that may be most helpful to them and to you.

TOPICS OF THE DAY

SULZER AND TAMMANY

ON THE EVE of the Sulzer impeachment proceedings some predicted that "Murphy would destroy himself in the act of destroying Sulzer." Their judgment is now vindicated, thinks a leading anti-Tammany daily in New York, which sees the whole appearance of the city campaign completely changed within a week after the removal of the Governor. It points to Tammany "thrown into confusion and consternation by a series of terrific attacks," while "up and down the city the name of Murphy has become the signal for cries of execration," and, "most alarming of all to the Tammany mind, the election betting odds have gone about and now favor Mitchel." Mr. Sulzer, instead of accepting defeat, returns to the East Side as a hero, receives a nomination to the State Assembly, and is regarded even by many of his enemies as certain of election. But perhaps the Fusion-supporting editors who describe the gloom in the regular Democratic headquarters are not in a position to know, and at least equal credence must be given by the impartial to the leaders in Tammany Hall, who smile as cheerfully as ever, telling inquisitive reporters that all these charges can do no permanent harm to their campaign, and that their ticket is absolutely sure of election by a comfortable majority. And while his opponents fill the air with shouts of "Tammany rule!" "Bribery!" and "Corruption!" Candidate McCall makes his appeal to the business men, taxpayers, and rent-payers of the city in behalf of a régime of economy and careful handling of the city's finances.

TO "A VICTIM OF CORRUPT BOSSISM."

These words were inscribed on the silver loving-cup presented to William Sulzer by Albany friends a few hours before he and his wife left the Executive Mansion.

Upon Governor Sulzer's removal from office editors within and without the State were ready to approve the verdict of the Court, tho not without dissenting voices. But, mixed with the compassion for the State, and pity or censure for Sulzer, were attempts to set forth the consequences of the impeachment. There were those who were ready to ask with the Houston *Chronicle* (Dem.) what, with Sulzer's removal accomplished and "a tool in every important office in the State," has "Tammany to regret, and what hasn't the State of New York to fear?" On the other hand, and far more numerous, were the papers which profest to see in the Tammany triumph one of those "triumphs that herald annihilation." Sulzer's impeachment, said the New York *Press* (Prog.), is not a "death-blow" to Tammany, but it is "a political blunder of incalculable measure." The Tammany leaders have overplayed their hand, agrees another

New York daily, *The Evening Post;* they thought that they could destroy Sulzer, but,

"like the assassins who rushed upon Giuliano dei Medici, in their fury they wounded themselves with their own daggers. . . . If Tammany had been content simply to expose Sulzer, and leave him morally disabled, it would have avoided the immense reaction against itself which has now set in, and could have prevented the ominous proof that whatever the voters think of Sulzer, they look upon Murphy with perfect hatred and contempt."

The blind Samson, says the Boston *Transcript*, recalling the Biblical story, "was able to pull down the stronghold of the Philistines." So, it continues, turning to more modern metaphor, Mr. Sulzer is likely to use his remaining artillery to help defeat

EDWARD EVERETT McCALL.

Chairman of the Public Service Commission for the First District of New York, former Justice of the State Supreme Court, he is running for Mayor of New York "on his record"—as a faithful public servant, say his friends; as "Murphy's messenger-boy," say his foes.

Tammany in this campaign. The first shot was the statement which appeared last week in the New York *Evening Mail* in the shape of James Creelman's interview with the ex-Governor, said to be based upon the testimony which Mr. Sulzer would have made if his lawyers had called him to the stand in his own defense. The chief allegations by Mr. Sulzer in this long interview which fills several newspaper pages are, in the Brooklyn *Eagle's* words,

"That before his inauguration Charles F. Murphy offered him money enough to pay his debts;

"That many times thereafter Mr. Murphy sought to coerce him in the matter of appointments;

"That, being stubbornly resisted, the Tammany leader threatened to make the administration a laughing-stock; and

"That impeachment was the outcome."

"I was impeached," declared Mr. Sulzer,

"because I set in motion the machinery which led to indictments by several grand juries, and which have unearthed State-wide frauds running into many millions of dollars, in twenty-two counties, in connection with the highways and canals of the State.

"This and my fight for direct nominations severed all relations between Mr. Murphy and myself and marked me for political slaughter. It was a matter of self-preservation for Mr. Murphy and his lieutenants."

But Mr. Murphy is not a candidate for office, while Mr. Edward E. McCall is running for Mayor, and his friends insist that he will be "his own man" and "unbossed." Hence the significance of these words, which made the Sulzer statement at once a campaign document:

"One of the agents through whom Mr. Murphy most frequently communicated with me was Judge McCall. Judge McCall usually spoke of Mr. Murphy as 'the Chief,' and would say to me that 'the Chief' wished such and such a thing done or demanded that I follow such and such a course of action."

All these statements were supported by detailed recitals of telephone conversations and of meetings at Mr. Murphy's house or Judge McCall's house. The story of Mr. McCall's appointment to the Public Service Commission last February gave New Yorkers quite a new version of that affair.

Mr. McCall, who at first refused to consider the interview genuine, still thinking of Sulzer as one who "tells only the truth," later made the emphatic rejoinder that the statements, "as far as they refer to me, have not a word of truth in them." He then gave his own recollections of the Public Service Commission appointment, and made this denial of the most damaging charges in the Sulzer statement:

"I never from the time that Governor Sulzer was installed in office down to the present day took any message of any kind to him.

"I never referred to, and I never recall of having spoken of, Mr. Murphy as 'the Chief,' and what he means by that saying I do not understand."

Now the New York *Morning Telegraph* (Dem.), which supports Mr. McCall, does not see why the Fusionists should harp on that word "Chief." "Just as good men, just as pure-minded men as Judge McCall, or John Purroy Mitchel, or even as good men as the editor of the New York *Evening Post*," it remarks pointedly, "have affiliated with Tammany, and they have at times called the Tammany leader 'Chief.' . . . 'Chief' is a colloquialism, and its use carries with it no more significance than the plain term 'Mister.'" Thinking men, declares *The Telegraph*, in another editorial, "will refuse to condemn Edward E. McCall upon the testimony of a Governor who made a false affidavit concerning his own campaign expenses." It continues:

"The Fusion cause is in desperate straits if it must depend upon the evidence of such a man to bolster it and make it worthy of confidence.

"Sulzer is either an informer who 'snitches' on his pals or he is a falsifier of facts. Either horn of the dilemma leaves him in sorry plight."

The Commercial (Fin.), too, declares that Mr. Sulzer "proves nothing"; his story is all "a matter of inference and innuendo." And *The Sun* (Ind.) is disposed to dwell on the inconsistencies of the Sulzer narrative, to find in it falsehoods and admissions of the ex-Governor's unworthiness, and it believes that Judge McCall "has met the charges of William Sulzer squarely."

But by far the greater number of New York dailies are supporting the Fusion ticket, and they see in the charges against Mr. McCall, including the supplementary statements of Mrs. Sulzer, Mr. Hennessy, and others, a serious blow to his candidacy. Not that everything Mr. Sulzer says is accepted at its face value, but the claim is that, with all due allowances "for bias and for infirmity of character," for errors, exaggerations, displays of rhetoric, lapses of memory, and flights of imagination, there is evidence enough to warrant the belief that "if Edward E. McCall is elected Mayor, Murphy will continue to be 'the Chief.'" That is, continues *The World* (Dem.),

"He will be 'the Chief' not only of Edward E. McCall, but of

NEW YORK AS SEEN BY HER NEIGHBORS.

the government of the City of New York. . . . The kind of government that the people of New York City would have under Mr. McCall can be fairly estimated from the kind of government that the State would have had under Mr. Sulzer if he had made all the appointments that Murphy insisted upon as the price of permitting him to remain as Governor."

It is their belief that the voters are coming to look at the McCall candidacy from this angle that brings conservative journals like the Brooklyn *Eagle* (Ind. Dem.), New York *Times* (Ind.), and *Journal of Commerce* to the conclusion that "the disclosures following Mr. Sulzer's removal have gravely weakened Mr. McCall." The Democratic candidate for Mayor may be able to disprove certain specific charges against him, but he has a difficult task in persuading the people of New York of his independence of Tammany control, thinks *The Times:*

"It would not be so difficult if Mr. McCall, in his long career in New York politics, could point to any evidence that he had been an opponent of Tammany Hall and its successive chiefs, or even that, in the many situations in which the perfidy and greed of Tammany have been resisted by honest citizens, he had been independent of that organization. But he can not. He has received much from Tammany. . . . He has never lifted his voice against it. He has never publicly lifted his finger against it. Its aims, its methods, its fierce appetite, its cruel and sordid oppression, its cooperation with crime, its intricate and unfailing treachery and corruption have not, so far as the public record shows, aroused in him the faintest manifestation of disgust, or even distrust."

The speeches and press statements made by Mr. John A. Hennessy, who investigated the State highway contracts under Governor Sulzer, made him, as shown by the newspaper headlines, the most spectacular figure in the campaign last week. His attacks on Mr. Murphy and Judge McCall are looked upon by many as even more damaging than those contained in *The Evening Mail's* Sulzer interview. Mr. Hennessy upholds the version of the Sulzer-Murphy-McCall conferences given in that interview. He corroborates the ex-Governor's charges against Murphy. He tells a circumstantial story of Judge McCall delaying action on a case involving the city and the treasurer of Tammany Hall, and finally deciding against the city without making any explanation. This, declares *The Evening Post*, "has important bearing on the campaign," for "if from the bench Judge McCall dispensed favor to the treasurer of Tammany Hall, his talk about being no man's man now is mere wind."

Most of this the leaders of the regular Democracy consider unworthy of causing any departure from the usual policy of dignified silence. Mr. Murphy does suggest that Mr. Hennessy might name some of the gentlemen who figure in his stories. And there has been talk of indictments for libel.

William Sulzer has at least effectually silenced those who said his impeachment would end him politically. It is remembered that he informed a friend who made a call of condolence after the vote of removal, that it was but the beginning, not the end of his career—"If you drop around to the 'People's House' one year and three months from to-day you'll find the occupant to be William Sulzer." As the Chicago *Inter Ocean* explains it:

"The Sulzer plan for rehabilitating his political fortunes includes running for the legislature upon the Progressive ticket; being elected and becoming leader of the Progressives in the New York Assembly, with the possibility of becoming Speaker of that body, and, following that, a nomination and election as Governor upon the Progressive ticket."

The first move, at least, would seem to have been a successful one. The Progressive nomination for the Assembly from the Sixth Assembly District, a Jewish neighborhood on the lower East Side, was offered and accepted. *The Morning Telegraph* thinks that will be the end of it:

"Before this manufactured East Side wave of hysteria in his favor subsides he may be elected to the Assembly, but we doubt it. . . . The sober second thought of the Sixth District constituency is likely to assert itself."

But other papers remind us that the "district has been a strong Sulzer district for twenty years," and that any "change of sentiment" in evidence has been in the direction of greater enthusiasm for Sulzer. His speech-making tours in the district have been veritable triumphant progresses, judging from press reports, and the new spectacular features of the campaign are thought likely to strengthen the Sulzer sentiment. A Sulzer victory seems probable to *The Evening Post*, and it turns from the personal victory to consider it as a phase of the uprising against Tammany:

"If it is a pity that so many people are willing to shut their eyes to the faults of a man like Sulzer, it is a comfort to think that in a large proportion of cases enthusiasm for him means resentment against Tammany and an awakening to the humiliation and outrage of Murphy rule. . . . God moves in a mysterious way his wonders to perform."

THE FIGHT FOR HETCH HETCHY

AFTER TWELVE YEARS of persistent effort San Francisco has convinced many eminent conservationists and an impressive majority of the Lower House of Congress of the justice of her request for reservoir rights in the Hetch Hetchy Valley, in the Yosemite National Park, but she has not yet silenced the critics of her cherished plan, who promise a vigorous renewal of their fight when the question comes before the Senate in the next session. This opposition is based partly on the general principle that national park territory, the property of all the people, should not be surrendered for the benefit of a single community, except to meet an imperative need; partly on the theory that the scheme involves the destruction of one of the nation's beauty spots; and partly on the suspicion that San Francisco's interest in the Hetch Hetchy is really due to its possibilities as a source of hydroelectric power. The Society for the Preservation of National Parks maintains that the press of the country are overwhelmingly opposed to San Francisco's claims, and in support of this contention it cites an imposing list, including such influential organs as the Boston *Transcript*, *Post*, *Record*, and *Herald*, Springfield *Republican* and *Union*, Providence *Journal*, New York *Times*, *Tribune*, *World*, and *Evening Post*, the Brooklyn *Eagle* and *Standard Union*, Philadelphia *Record*, *Public Ledger*, *Telegraph* and *Inquirer*, Baltimore *American* and *Sun*, Cleveland *Plain Dealer*, Atlanta *Journal*, Nashville *Democrat*, Memphis *Commercial Appeal*, Louisville *Courier-Journal*, Indianapolis *News*, Chicago *Inter Ocean*, Milwaukee *Free Press*, *Journal*, and *News*, Minneapolis *Tribune*, Denver *Republican*, Seattle *Times* and *Post Intelligencer*, and even two San Francisco papers, *The Wasp* and *The News Letter*.

Photograph by J. N. Le Conte.

A BEAUTIFUL CORNER OF THE HETCH HETCHY.

As the Wapama waterfall in the background of this picture is 1,700 feet in height, and as the plans call for about 300 feet of water in the proposed reservoir, it should still afford an impressive spectacle even if San Francisco wins her fight for the valley.

If the Hetch Hetchy Bill that has passed the House and awaits the action of the Senate in the next session should become law, declares Robert Underwood Johnson in an open letter to his "fellow-owners of the Yosemite National Park," "a precedent will be established under which all your other National Parks will become the loot of corporations, private or municipal." "The Hetch Hetchy," says Mr. Johnson, "is a veritable temple of the living God, and again the money-changers are in the temple." The national organizations fighting the bill, he explains, hold that no concessions in the Hetch Hetchy should be made to San Francisco until she proves that her water supply can not be obtained from any other source. And Caspar Whitney, in the editorial columns of *The Outdoor World* (New York), insists that the pending legislation is nothing less than a "steal," and goes on to say:

"It is true that the city of San Francisco requires a greater supply of water than it now has through the Spring Valley Co.; but it is also as true that there are several other sources than Hetch Hetchy from which the needed amount can be obtained if the city will pay for it — some $20,000,000 more than it would cost to bring in the Yosemite supply. The 'city,' which means, of course, the group of controlling politicians who have been active in this campaign, will not pay for water elsewhere, so long as there is a chance of persuading Congress to turn over, without cost, the valley of Hetch Hetchy.

"But it is not the Hetch Hetchy water which so deeply concerns the San Francisco gentlemen. It is the tremendous electric-power project which they are nurturing under the guise of providing for the city's obvious necessities.

"That is the milk in the Hetch Hetchy coconut, and this is why President Wilson will undoubtedly veto the bill if the Senators put it up to him."

Turning to San Francisco's side of the case, we find it effectively presented in *The Congressional Record's* report of the discussion preceding the passage of the Raker Bill by the House. Here we read that San Francisco "is confronted by an emergency," since "practically one-third of the municipality is without adequate water supply"; that the city already owns two-thirds of the floor of the Hetch Hetchy Valley and also a portion of the dam site; that of the 719,622 acres of land in the Yosemite National Park only 1,330 acres will be flooded by the proposed reservoir; and that the city is ready to give other land, acre for acre, for the territory it asks the nation to surrender. Senator Key Pittman, of Nevada, thus summarizes the advantages of the bill:

"It conserves the surplus waters of that river [the Tuolumne] not only for the supply of the domestic use around those cities, but for the benefit of the irrigationists of the valley—water that to-day is wasted and that can not be saved except by the building of this dam. It creates a water power, a hydroelectric energy of over 115,000 horse-power, which must be supplied to all of these people at cost, thereby being the greatest aid to relieve them from the monopoly that has been supplying them with light and power in that section of the country for years.

Photograph by J. N. Le Conte.

THE FLOOR OF THE HETCH HETCHY.

This view shows the lower end of the valley. The line of vegetation about a third of the way from the bottom of the grey granite cliffs in the background corresponds approximately with what will be the water-line if the valley is changed into a lake.

"It not only serves the purposes of irrigation and domestic purposes, but it gives power to pump the subsurface water to irrigate hundreds of thousands of acres that can never be irrigated in any other way. It goes further than that; it provides a fund for building roads and boulevards and opening up one of the greatest national parks that exist in this country."

FENCING OFF THE NEGRO

THE RACE PROBLEM may be solving itself by the evolutionary process, as wise observers assure us it must do, but its path to the ultimate goal is not without occasional jars, the latest one being caused by the movement for residential segregation in some of the large Southern cities, notably Baltimore and Louisville. The council of the Maryland city recently passed an ordinance providing for race segregation, and the other day the State Court of Appeals affirmed its constitutionality. In Louisville the question has been agitated considerably, and the idea has received the indorsement of the Louisville *Times*. The Baltimore *Sun*, professing the kindliest sentiments toward the colored people of the city, advises them to "accept the situation as fixt by the present law and not undertake to keep alive an issue which it is to their best interest to remove from the field of agitation." The New York *Evening Post*, on the other hand, insists that the legislation is undemocratic, and the Philadelphia *Public Ledger* holds that it is "class legislation, violative of the spirit if not of the letter of the Constitution." It is generally predicted that the ordinance will not be accepted as final by the negroes until the Supreme Court of the United States has passed upon it. The argument of the opposition is summed up in an article by Samuel Want in the Baltimore *Evening Sun*, from which we quote in part:

"It is a settled rule of decision in the United States Supreme Court, before which the question of the constitutionality of the legislation in question will come for ultimate determination, that legislation may be stricken down as unconstitutional where its operation is to deprive persons of some constitutional right or guaranty, even tho the language of the enactment, taken alone, could not be held objectionable.

"Applying this principle to the segregation legislation the significant fact is that in its operation—having regard to the conditions existing in this city—it absolutely prohibits negroes from occupying any of the desirable residential sections of the city, with a few insignificant exceptions.

"No real analogy to the segregation legislation can be found in the laws providing for separate accommodations for colored people in schools, street-cars, and railroad coaches, for in all such cases the very essence of the decisions upholding the statutes is that substantially equal or at least satisfactory and reasonable accommodations are to be provided, notwithstanding the separation, while in the case in hand the essential effect of the legislation is to deprive a portion of the population of the right to occupy any (with rare exceptions) but the least desirable sections of the city."

The Philadelphia *Public Ledger* says "the ordinance is a kind of sumptuary legislation," and "analogous to the prohibition laws that have been enacted in many of the States." This paper thinks that Southern cities other than Baltimore have "found it possible to prevent the invasion of select residential neighborhoods by undesirables, either white or black, without resorting to discriminatory enactments, the immediate effect of which is to aggravate race prejudice." Viewing the problem from a Southern standpoint, the Charleston *News and Courier* says:

"In the South, where in questions of this sort we deal with facts and not with theories, the belief will prevail that Baltimore's experiment is likely to work out for the good of both races and that it will promote the material progress of the city. The fact that sentiment among the white taxpayers of the city is overwhelmingly in favor of segregation is not needed to justify the change.

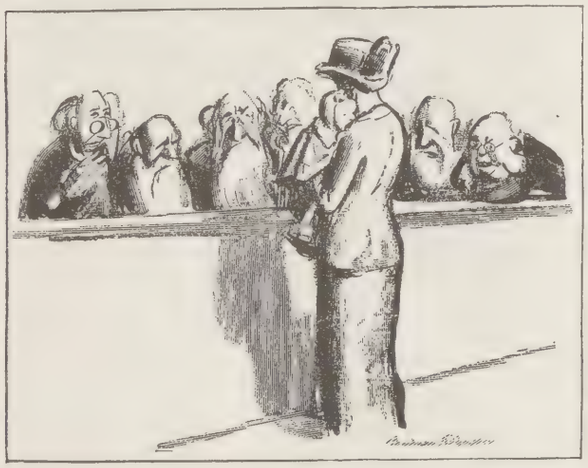
"Every Southern city knows where its disease centers lie. It may not be the negro's fault that he does not maintain proper sanitary conditions in his home, for generally he fails to understand the need of sanitation; but it is stretching the idea of democracy pretty far when it is used to prohibit a step which is sure to be an effective preventive of disease."

No definite steps have been taken in the Kentucky city, but of the problem the Louisville *Times* says that—

"Sooner or later, it must be settled. The sooner it is settled the less is the danger of friction between the races, the greater the saving in property values, the more certain that reason, not passion, will dictate the decision reached."

THE CRIME OF MOTHERHOOD

IRONIC or indignant criticism from the local press greets the policy of the New York Board of Education in penalizing motherhood among school-teachers, altho here and there it finds a defender among the papers of other cities. This policy has been made evident in a number of instances, of which the most conspicuous is the case of Mrs. Bridget C. Peixotto, now before the courts. After eighteen years of efficient service, and within two years of the time when she would have been eligible for a pension, Mrs. Peixotto was dismissed for neglect of duty because she was absent without leave for the purpose of bearing a child. It will be recalled that some months ago another New York teacher, Mrs. Catherine Edgell, applied for leave for the same purpose, and was refused it. It is said that Mrs. Edgell has now returned to her classroom, but that her name is no longer on the pay-roll. The vote of the Board dismissing Mrs. Peixotto was 27 to 5. Other mothers on the city's teaching staff have been summoned for trial, and a resolution has been passed directing a thorough search for still other offenders who, as *The Tribune* remarks, "may be concealing their shame." The same paper notes with satisfaction a movement for the abolition of the Board of Education in its present form, and the substitution of "a smaller, more expert body." And returning to the subject in another issue it goes on to say:



BOARD OF EDUCATION—"You may marry, but you must not have children." —Robinson in the New York *Tribune.*

"Having been so successful in ferreting out criminals among our married women teachers who actually had the brazen immorality to have children, our Board of Education now seeks other fields to conquer. General Wingate, one of the sternest moralists on the list, suggests that marriage itself shall bar a woman from teaching.

"There is at least real logic in this view. To permit a woman to teach after marriage, but to oust her if she has a child, is about as inconsistent and immoral a stand as a supposedly intelligent and moral body of men could take. To adopt General Wingate's suggestion would at least relieve the Board of the odium of actively instigating wrong.

"Of course, such insignificant ideals as efficient teaching and justice to women are quite another affair. By the time the members of the Board awake to the importance of these topics they will probably have been long since legislated out of existence."

It is an interesting coincidence, agrees *The World*, that Drs. Howe and Goodnow, the Board of Estimate experts, should be advocating a Board of Education of eight members, "with greater executive and general powers and less scope of interference in administrative details." "In public service," it adds, "whom the gods would destroy they sometimes first make ridiculous." "I am against the principle of having mother-teachers in the schools," declares Abraham Stern, chairman of the Committee on Elementary Schools, who states almost in the same breath that 138 women teachers have been married since July, and that on an average 500 teachers become brides each year. In the discussion of Mrs. Peixotto's case before the Board of Education two members, Dr. Ira S. Wile and Chairman Arthur S. Somers, of the committee on high schools, strongly championed the cause of the mother-teacher. Says Dr. Wile:

"The issue in this case is whether a married woman who becomes a mother is to be dismissed from the service. You can not discharge her for being married, but you want to throw her out because she has borne a child. Literally, you seek to penalize motherhood—a condition that is strictly not Board of Education business.

"Your business is to employ teachers who are efficient. If you throw Mrs. Peixotto out you will have brought upon this city—upon yourselves, rather—the unenviable distinction of being the only education board in this country to take such a step. In France, and in the Russia that is held up so unfavorably in matters of humanity, Mrs. Peixotto, by the rules, would have been given a leave of absence on pay. In England and Germany a leave of absence without pay is granted.

"Aside from this, your stand is that the efficiency of the teacher is impaired. Can you show me how the fact that a teacher is a mother warps her efficiency? Do you not know that in the best of our private schools married women receive preference as teachers?

"It is not a matter of whether other teachers are waiting in line for employment—you have here the question of efficiency, and I need do no more than point to the record of eighteen years' service of which Mrs. Peixotto may proudly boast."

Mrs. Peixotto's attorney denounced the decision of the Board as "against public policy and public morality." Defending the dismissal, Commissioner Abraham Stern argued that child-bearing means interrupted work and diverted attention, and necessitates "the employment of substitutes who are, in many cases, mere makeshifts," and "the pupil suffers." At a subsequent meeting of the Board, Superintendent of Schools Maxwell, while declining to say whether a woman teacher was more or less efficient after marriage, admitted that "the teacher is absent from school much more after her marriage." Meanwhile the Board is awaiting the decision of the court in the case of Mrs. Peixotto, who sues for reinstatement on the ground that her dismissal was illegal.

The only question that the Board of Education should consider, insists *The Commercial*, is whether or not married women should be employed as teachers, since "to forbid a married woman to become a mother is an idea so repellent and so fraught with evil that the public conscience will never accept it."

Turning to outside papers, we find the Washington *Post* declaring that "the action of the New York Board of Education is founded upon common sense, and it is wholly unjust to construe it as disapproval of motherhood." Says this Washington daily:

"Few persons will attempt to argue that a mother, engaged in caring for an infant, can give much attention to a classroom full of other children. Her first interest, naturally, will be with her own child. For at least a year she should give her entire attention to her own child, and if she leaves her own offspring to return to her teaching occupation, she is forced to neglect one or the other. Even tho her own child is in good hands, her thoughts are apt to wander to her home, and the education of the children whom she is supposed to teach naturally suffers.

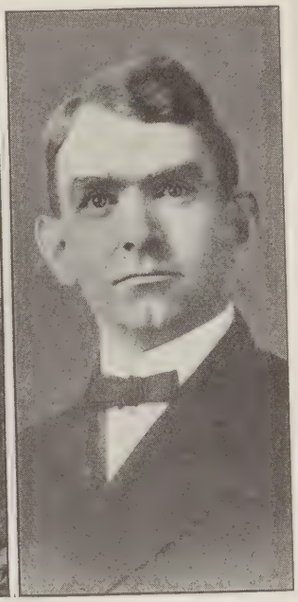
"If a woman with a child were without a husband to support her, there would be some excuse for the uproar in New York, but inasmuch as it must be clear that she can not do her full duty by her pupils and her own child and husband at the same time, there is ample reason for the action taken by the Board of Education."

EX-GOV. M. W. PATTERSON.

His change of front in espousing the prohibition cause was one of the notable surprizes of the campaign.

THE STATE CAPITOL,

The scene of a legislative struggle that lasted for some nine months, with the concomitants of adjournments, filibusters, and rulings from the Chair which brought armed men into the assembly chamber.



THE MAYOR OF MEMPHIS.

Mr. Crump's leadership is generally held responsible for fighting off the passage of the enforcement laws.

STORM-CENTERS IN THE TENNESSEE PROHIBITION STRUGGLE.

KEEPING TENNESSEE DRY

DRINK may cause all sorts of trouble, but the reports from Tennessee seem to show that the passage of a prohibition law may, after all, have much the same effect. Or, as a New England editor views it from afar, the coming of the "cold-water" wave has plunged the people of the State into "the hottest kind of hot water." Tennessee, and less conspicuously Arkansas, Ohio, and Delaware, are now, says the New York *Evening Post*, "offering proof of the fact that if it is hard to secure prohibition laws, it is still harder to enforce them." For the struggle that has been going on in Tennessee for months has been caused by the efforts of the Governor of the State and the friends of the recently enacted prohibition law to secure its enforcement in the cities. An enforcement law now stands on the statute-books, but only after a campaign that has roused bitter feelings throughout the State, brought armed men into the legislative halls, and led those opposed to the new legislation to exclaim that "the State of Tennessee is in the clutches of a conscienceless and irresponsive oligarchy headed by a tyrannous satrap."

The prohibition issue has been "a ubiquitous trouble-maker" in Tennessee for years, the Hartford *Courant* reminds us; it has disintegrated the Democratic party, "arrayed the farm-house counties against the cities," indirectly caused the death of ex-Senator Carmack, and furnished the country "a spectacle of Tennessee legislators scurrying to adjacent States and sojourning there to break the quorum." The present fight for law enforcement goes back to the legislative sessions of last winter and spring. In September the Governor called a special session chiefly for the consideration of enforcement legislation. It met, and obstructive tactics were brought into play to defeat the measures supported by the Governor and the united Republicans and Independent Democrats. As *The Courant* tells the story in a brief editorial summary:

"The Prohibitionists clamored that the 'regular' Democrats were taking orders from Mayor Crump, of Memphis, as from a boss, and that he was the agent of the liquor interests. The Speaker of the House was accused of high-handed usurpation. On the other hand, the 'regular' Democrats complained that gunmen had been brought to the State-house to intimidate them. 'In order to have what they call "law enforcement,"' said the Memphis *Commercial Appeal* (Dem.), 'they bring into the Capitol at Nashville a lot of bull-necked thugs armed to the teeth and prepared to shoot at a signal.' Nobody was shot, however; in spite of the presence of the gunmen the filibuster continued and prevailed; the legislature adjourned in a near-riot."

Copyrighted by Harris & Ewing.

GOVERNOR HOOPER,

Who led in the recent successful fight in Tennessee for legislation to secure the enforcement of the liquor laws.

This meant the call for another extra session, and an appeal by the Governor to the citizens of the State to gather in mass-meetings "to instruct, encourage, and support both the Governor and the General Assembly in the restoration of the majesty of the law." Many of these meetings were well attended and enthusiastic, we glean from Tennessee dispatches. At Murfreesboro former Governor Patterson, once an antiprohibitionist, announced a change of heart, saying:

"The trouble was not all over the Prohibition Law, not altogether in the non-enforcement of the law, but in the accursed thing itself. . . . . .

"From now as long as life lasts I am the uncompromising foe of the liquor traffic."

While the meetings were going on court

orders closed many illegal saloons in Nashville, Clarksville, Chattanooga, and Knoxville. As a result of the brief session of the legislature which convened on October 13, tho a bill authorizing the courts to remove inefficient county and municipal officers failed, the people of Tennessee have, in Governor Hooper's words,

"been granted the right to go into the courts with civil lawsuits and exterminate the lawless saloon. They will no longer be compelled to sit with folded hands and suppress indignation while faithless public officials refuse to enforce the criminal laws.

"The shipment of liquor from one county to another has been forbidden, and the Federal Webb Law has been made effective by prohibiting the shipment of liquor into the State."

It is gratifying to the Nashville *Banner*, which has been a leader in the agitation for enforcement of the liquor laws, that "the means for crushing the booze rebellion seem to be in sight," for even tho all the bills were not passed, what has been done "is a start in the right direction." The best thing of all, in its opinion, is the fact that the county mass-meetings throughout the State have shown "that the people are determined on law enforcement." The Nashville *Tennesseean* can not conceal its exultation over the defeat of the enemies of the liquor legislation of 1909. It says:

"What the liquor agents and dealers are pleased to call a 'wave of hysteria' is now sweeping over the State, a hysteria that is for the rigid enforcement of the prohibition laws. It is commanding and irresistible, and is sweeping the lawless liquor traffic from the State. It is closing permanently and forever the open saloon in Tennessee, and it is doing this in an orderly, natural, and legal way."

Well, concludes the Memphis *Commercial Appeal*, representing another side of Tennessee opinion, it remains to be seen "how far these bills will go toward eliminating the drinking of whisky and beer." Their force and potency, it remarks, "depend upon the same quantity that was behind the original prohibition bills."

"In a county where there is a strong sentiment for prohibition the laws are reasonably well enforced—about as well as the laws against murder, larceny, horse-stealing, fighting, and adultery.

"In the counties where there is small prohibition sentiment there is a corresponding laxity in the observance of the Prohibition Law."

The issue in Tennessee, for the last word has apparently not yet been said, is variously explained by editors outside the State. In the Louisville *Post's* opinion the question to be decided is "whether the people of Tennessee are fit for self-government or whether they will submit to be ruled by the Whisky Ring." The St. Paul *Dispatch*, on the other hand, is interested in the new "Tennessee theory" of law, which "admits that prohibition in Tennessee is a failure in spite of law, yet would put new law on the statute-books to enforce laws already there." And *The Dispatch* presents its idea of "what seems to be the trouble with Tennessee" in these words: "Prohibition never yet has totally prohibited, and it prohibits not at all when it is attempted among people who oppose it or even favor it in a half-hearted way." The New York *Evening Post* recalls that there are other States in Tennessee's position. For instance:

"In Arkansas, where an emergency clause carried the recent Prohibition Law into immediate effect, and the saloons, having lost an appeal to the courts, are giving evidence of an underground resistance, mass-meetings are being held to insist upon the law's observance. In Ohio and Delaware the trouble is with liquor shipments into local-option territory. In the former State, Chief Justice Pennewill upheld last week the Hazel Law, prohibiting common carriers from accepting such shipments; in the latter, a referendum election has been called to pass upon a similar law."

The difficulty, observes *The Evening Post* finally, "seems everywhere to have a twofold root: in a saloon element that does not know when it is beaten, and in city police or country sheriffs who must be goaded by new laws to enforce old ones."

FOREIGN COMMENT

GERMANY'S BREAD DEFICIT

BEEF AND PORK in Germany have been for many years extremely scarce, and on reliable authority, as the German press witness, horse, not to say dog, has been as popular a viand as the chicken or the calf. This year, however, there is also a bread shortage. The protective policy which regulates Germany's importing business has not redounded to the comfort of what Bebel proudly styled "the proletariat aristocracy." The potato famine in Ireland with all its fearful and melancholy incidents finds at present some parallel in the wheat famine of Germany's overpopulated kingdoms and provinces. The Empire of Kaiser William can not feed its people excepting by means of costly importations from the far Eastern and Western worlds. Even the finest harvests of Westphalia and Bavaria fail to fill the mouths of the teeming millions that hold the land saved for them by the valor of Arminius. We learn from *The Continental Correspondence* (Berlin) this condition of things is keeping the country poor. According to Goldsmith,

> "There was a time, ere England's ills began,
> When every rood of land maintained its man."

At present in Germany every rood of land does not maintain its man, and we read in the paper cited above:

"Altho Germany has just had an excellent harvest, and the figures given are almost record ones, the import of wheat has again risen in comparison with the previous year. As an agricultural country, Germany produces chiefly rye, oats, and potatoes, whereas for many years past she has been one of the largest importers of wheat. The entire import for the first eight months of this year amounted to 15,635,127 double cwts. as compared with 13,930,889 double cwts. in the previous year."

Perhaps the most remarkable feature in Germany's importation of wheat lies in the fact that the United States furnishes most of this grain to the Empire, Argentina and Russia being outrun in the race. Thus we are told:

"Russia, which two years ago supplied more than half of the wheat imported into Germany, has now sunk to the fourth place. In the year 1911 this country imported more than nine million double cwts. of wheat into Germany, whereas the supply for this year has shrunk to a little more than two millions. The Russian wheat supply is now far exceeded by that of Canada. From the latter country Germany has this year received nearly four times as much as in 1911, viz., 2,141,447 double cwts. The import from the Argentine Republic has this year not quite reached the same figures as in the last year, but still amounts to 4,196,003 double cwts. The import of wheat from the United States of America has increased in the most extraordinary manner. This country has now taken the first place, even sending a larger supply than the Argentine Republic. Whereas less than two million double cwts. of wheat reached Germany from the United States in the first eight months of the previous year, the amount for the same period of his year amounts to nearly five and one-half millions (5,406,775) double cwts."

Roumania, one of the chief wheat countries of Europe, has failed in her wheat, and Germany has turned to Asia, East and Southeast. To quote further:

"The imports from Australia and British India show a rise as compared with those of the previous year; from the first-named country they amounted to 695,921, from the latter 377,717 double cwts. On the other hand, the import from Roumania, which last year surpassed that of Canada, shows a very decided falling off. From over two millions, it has sunk to a little more than 600,000. No doubt the war in the Balkans is mainly responsible for this sudden decrease. Nevertheless, there is every reason to suppose that, in the future, overseas countries, especially the Argentine Republic, the United States of North America, Australia, and India, will be the chief sources from which Germany will draw her wheat supply."

ALCOHOLISM IN RUSSIA

THE BEST MINDS in Russia stand aghast at the ravages wrought in Russian society by the abuse of *vodka*, the national spirituous drink of the lower orders. The Government at St. Petersburg has maintained a monopoly in the manufacture and sale of this commodity and has promoted with great energy its production and use. The Army and Navy that fought with Japan were supported by the revenue that came from this monopoly, and Russia, we are told, has replenished the privy purse of its sovereign from the sale of a drink that is actually tending to the demoralization of the common people. As far as we can learn from the opinion of the Russian press, ever since the Russian Government declared *vodka* a State monopoly, and assumed the rôle of the saloon-keeper, the liquor business there has been making rapid

THE GOOD-ROADS QUESTION IN RUSSIA.
The highway to financial prosperity!
—*Novoye Vremya* (St. Petersburg).

progress and has become one of the main sources of income of that country. Last year the Government of the Czar realized from the sale of liquor $412,000,000, and for the first six months of this year the proceeds exceeded those for the corresponding period of last year by nearly $23,500,000, which figures, perhaps, tend to show that the Russian bureaucracy has been successful in one branch of endeavor, at any rate. It may be recalled here that Mr. Maklakov, the Minister of the Interior, said in an interview with a French journalist some time ago that the "severe climate of Russia makes alcohol a vital necessity to the masses." But some Russians do not agree with that statesman's view, and have very different ideas about the results of the Government's activity in that direction. "Public drunkenness has been growing to extraordinary proportions," says the *Ryetch* (St. Petersburg), and the increase in drinking "has assumed a really threatening character." The radical press, and even some conservative organs, have been conducting a vigorous campaign against the liquor monopoly. Mr. M. Menshikov, of the *Novoye Vremya* (St. Petersburg), condemns it in the following words:

"A State monopoly of the source of drunkenness exists only

here, in Russia, and all the rest of the world—it seems, without exception—does not allow the complicity of the Government in this public vice. In the whole world, even in the barbaric and pagan, the rôle of the Government is presumed to be a struggle against vices, but not participation in the way of their exploitation. . . . Our official publicists (oh, how hard their task is!) maintain that the Government sells alcohol exclusively with a view to limiting the evil: that if it should allow perfect freedom in the manufacture and sale of this poison, drunkenness would reach 'quite incredible limits.' However, the experience of all nations—both Christian and pagan—which grant freedom in this respect, shows different results. Public intemperance in those countries persists, but it is far less and not so appalling as here. Why? For one simple reason. Repudiating the monopoly of liquor, the governments in the West deprive this vice of the most powerful capital in the world, that of the State. They deprive it of the most powerful mechanism of distribution, the governmental system. They take from it the highest authority, that of State approval. That alone constitutes a hard blow to vice. . . . Some may say: Permitting the manufacture, sale, and consumption of alcohol, the governments in the West grant freedom to this evil. Not at all. Only an opportunity for evil is afforded, but simultaneously measures are taken to limit the opportunity. Not getting into an irreconcilable contradiction with itself, like our Government, the Western authorities can fight drunkenness like any other vice. But here the temperance movement, as is known, frequently meets with opposition on the part of the Government. The resolutions of numerous village assemblies regarding the closing up of saloons and Government liquor stores have not been affirmed, petitions have not been granted, preachers of temperance have frequently been dealt with as common rioters, and subjected to punishment. . . . Despite the categorical 'wish' of the Imperial Duma that liquor should not be sold in the colonization lands of Siberia belonging to the Government and the Ministry of Domains, liquor is being freely sold there. . . . For many years the press and society have pointed to the unseemliness of selling liquor on great Christian holidays or in the early hours when the working people go to their factories and mills, or of selling it in such small quantities that the last cent might be taken from the beggar. The indecency and the great harm of it are well understood, but what can you do if the nature of trade in general and that in liquor in particular, demands that the trade should adapt itself to the chief consumer—the drinking masses? Having become the owner of and dealer in such a poisonous product, the Government has placed itself in a false position from which there is no way out. To limit the traffic means to limit the income . . . ; not to limit it means really to make drunkards of the people."

ENGLAND'S OPIUM TRADE IN THE EAST.

LLOYD GEORGE—"What do you pay for the privilege of poisoning your subjects with opium?"
EASTERN PRINCE—"About a million a year."
LLOYD GEORGE—"Heaven bless your Majesty for so greatly enriching our treasury." —*Wahre Jacob* (Stuttgart).

In conclusion, Mr. Menshikov takes this more hopeful view, however:

"No matter how much bureaucratic eloquence the 'liquor publicists' should expend, the fate of the liquor monopoly in Russia is already decided. If not the days, the years of this unhappy child of Count Witte and Kokovtzov are numbered. I say this with absolute certainty, because I can not conceive that the clouding of the Government's consciousness in this question can last much longer. Seeing the terrible results of public intemperance, it is quite improbable that the Duma and the Imperial Council will not attempt to check the danger, that the Church will not take a hand, enlightened society, and lastly the Government itself."—*Translations made for* THE LITERARY DIGEST.

SPREAD OF THE OPIUM-HABIT IN INDIA

IT APPEARS that while China, under a frankly "heathen" Government, is applying the most drastic measures possible to crush the opium-habit—and is succeeding in its attempt—the vice is actually spreading in India, under a Christian domination. According to the "Statement Exhibiting the Moral and Material Progress of India During the Year 1911–12, and the Nine Preceding Years," recently issued by the British-Indian Government, the internal consumption of the poppy poison rose 21.4 per cent. in the last decade. As stated on page 194 of this ponderous official publication, while India used 847,332.4 pounds of its home-grown opium in 1901–02, its consumption had jumped to 1,028,892.3 pounds in 1911–12, a net increase of 181,439.9 pounds. The curious fact about this increase is that, as the authority quoted says, "only a small part is . . . attributable to the growth of the population." This remark becomes very plain when it is read in conjunction with the statement, in another part of the book, that the increase in the population of the Provinces constituting British India between 1901 and 1911 was 12,662,000, or only 5.5 per cent. The consumption of opium, we find from this report, has increased in all but one administrative division of British India. Witness the following figures exprest in *seers*—a *seer* being a little more than two pounds:

	1901–02	1911–12	Average Consumption per 1,000 of population, 1911–12
	Seers	*Seers*	*Seers*
Madras	35,629	41,391	1.0
Bombay	46,001	56,278	2.8
Bengal, Bihar, & Orissa	92,857	103,162	1.5
Assam	48,217	60,279	9.1
United Provinces	62,301	61,810	1.3
Punjab	52,798	63,481	3.2
Northwest Frontier Province	2,535	2,637	1.3
Burma	39,858	53,120	5.0
Central Provinces and Berar	29,988	54,357	3.9
Ajmer-Merwara	1,139	2,694	5.3
Coorg	38	49	.3
Baluchistan	662	710	1.7
Total, British India	412,023	499,968	

A further idea of the increase of opium consumption in British India can be formed from the fact that, as stated in the Excise Administration Report of the Punjab, just issued, the amount realized by that local Government from the opium product sold for use in the province rose from $171,146 to $186,182.4 in the twelve months ending on April 31st last—and that this increase is not attributable to the increase of duty during that period. As to the reason why the consumption of opium is increasing in India, the last-named report states with great *naïveté:*

"The good work of police and excise officials, and the assistance derived from the public and local notables, are too often rendered nugatory by the extraordinary leniency of the courts, both original and appellate."

An insight into the classes who use the opium in India is given

SECOND THOUGHTS.

HER LATEST RAG-TIME.

"You made me love you.
I didn't want to do it, I didn't want to do it.
You made me want you,
And all the time you knew it, I guess you always knew it.
You made me happy sometimes—
You made me glad,
But there are times, dear,
You make me feel so bad," etc., etc.

(*Popular Song*.)

—*Pall Mall Gazette* (London).

SOME HOME-RULE CARTOONERY.

by a native Indian writer in the current issue of *The London Quarterly Review*, who thus frankly states the case:

"There is no province of British India and no territory governed by a native prince where the drug is not in common use. Generally it is taken in the form of pills: less often it is smoked. The consumption varies in different parts of the country, ranging from 18.7 pounds down to 4.1 pounds *per* 1,000 *per annum* (not taking into account the illicit consumption, which is known to be far from negligible). . . . A considerable portion of the drug consumed in British India and the native States, shocking to relate, is used not by adults, but by infants. The babies, it may be pointed out, do not merely imbibe the poison with their mother's milk, but actually are made to drink it dissolved in water, or to swallow it in the form of a tiny pill. The Government of India, in its capacity of opium monopolist of the Peninsula, it may be noted, especially prepares *balgoli*—children's pills—containing the 'black poison of the East' combined with spices, to be administered to babies. According to the evidence given before the Royal Commission on Opium which reported in 1895, in a single year 1,200,000 of these pills were manufactured.

"Taking India as a whole, fewer women than men take poppy preparations. In some localities, however, its use is so common that a box of opium is handed around among the ladies by the hostess just as chocolates would be passed about in Europe. The men and women who indulge in the vice are, for the most part, middle-aged or old, and seem to feel that it will smooth the path of their dotage by its narcotic influence.

"As to the races caught in the toils of the *papaver* siren, curious to say, the martial peoples have fallen under the spell more than the milder ones. The Rajputs and the Sikhs consume it in quantities. The Marathas, however, as a rule, are not addicted to the vice. The habit is more or less prevalent, broadly speaking, among the Indians in the Army. Many of them take it regularly, the year round, while others use it only during the winter. Among the races with a commercial bent of mind, the Marwaris are known to be the largest eaters of the drug, whereas but few Parsis take it.

"As a rule the vice is indulged in by the wealthy and middle classes, tho some poor people ape their vice. Few cultivators, litter-bearers, fishermen, day laborers, or other people who have to earn their living by the sweat of their brow, are addicted to opium, altho some members of the lower classes, such as tailors, carpenters, and those who do not do extremely heavy work, join the leisured people in the habit. A large number of railway employees, and not a few coolies, are slaves to the poppy.

"On the whole, indulgence in opium is confined to the urban population, and more especially to the inhabitants of large cities. Lucknow and Cawnpore, on account of their close association with the decadent Moslem rule just prior to its total extinction, head the list in this respect; and it is generally admitted that more Mohammedans than Hindu inhabitants of these towns are addicted to the vice. The consumption in Calcutta is very large, probably 10 per cent. of its population taking it. The habit is quite common in Benares and Gya, the prevalence in these places probably being due to the vice rampant amongst the Hindu and Buddhist priests and pilgrims. About 10 per cent. of the population of Madras make use of the juice of the poppy in one form or another.

"While the evil is largely urban, it must not be supposed that the rustics are not addicted to it. On the contrary, it is safe to assume that one-fourth or one-fifth of the adult population of Assam, and of villages in certain districts of the Punjab, habitually use the drug."

A FRANCO-SPANISH FLIRTATION

PROFUSE EXPRESSIONS of mutual good-will and high resolves of governmental harmony are heard in France and Spain after the visit of the French President and his Premier to Madrid. Talk of an alliance, or at the very least an *entente*, is in the air. The great Triple Entente will become a Quadruple Entente, and Spain's new Navy will range proudly alongside the fleets of England, France, and Russia. The more immediate results are to be better harmony in Morocco and a truce in the tariff war that has raised a trade barrier between Spain and France rivaling the Pyrenees. Some of the more sober Paris papers warn their readers against the extravagant expectations that are painting the future in rosy hues, and the German press consider the whole affair vastly amusing. The present condition of this question is well summed up by the London *Statist:*

"The French Prime Minister was so well received during his recent brief visit to Spain that it seems to prove that feeling in the two neighboring countries has grown so cordial that not only are they prepared for an understanding that will bring them much closer together than they have been for a century hitherto, but that there are reasonable grounds for expecting that either an alliance or an *entente* similar to that which exists between our own country and the French Republic is likely to be brought about."

And indeed the principal papers of Madrid for the most part seem to favor the match. The *Imparcial*, for instance, attributes

the highest significance to the interview between the Spanish Premier and Mr. Barthou, and adds:

"We may remark that a Franco-Spanish alliance would be a fine stroke of national policy. To associate Spain with the French *entente* with England would indeed be a triumph for Mr. Poincaré's statesmanship."

The organ of the Navy, the *Diario della Marina*, believes the visit "marks a definite stage in the progress toward a Franco-Spanish rapprochement," and predicts hopefully that "Spain will make her appearance in the field of international politics on reorganizing her Navy, and will be incorporated in the group of alliances most conformable to her interests, such as the Triple Entente." Indeed, it exclaims, "a new factor has now entered the group of European Powers—the Quadruple Entente, which will prove a guaranty of progress and peace."

ENLISTING DON QUIXOTE AGAINST THE TRIPLE ALLIANCE.

THE DON—"Yes, Marianne, only say the word and I will charge the German windmill!" —© *Kladderadatsch* (Berlin).

French opinion is best reflected in the columns of the *Espagne* (Paris), which was founded expressly for the purpose of drawing closer the ties between the chancelleries of Paris and Madrid. Recently Mr. Pinchot, Minister of Foreign Affairs at the Quai d'Orsay, wrote an article in this organ in which we read:

"The relations between France and Spain seem to have been prescribed by nature. A large terrestrial frontier joins them together, and if it is true that this frontier—formed by the magnificent chain of the Pyrenees Mountains—constitutes a natural obstacle to invasions and war, it has not prevented these two countries from being kindly neighbors always, so as to know each other, to appreciate each other, and very often in the course of their long history to lend to each other a mutual support."

The great *Journal des Débats* (Paris), which is supposed to express the sober second thoughts of French statesmen, thinks the recent conferences between Mr. Poincaré and King Alfonso will "do something to bind more closely the natural ties that unite the two countries." But it urges caution in expecting too great results from recent friendly speeches:

"We must beware of giving way on this subject to flights of imagination. Already the press have been trying to launch projects and prophecies of extravagant anticipation. They have been discussing plans of an alliance and of naval and military cooperation between France and Spain. Certainly the two States have common interest in the Mediterranean and are destined, unless they fall into deplorable blunders, to defend themselves by a united front. . . . But this is not the same as making formal engagements for a long term to combine their military operations. . . . The first duty of the two Governments is to improve their commercial relations."

This writer goes on to say that a "commercial war" is at present raging between Paris and Madrid, and that "ultra protectionists" have succeeded in reducing the trade between the two markets 38 per cent. since 1891. It is time "to put a stop to this absurd commercial battle."

The German papers speak as if they regarded with amused contempt the idea of a Franco-Spanish *entente*, and we read in the *Lokal Anzeiger* (Berlin), an official organ with a decidedly chauvinistic tendency:

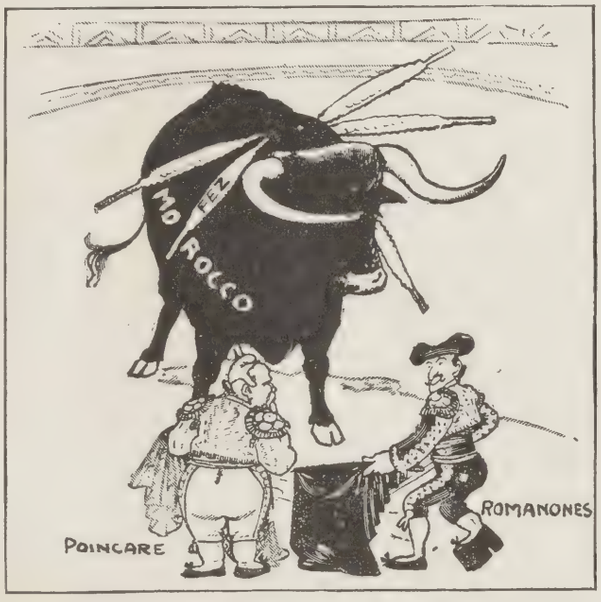
"Mr. Poincaré goes to Madrid! Europe is immediately flooded with speeches and newspaper articles brimming with assurances of friendship and love. Meanwhile people in Spain are compelled to meet these French exaggerations by clearly stating the limitations within which Spain intends to keep in accord with France. This does not, however, restrain Paris journalists from putting on a grand air as if France were putting the whole Kingdom of the Peninsula into its pocket."

The Catholic *Germania* (Berlin), which is glad to have a fling at France for its "Combism" in confiscating French Catholic property, declares:

"Will Mr. Poincaré succeed in realizing the *entente* which France is so anxious for, and thus oppose a Quadruple Alliance to the Triple Alliance? There are so many unknown contingencies which may crop up that we can only refrain from answering the question. The attitude of the Spanish Premier, Mr. Romanones, in any case seems plainly to be bent on checking the exorbitant demands of the French."

"The affair of the pretended Franco-Spanish alliance is becoming really ludicrous," remarks the *Berliner Neueste Nachrichten*, a Conservative paper, in which we further read:

"Already in the fêtes which celebrated the presence of Mr. Barthou at San Sebastian, every onlooker remarked how little the actual fraternization between the two peoples responded to the elation with which the visit was announced and commented upon. And now, after the visit of Mr. Poincaré to Madrid, which should have excited much more enthusiasm, we have the impression from the declarations published on both sides that 'the mountain labors and a mouse is born.'"—*Translations made for* THE LITERARY DIGEST.



EXTRAORDINARY POLITENESS IN THE BULL-RING.

ROMANONES—"I'll let you finish him."
POINCARÉ—"After you, sir."

—*Compana de Gracia* (Barcelona).

SCIENCE AND INVENTION

A ROW OF WOODEN HOUSES IN BOSTON.

BOSTON'S WAR WITH FIRE

FIRE LOSSES in the United States are regarded by experts as discreditable to our country, and many attribute the blazes that dot the land every day from ocean to ocean to our partiality for inflammable building materials. Altho the rank and file of our citizens remain indifferent, believing, with a fine disregard of arithmetic, that "the insurance companies pay the bills," some of our municipalities are waking up and are making attempts to diminish the loss, by legislation and otherwise. Many of our growing cities show street upon street of new houses built very much like ornamental piles of kindling-wood. People who live in such cities will be interested in the recent passage by the Boston city council of an ordinance considerably extending the fire limits in that city. This ordinance, tho the Boston *Transcript* calls it "feeble" and charges that the council passed it only through "the pressure of cold facts and the knowledge that the public were well aware of these facts," is regarded as a plain step in advance, and is the result of a systematic campaign of education waged by various civic bodies. Mr. G. G. Wheat, Secretary of the Boston Chamber of Commerce, who has taken an active part in this movement, writes of it in substance:

A FOURTH-OF-JULY FIRE IN BOSTON.

"Many of our growing cities show street upon street of new houses built very much like ornamental piles of kindling-wood."

"The study of the question of extending the building limits and increasing the area in which no more buildings of wood construction might be erected resolved itself into a study of comparative costs of housing. This study again divided itself into the first cost of construction and the costs of maintenance and depreciation, and this has been taken and applied to a term of years. . . . The figures submitted by builders and obtained on buildings actually constructed show that the difference in cost is less now than it was two years ago.

"The various associations, including the Chamber of Commerce, who have worked in favor of extending the building limit, have realized from the start that this question would probably settle itself on a business basis, and have studied the question from that point of view. It seems very clear that the better construction will be far cheaper in the long run, and even in a period of five or six years, and unquestionably in a period of ten years or more, but great opposition was naturally met from many builders of wood construction and agents of such property. An unusual amount of interest has been given to this by all classes of people, and the very great importance and the reasons for this interest can be well understood when the actual proportion of our total wealth that is invested in residential property is known.

"It is a fact that the business of housing the family has been very rapidly becoming a special business, which is entrusted to other men. These builders of the homes have viewed this business naturally from the standpoint of personal profit. It is not strange that such being the case, the future welfare of the cities has been overlooked and neglected. The study of this entire question of housing has just been opened up in this present study. The State of Massachusetts has passed a law enabling all towns and cities to create a City Planning Board, and in a few weeks a session

Copyrighted by the American Press Association.

DYNAMITING THE CUCARACHIA SLIDE.

of two days' program will be given to a broad view of the whole question of better cities, and the housing question will be given a large share of the discussions. Representatives from all cities will attend this convention."

The feeling in Boston just before the ordinance was put upon its passage is represented by the following paragraph from an editorial in *The Transcript* (August 7) describing conditions which have their counterpart in most other American cities:

"It is a quarter of a century since the fire limits of Boston have been extended. The city has grown enormously, and this largely by inflammable wooden buildings. Conflagration menaces huge districts; the fire risk is greater than in any other large city on the continent; the mayor urges extension of the building limits; the Chamber of Commerce seconds him; the fire commissioner and the Massachusetts Real Estate Exchange fervently concur, and yet nothing is done. . . . The situation is as anomalous as it is exasperating. It flatly corroborates the jeer of Europeans that in municipal government the American democracy is continually breaking down. In Europe such a situation could never have formed in the first place. Americans abroad who go to a fire expecting excitement are comically disgusted. Yet at home they endure the exorbitant expense of the huge fire hazard docilely enough."

The day after the passage of the bill, the same paper (September 23) exprest its feelings as follows:

"Of course what was accomplished was better than nothing, but it merely relates to territory that should have been covered twenty years ago or more. The great outlying areas still to be developed, and comprizing at least half of the city territory, will continue to be at the mercy of the old crowd. Only to an almost negligible extent does this ordinance protect the physical future of Boston. It merely recognizes a neglect that has lasted over several decades, that has left its blight upon much of the building in the meantime and leaves the greater field open for conditions that will probably be even worse than those we already have. . . . . .

"Something at least has been accomplished. The public is constantly learning what interests and what representatives of these interests are the chief obstructionists of this attempted vital reform. It knows who are banded together to keep Boston a wooden city that they may continue to sell it kindling-wood. Instead of quieting the agitation, the present result of this crusade should be to stimulate it. This should be made an issue at every municipal election until the now rapidly multiplying rookeries are no longer permitted. To be sure, the interests that are cheapening real estate and putting up fire-traps for the people to live in have been given a new lease of dangerous privilege, but it must now be the duty of every good citizen that has an interest in the future of his city, of every business and social organization that desires to see the newer Boston a fit place for self-respecting people to live in, to work before the City Council and before the legislature for the radical improvement of conditions that are now so menacing."

The condition, its partial relief, and the means that have been and are still being adopted to lessen risks from fire, have their lessons for all American municipalities.

A PLAGUE OF CATS

THE AUSTRALIANS, besides the plague of rabbits with which they have been afflicted for many years, are now obliged, it appears, to fight a plague of cats. The cats were introduced originally in the hope that they might take to killing off the rabbits, and now some planters are putting in dogs to kill off the cats. The canines having misbehaved in some instances, the victims are looking about for dog-killers, and apparently there is to be no end to this endless-chain game of The House that Jack Built. The obvious moral is clearly drawn by a contributor to *Cosmos* (Paris, September 25), who writes as follows:

"The Australians imported rabbits to give themselves the pleasure of hunting them and also to furnish a new product for their estates. As is well known, this plan did not work out well; the rabbits multiplied rapidly, owing to the well-known fecundity of the species; they have consumed pasturage and crops in such a degree that they have become a pest, destroying the food supplies intended for the herds. Every possible means has been employed to get rid of them; prizes of immense value have been offered to whoever would furnish a means of exterminating this prolific race. Nothing has succeeded, and breeders are obliged to live side by side with the enemies that they themselves introduced into their land.

"And now a new pest has appeared in the land—that of cats. These animals, the old ladies' friends, have often left their owners' houses, either voluntarily or because they were driven out, and have founded new families in the bush. In some cases breeders have established cats on their estates in the hope that

they would make war on the hated rabbit. Unfortunately, the descendants of these domestic cats, completely abandoned to their instincts, have returned to the wild state to such a degree that their type has altered; they have become larger, stronger, and more ferocious than their ancestors. As they find in Australia no enemy of their race, they have multiplied, their forces have gained ground, and they are infesting the whole country.

"To gain a livelihood, they hunt all sorts of small creatures—lizards, opossums, even young lambs, and they also have some appetite for the rabbits. In the Macquary Islands, where they have become particularly numerous, they also attack sea-birds, whose numbers they have diminished together with the eggs that formerly nourished the fishermen.

"It has therefore been decided to make an end of this race of malefactors, and to that end there has been introduced a breed of savage dogs to destroy them. This succeeded very well, but when the cats became scarce, the dogs, to live, began to attack the seals, and now it is proposed to exterminate the dogs!

"It is certain that the cats have lessened the amount of small game, but their effect on the rabbit plague remains yet to be shown.

"If we recollect that every country that has destroyed its pilfering sparrows has had later to spend large sums in reimporting the species, we shall realize once again that the Creator, in his goodness, has organized things better than our learned agronomists. This is not to say that we should stand with folded arms before the numerous plagues that assail us, but only that whatever we do should be done with extreme prudence."—*Translation made for* THE LITERARY DIGEST.

THE CULEBRA SLIDES

WHY IT WAS that all the eminent engineers and scientific men who went over the ground with such painstaking minuteness before we began work on the Panama Canal failed to foresee the enormous earth-glides that have been such an unpleasant feature of the later digging, is explained by Dr. Vaughan Cornish in a paper on the canal work read before the recent meeting of the British Association. Engineers and geologists both based their calculations on the rock as they found it, not foreseeing that its chemical composition was such that contact with water rapidly disintegrated it until it became hardly stronger than sand. We quote from a condensation of Dr. Cornish's paper, printed in *The Scientific American Supplement* (New York, October 11), as follows:

"Dr. Cornish gave a short sketch of the advance in the knowledge of tropical diseases which had rendered it possible to make the Isthmus healthy, and eulogized the Americans for the establishment of orderly and civilized life in what was, after all, only a great labor camp, temporary in its constitution and polyglot in composition. The efficiency of the organization of the operative force he attributed chiefly to the exceptional qualities of Colonel Goethals, chairman and chief engineer, after whose appointment in 1907 the rapid and efficient prosecution of the undertaking commenced. The greatest engineering triumph up to the present time was the Gatun Dam. It stood solidly, in spite of the looseness of its material, and it was so broadly based that it had not sunk in the soft ground, in spite of its great weight. The water was not yet at its full depth at the back of it; but its rate of rise had been equal to that calculated beforehand, so that there was no evidence of leakage.

"In regard to the slopes to be given to the sides of the Culebra Cut, all the engineers, both American and European, of the International Board appointed by President Roosevelt in 1905 had been in agreement, and all had been wrong. They had said that the rocks would stand firmly at an average slope of three vertical on two horizontal, whereas there are several miles of the cut in which the sides are still collapsing, altho the slope has been reduced to about one vertical on three horizontal—that is to say, less than one-quarter of the proposed steepness. The geologists had likewise failed to foresee the collapse of the sides, and had encouraged the engineers in their misplaced confidence. The source of error was the neglect of both engineers and geologists to take account of the chemical composition and minute mineral structure of the underlying rocks of which they had obtained specimens by boring. Some of these, lying for the most part in thin seams, were completely disintegrated when even a little rain-water reached them, and when the unbalanced pressure became considerable, on account of the deepening of the cut, they flowed like sand. The banks were thus left unsupported, and they collapsed. When the disintegrated seams extended below the bottom of the cut, the accumulated pressure of the fragmentary material heaved up the bottom, often to a height of 20 feet, the mound being, moreover, broad enough to cause a serious reduction in the width of the navigable channel. This trouble still continued, and, in Dr. Cornish's opinion, was likely to continue for a long time. From his own observations on the spot, however, he concluded that, owing to the great width of the bottom of the cut, and the efficiency of the machinery for excavation and dredging, the engineers would be able to maintain a channel of sufficient width and depth for the passage of large ships."

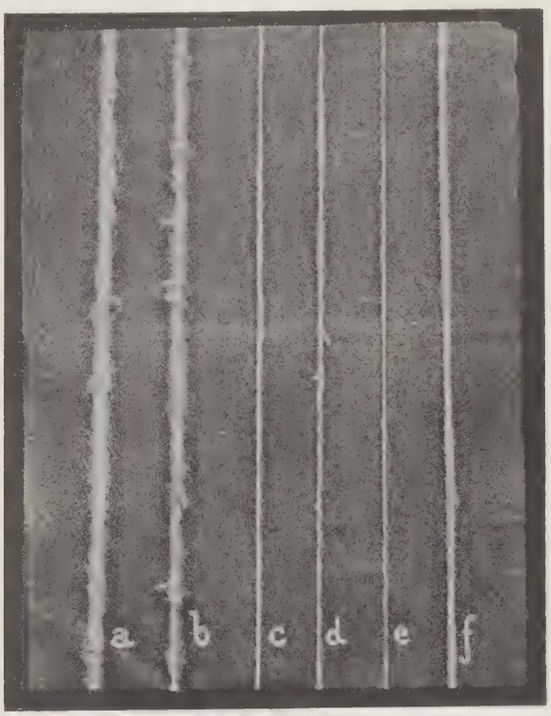
From the London "Graphic."

THE SLIDES THAT MENACE THE CANAL.

"There are several miles of the cut in which the sides are still collapsing," and in Dr. Cornish's opinion this trouble "is likely to continue for a long time," altho the engineers will probably "be able to maintain a channel of sufficient width and depth for large ships."

A HINT FOR STEAM ROADS

THE IRE of *The Electric Railway Journal* (New York) is roused by a suggestion that electric railways should now profit by the experience of the steam roads in the development and use of signals. The boot, it says, is entirely on the other leg. If there is one particular thing in which the



KAPOK YARN.

electric roads have nothing to learn of their brothers of steam, it is the maintenance of signal facilities. Writes the editor of *The Journal:*

"The statement that electric railways are in position to, and should, profit by the experience of steam roads in the development and use of signaling systems has been made so often that it is commonly accepted as a matter of fact. There is one particular, however, in which steam railways can learn something from electric roads, and that is how best to maintain signaling facilities.

"It is almost a universal custom among electric railways which have signals to require their maintenance to be handled by the department which looks after the overhead and power facilities. This puts the signal maintenance in the hands of men who are already handling electrical work and are familiar enough with it to be able to assimilate the added labor of caring for the applications of electricity which the signals represent.

"It is true that hardly any signals except such as are electrically operated are used on electric railways, but the fact remains, nevertheless, that these roads have shown a much better appreciation of the fitness of things in keeping all of their electrical facilities under the eye of an electrical department than steam roads have in trying to combine the maintenance of signals with maintenance of track. Steam roads have had for many years a department in charge of their telegraph and telephone facilities, which corresponds in a way to the overhead department on electric roads. But instead of trying to work out a combination of the telephone, telegraph, and signal maintenance, which undoubtedly could have been made successful, they seem to be endeavoring to combine two kinds of labor which are distinctly incompatible. . . . . .

"Electric railways seem to have arrived first—and without straining—at the best solution of the difficult problem of how to maintain signals most economically. And in this respect, at least, steam roads have something to learn from electric railways—even tho the latter may be indebted to the former for much of the pioneer work that has been done in connection with the engineering problems of signaling."

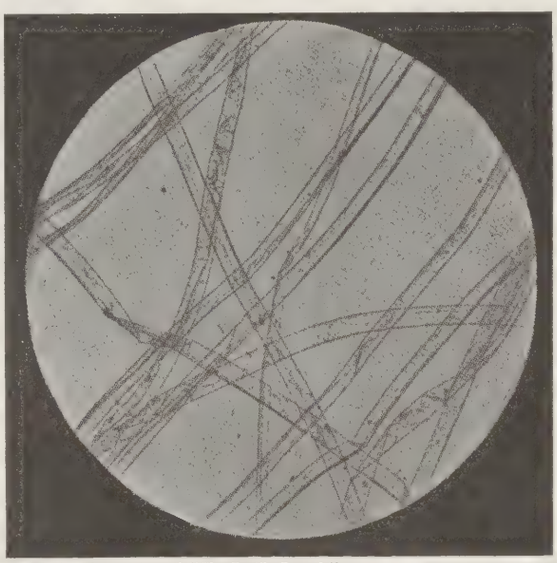
KAPOK: A NEW TEXTILE FIBER

VARIOUS SILKY FIBERS known as "kapok" are used in the industries, especially in Germany, and the invention in that country of improved methods of spinning them is giving their employment great impetus. From an article in the *Monatschrift für Textil Industrie* (Leipsic), by Julius Harraut, technical instructor at Weipert, Germany, we learn that the true kapok fiber comes from the kapok-tree (Eridendron or Ceiba) of the Dutch Indies and Java. It is also grown in Ceylon, British India, and Central America, and experiments are being made with it in German New Guinea and German East Africa. Owing to its lightness and expansive quality it is used for upholstery, mattresses, and similar purposes, but attempts to spin it were long frustrated by the extreme brittleness and smoothness of the fiber, until the invention by Emil Stark of a process by which it may be made into yarns, especially when mixed with cotton, wool, or silk. The Stark process is said to be likewise suited for spinning fibers similar to kapok, particularly the calotropis from Southern Asia and Africa, and which, owing to its extreme length, can be worked more easily than the regular kapok. We quote from a translation of Mr. Harraut's article made for *The Textile World Record* (New York, October) by its editor. We read in substance:

"The kapok fiber under the microscope has a peculiar brightness. The fiber is very transparent and nearly structureless. It has a very wide lumen, or cavity, in contrast with a very thin wall. It is very brittle and is easily broken when subjected to the spinning process, owing to the pressure and twisting to which it is necessarily subjected. The calotropis fiber has a similar structure, but exhibits more distinct longitudinal lines.

"The smoothness and brittleness of the fiber make the spinning process difficult. Both of these properties are taken into consideration in the Stark process, the fiber being treated with a solution, such as ether, carbon disulfid, and also with boiling water. This treatment dissolves the substances that may have adhered to the fiber, which loses its luster by reason of the resulting shrinkage.

"The kapok fiber is obtained from the fruit of a tree which grows to a height of 100 feet and occasionally to a diameter of



Illustrations by courtesy of "The Textile Record."

THE KAPOK FIBER.

three feet. Its roots are straight and grow deep into the ground. The bark of the young tree is light green and later becomes light gray. Under cultivation the tree reaches a height of about 60 feet and a diameter of 26 inches. The white or yellowish blossom develops into the kapok fruit, which is covered by a brownish fivefold husk and is from one-half to three-quarters of an inch in length and one to two inches in thickness.

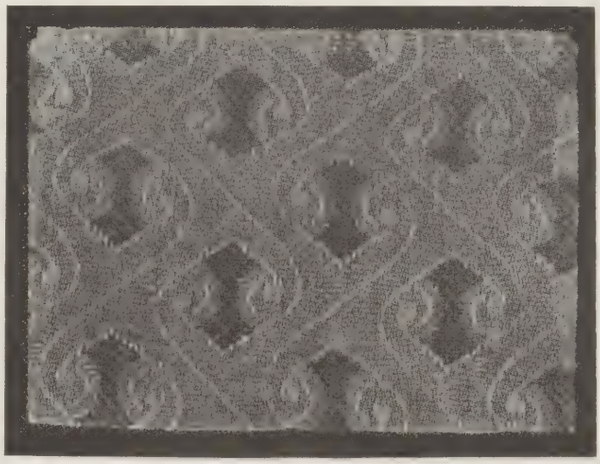
"At the Brussels Exhibition in 1910 a kapok-tree was shown

bearing fruit. This tree was exhibited, not because of its importance in the texile industry, but to encourage the growing of kapok in the Dutch colonies. The wood is used for isolating material for telegraph-wires. The kapok fiber is obtained from the seeds found in the husk of the fruit. The fibers become loosened as the fruit ripens.

"When cultivated kapok-trees are raised from the seed, the distance between the trees is 5 to 6 meters. Kapok is seldom cultivated alone, the field being generally planted with coffee and coco.

"The fiber is separated from the seed by hand. The seed with the fiber is thrown into a basket and stirred by hand with a short stick. The heavy seed sinks to the bottom and the fiber is removed from the top. As will be readily understood, this is a slow and expensive process. Attempts have been made to invent a machine for removing the fiber, but without success, owing to its brittle nature. Of late years there has been much adulteration of the kapok fiber by mixing with low grades of cotton and cotton waste. The fiber is packed in square bales at a pressure of 150 to 4,500 pounds to the inch. The bales are covered with jute and fastened with iron bands. Owing to the importance of kapok cultivation in Java, the planters in that colony have tried to protect their trade by marking the product 'Java kapok,' and having each bale stamped to indicate the quality as a guaranty against adulteration.

"Owing to the inflammability of kapok, many fire-insurance companies have refused to take risks on establishments in which this material is used; others having accepted the risks only at very high premiums. The kapok seed yields about 25 per cent. of oil, which is used in the manufacture of soap. The seed from which the oil has been prest is used for fertilizing the land and for feeding cattle."



UPHOLSTERY FABRICS OF KAPOK FIBERS.

THE FIRST DOMESTIC ANIMALS

GENEALOGY is quite as interesting a study when its object is the dog or the horse as when a human family is investigated. Most of those who pursue it, however, confine themselves to recent breeds. It is possible to follow it back to prehistoric ages—not of course with individual lines, but with the larger groups. The result of such studies reveals the fact that man has tamed certain breeds almost ever since he has been man—so far as his remains go to show. From a discussion giving the results of the latest investigations, contributed to the *Revue Scientifique* (Paris, September 27), we take the following paragraphs:

"A characteristic trait of certain species of mammals is the facility with which they abandon liberty to live entirely under the domination of man. They pass very easily from the savage to the domestic state, and vice versa. Others, on the contrary, forming the vast majority, absolutely resist all domestication, even when slow and progressive.

"This aptitude for domestication was naturally noticed very early by man, who has used it in the creation of domestic varieties.

"It is possible that the reindeer that lived in 'central Europe at the end of the Stone Age was more or less domesticated. It is a remarkably stupid animal, and the Lapps of to-day can manage it only with the help of their dogs. As the dog was not surely domesticated at this epoch, the question of the domestication of the reindeer is also doubtful.

"The first animal that we know positively to have been domesticated is the dog. It is known that the accumulations of domestic refuse called 'kitchen middens,' especially frequent in the north of Europe, are regarded as dating at the outset from the neolithic period. Now it has been long noted that all the bones found in these middens are gnawed and more or less eaten. Dogs' bones are also very numerous among them, and it has been experimentally found that this animal is exclusively responsible."

These earliest dogs, we are told, were of medium height and resembled our hounds. At the beginning of the Bronze Age larger dogs made their appearance, and at the end of that age we have numerous varieties. Some of these may have been due to crossings with wolves. As for the horse, it appears to have been abundant, in domestication, during the later Stone and the Bronze ages. We read on:

"Its domestication must have taken place rather late in our countries, for all the terms used to designate it by western races are derived from the Sanskrit, that is to say, from a tongue of Central Asia, a region where large herds of wild horses still exist. . . . The tame horse is descended in great part from these Asiatic horses. As for the small paleolithic horse so abundant at Solutré, it must have given rise to the semidwarf varieties, such as the Shetland, Scotch, Corsican, and Sardinian ponies.

"The pig appears to have been domesticated in the later Stone Age. . . . The sheep . . . was much later domesticated than the ox or the horse, and the old Egyptian wall-paintings do not show it, altho they represent the two latter animals. The prehistoric sheep has descendants, not much modified, in certain Swiss varieties of to-day. It was small, with slender legs and short horns like a goat's. At the end of the neolithic it was joined by a stronger variety. . . . . .

"The neolithic goats were quite similar to our modern goats, but smaller. They originated in Asia, where there are numerous wild forms in the Himalayas, Afghanistan, etc. . . . The ancient Egyptians reproduced the goat in their paintings, and the Bible and the Vedas speak of it.

"The *Bovidæ* must have been represented from the first by two forms: the *bos primigenius* or urus, and the *bos longifrons*. The urus was probably related to certain Scotch varieties, and to Hungarian and Russian forms. The other corresponded to our shorthorn varieties. . . . . Skulls without horns are also found, but their signification is not exactly understood. . . . In the Bronze Age appeared the *bos frontosus*, an ox with a long head, flat forehead, and long horns, the ancestor of our best breeds. Unfortunately the relations of these various varieties are not known.

"The problem of all these breeds of domestic animals is equally difficult; not only were they derived from many sources, but hybridation and the introduction of foreign elements by man must have complicated their descent extraordinarily."—*Translation made for* THE LITERARY DIGEST.

LETTERS AND ART

MR. ALTMAN'S GREAT GIFT OF ART WORKS

"IT is precisely as if a generous section of the Louvre or of some other great Continental gallery had by some magical process been conveyed to our shores and bestowed upon the public," says Mr. Royal Cortissoz, writing about the Altman art bequest. The art world of America had not ceased talking of the great Morgan collections and their probable destiny as public possessions when this other gift to the public is made with almost no restrictions—none, indeed, save what has been easily surmounted. Mr. Altman's accumulations were fewer in number than Mr. Morgan's, but

AN OLD WOMAN CUTTING HER NAILS,
By Rembrandt.

This and the following pictures in this department are from the Altman collection bequeathed to the Metropolitan Museum of Art.

they are distinguished by their unique excellence. Every one is a masterpiece. Much has been said of the thirteen Rembrandts, "including certain works of the noblest renown." As regards pictures, declares Mr. Cortissoz in the New York *Tribune*, "Mr. Altman would appear not merely to have equaled, but to have surpassed, all other American collectors of the present day." Mr. Cortissoz recalls that Mr. Altman's name was frequently associated with sensational prices in the foreign auction-rooms, but adds that "he was never known to be merely extravagant." He sought only "authentic and brilliant gems of old paintings," and the high prices were unavoidable. By Hermann Struck, the German etcher, lately a visitor to New York (quoted in the New York *Times*), Mr. Altman is described as having been an "ideal collector," who "never considered buying a picture, porcelain, or any other treasure without weighing the question: "Is this piece really worthy of a place in my gallery?" Mr. Cortissoz draws an interesting picture of New York's future good fortune:

"Possibly he had a special predilection for the art of the Low Countries, if we may judge from the prominence of Rembrandt, Hals, Van Dyck, Vermeer, Ruysdael, Hobbema, De Hoogh, and Maes in his collection. But three other paintings of his would alone serve to show his catholicity as well as his really subtle judgment. He bought one of the most exquisite of Renaissance portraits, the 'Federigo Gonzaga,' of Francia; he bought the 'Holy Family,' by Mantegna, which was in the Weber collection, the kind of souvenir of the Mantuan master which it had seemed America could never hope to possess, and finally he secured that fascinating little Botticelli, 'The Last Communion of St. Jerome,' which has a place by itself in the history of the painter's work. This last picture . . . is not by any means a conventional specimen of Florentine art. It illustrates Botticelli in a very personal and even esoteric mood; it is the sort of picture which requires for its full appreciation a peculiar knowledge and sympathy in the student. There lies the key to the fair fame of Mr. Altman's whole collection.

"It is good to hear that by the terms of his will all these works of art are to be arranged in rooms of their own, to form, as it were, a museum within a museum. One dwells with delight on the thought of the groups into which the paintings will fall. With the Rembrandts there will go, we suppose, all the Dutch and Flemish masterpieces of his period. Then one sees in imagination the little company of Northern Primitives, the paintings by Gerard David and the Memlings, and, on the same wall, the portraits by Dürer and Holbein. Velasquez will have naturally his well-isolated panel, and there will be, we should hope, a whole room for the Italians, for Mantegna, Botticelli, Tura, Verocchio, Titian, and the rest. In still another room one would like to see the sculpture, the marbles, and terra-cottas by Mino da Fiesole, Donatello, and other Italians, and the works of the French school, including examples of Houdon, Germain, Pilon, Falconet, and Clodion. There are tapestries, too; there are porcelains, enamels, bronzes, and furniture, and, to round out the splendid catalog, there are some superb rugs. Art lovers, in short, are to be dazzled this winter. With the Altman and Morgan collections both to be placed on view, the Museum will be more than ever a place of happy pilgrimage."

That the Altman art collection would ultimately be given to the public was inevitable, observes the New York *Evening Post*. "Treasures of such richness and rarity come to be thought of, even in the minds of their owners, as 'affected with a public use'; and it is only a question of time when the enjoyment and profit to be got from them are made as general as possible." The terms of the bequest provide for an alternative of a separate museum, under the control of the Metropolitan board, but the Museum directors have voted to meet the first proposal of keeping them intact. A few have written to the newspapers favoring the independent museum, thus affording New York an exhibit similar in plan to the Wallace collection in London. Of the accumulating treasures of the Museum the New York *Tribune* speaks:

"As it passes into the keeping of the Museum, accompanied by a characteristically generous endowment, the trustees of that institution must begin to wonder if Aladdin's lamp has not been placed in their hands. A body of paintings, porcelains, rugs, and other gems, which, housed by themselves, would have made a gallery in this city comparable to the Wallace collection in London, is flung as it were into the great stream of benefactions that for some years now has been steadily flowing into the vast building in Central Park. Already we have one of the great museums of the world, and to judge from this latest bequest its future promises almost incredible things. Historians will find in its growth evidences of public education and taste; they will recognize in it, perhaps, a kind of monument to American culture. But they will see in the Museum, too, an extraordinary

testimony to the depth and fervor of American patriotism, to the public spirit which more than anything else ennobles a man's career. It was a fine thing that Benjamin Altman could care as he cared, amid all the exactions of a merchant's busy life, for beauty and for genius. It was, if anything, finer for him to have conceived the thought of sharing with the people his joy in art, and of handing down his priceless works from generation to generation."

BRANDER MATTHEWS DEFENDS THE THEATER

AMID ALL THE ODIUM at present heaped on the modern stage it finds a sturdy advocate in Prof. Brander Matthews. He is optimist enough to believe that "the stage as a whole in the United States is far better, far truer to life and artistic ideals, for more authentic in every way than it has been in any previous period in American dramatic history." He is not a bit dismayed by the occasional play which needs or gets police attention. Responsible critics and the self-respecting public stir up the storm that moves the public guardians to action, and the play is altered. Then in a few weeks, or at most months, it disappears and the stage resumes its normal health and well being. People who do not fix their attention on one or two reprehensible plays that have aroused public criticism must realize how much better off we are to-day than were our fathers of fifty years ago, despite the current cries of theatrical decadence. In the New York *Sun* Professor Matthews asserts that "fifty years ago the drama of the English language was simply contemptible." He goes on:

"So bad were conditions then that respectable people were driven away from the theater except when they went to see a great actor—Booth, Kean, Cushman—for example. In those days respectable and discriminating people never went to the theater to see pictures of contemporary life, for such pictures were not to be found on the stage. For pictures true to contemporary life people read novels.

"At that time our stage was mainly filled with adaptations from the French drama. These, bear in mind, were deprived of their original value and meaning as picturing existing life in France because they had to be warped into conformity with British or American life. Therefore these French plays, adapted for the English-speaking stage, lost their integrity, and as a result the English and American theater became an unreality. At that time there was no international copyright law protecting the dramatist. The native dramatist of England and America had to compete with stolen goods brought from France, and even these were so disfigured that they lost their original value."

Professor Matthews would not be taken to mean that we are now writing great dramas, but he avers that "the spoken drama is alive on both sides of the Atlantic." Furthermore:

"Whether there are any men or women of genius among our modern playwrights, or whether the plays they are producing bear comparison with the old comedies and will survive, we can not decide, for we lack the perspective of time and must leave such judgment to the next generation. We may not have the tall trees—of that we can not say definitely—but we have got the underbrush to protect the tall trees.

"What is particularly hopeful about the young men referred to is that they are not trying to be literary. They are trying to be interesting, and most of them are trying to be truthful. By 'literary truth' I do not mean portrayal of the external facts of life, but fidelity to the inner life; and it is this inner life that the younger men are trying to get. Personally I think the drama will be more important than prose fiction during the next twenty-five years.

"With all these hopeful conditions, however, as to the playwright and his own work there is another side to the dramatic situation which must be noted. Without its being any one's fault, the organization of the theater itself is unfortunate in this country. Producing managers, of course, do not make so much money out of a play during its run in New York as they make from that play while it is on the road, especially with two or three or half a dozen companies acting it in different parts of the United States.

"Owing in a large measure to the enormous current expense of producing plays, the manager as a rule tends to look with distrust upon a play in which he does not see 300 nights. This means that in far too many cases he is inclined, because of circumstances, to regard favorably a play abounding in violent action and primary colors.

"It may frequently happen that an artistic play which would be commercially successful for thirty nights in a repertory theater has no chance of being produced, simply because of the unfortunate organization of the theater here. Let me repeat that this is no fault of the manager, but results inevitably

MAGDALEN VAN LOO, WIFE OF TITUS.
By Rembrandt.
The Altman collection contains thirteen canvases by this master.

almost from the system that has grown up; and I do not see how it can be avoided until we have one or more repertory theaters in each large American city.

"Right here comes in the great value of the Drama League of America. Its officers send out to all members of the league a bulletin about a play that appeals to the more intelligent playgoer. The result is that the manager is encouraged by rising houses, due largely to response of the league members and their friends to give the play its full chance and also to give the general public time to hear about it and to see it."

The art of acting, which is sometimes thought to be lost, or on the decline, has, in this writer's view, only suffered a change into something else. We shall not expect old stagers to agree that acting is better; it is different in kind, and with the change has come about a changed viewpoint in the audience:

"With this silent, steady evolution of the drama toward its high destiny we find the interest of the more intelligent part of the audience drifting away from the acting to the play itself—its construction, workmanship, the ideas and ideals of life it interprets and the picture it gives of this and that phase of life. Twenty-five years ago people generally went to the theater to see an actor or the company of an actor. Now an increasing minority go to see what Shaw or Barrie or Thomas has to say; and it is safe to guess that the plays they want to see will be played well.

"I am well aware that a competent actor's personality makes the stronger appeal and that the great majority of the average audience go to see this actor or that one and always will. But

I maintain that the leaven in the lump is growing, and people are now discussing the thesis, problem, and meaning in the play as never before. This intelligent consideration of the drama itself is growing, for one reason because the modern stage has no longer the large, dominating personalities of thirty or forty years ago. There is no Forrest, Booth, Cushman, Irving, or Jefferson on our stage to-day as a towering personality. No one of these great actors took any interest in the contemporary drama of his own language; no one of them ever produced a good new play. They were wholly satisfied to play the great parts in the great plays of the past.

"All this does not mean that we haven't good actors to-day,

THE LAST COMMUNION,
By Botticelli.

It "has a place by itself in the history of the painter's work."

for we have—and a larger number of good actors than ever before. Any one who remembers stock companies of forty years ago knows that the performance of a good modern play is likely to be a great deal better than it would have been in one of those stock companies.

"In all this evolutionary change in the drama one thing that has been lost is the tradition of the older artificial comedy. To-day we do not see performances of 'The Rivals' or 'School for Scandal' that are at all comparable with their performances of forty years ago, and simply because the actor of to-day has trained himself to act an entirely different kind of play—less rhetorical, less traditional; in a word, less artificial. Yes, there are a great many more good actors now than there were forty years ago.

"In considering the striking changes which have come over the drama and its probable future development we must not forget that the old artificial plays were written to permit production under physical conditions of the theater itself which have now passed away. Under the crude and inefficient lighting of the stage it was necessary then for the actor to come right down to the footlights, the only place where his facial expression could be seen. . . . . .

"Garrick would be laughed at to-day if he were here now, and acting in his old manner, but if Garrick were here to-day he would adjust himself to modern conditions and be just as great now as he was in his own time under conditions that then prevailed."

KIPLING STILL A BEST SELLER

THOSE WHO IMAGINE Kipling is one of the "dead ones," because his name is not so much bandied about in literary columns as formerly, will be surprized to learn that his vogue among readers has never had a setback and is now steadily increasing. Kipling, in fact, is one of the best sellers. Book-stores record a decided jump in the past year. Where one copy was sold ten years ago, about ten are sold now, says the New York *Sun*, which recently collected testimony from the big booksellers of New York. Some titles, to be sure, sell only four or five times as many as they did, but others sell fifteen times as many. Mr. Charles E. Butler, of Brentano's, gives this testimony:

"Kipling is now and has been for some time one of our best sellers. Where ten years ago we sold one copy of Kipling we now sell ten. Of course this is an average, and in many instances we sell a great many more than that. 'Departmental Ditties' is still among his most popular books of verse, and I believe we sell more of that than any of the others. It is one of the best known, and to the thousands of the younger generation who are just getting acquainted with Kipling's books it, of course, furnishes a striking introduction. 'The Seven Seas,' I believe, would come next in poetry, while 'Kim' in the prose is one of the best sellers with us. From all I hear, people are more anxious to read that great epic of the East now than they ever were before. . . . . .

"In his almost uncanny understanding and expression of human nature, and in his gift of knowing men and bringing out the real human character, he is as a writer more like Theodore Roosevelt in his field as a statesman than any man I can think of. I think the comparison will be admitted, because of their common virility, understanding, and appeal to the strenuous manliness of every human being.

"Kipling can talk to any man in his own terms. Take 'The Day's Work,' for instance, and in it he talks to civil engineers, railroad engineers, sailors, marine engineers, and a dozen other distinct classes of men with a perfect understanding and an accurate technical knowledge of that man's trade or profession. Moreover, the trick is so turned that the technicalities do not mystify the layman. You see, having lived the life out there in India, he well knows the heart and mind of the empire-builders and of the empire-protectors, Kipling's beloved Tommy Atkins.

"The versatility of the man is one of the things about which we are constantly hearing. Book-buyers never seem to cease to marvel at the range of his powers. Take, for instance, his 'History of England'; he takes the subject from an angle entirely his own, and with a virility which he alone can display; he gets behind the nationalist movement and turns out a book which I believe will be one of the leading volumes of its kind for years to come. Certainly such unofficial indications as we have in Brentano's show that.

"Just as Roosevelt has done much for the inspiration of an ideal in the American people, Kipling has done more than any of us can realize toward the inspiration of the people of Great Britain."

One of Kipling's signal achievements has been to make the "tired business man" read poetry—at least his poetry:

"Everybody appreciates the fact that the average man is not a great lover of poetry, but every man can appreciate the rhythm and swing of Kipling's deathless ballads, and from the way that books sell here I am confident they do."

Along with Shakespeare, Dickens, Scott, and Thackeray, Kipling is now bought in complete sets. He is a part of every library's furnishing, avers Mr. W. J. Macmillan, who is a buyer in the Wanamaker store of New York. This means at least that he is bought, even if it follows that he is later embalmed, as happens so sadly often to the authors of "complete" works. Mr. Macmillan declares:

"Kipling's popularity has been a steady growth, and to-day we are selling many, many times as great a quantity of his work as we have before in the last ten years. There is nothing unstable or ephemeral in the way Kipling's books are selling now. They are selling very well indeed, and we have every reason to believe that they will continue to sell better. Kipling is a standard

author, and as such his books sell in complete sets now where they used to sell in two or three volumes. The public has given unanimous expression of its pleasure in the complete uniform editions of Kipling, and we find that the expensive editions sell just as well as the cheaper ones. The limp-leather set, for instance, has done comparatively better with us than the green cloth. Of course with a living author like Kipling, people like the uniform editions because they can always add to their collections.

"Whenever one of our regular book-buyers who is known as a lover of rare and expensive books comes in here we expect him to ask for Kipling, and we are seldom disappointed. We find that persons furnishing libraries almost invariably buy complete editions of Shakespeare, Dickens, Thackeray, Scott, George Eliot, and Kipling. Always a complete edition of Kipling is included. . . . . .

"The newer works are the more generally discust by purchasers, and his late volume, 'Collected Verse,' is a favorite here. We find, however, that 'The Five Nations' and 'Departmental Ditties' are still among the most popular of his books of poems, while 'The Day's Work,' 'Many Inventions,' and 'Plain Tales from the Hills,' might roughly be classed as among the most popular of his prose works.

"We hear a great deal of the revival of poetry, but I am confident that Kipling's poems would have been just as popular today without any other poetical revival."

NORWAY'S CONFUSION OF TONGUES

IF IRELAND gets home rule, will she throw the English language in the face of her erstwhile oppressors and begin talking in Gaelic? This is practically what Norway is reported to wish to do with the tongue imposed upon her by her Danish conquerors. Norway has been a bilingual nation ever since, and some have desired that the "landsmaal," or native speech, should become the official language of the country. Ibsen scoffed at the project in "Peer Gynt," but its advocates have been persistent, and a writer in the New York *Times* asserts that the celebrations of 1914, marking the centenary of Norway's independence of Denmark, will show a formal adoption of the new tongue. Resident Norwegians have followed up this statement with a denial, but the possibility is interesting enough to warrant quoting the grounds upon which the action rests. The word reform should not be applied to the proposal for, as the writer asserts, "the measure now in process of adoption is not the revision of the existing language, namely, Danish, but the adoption of an entirely different one, known as the Landsmaal." We read:

"It was invented toward 1850 by the eminent Norwegian philologist, Ivar Aasen, who in its construction embodied much of the ancient Norse of the sagas, as well as some of the dialects of the remoter regions of the Kingdom, where the peasantry have clung through the four centuries of Danish domination to the tongue spoken by their forbears in the days of the vikings.

"Employing these and other materials, adapting them to modern requirements, Ivar Aasen succeeded in evolving so melodious and so poetic a language that the vast majority of his countrymen, commencing with the rural population, have accepted it for their songs, their plays, their sermons, their schools, and their vernacular. It has caught their fancy; it appeals to their pride in the romantic past when the sway of the Norse vikings extended over Scandinavia, Northern Germany, Russia, and the greater portion of the British Isles; and it has become identified in their eyes with Norwegian nationalism.

"The spurious Danish—in which Ibsen wrote and which has been the official language of the Norwegians for more than four hundred years—recalls to them those centuries of Danish oppression and persecution, when, robbed of her independence, Norway was ruled from Copenhagen, not even as a province, but as a colony, fit only for spoliation, exaction, and tyranny. Everything that serves to recall Danish domination is hateful in Norway. Indeed, his Danish birth is the only real cause of the unpopularity of King Haakon's sagacious and conscientious rule."

Early next year Norway will celebrate the centennial anniversary of her emancipation from Denmark, of the recovery of her independence as a separate kingdom with a constitution of her own, tho united by dynastic ties with Sweden until 1905. And the writer in *The Times* asserts that—

"It is proposed to signalize the national rejoicings in honor of the occasion by the legislative adoption of Ivar Aasen's Landsmaal as the official and national language of Norway. The Government, an overwhelming majority of the Storthing, the press, and the bulk of the people have all determined upon the change, and a royal commission appointed jointly by Crown, Cabinet, and Parliament is now engaged in completing the necessary arrangements for the execution of the proclamation decreeing the new vernacular, which is to inaugurate the centennial.

THE HOLY FAMILY.
By Mantegna.

"The kind of souvenir of the Mantuan master which it had seemed America could never hope to possess."

"It will be a remarkable and unique event. For, while there are plenty of instances of a Government forcing its language upon provinces and dependencies acquired by conquest or statecraft against the wishes of their population, there has been no case until now, to my knowledge, of a people compelling its rulers to abandon the national language for an entirely new tongue. Ivar Aasen, its creator, already celebrated as a philologist, will henceforth enjoy new and more lasting fame, and will occupy an isolated place in history as the one man who invented and constructed a language which so pleased and fascinated his countrymen that they relinquished the tongue that had been theirs for hundreds of years, to adopt his for official and national use.

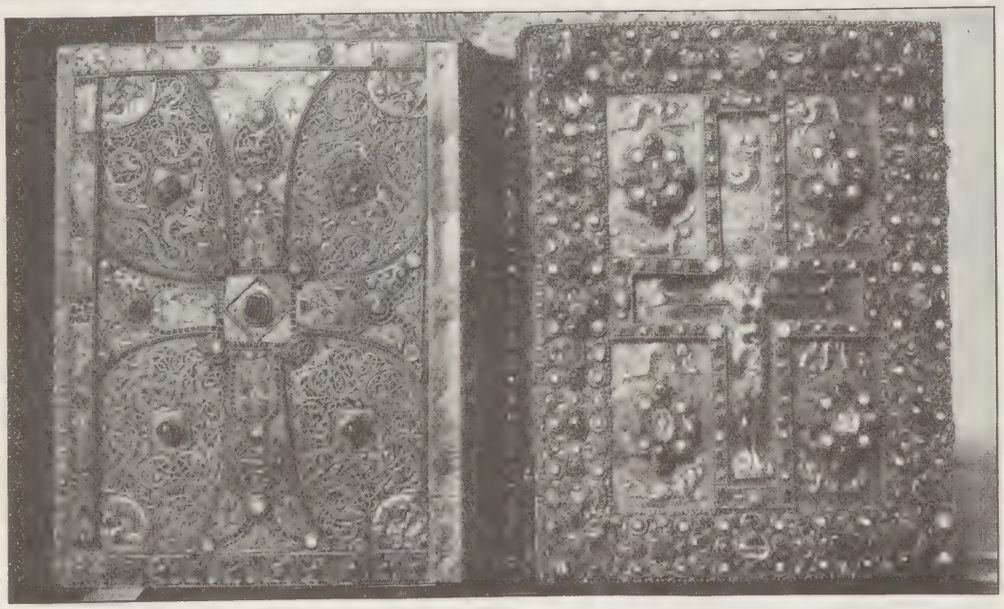
"Ivar Aasen, who was the son of a small peasant farmer, was born just a hundred years ago in the district of Sondmore, and was honored on his death, in 1896, with a great public funeral at Christiania, where a national memorial is about to be erected over his tomb.

"There are but two things more to be mentioned in connection with this remarkable linguistic change in Norway. The first is that Landsmaal is phonetic in its spelling. The second is that its adoption as the national vernacular will present no difficulty. For, as I have mentioned above, it has been taught in schools for twenty and thirty years past—and in Norway everybody attends school, popular education being of an extremely high order. Moreover, the people have become so accustomed to it, and have developed such a liking for it, that it is they who forced its adoption by the State."

RELIGION AND SOCIAL SERVICE

THE MORGAN BIBLES AND PRAYER-BOOKS

THE PUBLIC have repeatedly been given the opportunity of seeing detached sections of the great collection brought together by the late J. P. Morgan, but they are now seeing for the first time his wonderful collection of sacred documents. It is on exhibition at Columbia University, brought there primarily for the benefit of the members of the General Convention of the Episcopal Church, who have just completed their sessions. More than seven years ago Mr. Morgan "first introduced into their consultations the germinal idea from which they gradually shaped the plans for the present exhibition," explains Prof. Vladimir Simkhovitch, who was Mr. Morgan's chief adviser in the assembling of these works. For it was his desire as a churchman that the body in whose councils he often served should have the opportunity to see these works of church history. Nowhere in the world can their counterpart be found. To a representative of the New York *Tribune* Dr. Simkhovitch declares:



HEAVILY JEWELED MANUSCRIPT COVER.

The left side is eighth-century work; the right represents the ninth.

"I am acquainted with all the important manuscripts of the world. I have handled most of them. And I can say that the great collections of neither Munich nor London could produce such an exhibit as that which you see here. It is not the number of items, but their individual quality, that makes it so remarkable. Practically every period in the history of the Christian Church is illustrated by one or more finest specimens—and mark that I say 'finest.' Out of every important period the most important thing of that period is seen here. Yonder, in one of those heavily jeweled Byzantine bindings, is a fragment of a seventh-century manuscript. . . . Very few people remember to have seen even the manuscript."

The exhibition comprizes about three hundred and fifty books and nearly one hundred manuscripts. The writer goes into these rhapsodies:

"Massive jeweled manuscript covers, a thousand and more years old, are there, and marvelous hand-illuminated manuscripts, their gorgeous colorings and exquisite workmanship the result of years of toil by ancient monks and medieval artists. Many of them were once the dearest pride and delight of kings and emperors and popes. Only potentates such as these could command the services of the men who produced most of the Morgan manuscripts—men whose talents and skill were the rarest of their time, and a few of them true masters whose gifts to the centuries have yet to be surpassed.

"Dr. Simkhovitch's 'No' was sufficient to damn any manuscript that was being offered for sale to Mr. Morgan; and, by the same presents, no more than the Columbia professor's 'Yes' was needed to persuade him to back a medieval missal to the limit.

"When Dr. Simkhovitch leans his nose close to the pages of an ancient and very rare Spanish apocalypse, in order to examine closely the direction taken by the feathers on the wing of a minute dove in the marginal decorations that surround a hand-illumined portrait, you know he is going to tell you whether it really dates from the early twelfth century—(and Spanish manuscripts of any century are extraordinarily rare, he explains)—or is merely a copy, of inferior merit, made a few score or hundred years later, and therefore of no great historical or artistic importance. The soft brown folds in the gown of a nun who adorns the pages of a thirteenth-century Bible surprize you by remaining motionless when touched by the light breeze from an open door behind you. Dr. Simkhovitch has not spoken, but when he pauses before this bit of art there is something in his attitude that keeps you as quiet as tho he had raised his index finger and whispered 'Hush!' He has grown to know these monuments of an ancient art more intimately than any man living who has seen them—and you feel that it has only deepened his wonder."

A few of the gems from this collection are described with Professor Simkhovitch's comment—

"It is in one of these cases that Dr. Simkhovitch shows you the Byzantine bindings he has just referred to, and with them points out an extravagantly bound tenth-century manuscript, the famous 'Evangelia Quattuor,' turned down to show both upper and lower covers. The upper one is a splendid example of Carolingian art—the finest of the ninth century, when this half of the cover was made. It is all worked over with carved and hammered brass and silver relief-work, in which are roughly set more than one hundred and thirty jewels—rubies, emeralds, pearls, garnets, and so on. The lower cover, explains Dr. Simkhovitch, exhibits the only known combination of four different processes of medieval decoration—namely, 'garnet' or jewelry work, cloisonné, enamel, and Irish chiseled metal. Just how this rare grouping came about is a tantalizing mystery, but the date of its making is definitely fixt as in the year of Our Lord 750.

"In the case beyond is a gorgeous manuscript of the eighth century, known as the 'Golden Gospels.' Its great pages of vellum—dyed a rich purple with a craft unmatched to-day—bear in letters of gold the text, which Dr. Simkhovitch describes

as 'the most important collection of the kind in existence.' In its later days this volume was presented by Pope Leo X. to King Henry VIII. of England, whose royal arms were then inscribed on the fly-leaf. There are some ninth-century manuscripts in this case—one of them illumined with miniatures—and then, right in front of you and just below the blazing 'Golden Gospels,' you notice something for the first time—an entire bound volume in the handwriting of Martin Luther. The hand is small and cramped, the ink a bit pale here and there, plenty of marginal notes and an occasional word scratched out—the whole volume might be squeezed into your pocket, always providing, of course, you had a right to put it there.

"'I doubt if any other complete volume in his hand exists,' is Dr. Simkhovitch's comment. 'Nor do I know why I placed it here—just my fancy, perhaps—but there you see it,' he adds, with a slight gesture toward it of his hand, palm up, and then moves on to another case, leaving you to wonder just how firm his belief may be in the divine right of kings.

"Oldest exhibits of all, marking the span of Biblical records, are two Babylonian bricks, 'probably from the library of Ashurbanipal,' and dated in the reign of Ammi Zaduga, about 2,000 B.C. One of them bears the earliest known version of the Deluge, and the other the oldest extant record of the story of Adam. Flanking the bricks are two baked clay cylinders, made by order of King Nebuchadnezzar between the years 604 and 561 B.C., and containing, among other records, some account of the attempted repairs on the Tower of Babel. Aside from these four hoary records, the exhibit is designed to cover only the life of the Christian Church.

"Only a very few complete tenth-century Bibles exist; one of them is in the Morgan collection, and fills three huge volumes in a case all by itself. Several Bibles and apocalypses in French, Greek, German, or English, and dating variously from the twelfth, thirteenth, and fourteenth centuries, are shown. On one page of a French apocalypse of the thirteenth century appears an illumined portrait of King Louis IX., for whom it was made, and three others—his mother, the artist of the work, and the caligrapher, respectively.

"The 'Windmill Psalter,' in an adjoining case, on account of the miniatures, especially the small ones, as well as the pen-and-ink decorative drawings, that embellish nearly every page of this manuscript, is declared by Dr. Simkhovitch to be 'the finest monument of the thirteenth-century English art.' Here also is the famous 'Huntingfield Psalter,' the first forty pages of which are devoted to miniatures depicting scenes from the Old and New Testaments.

"Hard by is Wyclif's English version of the New Testament, written on vellum. It formerly belonged to Thomas Roper, the son-in-law of Sir Thomas More, and was an heirloom in the Roper family until Mr. Morgan bought it.

"An exhibit that Dr. Simkhovitch regards as a special prize is a Brevarium Romanum, a Flemish manuscript, written and illumined toward the end of the fifteenth century by David Geraerd and his associates. It contains twenty-five large and thirty small miniatures, and the whole was executed for and later purchased by Eleanor, Queen of Portugal. Dr. Simkhovitch once wrote an article for the *Burlington Magazine*, in which he pointed out that this manuscript contains many miniatures identical with the Brevario Grimani, the famous treasure of St. Mark's, in Venice, and that it has, besides, 'many conclusive proofs' that the Venetian manuscript was largely copied from the one in the Morgan collection. Dr. Simkhovitch at once found himself the center of a swirling storm of argumentative protest at what may have seemed to some well-nigh heresy."

FRENCH ILLUMINATED MANUSCRIPT.

Work of the Court painter, Jean Bourdichon.

A JAPANESE VIEW OF OUR PIETY

ALL OUR EFFORTS to Christianize Asia are considered a failure by some Christian Japanese, because our religion is too practical, or, as they deem it, too worldly. This idea is clearly set forth by Mr. Kanzo Uchimura in *The Christian Work*. That the writer is a "devout Christian Japanese," who speaks for many of his fellows, is admitted by the editor of the New York weekly, tho he expressly states his own dissent from much that is said, and asserts that "many Japanese take just the opposite view as to the success of American missions." The Japanese critic of "Americans as religionists" observes, first, that this country has produced no really great thinker or artist. Then he continues:

"A great religion can not develop in a country where there is no great art or philosophy. America has never had one great theologian, except Jonathan Edwards, whose greatness has not yet been recognized by most Americans. Religionists of America are, as a rule, persons who awake society; that is, so-called revivalists. Theodore Parker on Unitarianism, Moody on Evangelism, have no difference in respect of pragmatism."

Perhaps our greatest weakness, in Mr. Uchimura's eyes, is that we "do not recognize the value of religious work which can not be shown by statistics." The religion of Americans, he complains, "is in substance worldly."

"When they preach Christianity they do not put so much stress upon truth itself as upon the influence which truth has upon politics and society. Their logic is always *a posteriori*, but not *a priori*. When they have their statesmen prove the truth of Christianity, they consider they have got the greatest possible proof. Mr. Roosevelt, Mr. Taft, Mr. Wilson, and Mr. Bryan are great authorities in religion.

"To Americans nothing is more powerful than the fact of personal success as embodied in successful men. Therefore they can not understand mystical religion. In praising Luther, they refer to his works, but never touch upon his profound faith; they can comprehend Luther the reformer, but not Luther the

Christian. It seems that Luther's delicate idealistic conception of religion is beyond the comprehension of Americans.

"In their eyes Count Zinzendorf is not one of the foremost religionists, and the religious greatness of Honen and Shinran, founder of the Honganji, can not be recognized by them. The communion with God apart from the earth and body is called a dream by their religionists.

"Kierke-gaard advocated the Christianity which needed no church institution, but it has received no attention from them as impracticable. The Bible teaches that God is a spirit, but Americans do not believe in his power if it is not shown by forms and statistics. When they see me, they never ask, 'What do you believe in?' but always inquire, 'What church do you belong to? How many copies of your magazine are published? How many followers do you have?' When I say I commune with God under the shade of a grave, or by the small stream, they scornfully reply, 'Very poetical, eh!'"

So, with all our boasted religious activity, it seems to this Japanese observer that "lack of piety" is a fundamental American trait. It appears, we are told, in the very activity of our missionaries:

"They consider it of little consequence to break down others' faith and feel a triumph in having others throw away their hereditary religion. They do not understand that all religions are sacred. The missionaries want to impose their will upon others, and when they get others to believe just like themselves, they call it a missionary success. They who love liberty so intensely are not contented unless others have the liberty which they themselves enjoy. They interpret tolerance only politically and do not put it into practise in matters of religion.

"The spirit of tolerance is to respect others' faith, but they do not know tolerance in this sense. Thus, altho Americans profess liberty loudly, they are great tyrants in religion.

"They do not burn heathens at the stake, but they don't care at all to make light of and tread down the beliefs of so-called heathens. Not profound and not truly pious, Americans have never succeeded, tho they propagate their faith all over the world. When they converted the Hawaiians to Christianity they took possession of their land. They are proclaiming Christianity in India, China, and Japan, but they have never effected spiritual reform in them, only destroying the old customs and religions."

Hence it is, concludes Mr. Uchimura, that "American missionary works abroad are a failure on the whole." As he puts it:

"Americans who lack piety do not know the way to approach the mind of heathens, and they have no faith strong enough to meet the demands of heathens. Orientals are believers in 'future life,' while Americans care only for this world. The former are meditative, while the latter are expressive; and the former are tender, while the latter are vigorous."

MOHAMMEDAN SCORN FOR STATISTICS—It would seem that even to-day, among typical Moslems, scientific curiosity is an unknown attitude of mind. Indeed, according to incidents related by Miss Isabel Blake, of Aintab, Asiatic Turkey, and given to us in the current *Missionary Review* (New York), it is considered irreverent even to seek to know the facts of the universe. "Allah knows; why should I seek to understand?" is said to be the answer one ordinarily receives when asking questions in Turkey. For instance, we read:

"A curious American asked a Turkish camel-driver how long camels live. The reply was, 'How should I know? Allah knows. When Allah wills to take a camel he takes him. Who am I that I should inquire?'

"A French statistician wrote to the vali of Aleppo and asked these four questions: 'What are the imports of Aleppo? What is the water supply? What is the birth-rate? The death-rate?' The vali replied: 'It is impossible for any one to know the number of camels that kneel in the markets of Aleppo. The water supply is sufficient. No one ever died of thirst in Aleppo. The mind of Allah alone knows how many children shall be born in this vast city in any given time. As to the death-rate, who would venture to ascertain this, for it is revealed only to the angels of death who shall be taken and who shall be left. O Son of the West, cease your idle and presumptuous questionings, and know that these things are not revealed to the children of men.'"

TO MEND THE BROKEN SABBATH

IF THE PARTIAL BREAKDOWN of the American Sabbath is to be repaired, if the American people are to come to a realization of "the theft they are practising on themselves, to say nothing of their iniquity toward God, in the reckless abuse of Sunday, which dissipates their energies and lowers the tone of their lives," the first move must come from the Church, declares the editor of the New York *Christian Advocate*. It is indispensable to this end, he says, that Christian people should "recognize the spiritual values lying in the proper distribution of their time on Sunday." For,

"If they were more evidently convinced that the primary requirement of the day for themselves is an uninterrupted fellowship with God through prayer and meditation, to be followed by the unspeakable advantages of community worship in a temple dedicated to the Lord, the proper disposition of the balance of the day would be insured. If we begin the day with the notion that a fortunate pause in the hurrying activities of the week has been granted us for the mere purpose of festivity, the sanctities of the day are likely to be ignored. . . . . .

"We have no desire to suggest a schedule for Sunday which would make the day irksome with artificial restraints upon a normal and happy life, but we are very certain that there has been a gradual diminution of the spiritual purpose of Sunday on the part of Christian people, which ought now to be strongly resisted, lest it sweep on to further abuses of the finest institution ever devised by God for the protection of the human race."

That the Church is largely responsible for the fact that this is a "Sabbath-breaking generation," *The Herald and Presbyter* (Cincinnati) agrees. In the opinion of this Presbyterian weekly, the question is, Do we keep the Sabbath, or only Sunday? There is much in a name in this case, we are told—"no man has any right to be called a factor for Sabbath observance who is so weak in backbone and knee and speech that he does not call it the Sabbath." We read further:

"Every one who cares for sacred things sees that there is a terrible growth in Sabbath desecration. To great masses of people the day is simply given over to worldliness, in the way of sleeping, feasting, visiting, theaters, picnics, excursions, automobile and bicycle and carriage riding, baseball, and other games, while the Church and religion are neglected and trampled under foot. The Sunday paper takes the place of the Bible to multitudes, and God is not in any of their thoughts.

"But how can we expect them to do otherwise? Why should they observe the day as a holy day and not as a holiday? Simply because it is the Sabbath, and God requires it. It is right. It is a sacred duty. It is the law of God. It is God's holy day. But they are not told that it is. Many of them never hear it called the Sabbath. It is only Sunday to them. Many children never hear the Sabbath-school called anything but 'Sunday-school.'

"And why should they have any more regard for Sunday than for Monday, unless it is God's holy day and they are taught that it is, and are taught to observe it? Until Christian people have enough respect for God and for his day to call it the Sabbath, they need not expect the world to pay any attention to it."

The great difficulty, we are told, is not with the sects which refuse to recognize the first day of the week as the Sabbath, but "with those profest Christian people who believe in the Sabbath so slightly and so weakly that they never call it the Sabbath, or assert the sacredness of the day by using the name which divinely designates it as the holy day of God." The editor of *The Herald and Presbyter* concludes with these emphatic sentences:

"We did not expect to say so much on the subject just at this time, but Sabbath desecration is a sin that in God's sight is as deadly and as hateful as murder or theft. It is one of the peculiarly aggravated sins of our own times. Christian people should stand up and protest against it. They should advocate and defend the cause of the Sabbath. If they do not do so, more vigorously, by life and word, the Sabbath will increasingly become to the world merely Sunday, a day with a heathen name, and then . . . simply Sunday, to be trampled under foot and desecrated with impunity."

Stevens-Duryea

"Nearly a Quarter Century of Leadership"

The Stevens-Duryea makes instant appeal, by its very appearance, to those who seek luxury, distinction, and refinement, in all their appointments.

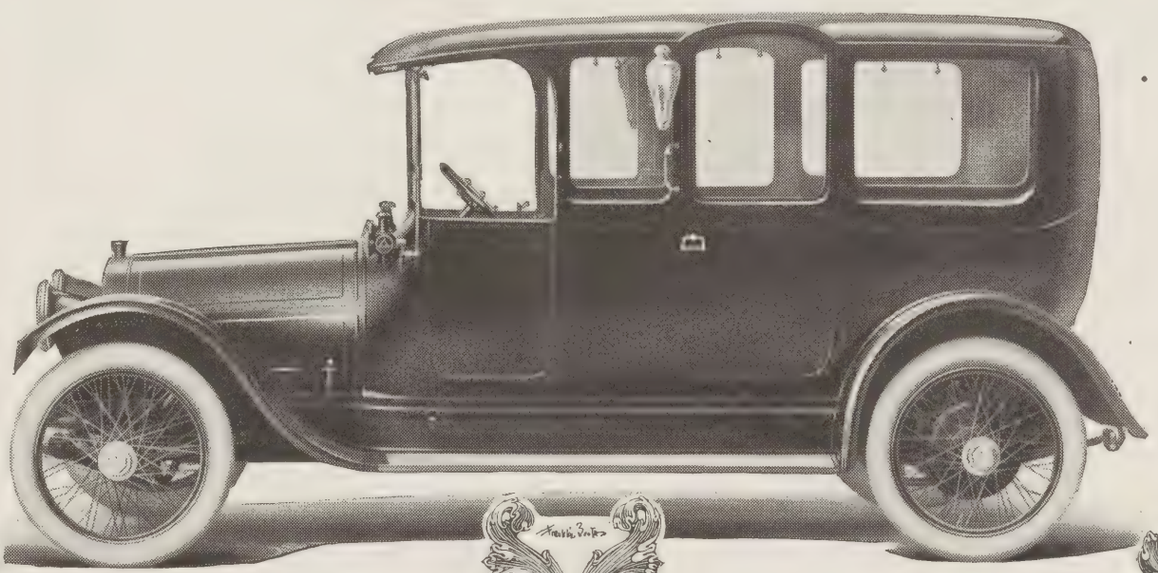
From the shapely hood, which curves artistically upwards and outwards to meet the fore part of the body, to the gently rounded surface at the rear, there is not a harsh angle to mar the harmonious symmetry of the car.

The aristocratic exclusiveness and courtly style of these Stevens-Duryea innovations of to-day are destined to become the mode of to-morrow.

Limousines and Berlines $5750 to $6200

Stevens-Duryea Company Chicopee Falls Mass

"Pioneer Builders of American Sixes"



Four

The Thomas B. Jeffery Company
Jeffery
Kenosha, Wis. U.S.A.

$1550

Can it Be Done?

ONE big motor car dealer said when he saw this Jeffery Four: "It can't be done. You can't build it to sell for $1550—it's too good."

We proved to him that it can be done—by a manufacturer with the experience, capital and equipment. Three days later he wired us an order for eight hundred cars.

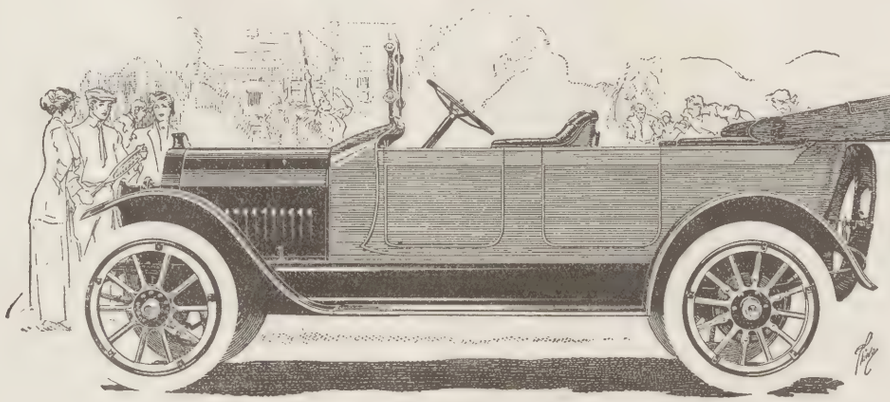
Now we have done it, and here it is. The highest grade car in all its elements, and sold at $1550.

This is the first public announcement of this astonishing car. We know it's astonishing, because when the dealers heard of it and saw it they placed orders for more than fifty per cent of the output of this factory for the next twelve months. It's a manufactured car—produced in a plant backed by forty years of manufacturing experience and five million dollars in assets.

It would be impossible to build a car like this to sell for $1550 without the factory, capital and equipment to produce in great quantities.

The Jeffery Four is the product of the best European experience—therefore a little in advance of the best American practice. Watch for the attempts to imitate this car.

We have given it the name of Jeffery because we want the world to know that Jeffery built it. The world already knows the reputation behind that name.



The Jeffery Four, $1550

If it's in the Jeffery it's High Grade

Fifteen Features of the Jeffery Four

THE Jeffery high speed mono-bloc motor is powerful, light and economical. It will travel, without vibration, twenty miles per hour on low, forty on second, fifty on direct and fifty-five on fourth.

The oiling system is the latest—combination force feed and splash. Oil is carried in the crank case and pumped to the bearings with dips for lubricating the cylinders.

We made this car light in weight and light running to reduce fuel consumption, vibration and tire expense. Economy is the result.

This car has speed, snap and go. It will remind you of a wiry western pony. You can speed up the Jeffery Four to forty miles, shut off your engine and coast half a mile.

With Imported annular ball bearings throughout, it rolls so easily. The mere pressure of forty-five pounds will start it rolling on the floor.

All manufacturers know that the U. S. L. starting and lighting system is the most expensive and is protected by exclusive patents. We know, by experience, that it is the best for the Jeffery. Another car, selling for $3250, charges $200 extra for this equipment, which we include in our $1550 price.

The leather universal between the clutch and transmission marks a great step toward silence and efficiency.

Daimler proved that to the satisfaction of Europe. We tested it for thousands of miles before we adopted it on the Jeffery Four and Six.

Rothschild of New York designed the bodies of the Jeffery Four and Six. Only the eye can sense the lasting impression of beauty that is theirs. It cannot be described.

Brewster Green predominates in the color. The doors are extremely wide, 23½ inches, the seats so broad, the upholstery so deep and the little conveniences so many that uncommon comfort will be yours. The back of the front seat is faced with the finest leather.

Dash attachments include gasoline pressure gauge, oil pressure gauge, speedometer, dash lamp, combination lamp switch and two compartments for gloves or valuables. Power tire pump, $25 extra.

Gasoline pressure tank carried in rear distributes weight properly—safer and easier to fill. Pressure pump operated from cam shaft.

High speed mono-bloc motor, European type. From nothing to forty miles in twenty seconds—high grade.

U. S. L. starting and lighting system—high grade. This car could be sold for $100 less if equipped in any other way.

Imported annular ball bearings throughout—high grade. Standard on the world's best cars.

Spicer universal joints—high grade. Ask any mechanic.

Combination force feed and splash oiling system—high grade. The most economical we know.

Four forward speed transmission—high grade. Control lever directly over transmission.

Full floating type rear axle on imported annular ball bearings—high grade. Same quality as used by all the highest priced electric vehicles.

Body designed by Rothschild of New York—high grade. The hit of the Paris show.

Leather universal between clutch and transmission—high grade.

Vanadium steel springs and front axle—high grade.

Rayfield carburetor—high grade.

Left drive and center control.

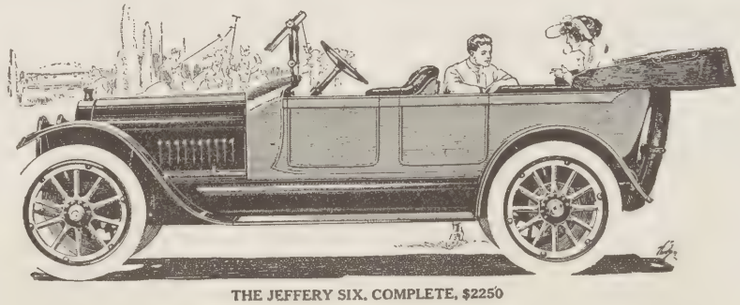
Pressure feed gasoline tank in rear and pump operated through cam shaft—high grade.

Bosch Duplex ignition—high grade.

Solar lamps with dimmer—high grade. Operated by four-position switch—the simplest ever made.

High Grade Features of Jeffery Six

Forty-eight horse power motor, cylinders cast in pairs, 3¾ x 5¼.
Extra large bearings.
Bosch Duplex ignition.
Rayfield carburetor.
Imported annular ball bearings throughout.
Four forward speed transmissions.
Warner speedometer.
U. S. L. starting and lighting system.
Power tire pump.
Wheels and tires 36 x 4½. Wheel base 128 inches. Demountable rims.
Rothschild body with extra wide doors and low, deep seats.
Pressure feed gasoline tank.
Full floating rear axle. Price, $2250.



THE JEFFERY SIX, COMPLETE, $2250

THE Jeffery Six has many of the best features of the highest priced car. It's light—actual scale weight 3700 pounds with full equipment. It's a duplicate of the wonderful Jeffery Four except for size. We built it for the man who prefers a car of this type. We made it luxurious without making it extravagant. It's economical because it is light. It is beautiful to the eye and a delight to drive. It's smooth, flexible and responsive.

We believe that a better Six cannot be built, for the simple reason that parts of better quality have yet to be produced.

There is a vastly entertaining story to be told about the production of these two cars by this company—it's a book full of pictures and interesting sidelights on this great industry. Write and ask for it.

REVIEWS OF NEW BOOKS

THE SECOND ISABELLA OF SPAIN

Gribble, Francis. The Tragedy of Isabella II. Illustrated. Cloth, pp. 308. Boston: Richard C. Badger.

MR. GRIBBLE intentionally avoids the biographical solemnity of the preacher whose duty it is to point a moral, or of the historian who would uphold the dignity of history and his own, or that of the friend of the family who finds the situation shocking. Having exhausted in previous volumes the love affairs of men and women of genius—George Sand, Rousseau, Madame de Stael, Chateaubriand, Byron, Shelley—Mr. Gribble is obliged to descend to a lower level and study a woman whose only claim upon attention is the accident of a crown.

It seems not without significance that while the newspapers are reporting the real tragedy which is saddening the heart of the present Queen of Spain through the afflictions of her children, this record of the license of Spanish court life two and three generations ago should be published. "Virtue was not—as people say 'in the family.'" Isabella's father opprest his subjects, and enriched himself by plundering the Navy. Her mother chose as her "favorite" the common soldier on guard beneath a palace window, and she was even accused of stealing spoons. The husband imposed upon her was vacuity personified. "Socrates of old raised the question whether virtue can be taught, but the experiment was not tried in Isabella's case," and so this queen, because she "never had a chance," was most unwise in her choice of the partners with whom she gaily danced away a kingdom.

It is a pitiful story for all its gaiety—the life history of this "spoiled child, incapable of growing up, incapable of perceiving that she had duties—except to the Church—as well as rights: a creature of impulse who always acted in impulse, without regard to consequences, even to the point of squandering her patrimony, and pitching, or tempting others to pitch, her throne out of the window." She is not the kind of a great-grandmother which one would select, if he had the privilege of choosing his ancestry, on eugenic principles, and she was equally unfortunate in her own predecessors. The events of the nineteenth century in Spain, as seen from the palace windows or behind the doors of diplomats, add their value to this record of a gay and reckless queen.

NEW YORK IN 1679-1680

Danckaerts, Jasper, Journal of, 1679-1680. Edited by Bartlett Burleigh James and J. Franklin Jameson. Maps. Cloth, pp. xxi–313. New York: Charles Scribner's Sons. $3 net.

The arrival of a distinguished stranger at the port of New York is almost sure to be marked by an inquiry as to how he likes America. One of the very earliest of these visitors—landing from the *Charles,* of Amsterdam, Captain Singleton, on September 23, 1679—has saved reporters the trouble of an interview by recording his impressions very distinctly in his published journal. The manuscript of this was first found and edited by Mr. Henry C. Murphy in 1864 and 1867. The present edition, a revision and correction of Mr. Murphy's, with the addition of much editorial matter, is published in the series "Original Narratives of Early American History."

Danckaerts and his companion, Sluyter, were two agents of the Labadist sect sent to find a place to which the community in Holland might emigrate. The journal covers the voyages across the ocean, travels in New York as far north as Albany, and through New Jersey as far as Delaware Bay, with a short visit to Boston. The quaint detail of the descriptions will be of great interest to present-day New Yorkers, whether they live in "Neu Haerlem," "a tolerably large village" on the island of "Manathans," or in the "Vlacke Bos" [Flatbush], or commute from "Ahakinsack" and "Gamoenepaen." Another familiar mark is his statement that on the road from Bergen Point to Elizabeth "nowhere in the country had we been so pestered with mosquitoes as on this road."

No less interesting are the journalist's comments on the persons he meets, for he combines piety with an acrid humor, and his transparent self-satisfaction has a last word for almost everything English. At Boston, "as it was Sunday, which, it seems, is somewhat strictly observed by these people, there was not much for us to do to-day," but the captain of the ship took them to his father's, where evening worship was being held. "The prayer was said loud enough to be heard three houses off, and also long enough, if that made it good." He also remarks of Boston that he was "never in a place where more was said about witchcraft and witches." Tho Danckaerts' piety did not include lengthy prayers, he made use of it in the religious instruction and reproof of his hosts by which he considered that his debt of hospitality was paid. Altogether he has given us one of the most quaint and spicy narratives of easy American travel to be found and one of as much interest to those as who live within the districts he visited as to the student of American colonial history.

THE PROFLIGATE DUKE OF WHARTON

Melville, Lewis. The Life and Writings of Philip, Duke of Wharton. 8vo. Pp. 336. New York: John Lane Company. $4.50.

This is a brilliant biography of a remarkable man—a daring Jacobite, libertine, and courtier, remarkable for his personal beauty and cowardice on the field of battle. When he called upon Lord Stair, the British Ambassador at Paris, he astonished the guests at a dinner party by drinking the Pretender's health. He became a powerful debater in the House of Lords and was notorious as president of the Hell-fire Club. When the King published a proclamation against the club Wharton played a strange farce. He took an old family Bible into the House of Lords and, protesting that he was no blasphemer or profligate, he proceeded "with a sanctified air" to read several texts from it. During the winter of 1725–1726 he openly espoused the cause of the Pretender, "James III.," and was outlawed by the King's command.

He was, however, equally admired and execrated, "for," says Mr. Melville, "while the Duke's profligacies disgusted many of his easy-going contemporaries, yet his gifts were so remarkable that his excesses were overlooked." Richardson had him in mind, we are told, when he described the character of Lovelace. It is also suggested that he is the Lorenzo of Young's "Night Thoughts." The scathing portrait of "Wharton, the scorn and wonder of his age," drawn by Pope in his "Epistle to Sir Richard Temple," can not be considered exaggerated when read in the light of history. It runs as follows:

"Thus with each gift of nature and of art,
And wanting nothing but an honest heart;
Grown all to all; from no one vice exempt;
And most contemptible to shun contempt;
His passion still, to covet gen'ral praise,
His life, to forfeit it a thousand ways;
A constant bounty which no friend has made;
An angel tongue, which no man can persuade;
A fool with more of wit than half mankind;
Too rash for thought, for action too refined;
A tyrant to the wife his heart approves;
A rebel to the very king he loves;
He dies, sad outcast of each church and state,
And, harder still, flagitious, yet not great.
Ask you why Wharton broke through ev'ry rule?
'Twas all for fear the knaves should call him fool."

Mr. Melville has done his work well in delineating the life of a man who in so many ways was typical of his age. This clever biography gives axioms from the writings of a man who could make an epigram as well as a speech. Among these writings we find many letters and the Duke's defense of Atterbury, the gifted bishop of Rochester, who, however, was found guilty of treason as a Jacobite and banished. But he that breaks must pay, and, deprived of his estates and reduced to beggary, Wharton wandered for three years through many parts of western Europe. Finally, after his conversion to the Roman Catholic Church, he joined the Franciscans and died in their monastery at Poblet in the thirty-second year of his age. There are seventeen choice and somewhat rare illustrations in this handsome volume, which is equipped with a copious index, while the care, erudition, and laborious minuteness of Mr. Melville's production are shown by the list of authorities given in the preface.

AN ENGLISHMAN IN CALIFORNIA

Johnson, Arthur T. California. 8vo. Pp. 346. New York: Duffield & Co. $4.50.

The subtitle of this book is "An Englishman's Impressions of the Golden State." Of Mr. Johnson's personality we know nothing, we can only say he has written a piquant volume. Yet, as he confesses, he has steered clear of "California's politics, and hardly touched upon her commercial aspects or the vexatious question of alien immigration." He has but "skirted the fringe of sociological problems," but his book, handsomely manufactured and profusely illustrated, reminds one of the account of Martin Chuzzlewit's journey to Eden or Mrs. Trollope's description of United States society in her "Domestic Manners of the Americans." For the writer's principal subject throughout the volume is "The Native Son"—the California man, of whom he ungrammatically remarks, "If no one understands the American character—and I do not think they do—it is equally certain that the American himself does not." Of his own

If You'll Call They'll Come

If you will call on your grocer for Puffed Wheat or Puffed Rice, there will come to your table tomorrow morning the most delicious foods folks know.

Grains steam-exploded—puffed to eight times normal size. Airy wafers, bubble-like and thin. Grains that taste like toasted nuts.

Ready to serve with cream and sugar, or mix with any fruit. Ready to melt at the touch of the teeth into almond-flavored granules.

They will bring to your people a food delight.

They will bring scientific, whole-grain foods, easy to digest. The only cereals in which every food granule has been literally blasted to pieces.

And a thousand breakfasts, in the years to come, will have added joy when you know these foods.

Puffed Wheat, 10c
Puffed Rice, 15c
Except in Extreme West

At Night

For a supper dish, or at bedtime, these crisp, brown grains will come to you floating in bowls of milk. Crisper than crackers—four times as porous as bread.

Whole grains made wholly digestible. The most inviting morsels ever served in milk.

You will use them in candy-making—use them to garnish ice cream—use them as wafers in soup. You will crisp them in butter so the children may eat the grains like peanuts.

These are Prof. Anderson's foods—the foods that are shot from guns. No other foods are in any way like them. It is due to yourself that you know them.

At every grocery they are at your call. Call now and see what comes.

Why Repair Shops Keep Busy

NO wonder automobile repair shops have so much to do, for—

—The automobile is the most severely used piece of machinery in all the world.
—It suffers the most and worst shocks and strains.
—It receives the least expert care in operation.

Because of this, the automobile **ought to be** the most carefully designed and the most carefully built machine in all the world.

But **it is not,** in most cases.

Here Are the Plain Facts

Four-fifths of the makes of cars on the market today are **neither** designed nor manufactured by their so-called makers. They are **not** even designed as complete, unified **cars,** but are collections of many groups of finished **stock parts**—bought here and there, wherever they can be secured most readily and cheaply.

It is nearly a miracle if these parts happen, in any instance, to form a balanced, harmonious, durable complete car—for these parts, remember, are designed and finished, **not** for some one particular car, but—

—as separate, unrelated units,
—by separate, unrelated groups of men,
—in different factories,
—at different times;
—these designers having no knowledge of what other parts are to be used in any particular car assemblage.

80 per cent—Think of It

Eighty per cent of American automobile "makers" are gatherers and assemblers of finished parts, made under these conditions. That is the cheapest method of "manufacture." Furthermore, it is a method not practiced and not countenanced in any other branch of the machinery-producing industries.

Locomotives, stationary steam engines, electric motors, machine shop equipment, printing presses—machinery that men buy with careful judgment and at big prices—are **manufactured** (not assembled) products. They've got to be designed and manufactured as ONE UNIT in order to have precise balance, and uniform strength and endurance, to withstand severe use, to be **right.** A railroad would refuse an assembled locomotive as it would refuse lead rails.

Only One Safe Method

Machinery manufacture is an old, stable, and experienced industry. And the machinery industry says that the only safe way to build an enduring product is to have that product designed and manufactured under the roofs of a single plant, and to have the whole work supervised by some **one** richly qualified and able man.

The principle is as old as the hills. Three hundred years ago, Descartes, first of modern philosophers, wrote: "There is seldom so much perfection in works composed of many separate parts, upon which many different hands have been employed, as in those completed by a **single** master."

WINTON SIX

Long stroke motor, left drive, center control, electric lights, self-starter, finest mohair top, easily handled curtains, rain-vision glass front, best Warner speedometer, Waltham eight-day clock, Klaxon electric horn, rear tire carriers, four-cylinder tire pump, demountable rims, full set of tools, German silver radiator, metal parts nickel finished. Fully equipped, **$3250**

Here's a ONE-UNIT Car

The Winton Six stands out as a distinctively and enduringly excellent automobile because it is produced on the same plan that the greatest and ablest of machinery makers adhere to so zealously.

It is designed and manufactured in **one** comprehensive plant. That plant has but one product—the Winton Six car, made in **one** single model.

Every part of the car is designed and manufactured to harmonize and coordinate with every related part.

From start to finish, the production of Winton Six cars is personally supervised by **one** man, Alexander Winton, founder of the gasoline motor car industry in America, and the world's most experienced six-cylinder specialist.

What's the Result?

That's why the Winton Six, alone, was able to change high-grade demand from four-cylinder cars to Sixes. That's why the Winton Six withstands the hardest of service and holds the world's lowest repair expense record—29.2 cents per 1000 miles. That's why the Winton Six is the finest possible specimen of ONE-UNIT Construction, which means that it is precisely the kind of car that fully satisfies the most exacting purchasers.

Let us send you a catalog.

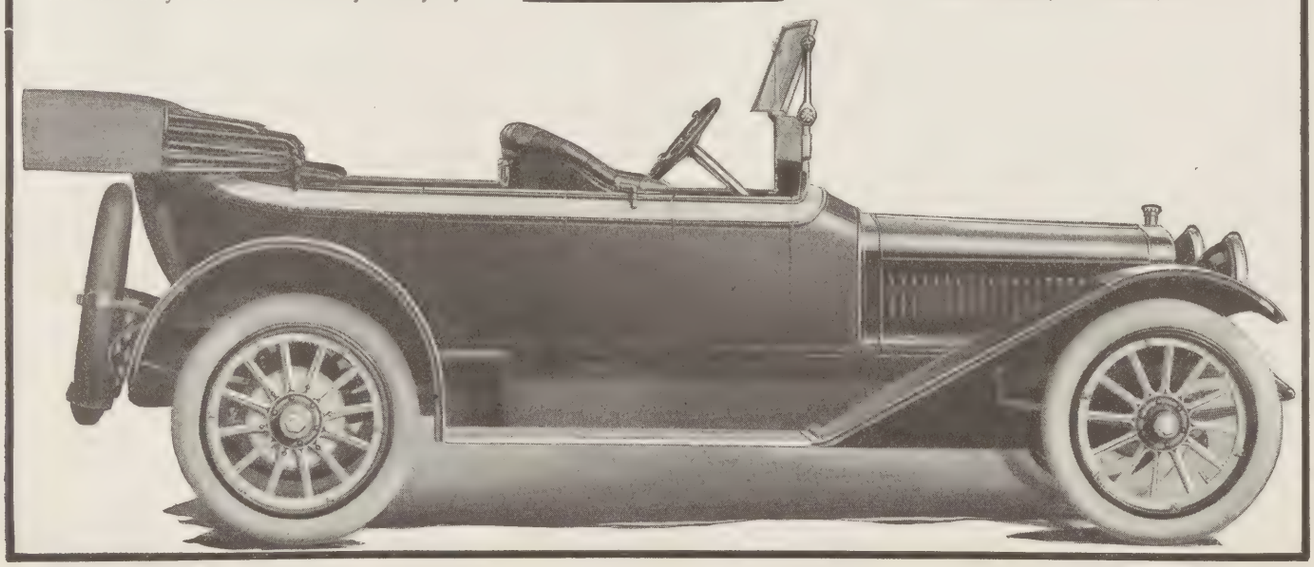
Caution

Be careful in selecting a car—this year more than ever before. There are startling reasons why. Read them in our Book No. 16



REVIEWS OF NEW BOOKS

(*Continued from page* 825)

account of the "Native Son," he makes the following admissions:

"If in dealing with some of the characteristics of his daily life, I may seem to have hit the Native Son rather hardly (*sic*), it is, as the reader will observe, because I feel strongly, not so much against the individual, but against what one may call that atmosphere of illusion, self-deception, and malfeasance which he, as a community, fosters, often perhaps unwittingly."

The slovenly and ungrammatical style of this extract pervades the book. We wish the writer had confined himself to such indulgence of what he oddly calls his "vagrant taste for idling and roadside observation" as is manifested in his sketch of Santa Barbara. The sketch is wholesome, and in spite of its stumbling and confused style, is really something more than

> "a tale
> Told by an idiot, full of sound and furry,
> Signifying nothing."

We quote the passage referred to as follows:

"What visitor does not remember those pleasant streets, which seem to have hit that happy medium which lies between the dismal incompetency of poor shops and that other extreme, the distracting hustle of department stores, dazzling hotels, ruinous taxicabs, and the rest? Or, shall we say that Santa Barbara is a half-way house between the strait-jacketed respectability of prim Pasadena and San Francisco, as seen by a Primitive Methodist hastening home in the dark? Where is the visitor who can forget the exhilaration and accessibility of those mountain drives, with happy children cantering in the peculiar lope of the country on their long-necked steeds; the restful parks; the sweet pastures along the cliffs; the number and variety of wild birds, often so absent in California; the quiet dignity of the old mission? which latter is neither a crumbling ruin, nor yet a patched-up relic uncomfortably modernized, but an old church which is still cherished and loved by the Franciscan brethren who dwell beneath its venerable roof. Just as the pines and eucalyptus-trees of that rugged bluff to the west of the promenade infuse the sea airs with the fragrance of their sun-warmed boughs, so, across the wide pueblo lands upon which Santa Barbara lies, does the quietude of an earlier age, an older country, linger like the peace of some old English cathedral town. For these features of Santa Barbara shall I ever have a fresh and abiding memory."

We sympathize with the old lady who sold Mr. Johnson a pound of "English walnuts" at Santa Barbara, and on learning that he had been in California only "six months, remarked: 'My! but you have learned to speak the language pretty good in so short a time.'" But to which we would add, "and to write it pretty badly."

THE CHEVALIER D'EON

Rieu, Alfred, [Translator]. **D'Eon de Beaumont, His Life and Times.** 8vo. Pp. 275. Boston: Richard G. Badger. $3 net.

The portrait which the Chevalier d'Eon sketched of himself for Duc de Praslin at a turning-point in his own career is in the main a true one. He said, "If you want to know what I am, Monsieur le Duc, I tell you frankly that I am of use only for thinking, imagining, questioning, reflecting, comparing, reading, writing, or to run from east to west, from north to south, to fight over hill and dale. Had I lived in the time of Alexander or Don Quixote, I should certainly have been Parmenio or Sancho Panza. Taken out of my element, I will squander the whole revenue of France in a twelvemonth without committing a single folly, and afterward present you with an able treatise on economy." It is needless to say that he had no such opportunities in France under Louis XV. and England under the régime of Pitt. So far he was born out of time and only destined to cut a figure as a swashbuckler and charlatan of the first water.

D'Eon de Beaumont was born at Tonnerre, a small town noted for its medieval buildings and situated on a steep eminence about twenty miles from Auxerre. His life as diplomat, soldier, and plenipotentiary in London, where he brought about the peace treaty of 1763, and as secret-service agent to Louis XV. and Madame du Barry, is a strange story of intrigue, bickering, and recrimination, through the storm of which he passed with singular courage and effrontery. When Louis XVI. discontinued the secret service, d'Eon, prest by his creditors, was struck by a new idea. He assumed female attire and passed himself off as a woman. It was not until his death in great poverty in London that the mystery which surrounded him was solved. His latter life had proved an enigma, baffling the sagacity even of Voltaire and Beaumarchais.

No romance writer has been bold enough to describe or imagine such a story as that of this daring and brilliant adventurer, who played so dashing a part in the court and political life of Paris, London, and St. Petersburg. Bets were freely made and taken regarding the question of his sex, while he was caricatured in London as drest half in man's and half in woman's clothes—one leg in knee-breeches, the other in flounced farthingale. A mass of his unpublished papers, giving details regarding persons and events during an exciting period of European history, were discovered after his death in 1810. They had been hidden in an English bookseller's shop for nearly a hundred years. The record of his life is an interesting one and the volume before us is of unusual attractiveness. The portraits of d'Eon, both as a man and as he masqueraded in female attire, are interesting. His temperament and appearance favored his strange and elusive impersonation, which probably was suggested to him by the pamphleteers, who declared that "his dragoon's uniform concealed a woman or a hermaphrodite." His "frail appearance, small stature, slender figure, and the delicate features of his almost beardless face lent color to the idea."

RECENT FICTION

Wallace, Dillon. The Wilderness Castaways. Pp. 322. Chicago: A. C. McClurg & Company. $1.25 net.

This is a real "Boy's Story," full of vigor, excitement, and interesting facts. It holds up manliness and courage in attractive light. Two wealthy New Yorkers hire a vessel for a hunting and fishing trip in the far north, and, as an accommodation to a business friend, Paul Densmore is invited to become one of the party. While Paul has the instincts and breeding of a gentleman, he has always been a "pampered pet" and has no conception of the hardships and duties of a hard-working self-supporter.

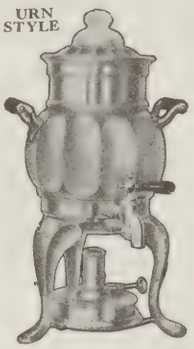
UNIVERSAL
Home Needs

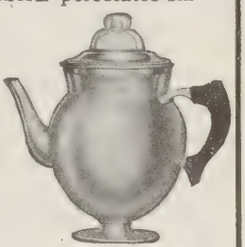
URN STYLE



Making Coffee at the Table

with the UNIVERSAL Table Percolator adds much to the enjoyment of the meal, besides giving the coffee a full strength and flavor free from tannin or bitterness.

The UNIVERSAL percolates six to ten times more water than anyother, ***takes much less time, cannot flood,*** and completes the process before the water boils.



POT STYLE
For use on the stove

Made in various urn styles with alcohol burner, and also in various styles for use on the stove.

UNIVERSAL
Coffee Percolator
Electric

is identical in principle with the other forms of UNIVERSAL Percolators, but is operated by electricity. Simply connect the cord and plug to any lamp socket and turn on the current. In a minute or two the circulation of water through the coffee begins.

Made in Pot Style, 6 cups, $8.25, and Urn Style, 6 cups, $10.00.

Look for this mark on each article. UNIVERSAL

Write for booklets describing these and other UNIVERSAL Home Needs, stating whether or not you have electricity in your home.

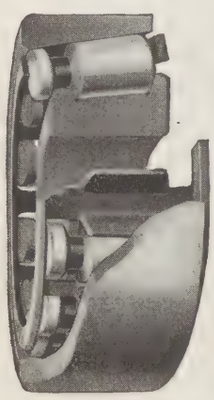
TIMKEN
ADJUSTABLE ROLLER BEARINGS

As Your Car Grows Old, Keep it Tuned Up

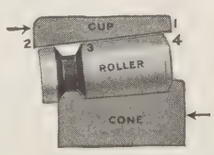
Retain its smoothness, its quietness and comfort. Retain its quick response, its effective power—its dependability. You bought it for these qualities—keep them in the car as it grows old in your service.

Tune up your motor, adjust the carburetor for weather and varying qualities of gasoline. Adjust the steering gear. Adjust the brakes.

And don't forget to adjust the bearings. For all bearings wear same as other moving parts and need adjustment if you are to keep the full power and efficiency of your car.



Timken Bearing partly cut away to show construction



If wear occurs, leaving slight space between cup and roller, adjustments can be made by moving the cup or cone in the direction of the arrows.

As 1-2 and 3-4 always remain exactly parallel, the adjustment brings the different surfaces into perfect line-contact, and no principle of the bearing's efficiency is impaired.

Inside Knowledge that will Help You

WHEEL bearings must turn easily of course—to eliminate friction. But they must fit snugly too—to prevent wheels from wobbling.

As bearings wear—all bearings do—they get loose. A little looseness allows the pound that makes faster and faster wear—more and more looseness.

Bearings on shafts that support gears—transmission, driving and differential gears—when they wear (as all bearings do) allow the shafts to drop slightly out of line. The gears on those shafts get slightly out of correct mesh. Imperfectly meshed gears make noise and waste some of the power.

The trouble goes on *at an increasing rate* unless promptly checked by adjusting a type of bearing that can take up looseness when it develops.

Use of steels best adapted for bearings, extreme accuracy of manufacture, strict following of heat-treatment formulas developed by years devoted to concentrated study of bearings alone—these are producing bearing parts that have wonderful wear-resisting qualities.

And yet bearings—all bearings—do wear.

The Timken Tapered Roller Bearing is the one type of bearing that can be adjusted to completely eliminate the effects of its slight wear.

The Timken Tapered Roller Bearing carries the load and resists the shocks along the lines of its rollers instead of on the points of balls; its tapered construction enables it to meet side pressure and shocks in addition to direct load; its line contact distributes pressure and hence minimizes wear—*these are three great principles that are kept in constant operation for your benefit by the fourth great principle of adjustability.*

And beyond keeping the Timken Bearing itself always at full efficiency its great principle of adjustability keeps the shafts and gears up to their top notch efficiency

You can see how important it is to have adjustable bearings in your car if you are to retain its effectiveness as a power vehicle—as it grows old in your service.

Other interesting facts about bearings are told in the Timken Primer No C-1 "On the Care and Character of Bearings" which, with the Timken Primer No C-2 "On the Anatomy of Automobile Axles," will be sent free, post-paid on request to either Timken Company.

THE TIMKEN-DETROIT AXLE CO., DETROIT, MICH.

Every Timken Bearing, large or small, is of just one Timken quality, through and through

REVIEWS OF NEW BOOKS

(*Continued from page* 827)

His selfishness and heedlessness cause him to be lost with his sailor companion, Dan Rudd, on the ice in the arctic region, and he spends a strenuous winter among the terrible dangers of forest and sea. Hungry, weary, sometimes almost freezing, the boys battle their way to the post at Winnipeg, often barely escaping death. Their experiences make a wonderful change in the luxury-loving New Yorker. Even grown-ups will enjoy the descriptions of the hair-breadth escapes and the exciting scenes, which culminate in safety for the boys and material advancement for all concerned.

Tappan, Eva March. The House with the Silver Door. Pp. 184. Boston: Houghton Mifflin Company. $1.

This is a collection of three "Once Upon a Time Stories," with all the mysteries, magic, and wonderful adventures of the old-time fairy tales. It seems a bit early to think of the holiday season, but this will make a delightful gift book for the little "kiddies" at Christmas time. There is not much choice between the title story, "King Haensel the First," and "The Star Princess," but they are pretty little tales, told quite fluently and with convincing charm.

Edganton, May. A Modern Eve. Pp. 351. New York: Frederick A. Stokes & Company. $1.25.

Eve's other name was Ellen. She had red hair—a fact which the author never lets you forget. At the age of thirteen on a Canadian hillside she meets a young embezzler who has eaten her lunch while she slept. She promises to deliver a letter for him. Curiosity causes her to read the letter. It frightens her and she suppresses it. This causes certain necessary entanglements in the threads of the story. Later Ellen's parents move to England that she and her brother Ingram, a prig if there ever was one, may receive a better education. Leaving college, Ellen allies herself with the suffrage party and insists on working for the cause even with insufficient remuneration. Unreality and insincerity characterize much of the story. Her attitude as a college-educated girl is untrue and overdrawn. The situations and experiences with the two men who come into her life are impossible and exaggerated. Melodramatic episodes abound, and in the end Ellen listens to her heart and forgets the "cause." It is a story more entertaining than convincing or satisfactory.

The City of the Purple Dreams. Pp. 411. Chicago: F. G. Browne & Co. $1.30.

There is usually a great and appreciable difference between a vagabond tramp and a multimillionaire financier, but in "the City of Purple Dreams," otherwise Chicago, all things are possible. Daniel Randolph Fitzhugh finds it easy to change from a dirty, ragged tramp to an eloquent anarchist, later to the noted Hugh Dan Fitzrandolph, "King of Wheat," of unlimited power and means. This change is the culmination of many melodramatic episodes, tragic and startling. Esther Strom, a socialist, and the beautiful and wealthy Kathleen Otis play important parts in the wonderful and meteoric career of the histrionically endowed, but friendless, young man. Credibility and plausibility are strained to the utmost in the construction of the story, but there are thrills enough to interest the casual reader.

Bailey, Temple. Glory of Youth. Pp. 331. Philadelphia: The Penn Publishing Company. $1.35.

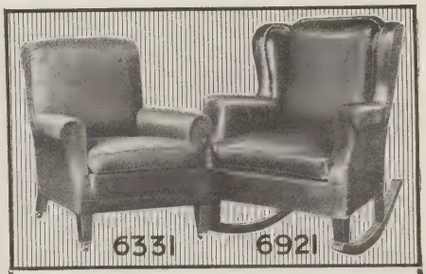
This complicated love-story, before the clouds are dispelled at the latest possible moment, comes perilously near being a "Tragedy of Errors," but its characters are interesting and lovable. The complications are exciting enough to arouse the curiosity of the reader. The technic of the book is good enough to hold one's interest. Dr. Anthony Blake had always worshiped Diana Gregory, but she went abroad still undecided about her own feelings, and while there became engaged to a foreign count. By the time she came to her senses and was ready to throw herself into Anthony's arms, he had already pledged himself to little Bettina, who had been left in his care by a dying mother. The author claims great wisdom for Diana, but she has a strange way of showing it. She made her first mistake when she failed to appreciate Anthony; her second when she advised Bettina to keep her engagement secret, thus causing many false situations; and her third—well, she made many, but that is the story.. Justin Ford, a young aviator, helps in the solution of the difficulties, as he does in the complications, but the dénouement is very satisfactory. The reader is left to decide how far one should be bound by a loveless engagement.

Hay, Jan. Happy-Go-Lucky. Pp. 365. Boston and New York: Houghton Mifflin Company. $1.25.

This is an original story, told in an original way, with wholesome humor. From "Book One," in which the characters are introduced as school-lads at a final dinner before separating for the holidays, to the end of "Book Three," when everything ends satisfactorily, we read interesting tales about interesting people. Much is left to the reader's intuitive perception instead of being labeled with "he said" and "she said." Richard Mainwaring, "the Freak," was certainly happy-go-lucky, but he did the right thing at the right time and had a most engaging personality, so that the story of his love and his other affairs involve some very amusing incidents which prove engrossing. It is a most enjoyable book to read aloud, a comedy with romance well developed.

Herrick, Robert. His Great Adventure. Pp. 408. New York: The Macmillan Company. $1.35.

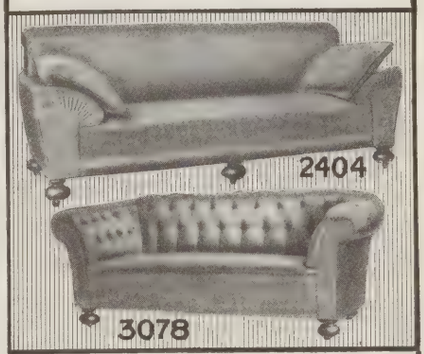
After reading this adventurous and well-nigh incredible story, one will hardly dare pass unaided a man fallen by the wayside, about whom there can be the slightest possibility of doubt as to the cause of the trouble. Edgar Brainard, a would-be dramatist, down on his luck, was the only one of the onlookers to doubt the drunkenness of the man who lay in convulsions at his doorway. After carrying the stricken man to his room, and sending for the doctor, he proceeded to make him as comfortable as possible. In dire straits we take great chances. Believing that he could not live, "H. Krutzmacht" dictates a power of attorney to the young man and charges him with an astounding mission—and with his wallet which contains thousands of dollars. This mission is the "Great Adventure" and it forces the young rescuer to go West blindly, to loot safes, travel with immense and hidden treasure through Arizona, Mexico, to Paris and back, always in search of "Melody" whose fortune and interest he considered a sacred charge. The book ends happily.



The Joy of a Big Karpen Easy Chair

Nothing is more luxurious after a hard day at the office than to relax in one of these big overstuffed Karpen comfort chairs with the new Karpenesque Upholstering. Until you try one you will never know what real rest is. Seek out the Karpen Dealer in your town today and find out about them. If you try one you will buy one—then you will rejoice in its possession for years.

Karpen Guaranteed Upholstered Furniture



is made of the best materials by the best cabinet makers and upholsterers. It possesses a lasting quality in the highest degree. The designs are splendid and the prices are within the range of the average family. A thousand patterns from which to select, for any need in any room in any home.

Karpen Furniture bears our trade-mark and is guaranteed to give satisfaction or money refunded.

Our Book "2," sent free for the asking, is invaluable to intending purchasers. Hundreds of illustrations and many pages of educational information to guide you in making appropriate selections.

Write for Book "11" and mention this magazine and ask for the name of the Karpen dealer in your town.

CURRENT POETRY

POEMS to statues seldom are of serious importance. Take, for instance, the great amount of verse—enough to make a fat octavo volume—which M. Rodin's sculptures have inspired. Of all this, only one poem is still of interest, Mr. John Jerome Rooney's admirable interpretation of "Le Penseur." But there is a sort of poem, nominally inspired by a statue, which really does not belong in this class. That is the poem in honor of a great man written with his statue as immediate cause. Perhaps the best poem of this sort written in recent years is the late Lionel Johnson's "On the Statue of King Charles in Charing Cross." We are reminded of this poem by some lines in Mr. Benjamin R. C. Low's "A Wand and Strings, and Other Poems" (John Lane Company). "The Washington Statue in Wall Street" is sincere and dignified poetry; the last stanza is unforgettable.

The Washington Statue in Wall Street

By Benjamin R. C. Low

Immortal more than bronze, in bronze he stands,
Through all our tumult unperturbed, sedate;
Coming, clear-eyed, out of the scorch of fate,
Rough reins and sword-hilts calloused in his hands.

How large he looms beyond this troubled hill!
How, lost in balancings of life and death,
He heeds the flutter of his country's breath,
And bids, "I crave you, gentlemen, be still!"

This was the man who stemmed through brutal seas
And broke the dreadful shadow of a throne;
Who supped with swords, and watched all night alone,
Far off, in some great silence, on his knees.

Here is another of Mr. Low's poems, less heroic but equally sincere. "Livery of smiles" is a jarring expression, but as a whole the sonnet is effective.

To an Old Family Servant

By Benjamin R. C. Low

Dead?—but I can not think it; he who wore
His livery of smiles undimmed to sight;
Our childhood's fellowship who kept, of right;
Whose loyalty . . . no belted earl had more.
He stood so often at the stable door,
Lifting his lantern, signaling "Good-night!"—
To follow me half home with friendly light:
I can not think . . . he never failed before.

Yes, it is I who stand, good friend of years,
Blinded with shadow, where your footfalls fell;
To cast the glimmer of my childhood's tears
Beyond the dark, beyond the funeral bell,
Beyond the silence; I—God grant he hears—
Who lift the lantern, now: good-night!—farewell!

Surely it is time for a new volume of Miss Amelia Josephine Burr's poems. There was some very distinguished verse in "A Roadside Fire," the volume which George H. Doran Company brought out over a year ago, and since this publication her work has steadily gained in strength and charm. *The Bellman* prints this attractive apology. Miss Burr's point of view may not appeal to all, but unquestionably her lines are beautiful.

Children of the Night

By Amelia Josephine Burr

Blame us not, ah, blame us not, ye folk who love the sun,
Whose longings haunt the fields at noon, the ingleside at night;
For we are of another blood, and feel our pulses run
As run the tides to meet the moon, and leap beneath her light.

We sit beside your hearthstones with our faces to the fire,
But our hearts within are straitened—(do ye ever understand?)
For we long to turn away—yet dare not yield to the desire—
Where the moonlight at the window beckons, beckons like a hand.

The household phrases come to us as in a tongue unknown;
We gaze at you unseeing, for our thoughts are far away,
Like scattered flakes of star-dust on the flying cloud-rack blown
Beyond the placid vision of the children of the day.

Blame us not, ye quiet ones who crouch beside the flame,
And rule it as ye rule your souls, with measured, tranquil hand.
Nay, but my words are idle. Give us neither praise nor blame—
Only be blind forever, since ye can not understand.

The rimed editorial seems to be gaining in popularity. Mr. Viereck and Mr. Le Gallienne have discust various political and economic topics in verse in the editorial columns of *The International*, and Mr. Richard Johnson Walker, editor of *The British Review*, recently put his usual four pages of chronicle and comment into the form of a sonnet-sequence. In the October *British Review* he prints, among his editorials, this excellent sonnet. There are so many poems telling the advantages of the country as a place for spiritual activity that it is pleasant to find the opposite idea exprest, and exprest so skilfully.

Two Voices

By Richard Johnson Walker

Here, where the woodland air is clear and clean,
And 'neath the boughs sunshine and shadow trace
On the sward a flickering pattern of live lace
In white and black, each touched with tenderer green,
Comes a sure sense of sovran things unseen,
A savor of a more than earthly grace,
A rapture, and a knowledge that the place
Is as the presence-chamber of a Queen.

But where the city hums with trade and strife,
Where poor men mope and rich men rue their wealth,
Where few find happiness and none find health,
Who will may there learn truth no whit less well.
Nay, in the common commerce of man's life
Speak to the wise God's greater oracle.

The October number of Mr. Stephen Phillips's *The Poetry Review* contains a brief essay by Mr. S. M. Ellis on "A Lost Poet and the Poetical Attitude to Death." The "lost poet" is Herbert Kennedy, who died in 1910 at the age of eighteen. The

This $35 American Adder

First Announced Last June—Now in 10,000 Offices

Try It Ten Days

We are not here attempting to sell an Adding Machine. We are asking you merely to let our local dealer leave it ten days in your office.

Then refuse it or keep it.

Just see the machine and learn what it means to you. You owe that to yourself.

Here is a machine which has become a sensation. It adds, subtracts, and multiplies.

It does the same work as $150 machines, yet it costs only $35.

No expert is needed. A child can operate. Any person with a little practice can compute a hundred figures a minute.

It is a portable Adder which can be placed close to your books and papers.

It is a desk Adder, enabling each user to have his individual machine.

This is the latest Adding Machine, built by men who know, and based on vast experience.

It is full size, rapid and competent. It is simple and infallible.

Each copied number can be read at a glance, and checked with the original before making additions. Mistakes can be made impossible.

Seven keys take the place of the many heretofore employed.

150 Per Day

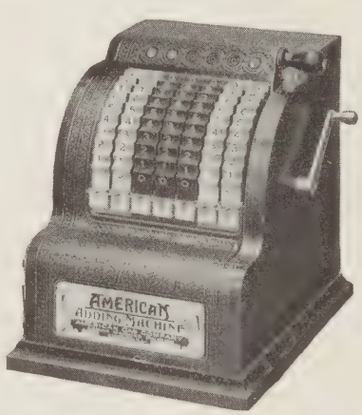
This American Adder was first announced in June. In four months it has gone into 10,000 offices. Now our output of 150 Adders per day fails to keep up with demands for it.

Big offices use it to give each worker his own convenient Adder. Thus it often saves its price each month in the saving of time.

Small offices, stores and factories use it. It is going to thousands of places which never before used Adders. All because the price is low and because anyone can operate.

Any man who adds figures owes this help to himself. It saves mistakes, saves time, saves hard brain work. At $35, any office or shop can afford this modern necessity.

The evidence is that a million men will want this machine when they know it.



Size, 8½ inches square. Weight, 17 pounds.

Make This Test

We have dealers in 600 cities. Send us this coupon, and a man will bring the machine to your office and show you how to use it.

He will leave it ten days. At the end of that time he will take it away if you can get along without it.

See how quickly it adds. See how it checks against errors. Learn for yourself how much it means as a saver of time and labor and mistakes.

This incurs no obligation. It involves no cost. Unless it will save its cost over and over we shall never ask you to keep it.

Please don't wait longer. This is something you need. Mail this coupon and judge it for yourself.

samples of his work given in this essay seem to justify Mr. Ellis's praise. Keats himself would not disdain this lovely fragment.

Moonlight

By Herbert Kennedy

Bright as the golden lily, ripple driven,
Floating beneath the hawthorn flowers of June;
So, stargirt, in the purple pool of Heaven
Swam the low glory of the desert moon.
And all the earth lay trembling in a swoon
Of slumbering loveliness; until my brain
Thrilled through with joy and the desire to weep,
A perfect pleasure blent with perfect pain:
And earth sank from me into sleep.

Sweet music sounded; ghostly hands upraised
My head, slow stealing from the shadowy vast;
And through the moon-kissed veils of sleep I gazed
Down the dim aisles of the forgotten past.

And this, too, is exquisite, a reflection of the "beautiful brevity of spring."

The First of June

By Herbert Kennedy

Sweetly smiles the sunset, through dark boughs golden gleaming,
Tenderly to westward, faint and far away,
Up into the glory of the sky my heart drifts dreaming,
Dreaming in Earth's wonder hour at closing of the day.

Sadly sighs the sunset, as lost winds wander weeping,
Weeping with the nightingales for the morns of May,
May, whose fragrant loveliness in the grave is sleeping,
Sleeping in that Heaven of dead, sweet things that can not stay.

. . . . . .

Dead and gone the sunset: and, as night is falling,
Faint with June's first sweetness, when the lilacs sway,
Dim with far sweet memories, the voice of May is calling
Sadly to my twilight heart at closing of the day.

Miss Travers gives a graphic sketch of the Cornish coast in the lines which we quote below. We take them from *The New Witness.*

In Cornwall

By Rosalind Travers

At twilight I came upon a little quiet bay
Of slow blue waters, when the tide swung full.
The clear skies over it were following the day;
The clear stream, welling from a wide brown pool,
Dropt down in silver to the silence of the shore.
All along the headlands there hardly was a sighing;
The waves lay hushed, and the wind had given o'er.
Folded into gentleness, the vales low-lying
And the rough, sad moorland were one forevermore.

Faintly down the valley came the notes of a song:
A young girl singing to the broad stones gray,
And the bracken in the meadow, as she lightly went along.
The words of her ballad were scattered on the way:
Evening only gathered up the echoing refrain.
"Come back to your true love, as trusty as a brother;
Your friend and your comforter, in pleasure and in pain,
Come back to your true love! you'll never find another,
The wide world over, so good to you again!"

PERSONAL GLIMPSES

HE FIGHTS FOR THE HOUSELESS

WE have our "Bill" Haywoods and Elizabeth Flynns to champion the causes of the lowliest of the poor, but there is nobody in this country who could be likened to M. Cochon, leader of evicted tenants in the city of Paris. The French capital is famous for its great variety of class struggles, a fact as much due, perhaps, to the picturesque men who lead in the uprisings as to the peculiar conditions which prevail there. In a very short time M. Cochon has become one of the most-talked-of men in France. The story of his stormy career is told by Louis Sherwin in *The Metropolitan Magazine:*

Just three years ago this man was an obscure artizan, a journeyman upholsterer earning forty-two francs a week—rather less than eight dollars and a half. To-day he is one of the best known and most popular men in Paris. His appearance, unaccompanied, and in the plainest of clothes, will be greeted by rousing cries of "Vive Cochon!" in quarters where the entire French Cabinet and the Academy in full uniform would excite only a mild interest. To be sure in such cases Cochon is usually arrested for the uproar his popularity causes. He has been arrested more than two hundred times in three years. And there is not a janitor in Paris who will not bar the front door if he sees Cochon coming.

Cochon's official title is "Secretary General of the National Federation of Tenants." He is the man to whom every tenant in Paris runs when he has trouble with his landlord or janitor. If you are about to be evicted, Cochon will come to the rescue with several other pairs of lusty and willing arms. He will save your furniture from the greedy paws of the court bailiffs. Furthermore, if you are so poor that you have difficulty in finding a place to lay your head, Cochon will find you shelter—even if he has to storm Notre Dame to do it.

What he has accomplished he has done single-handed. In one year, almost at one blow, he compelled the attention of all France to one of the worst ulcers on the body politic—the outrageous, pitiable condition of the poorest class of tenants in the big cities. He has compelled the Government to make a grant of 200 millions of francs toward the building of model tenements and workingmen's dwellings. Only a drop in the ocean, to be sure, but at least more than was ever done before. He has, in fact, forced not only the municipal, but the national, authorities to pay much belated heed to the crying problem of the housing of the poor.

Few Americans, even among those who have lived in France, can have any idea of the squalor and misery of the Parisian tenement. Without the slightest exaggeration, it is at least three times as bad as the worst of its kind to be found in New York. (This is not to be taken by New York landlords as an excuse for not improving the hovels from which they draw such ex-

(*Continued on page* 834)

The Ride of Rides

Many strong claims have been made for the Master "Six." Claims so strong they have created a big stir in the motor world.

And the sensation grows greater as men learn that every claim can be proven —every fact verified—by the car itself.

We offer you an easy way to test these claims; a way to find out the facts for yourself.

The Chalmers Standard Road Test

This is not the usual demonstration. In this ride we do more than show the comfort and luxury of the car. We put the Master "Six" through its paces—tests that prove its mechanical supremacy. We do things many cars cannot do at all. What others can do, we do with an effortless ease that is astonishing.

The burden of proof is put upon the car itself. No one has ever attempted so crucial a test. Many wouldn't dare.

Winning Scores Every Day

This "put-it-up-to-the-car" plan of selling the Master "Six" is bound to win you as it is winning others every day all over the country.

On this "positive proof of merit" the Chalmers Company have based their entire selling plan. And facts prove that buyers need only to see and feel in order to believe.

Those who ride, buy. They tell their friends about it; until thousands everywhere are talking about the car that sells itself.

Why This Low Price?

After a ride in the Master "Six" you will wonder how we can offer it at the price, $2175.

If the Chalmers Company made but a thousand or two thousand cars, the price would be at least $3000, that's sure. But the chief items of cost are distributed over a much larger output.

Savings That Cut Costs

In the Chalmers $7,000,000 factory, economy of production has been perfected as in no other.

Parts makers' profits have been wiped out by making nearly everything in our own shops. All bodies are mounted on the same chassis. That saves enormously in tools and machinery.

These are some of the reasons why, for $2175, the Master "Six" gives you features found in no other car at the price: features that nearly double the life of the car; that hold down renewal and operating costs almost to zero.

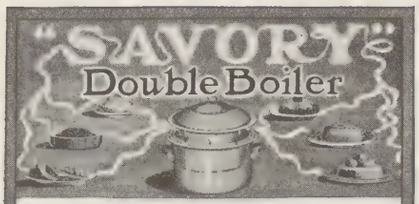
Roadster	$2175	Six Passenger . .	$2275
Four Passenger . .	2175	Coupe	2850
Five Passenger . .	2175	Limousine . . .	3600

Fully equipped, f. o. b. Detroit

All bodies interchangeable. Five wire wheels $80 extra

Whether you buy a car this year or later, we want you to feel free to take this Chalmers Standard Road Test now. It will not obligate you in the least. For you can't help talking to your friends about it, and that is bound to repay us.

Chalmers Motor Company, Detroit



Cooks Deliciously by Steam

THE "SAVORY" Double Boiler is made by the makers of the famous "SAVORY" *Seamless* Roaster. This Double Boiler cooks *by steam* and automatically returns the condensation to the large water pan. Fruits, custards, macaroni, puddings, etc. are made delicious and appetizing through its moist, even heat. Simple three-part construction; each pan can be used separately if desired. Has an easily cleaned, seamless bottom—a fine kitchen help with many uses; and results are always delightful. *Sold under an absolute 10-day-trial-money-back guarantee.* Ask your hardware or general store dealer for the "SAVORY" Double Boiler—it means better things for your table.

"SAVORY" *Seamless* Roaster

The "SAVORY" *Seamless* Roaster makes a first-class roast even from a second-choice cut. Needs little attention and is self-basting and browning—makes its own delicious gravy without water. Economical, easily cleaned and has a reputation behind it. Three sizes, five finishes.

"SAVORY" Coffee Percolator

The "SAVORY" Coffee Percolator needs only two-thirds the coffee required for an ordinary pot. Ten minutes percolating with the "SAVORY" produces delicious coffee of a taste that cannot be obtained through ordinary percolating. The "SAVORY" Percolator presents every practical advantage of the most expensive and can be had at half the price.

"SAVORY Prize Recipe Book" FREE

Contains 130 prize recipes for "SAVORY" Double Boiler and other "SAVORY" Utensils. Gives valuable hints on how to buy and cook meats. Sent free on receipt of request mentioning name of your nearest dealer.

PERSONAL GLIMPSES

(*Continued from page* 832)

orbitant rents.) What makes the state of the Parisian tenant so much worse than that of others is the fact that the French landlord is entrenched behind such a bulwark of special privilege and protective legislation. Not one of them has ever been able to explain why, for instance, he should be the only one among a man's creditors who can attach the very tools by which the man earns his livelihood, tools which even the State can not attach for arrears of taxes. Thanks to Citizen Cochon this state of things will not last long in France. The agitation against it has reached a point where both Chamber of Deputies and Senate have been obliged to consider a law which will render the tenant's furniture and effects unseizable. He has secured sufficient pledges, including those of a number of the extreme conservatives, to insure the passing of this law.

Cochon is one of the cleverest press-agents that ever lived. He "gets away with" stunts that by comparison make the tricks of our American theatrical press-agents look like the puny efforts of amateurs. He is so simple and direct that a good many people wonder if he is not just a practical joker. And some of his tricks make all Paris laugh—all but the tenement-house owners and hapless police officials. Mr. Sherwin goes on:

It was by his own hardships that Cochon's unofficial task was thrust upon him. Until three years ago he was pretty much the same as any other moderately hard-working Parisian artizan. Then one day the landlord raised the already exorbitant rent for his meager two rooms and kitchen in the Rue Chabrol. His neighbor, unable to pay, was about to be thrown on the street with his entire family, while the furniture, such as it was, was to be seized. So Cochon and the comrade began to see red. Before the bailiffs from the court or the janitor had time to gasp, the two tenants, with the aid of seven other devils, moved the household goods of Cochon's neighbor into Cochon's apartment. "Get out," said the landlord to Cochon. "Put me out," said Cochon to the landlord. "That's easy," replied the landlord.

But it wasn't.

The landlord forgot that building barricades is quite an ancient and honorable Parisian custom. The Cochon home became literally a castle. In two days the Parisian press had christened it Fort Chabrol and was watching the proceedings with gleeful interest. The garrison was victualed by means of ropes lowered through the windows. Harness policemen, "bourriques"—alias plain clothes cops—Republican guards and court bailiffs conducted the siege on behalf of the landlord while the hilarious crowds cheered the defenders. Of course, eventually the landlord won—that is to say, the Cochon party evacuated the fortress with all the honors. Furthermore, Cochon had made a great discovery. He had found out the secret of publicity. This one episode had agitated the landlord-and-tenant question as months

of writing and debating had not been able to do. So the National Federation of Tenants came to be organized, with the avowed purpose of employing just such methods.

The most serious problem Cochon had to tackle was the housing of the poor. For it is easier to snatch an unfortunate evicted person's furniture out of the landlord's paws than it is to find a lodging for that person after he has been evicted. Squalid and miserable as Parisian homes of that class are, the demand exceeds the supply. Cochon is doing his best to solve it for the time being in behalf of the members of his federation by the same sensational methods that he employs against landlords. He had no funds, no influence, nothing but mother-wit and a corps of brawny volunteers willing to attempt anything that entailed violence and the discomfiture of the bourgeoisie. So one day he exclaimed to a crowd of evicted tenants—for all the world in the language of a resourceful real-estate agent: "*Messieurs et dames!* I have the very thing for you. A large, airy, well-lighted, spacious room. Just vacated." And the next day he conducted his clients, bag and baggage, lares and penates, to the Chamber of Deputies! Here was a joke that tickled all Paris. Of course, they did not remain very many hours in that august hall. But the trick achieved results. It focused the public attention on the problem. It forced the authorities to find temporary quarters for the homeless until some benevolent persons came to the rescue. On another occasion he attempted to storm the Elysée Palace, saying: "This is a public building. It belongs to the people. It is much too large for M. and Mme. Fallières, who are simple and unextravagant bourgeois. Why should not some of its superfluous space be used by those of the people who most need it?" He actually succeeded one day in installing a couple of families within the sacred precincts of the Madeleine.

Cochon has the sympathy of every soul in Paris who does not own real estate. Everybody hates the landlord, whether in Paris or Peoria; individually and privately, even persons in authority like Cochon, altho he makes them a terrible deal of work. That is why he is able to get away with some of his humorous effects.

Take for instance the time he was besieged in the Rue Vaugirard. (He has been besieged at least six times.) Some police Dogberry had used unnecessary violence toward friends who tried to visit Cochon in his fortress. Reporters had been knocked about and the same sort of idiotic police methods employed such as prevailed recently in Paterson. Cochon hung out a large red flag from his balcony. This is a criminal offense in Paris. When put on trial for this Cochon pleaded that it was not a revolutionary flag, but merely a warning to his friends that the neighborhood was unsafe. According to French law, whenever the street is impassable or unsafe a small red sign must be displayed to warn passers-by.

"But," said the president of the court, "this was not a small red sign. It was a regular flag, measuring four feet by three at least."

"Monsieur le Président, I was on the top story," replied Cochon. "If I had hung out a small red sign people in the street

The TYPE of Building doesn't matter—

you can always daylight it with

Fenestra
SOLID STEEL WINDOWS

HERE are a dancing pavilion—a college museum—a food factory—an electric power house—a sanitarium—taken at random from our photo files.

The message is that FENESTRA will daylight *not only factories*, but *any industrial building*. From our line of FENESTRA Side Wall Sash, Monitor Sash, Fire Escape Sash, Vertical and Horizontal Sliding Sash, Sliding Doors, Portable Partitions, Hinged Doors, Casements and Institution Sash—you can get the very style your plans require.

Whether it's a power plant, warehouse, factory, theater, library, hospital, apartment, car barn, department store, railway station, loft building or textile mill—the builder has an open opportunity to benefit by FENESTRA illumination, fire-proofness and fresh air ventilation.

Built of *solid steel* sections—fitted with removable, self-adjustable ventilators—perfectly double-weathered against wind, weather or fire—FENESTRA *will last as long as your building.* Gives a half-week more daylight every month than wood sash, automatically fastens on the inside and will convert entire wall-areas into windows of equal strength. The one ideal medium for *natural* illumination.

FENESTRA is a surprise, too, in the matter of price. It seldom costs more than wood sash. Our Catalog V and booklets, "Is There One Good Reason?", "Fenestration," etc., give exact data, handsome pictures and interesting blueprints of details. This literature gladly sent you on request. Address

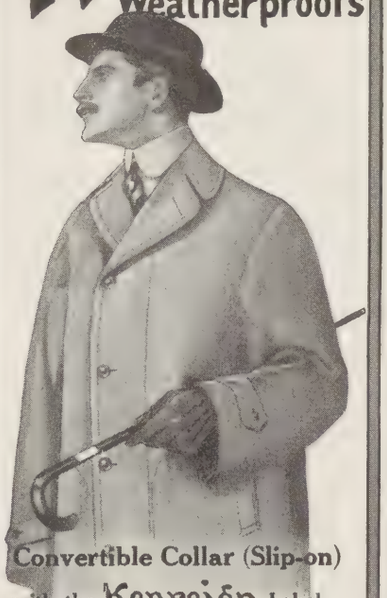
Kenyon Weatherproofs



Convertible Collar (Slip-on)
with the Kenreign Label

The most comfortable, general service model ever designed in a Slip-on. Can be buttoned to the neck in Military fashion on the few occasions necessary, but is generally worn as shown in the picture. Chafing at the neck, and collar stains, are eliminated.

A Kenreign Weatherproof will not fall apart; the rubber will not soften nor will it grow hard and stiff, making the garment useless. You are protected from these defects by the Kenreign label.

Kenreign Slip-on Coats are made in all suitable shades and styles for men and women. Prices range from $5.00 to $45.00.

Sold by reliable dealers everywhere.

would have thought it was an undershirt hung out to dry."

Cochon himself is a very serious, sincere man. Physically he is tall, broad-shouldered, of muscular build, with handsome features and an ample, blond mustache and blue eyes. Rumor credits him with having made money out of his activities, but it is not true. Not only has he no money, but his furniture is almost entirely dilapidated from frequent moving. He carries on his work from a tiny, bare office in the Rue des Martyrs, at the foot of the hill of Montmartre. As an orator he is simple and direct, and talks convincingly but without any rhetorical effects. Politically he is a Socialist. But his organization is independent of any party, and welcomes members regardless of whether they are anarchists or extreme conservatives.

EDDIE COLLINS, ALL-ROUND STAR

It probably will be several baseball seasons before Tyrus Cobb ceases to be the most conspicuous player in the business, but Eddie Collins, second baseman of the world's champion Athletics, certainly is climbing toward first honors. Just after the completion of the world series John J. McGraw, manager of the defeated New York Giants, remarked that "Collins is the best ball-player I have seen during my career on the diamond," and "he did more to beat the Giants out of two world's championships than any other member of Connie Mack's team." The New York *Evening World* uses McGraw's opinion as the text for an article extolling Collins, and adds some strong evidence to prove the contention that the Athletics' star excels them all. We read:

No one will question McGraw's ability to judge a ball-player's worth or value, but the leader of the Giants is not the only expert who concedes Collins the right to the leading niche in the hall of fame. Frank Chance, Fred Clarke, and, in fact, all of our baseball generals have seen Cobb, Wagner, and the rest of the stars in action, but all develop a weakness, no matter how unimportant, during a season. Collins, however, is perfect in every department of baseball. He always hits far above the .300 mark, is one of the greatest workers that ever trod the infield, and is really faster on the bases than Cobb.

In looking back over the three world's series that Collins was active in, we find that he did more toward making the Athletics famous than any other man on the team.

In the series just ended Collins was always to the front. In the first game at the Polo Grounds he cracked the ball for a triple and two singles. This hitting, combined with the fastest kind of base-running, was directly accountable for three runs. He scored three times himself.

The third game found Collins again in the front ranks of the offense. In the first inning his single developed into a run. His safety in the second scored two. He punched out a triple in the seventh that sent a runner across the rubber and he scored himself a few minutes later. Help-

Have You Met Mr. & Mrs. Carter's Inx?

Mr. and Mrs. Carter's Inx are for unusual people and all who write unusual things.

Mr. and Mrs. Carter's Inx have a right to be termed unusual, too, for they are designed to hold unusual inks—Carter's. They know that

CARTER'S INKS

are unusual, because they are made in the Carter laboratories and manufactory. That's evidence enough that they are carefully and skillfully made and that every bit of material that goes into them has been closely and cautiously examined. They are so brilliant, so intense, so unlikely to corrode the pen point or leave a watery streak. *You* should know these things, too.

To convince yourself, stop at your stationer's and adopt the "Inx"—fill them with Carter's Inks, and write—then you'll know the value of these unusual inks and their unusual containers.

The Carter's Inx are dressed in proper colors for red and black or blue ink.

Mr. and Mrs. Carter's Inx are at home with all the best stationers, and may be secured for adoption with a purchase of a given quantity of Carter's Inks or Adhesives.

Buffalo, N. Y.

ing his team to five runs in a single game is a fine day's work. In the final game he helped to push around three runs.

Playing baseball comes natural to this young star—he is only twenty-six. He was a star from the day he joined the Athletics in 1907. Collins is a product of Columbia University. He was at second base for the varsity when one of Connie Mack's scouts discovered him.

Collins was primed for a law course, but forgot all about law when a Philadelphia scout, during the summer of 1906, asked him how he would like to play ball for Connie Mack. Collins jumped at the offer and accompanied the Athletics on their last trip West. Here is where Collins had to do a little cheating. He did not want to impair his amateur status at college, as he was booked to captain the varsity team in 1907, his final year at school. He played in several games on that trip under the name of "Eddie Sullivan," and the critics were so greatly imprest with the playing of the "kid" that pictures and complimentary articles were printed in the Western papers, telling of the new phenom that Manager Mack had uncovered.

Collins returned to college, and the next spring when the varsity men, reported for practise he was called before one of the faculty, who produced a Chicago paper and showed Collins his picture. Collins refused to answer when asked if he was the "Eddie Sullivan." Then came the notice of his disbarment. He was told that he was not eligible to play ball for Columbia. Collins accepted the punishment in good grace and remained at school until June, when he received his degree and then hiked for Philadelphia, and has been with the Athletics ever since. This briefly tells of the early career of the world's greatest player.

Collins was born in Millertown, N. Y., on May 2, 1887. He is five feet ten inches tall and weighs about 160 pounds. He was a good football-player, one of the gamest that ever represented Columbia. Indeed, in every sport that he took up he displayed the same aggressiveness and gameness that mark his career as a baseball star.

Since 1909 he has never batted under the .300 mark; for several seasons he led Ty Cobb in base stealing and can cover more ground in the infield than Hans Wagner ever did. He is one of the surest men on bunts that ever handled a bat. He stands close to the plate, so that a pitcher can not work the corners.

Ray Collins, the Boston pitcher, says that Collins is the hardest man in the business to pitch to. Every other pitcher that ever faced him will admit the same thing. He will wait out a pitcher like a hawk. Not so with Cobb. The latter when he makes up his mind to hit will swing at anything. Collins, however, may have two strikes. He will then wait and get three balls. On the sixth pitch he will crowd the plate, and if it isn't right over the heart of the slab he'll walk.

Collins has absolutely no weakness as a batter. He is about the only man in the game, since Keeler retired, that can hit into right or left field. He is likely to take one close to his hands and rip it into right field or he will go after one on the outside and drive it into center or left field. Collins is a left-handed hitter.

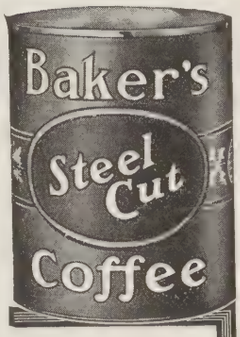
Delicious



Less Than a Cent a Cup

IF you are not already a user of our coffee, permit us to send you a trial package. Then you can see for yourself that it is not only better and purer, but that it costs less per cup than ordinary coffee, as it makes more cups to the pound.

A Trial Can Free

SEND us your grocer's name and we will send you a trial can of Barrington Hall, enough to make six cups of delicious coffee, and booklet, "The Evolution of Barrington Hall." This explains the three stages of progress through which this famous coffee has passed.

At first Barrington Hall was sold whole or ground as ordinary coffee is today, then steel-cut with the bitter chaff removed, and finally Baker-ized. In it we have retained the good points of our older methods and adopted new features (explained in booklet) that make it economy without economizing. A luxury not at the expense of health, but one that is an aid to correct living.

Baker's Steel-Cut Coffee

Steel-Cut Coffee lacks a little in quality and in evenness of granulation when compared with Baker-ized Barrington Hall, but the chaff with its objectionable taste is removed from it also. It is far superior to the so-called cut coffees that are offered in imitation of Baker-ized Coffee.

Our Coffee is for sale by grocers in all cities and most towns. Write for grocer near you who can supply it.

Written by a Purchasing Agent

I have stopped trying to fool myself!

Was a time, in my younger days, when "Price" was King. To cut a half-cent from the standard price was my idea of earning a small salary.

I thought I was putting it all over the salesmen, but of course I was only fooling myself. For the goods were always a half-cent shy on quality—or worse. Was I praised by the Boss? I was not. On the contrary, I was damned by the whole works.

Now I buy standard goods—and get them.

By "standard" I mean not necessarily the highest-priced stuff, but goods which are best adapted to the purpose for which they are made and which are so uniform in quality that the manufacturer dares to identify them with his trade-mark.

My standard paper for letterheads, office and factory forms, price lists, etc., is Hammermill Bond. It is an economical paper which is always uniformly strong, clear of surface, and with a "quality rattle." Above all, it is water-marked. That water-mark is a guarantee—it is all the assurance I want that I will get exactly what I pay for. And I always pay the same price—less than 9c a pound.

Yours faithfully,
A Purchasing Agent.

P. S.—I advise you to send for their new book, "The Signal System."

And when he gets on base he invariably steals second. His speed is too much for the average catcher.

Collins believes that a good education helps a ball-player. He says that it helps a man to think quickly. Collins married two years ago, and has a home in Clifton Heights, outside of Philadelphia.

REAL WILD MEN OF BORNEO

Those who have been saddened by the discrepancies between circus bill-board advertising and what they have actually seen in side-shows may learn from Daniel Denison Streeter, field agent of the United States Biological Survey, that there are really and truly some wild men of Borneo. Mr Streeter knows, because he has been all the way across the island and several times felt the sensation of being so near death at their hands that only a superstition or two saved him. The biologist visited and mingled with people whose chief amusement is collecting the heads of members of rival tribes. He observed female fashions that were a good deal more striking than those he was accustomed to seeing in this country. Some of the women he saw in the jungles were willing to suffer far more physical discomfort for the sake of personal appearances than the women of civilized countries; they underwent torture every few days for ten years in order to look just right. Mr. Streeter left his home in Brooklyn in April, 1912, for Africa and the Far East in search of specimens of rare beasts and reptiles. Failing to find what he wanted in Africa, the Malay Peninsula, or Sumatra, he went to Borneo. He experienced many thrills during the journey, and tells about some of them in an interview with a Brooklyn *Eagle* reporter, from whose article we quote:

My landing-place was Kuching, but I proceeded across the bay to the mouth of the Rejanj River, along which I continued for about ninety miles to the island of Sibu, where I met the only American I was to find during my entire travel across Borneo. He was a former missioner, who had given up hope of converting the indifferent natives, and was conducting a prosperous rice-growing plantation, having imported about 4,000 Chinese for the purpose. Proceeding eighty miles farther, I reached Kapit, where I obtained canoes and engaged thirteen natives as guides for my trip into the interior. They represented three different tribes and comprized one Punan, who was a tree-dweller and head-hunter; two Kayans, and the rest Lanans. For two months' assistance I gave the band what would in American money aggregate $15, and of all the natives who aided me in my Borneo travel they were the only ones that asked compensation. They were typical of the Borneo tribesmen, about five feet tall, good looking, with straight black hair and with remarkable muscular development.

The women, strange to say, were far

The Walled City

By EDWARD H. WILLIAMS, M.D.

A book unlike any other for general reading.

The author says in his introduction: "So far as I am aware no true story of the life of the insane criminal has ever been written for the general public. It has been told in a technical manner, of course, for the benefit of those interested in the scientific and sociological aspect of the subject, but such writings have little popular interest, and do not convey a correct picture to the mind of the average reader." This book is

A *Story* of The Criminal Insane

which describes and pictures the everyday life of those within the Walled City—any Hospital for the sick-minded of criminal tendencies.

Brims with humor and anecdote; shows the varied methods of amusement; recites many stirring efforts to escape; tells of types, of social position, of the law's outreach, the shortcomings of rulers, injustice, etc., etc.

Price $1.00 net; by mail, $1.11

more homely than the men, and I saw but one good-looking girl during my entire trip across Borneo. She was the wife of a Kayan raja, and he, with the deference that my strange appearance excited, offered her to me as a present.

As we proceeded to penetrate farther into the jungle, where no white man had ever passed, it was necessary to send the natives ahead with their peculiar knife-like blades, and to hew down the heavy underbrush and soft but thickly growing trees, for in such surroundings, where it was impossible to see a foot on either side, it would have been obviously impossible to have made any advance. It was by cutting down the trees, too, that the reptiles and animals, frightened at this first intrusion into their dense woodland domain, would dart across the cleared area, and thus make possible their capture.

For weeks we continued thus, and I shall never forget, as we approached the heart of the interior, the sensation that was mine, when, through the jungle blackness, we suddenly saw an opening ahead, and came upon one of the strangest of strange villages, to be found only in such a land as Borneo.

The first object to meet the eye was a long, grotesque-looking house, built of wood on piles about fifteen feet off the ground, an elevation necessary, as I afterward learned, not only to lessen the danger from floods, but also to prevent the attacks of wild animals, such as elephants and rhinoceroses, reptiles, and the sudden invasion by rival tribes of head-hunters. Each village contains one house, and each house shelters from twenty to three hundred brown-skinned natives. Throughout the length of the long house is a narrow hallway with crudely constructed doors leading to the various rooms. Each family occupies one room. Occasionally one will find a larger village having three such houses, which may contain as many as a thousand natives; but these are rare. A pole, in which notches had been cut, served as a ladder, reaching to the house. The supporting beams and the main doors were magnificently carved, showing that even with their roughly made blades these animal-like natives, who had never known the influence of civilization, were master artizans.

As we approached the house the natives came swarming out in numbers, and while they paid little or no attention to my brown-skinned escorts, they gazed at me in utter wonderment. As to whether the natives or myself had the greater misgivings I am unable to say. My sensations were indescribable. Here I was, in the heart of Borneo, surrounded by a horde of strange, brown-skinned men, leading animal-like existences, and whose chief diversion seemed to be proving themselves brave warriors by chopping off the heads of rival tribesmen and passing them down to posterity as trophies of their valor. I knew that they had never seen a man of white skin before, and whether they would make a sudden dash to claim the honor of my head was a matter that gave me some little concern.

Soon I was being examined from head to foot by the entire band. They ran their fingers through my hair, for it is light and somewhat wavy, while theirs was straight and black; they seemed to take particular delight in feeling of the white skin of my

PSYCHOLOGY
OF
INSPIRATION

BY
PROF. GEORGE LANSING RAYMOND
George Washington University

An Attempt to Distinguish Religious from Scientific Truth and to Harmonize Christianity with Modern Thought

Dr. J. Mark Baldwin, Professor of Psychology, Johns Hopkins University, says:—"I find it" (*i. e.*, the psychological basis from which the main thought of the book is developed) "new and valuable."

Hon. William T. Harris, Formerly U. S. Commissioner of Education, Washington, D. C.:—"Studies in all fields of esthetics and literature have given him a special power to present a great many current religious questions in a way that will prove acceptable to serious-minded people who find themselves on the borderland between the Christian and the non-Christian fields of belief. I predict that it will interest many and prove helpful to them all."

Hon. Edward Everett Hale, D.D., LL.D., says:—"In the range, only too wide, of superficial talk on these great subjects, nobody has presented them from this point of view. Here is an attempt both to interpret and to formulate beliefs which the majority of intelligent Christians hold. For many reasons, alas, which it is not worth while to discuss, such people are not always able to explain why they hold what I like to call twentieth-century views of Christian life and worship."

INVESTMENTS AND FINANCE

TRADE AND STOCK-MARKET CONDITIONS

WHILE trade reports in the week ending October 18 manifested some irregularity, *Bradstreet's* found that they "quite generally agree that business is in excess of that done at this time last year, when activity was well-nigh superabundant. There were "urgent calls for prompt shipment of textiles, of which there is a marked scarcity." In a number of trades men were busy in "adjusting prices to new tariff schedules," and this factor had tended to cause "more or less hesitancy." But there was "a general feeling" that the tariff reductions "would be met" and that "because of obvious advantages domestic interests will more than hold their own." These conditions had "made optimism quite pronounced." At the same time misgivings were encountered "here and there."

On the stock market, prices among the more active shares had been carried down from 2 to 3 points. This decline had occurred without any fundamental change in the attitude of our industries, in trade, the tariff, or in the currency legislation situation. Among the adverse factors were an advance in the Bank of England rate and a reduction in the price of finished steel. There was also anxiety in Europe over the outcome of matters in Brazil, and the Mexican situation had been a factor of some consequence. *The Wall Street Journal*, discussing causes, says:

"If the new tariff is suggested as the principal cause, the objection is at once raised that the substance of the important schedules has been known for months, and that business, according to the commercial agencies, has sustained no severe setback. If the Currency Bill is brought forward as a bear factor, the objection is made that the prospect of material amendment to the bill is becoming brighter. If the reported anticorporation policy is suggested, the point is made that it was known last spring that Bryan was to be influential in the new Administration and that the new Attorney-General would go as far as he could. The income tax is similarly disposed of by the reply that this, also, was long ago appraised as a matter of market force. The high money abroad and the New Haven's difficulties are not so easily passed off by the incredulous critics, nor is the Mexican situation, but it is insisted that in these affairs, too, there is nothing novel enough to break prices, and it is insisted that the difficulties of the railroads have long been known."

As to the future of prices, the same journal remarks that in New York what pessimism there was "seems to be confined to the territory below Fulton Street." North of that thoroughfare optimism prevails. The pessimism below Fulton Street is declared to be "as deep as it has been at any time—almost as deep as it could be under any circumstances." The optimism elsewhere is now "more pronounced than at any other time this year." Some pessimism prevailed in mercantile circles a few months ago—there was, in fact, quite an amount of it—but it "has now entirely disappeared." Merchants have come to the conclusion that tariff changes "will not produce any real disturbance and that the Currency Bill is not their affair."

Lack of speculation in stocks is explained by a writer in *Investments* as due to want of money. He says there is "absolutely no money available at the present time for speculation." That fact, coupled with the present state of mind of most bankers, means that "there won't be any speculation." When any rise in prices is undertaken it will be checked until something has been done with the appeal of the railroads for an advance in rates. Arguments in the case are expected to be made before December, and a decision is looked for early in the new year.

Investments believes that, whatever the decision may be, it will have "a big influence on the price of railroad stocks." While the effect of an adverse decision would be serious for many stocks, a favorable decision would mean "that railroad stocks are going to become more valuable than they are now." The writer makes a guess as to what the decision will be. It is that the rates asked for will be granted. He gives two reasons for his guess—first, that the railroads "seem to have the right on their side"; secondly, "the country seems at last to be in a frame of mind to do the railroads justice." He believes the roads will be able to make out a very strong case, and this opinion prevails, he finds, in many quarters.

In 1911, when the petition of the railroads was refused, the roads were asked to go ahead under the old rates and see if they could not increase their net earnings. It was believed then that more efficient management might produce better results. The result, however, since 1911, has been that net revenues, instead of increasing, "have shown a further alarming drop." In 1912, net revenues declined 20 per cent. over those for 1911. In 1913 they have declined 15 per cent. over 1910.

Of quite as much importance is the change that has come over public sentiment toward the roads. In 1911, public sentiment was distinctly hostile. Since then, shippers may not be any more anxious than they were in 1910 to pay higher rates, but the country in general has come to realize that the railroads "have not been getting a square deal." Moreover, it is seen that if matters go on conditions may eventually "react most harmfully on general business." Another point is that, with a strong popular demand for steel equipment in cars, it has been demonstrated that it would be impossible for the roads to provide steel equipment on the present basis of revenue. The problem before the public therefore is, "Would you rather pay what you are paying now, ride in wooden coaches, and stand a chance of getting killed, or pay a little more and give the railroads a chance to provide steel cars and safety?"

WOOLEN GOODS UNDER THE NEW TARIFF

George W. Perkins, on returning recently from Europe, gave to the *Odd-Lot Review* an interview in which he spoke of the effect of our new tariff on importations of foreign woolens. He had learned that American

tailors using high-grade cloths had received notice from British manufacturers that prices on new orders "would be a shilling per yard higher than before the law went into effect"—an increase which just about represents the reduction made in the new tariff.

Mr. Perkins cited this fact as evidence of the supreme ability in trade matters of English manufacturers. We in America, he said, "are babes in arms" when it comes to conquering the world's markets. British manufacturers act in concert, and their entire industrial strength is at one time brought to bear on a single point. The way in which British woolen manufacturers have prepared to meet our new tariff is a fair illustration of the methods by which they generally set out to conquer the world's trade in any commodity. Mr. Perkins believes that one of the good things we shall learn from the new tariff is "the supreme effectiveness of unity" in commerce, as well as the effectiveness of lack of unity such as prevails with us. If we do not wish our foreign trade to be dictated from London, Paris, or Berlin, our industries, he says, must be organized as theirs are organized—on a national basis.

Other reports as to woolens are that an advance of 20 per cent. will eventually take place in the price of foreign goods. That opinion is said now to prevail in leading dry-goods houses—at least *The Wall Street Journal* so understands. An advance of 5 per cent. has already been made and other advances are expected to follow. The head of one of the largest woolen importing firms in the country is quoted as saying, "There is every prospect of an advance of 20 per cent. on foreign woolen goods." He believed that, with the lessons the tariff will teach them, foreign manufacturers will seize the opportunity it offers them to raise prices. He would not be surprized to see in the end an advance of 40 per cent.

THE UNTHRIFTY AMERICAN

That the Americans are an extravagant people has passed almost into an axiom—at least in Europe, where judgment is based on what is learned of Americans from those who travel abroad. That Americans who stay at home, and especially those of moderate or extremely limited income, are extravagant has not so generally been commented on. A writer in *The Investor's Magazine* contends that "it is possible to show in cold figures that we are the least thrifty nation in the world"; we rank below even "such poverty-stricken nations as Italy and Japan," while if comparison is made with countries in which thrift is systematically practised, "the comparison is one to make us ashamed." Dr. Henry Smith Williams is referred to as having recently compiled figures which show that ten leading European countries average 373 savings-banks depositors for every 1,000 in the population, whereas in this country there are only 99 per 1,000. Dr. Williams's table, showing the number of depositors per 1,000 in each of these countries, is as follows:

Switzerland	544	Holland	325
Denmark	442	Germany	317
Norway	415	England	302
Sweden	404	Australia	300
Belgium	397	Tasmania	280
New Zealand	360	Japan	270
France	346	Italy	220
United States			99

In the European countries above named "there is at least one savings-bank de-

positor for every family." Switzerland does even better; in that country are five depositors for every two families, while this country has only one depositor for every two families. Dr. Williams is quoted further:

"If we were to seek further evidence that life is not elsewhere quite so strenuous for the average man as in America, we might note that 27 per cent. of the inhabitants of Japan and 30 per cent. of Australians are savings-bank depositors.

"The population of the United States is greater than the combined population of England and France, yet these countries together have more than twenty-seven million savings-bank depositors. We have a little over nine millions. Germany with seven-tenths our population has more than twenty millions.

"Now note this suggestive sequence. Of the four great industrial countries of the western world:

"(1) France has the lowest wage-scale and the highest per cent. of savings-bank depositors (34.6);

"(2) Germany has a slightly higher wage scale and a slightly lower savings-bank percentage (31.7);

"(3) England has a wage-scale still higher and a savings-bank percentage correspondingly lower (30.2);

"(4) America has by far the highest wage-scale and by far the lowest savings-bank percentage (9.9).

"Trade for trade, the American wage-scale is often not far from three times the French scale. Contrariwise, the percentage of savings-bank depositors is three times as great in France as in America. This may be a coincidence, but it is at least a suggestive one. The fact seems strongly to suggest that extravagance grows and thrift decreases with the increasing wage-scale."

The writer in *The Investor's Magazine* notes that Dr. Williams's figures, showing 99 depositors per 1,000 in this country, refer only to depositors in savings-banks, no mention being made of deposits in State, private, and national banks, or in loan and trust companies. It is much more the custom here than in Europe for a person of moderate means to keep money in one of these banks rather than to put it in a savings-bank. In fact, few Americans with cash resources, or any substantial income, now fail to have money in a bank where it may be drawn against by check.

WHAT STANDARD RAILS YIELD

The year's decline in quotations for standard railroad stocks has brought them to points where they yield handsomely on the cost. In case none of these roads reduces its dividend, purchases made now will prove extremely profitable. *The Wall Street Journal* has printed a list of twenty-three stocks which sold in October at prices to yield from 5 to 7 per cent. Six of them at those prices yield 7 per cent.; seven yield more than 6 per cent., and eight yield more than 5. Notable among those which show a high earning power on the market price are Southern Railway and Erie. Twenty stocks in the week ending October 18 were down to a level within three points of the lowest for the year, the lowest having been reached in June.

Roads which give the highest yield, and these yield exactly 7.1 per cent., are Chesapeake & Ohio, New Haven, Southern Pacific, and Kansas City Southern pre-

Editors, Lawyers, Scholars, Writers, Clergymen, Teachers, Travelers, Students—All who have any interest whatever in Foreign Languages need these authoritative

French-English German-English Latin-English DICTIONARIES

They will show you how to find the equivalent in English of French, German and Latin words.

And vice versa, how to find the French, German or Latin equivalent of English words.

How to spell, pronounce, syllabicate, etc.

How to conjugate the various foreign verbs.

How to translate American coins, weights and measures into their German equivalents, etc., and vice versa.

They contain lists of proper names, geographical names, and various other valuable data.

Cassell's New German Dictionary

German-English and English-German

Compiled from the best authorities in both languages. Revised and considerably enlarged by Karl Breul, M.A., Litt.D., Ph.D., Cambridge University Reader in Germanic.

By the issue of this new edition, this dictionary becomes the cheapest as well as the best popular German-English and English-German dictionary in the world. Among the new words and phrases included will be found many thousands of idioms, well-known proverbs and familiar quotations, besides colloquialisms and German slang terms which often prove puzzling to English students.

"I think that Dr. Breul, who has been so long engaged in the preparation of this work, has succeeded in giving the public an excellent book. It deserves to be recommended so much more, as the print is perfect and the price moderate."—*Prof. Münch, Berlin University.*

Octavo, Cloth, 1,360 pages. $1.50 net; by mail, $1.74.

Cassell's New Latin Dictionary

Latin-English and English-Latin

202nd Thousand. Thoroughly Revised and Corrected by J. R. V. Marchant, M.A., formerly scholar of Wadham College, Oxford; and Joseph F. Charles, B.A., late assistant master at the City of London School.

It is above all intended to be a dictionary of classical Latin, and thus, in this new edition, a large number of archaic, or post-Augustan, words have been omitted, while nearly all of the important articles have been entirely rewritten, chiefly with a view of introducing a greater number of quotations to illustrate construction and usage. The historical and geographical notices have been largely increased in number. In addition to the regular vocabulary features the book contains a table of the Roman Calendar, and a Geographical Glossary of the English names of important places with classical or later Latin equivalents.

Octavo, Cloth, 928 pages. $1.50 net; by mail, $1.68

Cassell's New French Dictionary

French-English and English-French

Edited by James Boïelle, B.A. Newly revised by de V. Payen-Payne, Assistant Examiner in French in the University of London. Containing, in addition to the regular French-English and English-French vocabulary, a special article on French Pronunciation; a list of French Nouns of Double Gender; a table of Irregular and Defective Verbs, and their Conjugations; a special Vocabulary of Proper Names; separate Vocabulary of Geographical Names, etc.

"The best French and English Dictionary of an ordinary size in existence."—*Critical Review*, Paris.

Octavo, Cloth, 1,230 pages; $1.50 net; by mail, $1.77.

FUNK & WAGNALLS COMPANY
354-360 Fourth Ave., New York

ferred. Two of these four reduced their dividends within the present year—hence the low prices. The fact that Southern Pacific yields so high a rate is due largely to the depression in the present market price, as brought about by the enforced distribution of $88,000,000 of its stock formerly owned by the Union Pacific. A table gives the recent market prices, dividend rates, yields on market price, earnings for dividends, etc., as follows:

	Price	Div.	Yield	Earn. 1913	Earn. on Mkt Pr.	High 1913

FACTS AS TO CLEARING HOUSE TRANSACTIONS

The annual report of the New York Clearing House for the year ending September 30 last shows totals for the year, as well as for daily averages, "well above last year's figures." At the same time, the totals were below those for 1910, 1909, and 1906. The New York *Evening Post*, commenting on the figures, prints the following table in which is given a summary of the year's exchanges and the year's average daily exchanges in New York for each year beginning in 1900:

	No. of bks.	Clearings	Daily Av.
1913.....	64	$98,121,520,297	$323,833,400
1912.....	65	96,672,300,863	319,050,497
1911.....	67	92,420,120,091	305,016,897
1910.....	50	102,553,959,069	338,461,911
1909.....	51	99,257,662,411	326,505,468
1908.....	50	73,630,971,913	241,413,022
1907.....	54	95,315,421,237	313,537,569
1906.....	55	103,754,100,091	342,422,772
1905.....	54	91,879,318,369	302,234,599
1904.....	54	59,672,796,804	195,648,514
1903.....	57	70,833,655,940	233,005,447
1902.....	60	74,753,189,435	245,898,649
1901.....	62	77,020,672,493	254,193,638
1900.....	64	51,964,588,564	170,936,146

In further comment on the report the same paper says the largest daily clearings in the year occurred on October 2, 1912, when the total reached $603,188,791, while the smallest daily exchanges were $152,-471,224, on March 22, 1913. These records compare with other years as follows:

	Highest	Lowest
1913.....	$603,188,791	$152,471,224
1912.....	572,932,728	166,564,908
1911.....	586,956,644	150,307,198
1910.....	736,461,548	130,436,161
1909.....	610,961,165	126,833,166
1908.....	440,527,496	106,833,749
1907.....	678,719,314	141,988,656

Attention is called to the fact that the report showed the kinds of money used by New York banks in paying their Clearing House balances—that is, how much in gold or gold certificates, and how much in legal tender, silver, etc. Balances are usually settled in gold or gold certificates, but last year $1,949,490,000 silver certificates were used. This was much the largest ever shown. Below is a comparison with recent years, the 1908 total of $528,710,000

Use Oxide of Zinc Paints

THE Strictly Modern Residence is painted inside as well as outside. Sanitary science is responsible for this practice.

1903	3,315,230,000	286,487

Following is an analysis of the distribution of outstanding loans given in the report of discounts on September 24, 1913. The figures are based upon the transactions of thirty of the largest banks and trust companies, each having approximately $20,000,000 or more of loans and discounts and aggregate loans and discounts of $1,226,974,500:

Loans to Wall Street brokers for account of correspondents	$174,945,900
Loans to Wall Street brokers direct	264,383,800

Other loans and advances, distributed geographically:

Eastern States (east of the Ohio)	$617,830,800
Southern States	174,140,500
Western States	167,720,600
Foreign (Canada, etc.)	2,898,800
Total banks' own account	$1,226,974,500

It is interesting to learn from this statement that the Wall Street loans made by the banks for their own account "form but 20 per cent. of the total." Nearly one billion of the twelve hundred million was "loaned outside of Wall Street, of which nearly 342 million was loaned to points in Southern and Western States."

U. P., S. P., AND C. P.

The long-promised suit of the Government soon to be undertaken to divorce the Central Pacific Railroad from the Southern Pacific means that the Southern Pacific will lose, in case the suit goes against it, 2,162 miles of trackage, the total trackage in the Southern Pacific system being 11,695 miles. This action by the Government, combined with the placing on the market of more than $80,000,000 of Southern Pacific stock, caused in October a decline in the market price of Southern Pacific to 84½, the lowest price since the panic of 1907, a price, moreover, at which Southern Pacific now yields a purchaser over 7 per cent. on his investment. A writer in the New York *Evening Post* gives in detail the following facts as to the relations of Central Pacific to Southern Pacific and to Union Pacific:

"Union Pacific acquired control of the whole Southern Pacific system in 1901, simply to get hold of the Central Pacific's 871 miles of track between Ogden and San Francisco, and thus complete its own main line to the Pacific Coast. E. H. Harriman testified on the witness-stand that Southern Pacific's ownership of Central Pacific was a case of the 'tail wagging the dog.' That Harriman did not overstate the facts is evident from the last annual reports of the two companies, showing that while Central Pacific's main line made up less than 8 per cent. of the Southern Pacific's total mileage, that company's gross earnings made up nearly 40 per cent. of those reported by the whole system. Hence, Southern Pacific would feel the loss of Central Pacific more than the Union Pacific missed the Southern Pacific. It is by no means certain, however, that the Southern Pacific will be ordered to dispose of the Central Pacific. In declaring the Union Pacific-

Southern Pacific system a combination in restraint of trade, all that the Supreme Court said regarding the Central Pacific was:

"'The Attorney-General suggested, at the oral argument, in response to a query from the Court, that the decree, while destroying the unlawful combination, in so far as the Union Pacific secured control of the competing line of road extending from New Orleans and Galveston to San Francisco and Portland, might permit the Union Pacific to retain the Central Pacific connection from Ogden to San Francisco, and thereby control that line to the Coast, thus effecting such a continuity of the Union Pacific and Central Pacific from the Missouri River to San Francisco as was contemplated by the acts of Congress under which they were constructed. Nothing shall be considered as preventing the Government or any party in interest, if so desiring, from presenting to the Court a plan for accomplishing this result, or as preventing the Court from adopting and giving effect to any such plan so presented.'

"Thus the Supreme Court declined to express any opinion as to the legality of Southern Pacific's ownership of Central Pacific. In divorcing the Union Pacific-Southern Pacific system a plan was devised for turning Central Pacific over to Union Pacific for $104,189,941, the price at which Central Pacific is carried on Southern Pacific's books; but the Western Pacific, backed by the California Railroad Commission, objected, on the grounds that the Central Pacific, with the Southern Pacific's California Benicia cut-off, would give the Union Pacific an advantage over other roads. Southern Pacific declined to allow the Western Pacific to use the Benicia cut-off, whereupon the whole deal was abandoned.

"Whether those negotiations will be resumed depends first upon whether or not the Supreme Court can be convinced that the Southern Pacific-Central Pacific system is a combination in restraint of trade, and next upon the attitude that will be taken by the California Railroad Commission regarding the lines under its jurisdiction, in the event that the Government wins its suit. Harriman admitted on the witness-stand that he had used Union Pacific to reach out and control the transcontinental railway situation south of Great Northern. In acquiring control of Central Pacific, however, Southern Pacific had no such object."

Bradstreet's, in commenting on the suit, says it seems to have been inferred that the enforced sale of the Central Pacific would be adverse to the interests of the Southern Pacific and that at the same time it might work in a moderate degree to the advantage of Union Pacific. There can be no doubt that the stock market awaits with much interest the action of the Attorney-General and its outcome. Segregation of the Southern Pacific's interest in the Central Pacific might be secured by placing the latter "in an independent position as to ownership and management." This possible outcome, rather than an actual sale of the road to Union Pacific, is believed by this paper to be "something which merits attention."

Thoughtful Harold.—FIRST FOND MOTHER—"My Reginald has to have a new set of school-books very year."

How To Be Happy and Efficient, and Live Long Despite A WEAK HEART and Hardened Blood-Vessels

The Heart and Blood-Vessels

Their Care and Cure, and the General Management of the Body
By I. H. HIRSCHFELD, M.D.

In this new book is told the really interesting story of the heart, and how to lead a happy and efficient life even when it is sick and the blood-vessels are hardened. The author, a prominent physician, discusses the correct management of the body in regard to work, play, sleep, food, sex, climate, and the different values in life, and shows the way by which to reconstruct one's system after it has been mismanaged.

"Nothing like it has appeared for supplementing the wide work of human conservation," says the *News*, Chicago.

"This book should be an aid to humanity in general."—*News-Tribune*, Detroit.

PERSONAL GLIMPSES

(*Continued from page 839*)

face, and could not believe it was real. They felt of my ears and nose, of my arms, hands and fingers, my legs, and even my shoes, the significance of which was beyond their grasp.

For a moment a consultation was held among themselves, and somehow I felt my fate lay in the balance. Then, with their tribal incantations, they began lavishing upon me presents of many kinds—rice, fruit, and even chickens, which are both scrawny and rare, their use being reserved for strictly ceremonial occasions. Then I learned that I was a god who had come into their midst on the propitious mission of increasing their crops and healing their sick; that, at least, was the conclusion of the natives, and as the verdict was somewhat better than that of decapitation, I accepted it gladly and entered upon my duties and dignity as a divinity.

As a libation fitting to what they considered a sacred personage, the savages brewed a special liquor made of rice and called "arrak." This drink is indulged in only on extraordinary occasions. Mr. Streeter found the concoction sweet, thick, and colorless, with a flavor somewhat like "Bénédictine," and not overintoxicating. He gave them little trinkets, which strengthened their belief that he had supernatural powers. They carried their sick to him and begged him to heal them. To continue:

In my medicine-chest I had a large quantity of quinine, alcohol, fever pills, and antiseptic solutions, and these I found of invaluable worth. Loathsome disease, not unlike leprosy, was the scourge of the interior, and three-fourths of the population, from children to aged people, were afflicted with it. Tho a novice at medicine, I treated as many as fifty natives a day, and over a thousand during my entire stay. Malaria and kindred ailments, caused by mosquitoes, centipedes, and various insects, had caused much sickness among these natives, over 200 miles in the interior, and my medicines were constantly in demand. Quinine, despite its bitter flavor, the natives ate like candy. The "white man's medicine," they called it, and so great was their fondness for it that even the well would feign illness to obtain it. Observing that I used alcohol without evidencing pain after being tattooed, they attributed it to magic powers and begged that a little be applied to their arms.

Their religion seemed to be a vague one. I observed a few totem-poles, but these were apparently offered for a propitious rice crop. For their dead the greatest respect is shown, and they speak of their departed reverentially, and in hushed tones. They care tenderly for their sick, and after death the remains are placed in coffins, handsomely carved and decorated, on the top of trees.

Marriage is a festive occasion, in which all join merrily. After a short trial union, if the contracting parties agree, they go through a peculiar native rite, and the couple continue to live together, seemingly happy, until death. Loin clothes form the

The Universal Language

Huyler's as a gift carries a message more clearly than words and as delicately as flowers. Preferences in flowers differ; a box of Huyler's is universally appreciated. Its gift is a subtle tribute to good taste.

Three Sash Frame

Grow Violets this Winter

You can grow violets, pansies or any other of the flowers you love so well in this miniature glass garden. Just fill it with rich fertile soil, plant your seeds and the winter sun does the rest.

Wouldn't you like to have lettuce, radishes, parsley or small white onions right from your own garden for your Christmas dinner?

It's a real pleasure to pick flowers and vegetables from your own little patch and much cheaper than paying fancy market prices. Start your Spring seedlings early and have large healthy plants weeks before your neighbors.

Lutton Sash Frames are made in 2, 3 and 4 sash sizes; single and double glazed. Size illustrated covers 54 sq. ft. Any size pays for itself with a single crop and gives years of service. Carefully crated and shipped ready for use. Stored away compactly in summer.

Pamphlet D describes these frames and their uses. Write for it today.

THE ABILITY TO HANDLE MEN

Let Us Give You
"The Ability to Handle Men"

We want to send you free this brilliant little book from the pen of Thomas Dockrell, the business analyst. It contains a vital message for big men—made or in the making.

The ability to handle men is an absolute need of the executive—or the man who hopes to become an executive. Without it he cannot get the best work from his subordinates—the best co-operation from his associates and superiors.

It is not an inborn characteristic. Mr. Dockrell proves this beyond the shadow of a doubt. And he points clearly the way to acquire it.

The book contains not a word of advertising. But it is so completely in line with the great movement we are leading—the movement for scientific business—that we want every business man to read it.

We have already given away 20,000 copies. Every one has been passed from hand to hand. A single copy was read by fourteen men in the accounting office of the Union Pacific Railroad.

We are going to give away 100,000 copies. Simply write for one on your business letterhead or give your business position. It will be sent to you without the slightest obligation.

Alexander Hamilton Institute
39 Mercantile Library Building, New York City

only article of wearing-apparel used by the natives, who are, I believe, more modest and moral than many civilized people in metropolitan centers. Their time is consumed generally in raising rice or hunting. The women work with the men, take care of the rooms in the "long house," and carry water and firewood. The men, armed with spears or long steel blades skilfully made of metal ore, will go on hunting expeditions or venture forth after the heads of some rivals against whom they have a grievance, and remain six or nine months.

For all their wild surroundings, the natives are unusually keen and eager for learning. They like to talk and ask questions, and, tho they have no written language, are anxious to learn of strange lands and people. They are fond of tatoo designs, which are made with India ink and tobacco juice. From this combination many die of blood-poisoning. Special designs are arranged for the neck, the shoulders, the arms, the chest, and the legs, each tribe having its own emblems. While the men are tatooed at various places over the entire body, the women are distinguished by strange-looking emblems extending from the waist to the knees. The entire process takes over ten years, and the pain suffered is intense.

To provide for further ornamentation, a child, on reaching the age of six months has the lobe of the ear punctured and a stick inserted. More splinters of wood are gradually added, until at the age of two years a circular mass of splinters can be seen in the child's ear five inches in diameter, and having but a thin rim of flesh about it. A little earring is then inserted, and larger ones gradually added until the child has reached the age of 13, when he has three or four large bone pendants hanging to his shoulder.

Anxious to press on, I sent my original guides back, because they were afraid of a tribe of especially savage head-hunters who lived in trees somewhat farther into the interior, and, provided with a new band of volunteers, left the village where I had been so royally treated. By following the river route in crude, native canoes, my progress was expedited, but the heat was so intense that it was necessary to jump overboard about every half hour to prevent a heat stroke. As the river was full of man-eating crocodiles, there was considerable risk, but the danger was minimized by the natives, who kept splashing the paddles, in that way frightening the crocodiles away.

Leaving our canoes, we resumed again our inland travel, through a wilderness of palm and beetle-nut trees from 300 feet high and 5 feet in diameter to smaller trees but 20 feet high. The underbrush was still dense and heavy, and it was impossible to see even our feet. Thorns and vines were encountered, but the greatest source of annoyance was from the wood leeches, 1 to 3 inches in length, that would drop into your shoes or over your body. The sting was accompanied by a persistent burning sensation, like that from a red-hot iron. While not poisonous, an itching irritation develops that continues for months afterward. We found it very difficult, owing to the jungle wilderness, to obtain the specimens we were after, but by chopping trees and clearing a path, I managed to get about 100 snakes, frogs, and lizards, and my persistency was subsequently rewarded

LIQUID GRANITE

Makes Floors Hard as Stone—Bright as Gold

Nothing adds such a touch of completeness and tone to a room as a well-finished floor.

Berry Brothers' Liquid Granite imparts to floors a smoothness and lustre that delights the eye. It brings out and protects the beauty of natural woods.

So tough and elastic is Liquid Granite that, although wood treated with it may dent under a blow, the finish will not crack. Nor is Liquid Granite affected by water. Wash it as much as you please.

It won't turn white.

BERRY BROTHERS' VARNISHES

These splendid qualities in Liquid Granite are the result of our 55 years' experience in varnish making. This same practical knowledge and skill also ensures the superiority of the other well-known Berry Brothers' products, such as Luxeberry White Enamel, Luxeberry Wood Finish and Luxeberry Spar Varnish.

Sold by leading dealers everywhere. Ask for your copy of our "Homebuilders' Booklet"—or write us direct.

PECAN SALES CO., ALBANY, GA.

by the finding, in their deep, isolated jungle lair, my much-sought-after "clouded leopards."

My native escorts, who were ahead of me, suddenly turned back in evident fear, and peering ahead, I discovered rude, thatched huts in the trees, but a short distance away, the homes of the fiercest, yet most cowardly, savages of entire Borneo; and it was with much difficulty and coaxing that I could prevail upon the natives to go forward. My presence caused much excitement among the tree-dwellers, who peered down, with their shining black little eyes, but their wonderment soon gave way to curiosity, and they were soon subjecting me to an examination similar to that I had previously received. My rifle was to them also a cause of much wonder. They treated me kindly, yet they were palpably of a lower order, and more animal-like, than those of the village I had previously visited. They were somewhat smaller, wilder, and, from the rows of heads that were weirdly drying over a fire, much more savage than their rival tribesmen. Their entire jaws were tatooed with hideous designs.

Their main weapon of defense was the deadly "blowpipe," through which arrows, with poisoned tips, can be blown with deadly accuracy a hundred feet in a single second. I have brought some of these arrows home. They are about five inches long, as thick as a match, and have a piston and appliance for catching the air when blown from the seven-foot pipe used by the savage. So expert are the Dayaks, or tree-dwellers, in their use that they can hit a bird on the wing, or invariably strike a vital spot of a wild boar or a human being. The virulence of the poison at the tip of the arrow is such that death will result in seven seconds. The poison is obtained from a resinous gum.

The Dayaks also have long, narrow stiletto-like blades, made from steel ore, and these are used generally in their attacks on rivals at night. Their desire for the heads of rivals is fanatical. With characteristic cowardice, they will make their attacks generally under cover of darkness, or when a rival tribesman has his back turned. Old men working in the rice flats are often the object of attack by the savage Dayak, who will suddenly dart out, slash off a head, flit back into the woods, and be gone within a few seconds. Returning to his village, he will triumphantly display his gruesome trophy, and will be acclaimed a warrior forthwith.

Before he can marry or be considered adult, the Dayak must bring home at least one head. The more he obtains the higher is his standing in his village. The night before I arrived five rival tribesmen had been decapitated, and their heads were being subjected to the drying process when I made my appearance. One of the favorite methods pursued by the Dayak in acquiring his trophy is to wait in a tree until a member of another tribe chances to pass, and then suddenly drop upon him. Their most highly prized trophy, however, is the head of a Chinaman. Many Chinese arrive in Borneo as rice workers, and frequently penetrate far into the interior, where almost certain death awaits them. So great is the glory of taking a Chinaman's head and pigtail that a special feast is arranged in honor of the warrior who has performed the deed.

The superstitious respect they had for

me probably saved my life and undoubtedly saved the lives of my fifty-two native escorts, for they were from a rival tribe, and nothing else could have saved them from swift and merciless death.

ANSWERS THAT MISS

A PARTY nominee for superintendent of schools in a Middle Western county in which a large city is situated had to take an examination at the State capital to test his qualifications before the law would permit his name to be placed on the ballot. He passed the examination, but with none too high an average. In the midst of the campaign the incumbent, a woman, who did not like the candidate any too well, got hold of his examination-papers and turned a copy of them over to an opposition newspaper. His answers to a number of questions were very laughable, but one of them was regarded as particularly amusing. The aspiring educator-politician defined "jeopard" as being a strange animal, a sort of cross between a ferocious member of the cat tribe and a rhinoceros. A cartoonist on the opposition newspaper drew pictures of the candidate's "jeopard" that made the whole city and county laugh. Many said that if they were in the politician's place, they would withdraw from the ticket and leave the State. But he did no such thing; he stayed on the ticket—and was elected. He admitted that the joke was a big one, but said it did not necessarily stamp him as incompetent, as such things frequently happened. Among the most recent stories of this kind is one from Scotland, and we find it in the London *Daily News:*

Some amazing "howlers" are mentioned as given in answer to examination questions in the report just issued on secondary education in Scotland. "Mammon" was quite commonly confounded with "manna" and also with "mammoth," "Mormon," "Mohammend"; Job with Jonah, and "muses" with "mutes." One definition was, "A worshiper of mammon means a bigamist," another that it "means an Israelite, since the people of that tribe were fed by mammon in the wilderness."

Muses, it was stated, were often seen at funerals in the olden days. A "Job's comforter" was described as "a woolen muffler worn round the throat," as a thing to give the baby the patience of Job," and as "something very pleasing, for Job was placed inside the whale's belly and it was very pleasing for him to get out again." There was a tendency to represent Isaac as "the fatted calf" who was to be killed, or to see in the phrase an equivalent to other familiar sayings like "the fat is in the fire," or "to kill the goose that laid the golden eggs."

But the acme of absurdity, it is declared, was surely reached by the candidate who stated that "Vanity Fair was a fair held in the time of Moses, where all the people gathered together and sold their goods—'Moses at the fair.'"

The paraphrase of Gray's well-known "Ode on the Death of a Favorite Cat"

VITALITY, ENERGY, ENDURANCE, NERVE STRENGTH, MUSCULAR STRENGTH, PERFECT PHYSIQUE?

My FREE BOOKS, "The 'Whys' of Exercise" and "The First and Last Law of Physical Culture," tell you, if you are weak or undeveloped, how to grow strong; if strong, how to grow stronger. They explain how to develop lungs and muscle, the strong heart and vigorous digestion—in short, how to improve health and strength internally as well as externally. Send TO-DAY—NOW—for these FREE BOOKS. Enclose 4c in stamps to cover postage.

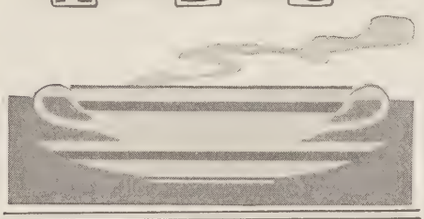
Do You Work with your Brain?

Brain workers, people *everywhere* who *think*, need stimulation. The best stimulation—and there is no reaction—is a cup of hot bouillon made by dropping an Armour Bouillon Cube in a cup of hot water. Full of the rich flavor of beef (or chicken) garden vegetables—thoroughly blended and properly seasoned—this bouillon provides the ideal refreshment for the thinker.

Grocers and Druggists everywhere.

For Free Samples, address Armour and Company, Chicago

Armour's Bouillon Cubes



proved rather subtle, and girls as a rule did it better than boys. In widely separated schools the odd mistake occurred of describing the "hapless nymph" as "a goldfish with no clothes on." In an essay on flowers the word "nature" was sadly abused—"All Nature dies in the autumn," or worse still, "All Nature leaves us when winter comes."

Of the pairs of characters in poetry proposed for comparison, Macbeth and Milton's Satan were first favorites. There was a strong tendency to treat Satan, not as a fallen angel, but as an erring mortal. "He resembles Macbeth," said one candidate, "because both were misled by their wives." "Placed in another walk of life," said a candidate, "Satan would have been a good man."

Some interesting blunders were found in the history papers. George Washington was confused with George Stephenson, Mr. Gladstone with David Livingstone, and Franchise with Franco-Scottish. One boy, after reference to the Boer War, solemnly stated that "Lord Roberts died last year at a good old age, and was head of the Salvation Army."

Two noteworthy definitions of franchise were given—"Franchise is a kind of cotton imported in bales," and "Franchise was the gold and silver treasure which the Spaniards in days of old got at the isthmus of Panama." The event most often misdated was the foundation of the House of Commons; some regarded it as simultaneous with the passing of the Parliament Act! It is remarked as extraordinary that many children defined Presbyterianism as government by priests or by bishops.

THE SPICE OF LIFE

On the Jersey Central.—BRAKEMAN—"Elizabeth!"

AUNT ELIZA—"Yes."—*Life.*

A Turned Crank.—WILLIE—"Paw, what is a genius?"

PAW—"A genius is a successful crank, my son."—*New York Sun.*

The Careful Waiter.—GENT—"Is there any soup on the bill of fare?"

WAITER—"There was, sir, but I wiped it off."—*California Pelican.*

Mere Foliage.—BARON SANS DOUGH—"What do you think of my family tree?"

MR. MUCHGOLD—"The tree may be a good one, all right, but looks to me as if the crop was a failure."—*Judge.*

Business Wo.—HAMLET—"Why is it, Simon, that they always have bloodhounds in an 'Uncle Tom's Cabin' show?"

SIMON LEGREE—"To find the manager on salary days, my boy."—*Puck.*

Nothing Left.—REPORTER—"I would like to get some details of yesterday's wedding."

MRS. PARVENU—"I'm sorry, but everything is eaten up."—*Brooklyn Life.*

Dept. K
Cincinnati, Ohio

Look for the Yellow Label

Not so Classy.—FIRST OLD FRIEND—"Hullo, old chap, how are you?"

SECOND O. F.—"First class; how are you?"

F. O. F.—"Steerage."—*Harvard Lampoon.*

The Lesser Evil.—BRIGGS—"You must have a lot of trouble keeping your wife drest up in the height of style."

GRIGGS—"Yes, but it's nothing to the trouble I'd have if I didn't."—*Boston Transcript.*

Either Way Would Do.—"It would be nice if everything one touched turned to gold, wouldn't it?" asked the dreamer.

"Yes; or if every one one touched turned over gold," suggested the deadbeat.—*Buffalo Express.*

A Tip for Him.—THE PREACHER—"Do you know where little boys go who fish on Sunday?"

THE KID—"Yes, sir; all us kids around here go down ter Smylie's crick below the bridge."—*Brooklyn Life.*

One Advantage.—"There's one consolation about the present drama."

"And what's that?"

"When I get old and am a grandmother I don't believe my grandchildren will be able to take me to a play that will shock me."—*Detroit Free Press.*

Punctured.—The attorney for the gas company was making a popular address.

"Think of the good the gas company has done!" he cried. "If I were permitted a pun, I would say, in the words of the immortal poet, 'Honor the Light Brigade.'"

Voice of a consumer from the audience: "Oh, what a charge they made!"—*Youth's Companion.*

Partially Answered.—In that part of Kansas where they need rain, certain church congregations have united to petition for it.

"Didn't I see your husband going to church to-day?" one Kansas woman inquired of another.

"Yes, he went to ask for rain."

"His faith must be pretty strong."

"Yes, he wore his raincoat and took his overshoes and his oldest umbrella."

"It didn't rain."

"No; but he brought back a much better umbrella than the one he took away."—*Cleveland Plain Dealer.*

What Stunted Emerson.—Emerson's period of literary production might have been considerably longer had he followed the light-breakfast régime advocated by *The Lancet.* In one of Mr. H. J. Warner's letters to his wife he writes: "We are all human and we all need cheering cups—but no pie at breakfast! It was pie at breakfast that broke down Emerson prematurely; no human being, however well, can live long and keep his mind unclouded on pie at breakfast. Emerson lost his mind—or memory—at a much earlier period than he would have been likely to lose it owing to the vicious habit of pie at breakfast."—*London Chronicle.*

What a Dollar Bill can do

for your backyard and the high cost of living.

IF you have a backyard or a garden that is not working for you to the limit of its possible efficiency, here is the best investment you can make. The intensive culture of gardens can be so developed by the "Garden Profits" System that small plots will frequently produce as much as the average small farm does now.

In this book, by one of the Agricultural Editors of *Country Life in America*, the best stories of 1000 garden successes are gathered together, reduced to simple terms and systematized for your ready use. Every phase of gardening is discussed comprehensively and expertly. Fifty illustrations and scores of plans and planting tables point the way to as many economies of time, work and money. A carefully prepared index adds great value as a ready reference guide throughout the planting season.

THE GARDEN MAGAZINE

is the final authority on all things horticultural. It aims to interest people in gardening by showing them how to get results in the most attractive and practical way. It has helped to decrease the cost of living in hundreds of homes by encouraging the use of once-neglected backyards for truck gardens.
It has brought health and joy into households by bringing their members into closer touch with nature. Among the leading features for the next year are the following:

Efficiency in Backyard Gardening

By Adolph Kruhm. These articles will help you make your garden produce more. They deal with the following subjects: Preparation of the soil, sowing and seeds, the cultivation of crops, crop rotation and the keeping of records.

New and Better Plants for the Hardy Garden

A series of articles written by experts dealing with improved types, races and varieties of shrubs, herbaceous plants, etc.

The Home Fruit Garden

By J. R. Mattern. These articles will show you which orchard fruits are best suited to your soil, climate and needs and how to plant them.

The Months Reminder

What to do right now and why and how to do it in *your* garden. The timeliest practical advice, warnings and explanations.

$2.00 worth for $1.00

A well-printed, strongly bound book of over 200 pages. It retails at one dollar. And *eight* issues of the *Garden Magazine.*

Come and Make Money in the Salt River Valley, Arizona

Here Uncle Sam has built the great Roosevelt Dam and is watering a farm for you. It is durable, fertile, easily worked soil, rich enough to enrich you. Twenty acres is enough, and rightly handled will put money in the bank rapidly.

Alfalfa pays surely and easily. It ripens quickly, cuts five or six crops a year, and sells for good prices. All conditions are favorable to it, and there's a demand right at home.

When you get to producing fruit, then you will be making the big money. The fruit here is of high quality, and you can put it onto the market early when prices are highest. Salt River Valley cantaloupes and strawberries reach the market in early March and bring $400 to $800 an acre. Oranges, peaches and olives take longer to come into bearing, but the results are worth the waiting, especially when you have these other crops to market meanwhile.

Sugar beets are money getters. They produce a heavy tonnage here, with high sugar content, and the premiums paid increase the profit.

Chicken raising and dairying pay well, and you will understand why when you see the prices Arizona miners pay for butter, eggs and poultry.

The Roosevelt Dam not only gives you water for irrigation—making crops certain—but the development of the electric power furnishes your light and power, and ultimately is expected to pay the entire cost of maintenance.

This is a valley of homes, with schools and churches. Land with water rights cost about $100 an acre, but you will agree such land is worth it.

If you want to know more about the "Salt River Valley" write for our new Arizona folder. I'll be glad to answer specific questions, also tell you about the Homeseekers Excursions, the first and third Tuesday of each month.

C. L. SEAGRAVES, General Colonization Agent, Atchison, Topeka & Santa Fe Railway, 2339 Railway Exchange, Chicago.

Folding BATH TUB

Costs little, no plumbing, little water. Weight 15 pounds, folds into small roll. Full length baths, far better than tin tubs. Lasts for years. Write for special agents offer and description. Robinson Bath Cabinet Co., 124 Vance Street, Toledo, O.

Blood Will Tell.—One morning a loyal Irishman was at work near the top of a telephone-pole, painting it a bright green, when the pot of paint slipt and splashed on the sidewalk. A few minutes later another Irishman came along. He looked at the paint, then at his countryman, and inquired with anxiety in his tone, "Doherty, Doherty, hov ye had a himarrage?"—*Louisville Masonic Home Journal.*

CURRENT EVENTS

Foreign

October 16.—Twenty thousand persons are rendered homeless by fire in Shanghai.

The rebels in Santo Domingo resume war operations despite the prohibition of further civil war by the United States

Henry Van Dyke, the new United States Minister to the Netherlands, presents his credentials to Queen Wilhelmina.

October 17.—Twenty-eight men, all except one German naval officers, are killed when the *L-2*, the latest and largest of Zeppelins, exploded at Johannisthal.

Brigands murder 300 persons and burn two American mission churches in the province of Fokien, China.

October 18.—The Dutch Government appoints Chevalier W. F. L. C. Van Rappard to succeed Jonkheer J. Loudon as Minister at Washington.

October 19.—Sir Rufus Isaacs, British Attorney-General, is appointed Lord Chief Justice, in succession to Baron Alverstone.

October 20.—The Servian Government announces that in accordance with the Austrian ultimatum it has ordered its troops to withdraw from Albania.

October 21.—Col. Theodore Roosevelt arrives in Rio de Janeiro and is welcomed by high Government and municipal officials.

October 22.—Nine are killed and 15 hurt in a railroad wreck at Sudbury, Ontario.

Domestic

WASHINGTON

October 18.—President Wilson opens conferences with Republican Senators with a view to insuring unanimous support of the currency-reform measure.

Arthur Yager, of Kentucky, is appointed Governor of Porto Rico.

A bill, introduced by Senator Clapp, to prevent the dumping of campaign funds into doubtful States on the eve of elections is passed by the Senate.

October 21.—Cablegrams are sent United States Senators Oliver and Saulsbury, now in Europe, ordering them to return to this country to establish a quorum.

The Post-office Department notifies all postmasters to cooperate with State and county good-roads projects.

October 22.—President Wilson signs the Urgent Deficiency Appropriation Bill, which contains a clause abolishing the Commerce Court and giving the Justices positions as Circuit Court Judges.

GENERAL

October 17.—The High Court of Impeachment removes William Sulzer as Governor of New York by 43 to 12, two not voting. Martin H. Glynn, Lieutenant-Governor, takes the oath as Governor.

October 19.—A Mobile & Ohio troop train carrying 175 enlisted men of the 39th U. S. Coast Artillery is wrecked near Mobile, Ala., and 26 are killed.

October 20.—Mrs. Emmeline Pankhurst is released from Ellis Island, following a decision by the Commissioner-General of Immigration, in conformance with the wishes of President Wilson, to allow her to enter the United States to fill her lecture engagements, subject to a promise not to advocate militant methods for American suffragists.

Progressives of the Sixth Assembly District in the lower East Side in New York City nominate William Sulzer for the legislature.

October 21.—An indictment charging Thomas E. Watson, the Georgia editor, with having sent obscene matter through the mails, is quashed.

October 22.—Two hundred and twenty-six miners are caught in a coal-mine at Dawson, N. M., as a result of an explosion, and an effort to rescue them is begun.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnalls New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"H. G.," Memphis, Tenn.—"Is it correct to say 'I have not seen *or* heard,' etc., or 'I have not seen *nor* heard,' etc.?"

"I have not seen *or* heard" is a less explicit statement than "I have not seen *nor* heard." In the former, *seen* and *heard* are used loosely as quasi-synonyms, and the expression means, "I have not observed, have not noticed in any way." "I have not seen *nor* heard" refers specifically to two ways of observing, and excludes both.

"H. E. D.," St. Charles, Minn.—"Kindly let me know whether the following sentence is correct: 'I have asked different ones *whom* I thought would be willing,' etc. Should it not be 'ones *who*'?"

One should say "*who* I thought would be willing." *Who* is subject of the verb *would be*, not object of *thought*. The object of thought is the whole clause, "who would be willing"; or else "I thought" is to be considered as parenthetical: "who (as I thought) would be willing."

"C. E. T.," Troy, N. Y.—"In a letter from a young friend recently occurred the following: 'I would have liked to have been in Troy to have seen it. It would be a sight to remember.' Will you kindly reconstruct the sentence?"

There are four errors in the sentences you quote. They should read: "I *should* have liked *to be* in Troy *to see* it. It *would have been* a sight (for me) to remember." (Or, "It *was* a sight [for those who saw it] to remember.") The two simple rules applying to the first of these sentences are these: (1) Use *should*, not *would*, with the first person always, unless the intention is to express willingness, wish, or determination. (2) If the infinitive refers to a time coincident with or posterior to the time of the main verb, it must be in the present tense; if prior to the time of the main verb, the infinitive must be in the present perfect tense. In the present case, the *being* in Troy, the *seeing* it, and the *liking* or *pleasure* experienced are to be understood as all taking place at the same time, and hence present infinitives should be used. We see no advantage in throwing the two sentences into one.

"W. E. S.," New York, N. Y.—"Kindly advise me if it is considered entirely correct to use 'Mr.' if you are, at the same time, going to use the title 'President' or 'Secretary'; that is, would it be correct to say *Mr. John Smith, President*, or should it be *John Smith, President?*"

We should write "Mr. John Smith, President," or "President John Smith."

"A. H. U.," Bath, N. Y.—"Kindly tell me if the following sentence is good English and if not, why? 'There was no one there but she and I.'"

"There was no one there but *she* and *I*" is good English. In sentences like this *but* may be used as a conjunction meaning "except that," or as a preposition meaning "except." In the first case, the completed clause would show what case-form is to follow *but;* in the second case, *but* as a preposition must be followed always by the objective. Your sentence, as you have written it, is equivalent to "There was no one there *except that she* and *I* were there." But you could say, "There was no one there *except her* and *me*"—or "*but her* and *me*."

"A. G. F.," Cambridge, Md.—"In THE LITERARY DIGEST for April 26, in the article 'When Adrianople Fell,' appears this sentence, 'That is, if we are to believe Luigi Barzini, correspondent of the London *Daily Mail*, who was one of the *two first* newspaper men to enter the city with the Bulgarian troops.' Is this sentence correct? Can there be *two first?*"

Yes, there may be *two first.* The first newspaper men to enter Adrianople may have numbered three, or four, or more. In the NEW STANDARD DICTIONARY under *first*, you may read: "The prevalent literary usage (almost universal in Great Britain) sanctions the forms like 'the two *bravest*,' 'the two *strongest*,' 'the two *first*,' 'the two *last*,' etc."

In This Free Book Dr. Eliot Tells How to WIN, Through READING!

To perpetuate his life's work in training men and women for success, Dr. Eliot has chosen their reading for them from all the 900,000 books of the world. This is the crowning achievement of his great career. Dr. Eliot himself tells of it all in a wonderful 32-page book, which goes to you free for the asking. Write for it today—NOW. No obligation whatever on your part. This book tells how, IN JUST A FEW MINUTES A DAY, one may become really well read. It tells how and why Dr. Eliot selected the particular 418 complete books which he presents in the fifty handy volumes known everywhere as

Copyright, 1899, by Notman, Boston

Dr. Eliot's Five-Foot Shelf of Books

The Harvard Classics

No matter *what* you do, you must read if you are to succeed. You *need* these books. The reading of them will add to your fund of knowledge, give you a truer perspective of life and other men, add to your mental stature, multiply your efficiency, better your position, increase your income. Dr. Eliot says "*they afford you the essentials of a liberal education if you can devote to them but fifteen minutes a day.*"

And if there is any one man who most fully realizes what the term "liberal education" means in success and income, it is Dr. Eliot, trainer of men.

Dr. Eliot's Idea

To picture the whole progress of civilization by bringing together the great books of civilization—that was Dr. Eliot's idea in selecting and arranging the Five-Foot Shelf of Books.

But *more* than this, Dr. Eliot himself has given them a value that goes far beyond the mere pleasure of reading. By footnotes, introductions, cross references and complete reading courses, he opens to you a vista of learning afforded by no other one set of books in all the world. He has anticipated your every reading need. Has chosen your reading for you. Tells you just where to find the verse, chapter, book or entire reading course you seek. *Reads with you.* Counsels you at every turn.

Live With World Leaders

The free book tells how Dr. Eliot will introduce you to the readers of every era, who are waiting to talk to you.

—tells how he brings you face to face with the world's greatest travelers and explorers. You hear them tell their own stories of achievement.

—tells how you can read all the great dramas of history, with Dr. Eliot always present to explain everything.

—tells how the world's greatest achievements, most important discoveries, the finest prose and poetry, are brought to you—all selected, arranged, indexed and explained by Dr. Eliot himself.

Master-Key to All Literature 76,000 Topics

Read with Dr. Eliot. Dr. Eliot conserves your reading time and energy by laying out reading courses for you on any chosen subject. In volume 50 you will find 76,000 topics indexed for your instant reference. No waiting. No brain cudgeling. No thumbing of countless books. No false "leads." The particular quotation, verse, lecture, book or entire reading course is ready the moment you want it. *Volume 50 is a master-key to all that is best in the world's literature.*

A Few Cents a Day for This Efficiency Builder

You *need* Dr. Eliot's Five-Foot Shelf of Books. Your *job* needs it. You now can have it at practically your own price. The new Popular Edition costs you but a few cents a day. At Dr. Eliot's own request this edition has been issued at one-tenth the price of the De Luxe edition, for the multitude of men and women seeking advancement through right reading. Printed from the same clear-cut type used for the costlier set. The quality of binding and workmanship are distinctly "COLLIER'S"—the best that can be said of any book—the result of thirty-eight years' experience in the making of good books by P. F. Collier & Son.

For a free copy of the most interesting little book ever written about books and success through reading, clip coupon. No cost. No obligation.

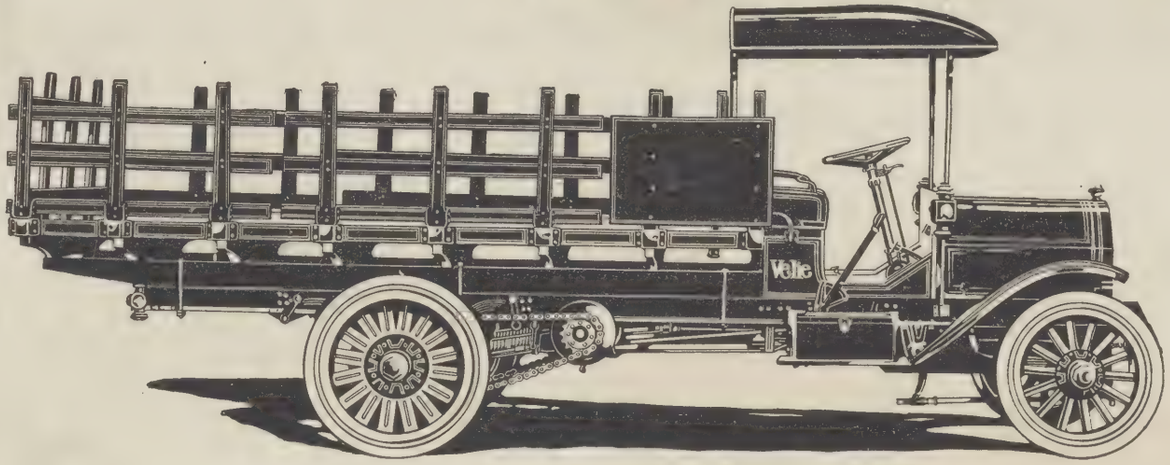
Velie



When owners of VELIE TRUCKS say: "We are satisfied that we have the best truck built," They know from long experience this is so.

And that is the verdict of every owner of a VELIE TRUCK. It is part of our service to know that it is true.

Already in use in practically every form of delivery or trucking service in which a motor truck can be profitably employed, the VELIE has stood the acid test of service of many of the biggest concerns of the country.

And it has steadily made good in reliability, in economy, and in the speed with which the work has been accomplished.

There are many reasons why this is so—first, because the truck is built right.

There are more features of design, adding to the service which can be obtained, than are found in combination in any other motor truck built.

And there is behind this design, the experience of men who, for the past sixty years, have been building vehicles for heavy service.

These two important features merit your careful consideration before you make your decision.

Three-Ton — Two-Ton — One-Ton

Each especially adapted to the service for which it is built.

Send for complete details.

Williams' SHAVING SOAPS

PATENTED
Holder Top Shaving Stick

When it comes to shaving soap, three questions must be answered:

Will the lather be abundant?

Will it soften my beard so that I can shave with pleasure?

Will my face be soothed and refreshed afterward?

Generations of shavers have testified that the most satisfactory answers to these questions are found in

Williams' Shaving Soaps

Four Forms of the Same Good Quality:

Williams' Shaving Stick (in the Hinged-Cover Nickeled Box)
Williams' Holder-Top Shaving Stick
Williams' Shaving Powder (in the Hinged-Cover Nickeled Box)
Williams' Shaving Cream (in tubes)

SPECIAL OFFER

Suit Case Sets

In order that those who are not familiar with some of our new toilet requisites may have an opportunity to try them, we have prepared very attractive sets of samples which we call "Men's Suit Case Sets" and "Women's Suit Case Sets." These are handsomely decorated boxes containing trial size reproductions of our regular packages. Either set named below will be sent, postpaid, for 24c. in stamps.

"The kind that won't smart or dry on the face"

Make Your Home Sanitary—

This powerful, odorless disinfectant is also a concentrated cleanser which comes in powdered form and dissolves in hot or cold water. When sifted into the sink it cleanses the drain pipes immediately, removing all traces of grease and sediment, rendering your sink clean, sweet and free from odors. If the sink pipes or those of the bath tub or closet become clogged, sift a little powdered Eagle Lye into them, pour in a little water, either hot or cold, and Presto! you have accomplished almost instantly what a plumber would have charged you several dollars to perform. Furthermore you have rendered these places sanitary and accomplished considerable towards the maintenance of a Clean, Hygienic Home.

EAGLE LYE
The Odorless Disinfectant

has many uses in the home. A small amount of it sifted into the Garbage Can will destroy odors and change the Garbage Can from an ill-odored, disease-breeding place into an object of real utility and cleanliness.

But these are only a few of the many uses of this wonderful concentrated disinfectant and cleanser. Ask your Grocer for a can of it. It costs only 10 cents and the results of its use will surprise you. FULL DIRECTIONS ON EVERY CAN.

If your Grocer or Druggist can't supply you with Eagle Lye, send us his name and 10 cents in stamps, whereupon we will mail you postpaid a large can and a copy of our illustrated booklet, which will show you how to keep your house clean and sweet and sanitary at a minimum expense.

To all Users of Eagle Lye this book is Free upon Request

EAGLE LYE WORKS

No More Monthly Payments. Increase in Price of $29.00

A Radical Departure is About to Be Made in the Plan of Sale of

The New Encyclopaedia Britannica 11th Edition

(Published by the Cambridge University Press)

Now Sold Direct to the Public

Hereafter it will be obtainable

—through agents and booksellers only
—for cash payment only (complete sets or volume by volume)
—no longer for monthly payments

The difference will be

—**An increase** of $29.00—$5.75 instead of $4.75 a volume
—**An immediate outlay** of the full cash price instead of only $5.00

THE FINAL DATE

Formal announcement is hereby made of the termination of the sale at the present low prices and for monthly payments. In England the closing date will be December 22nd, and in the United States and Canada very shortly thereafter.

Your only safe plan is to sign and mail, **now,** the order form on the opposite page of this announcement if you want to get the book before it costs $29.00 more.

TO MANY *of the public this inevitable change in the conditions of sale will present itself in this simple form: "It is* **now easy,** *and will be* **then almost impossible,** *for me to secure a work which I long since determined to obtain sooner or later."*

The success of the new Encyclopaedia Britannica, of which 51,243 copies (1,486,047 volumes) have already been sold, has made the existing system of small monthly payments so familiar that its discontinuance may, at first glance, seem to be a sudden and violent disturbance of established usage. But it should be remembered that every advertisement of the work has explicitly described the current offer as provisional, and the price as **temporary,** and subject to increase by stages until it reached the normal figure of $7.50 per volume, *i.e.,* the price at which the 7th, 8th and 9th editions were sold. The increase to $5.75 a volume which has been fixed to take effect in England as from December 22nd, and very shortly thereafter in this country, marks a stage in this upward process.

A last opportunity

before the price is raised and the facility of making small monthly payments is withdrawn

As all those who have been contemplating the purchase of the new edition have been told that the offer at $4.75 a volume was temporary, it could hardly be considered a hardship if the change to $5.75 per volume, and the abolition of the instalment system, were effected at a day's notice. But that course has not been adopted. Provision has been made for those who have been intending to subscribe but have not yet done so.

Before the change takes place, a last opportunity will be given to subscribe at the present low prices and to obtain immediate delivery of the volumes (and of the bookcase if desired) for monthly payments of only $5.00.

Why the Change Is Made at This Time

A reader who thinks that it would suit him better to purchase the Encyclopaedia Britannica on the monthly payment system and at the low price next year, than to do so now, may wonder why the sale should not be continued under the present conditions.

The employment of the large capital required for instalment sales, and the minimizing of profit entailed by exceptionally low prices, are expedient in the case of a new work of which the contents are so voluminous and so varied that they cannot adequately be represented by advertisements. On the other hand, the rapid distribution of a large number of copies upon unusually attractive terms firmly establishes the reputation of the work. Now that this has been done, a continuous, though slower, sale through booksellers and agents is more profitable and less troublesome. On the one hand, those who most need the Encyclopaedia Britannica, and those to whom its acquisition in the ordinary way would be most difficult, have already subscribed or can at once subscribe. On the other hand, it is now better known, more highly appreciated, and more constantly used than any other book to which the 20th century has given birth.

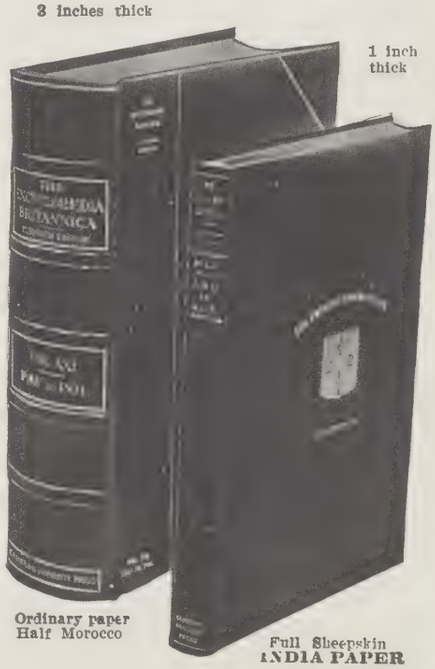
The Object Achieved, the Offer Closes

The editor completed a great achievement when he passed the volumes for press. Its publishers have now accomplished the equally necessary task of introducing the volumes in all parts of the world. And, after this final subscription sale, those who want the Encyclopaedia Britannica must buy it and pay for it as they buy and pay for any other book.

There are, doubtless, some intending purchasers who have delayed because they would like first to convince themselves concerning certain points such as cannot be covered in any general description. In particular, a reader may argue that his hesitation does not in the least call in question the value of the book, only his capacity to profit by it. "A series of volumes in which leading specialists collaborate to answer any question that can reasonably be asked should be invaluable. **Will it prove so in my case?** Shall I, in fact, use it when I have it?" Only actual examination and use of the volumes themselves can satisfy the desire to be reassured on this point.

"Conditional Purchase"

It has accordingly been decided that the wishes of those who truly seek an answer to this question will best be fulfilled by permitting **conditional purchase,** *i. e.,* the subscriber holds himself free to return the volumes after ten days' use and claim a refund of $3.75 from the $5.00 sent with his order. The reader who would subscribe with this proviso must endorse the order form "Conditional Purchase." On no account will the privilege be granted to those who order without such endorsement, since it is essential that the precise number of copies supplied on these terms should be known.



THE NEW ENCYCLOPAEDIA BRITANNICA 11TH EDITION

Closing of the subscription lists for the New ENCYCLOPAEDIA BRITANNICA—11th Edition, 29 volumes, published by the Cambridge University Press, of England. Price to be increased from $29 to $50, according to the binding. **No more monthly payments.**

NOW **$4.75 a volume, and sold direct to the public for monthly instalments, the complete set delivered on a first payment of only $5.00.**

THEN **$5.75 a volume, for full cash payment, through agents and booksellers only.**

A SINGLE PAYMENT OF $5.00 SECURES DELIVERY COMPLETE

THE MOST WONDERFUL BOOK IN THE WORLD

1. Eleven Editions: a Century and a Half of Development

No more striking evidence could be given of the immense expansion of knowledge in modern times than the growth of the Encyclopaedia Britannica. The three volumes of the first edition (1768), mainly the work of a single hand, have grown to 29 volumes in the 11th edition, the outcome of collaboration among some 1,500 distinguished specialists. And this growth of the Encyclopaedia Britannica is an indication also of the extent to which the need of such a work has increased with the expansion of knowledge. If a book of this kind was in demand 145 years ago, when a useful account of knowledge could be given in three volumes, how much more is such a resource needed to-day, when the required information occupies almost ten times as many volumes?

2. A Nearer Approach to Perfection

Besides the growth that naturally accompanies the increase of knowledge, each successive edition shows also an internal improvement upon its predecessor. The instrument is ever perfecting itself, until we come to the present edition, and to an advance for which the whole history of encyclopaedias affords no measure. Apart altogether from the immense superiority of its compact and handy format, the 11th edition excels all previous books of the kind in the following points:—(*a*) it is more thoroughly and consistently abreast of its times, (*b*) it will appeal to the reader as more exhaustive, and (*c*) to the inquirer as easier of reference.

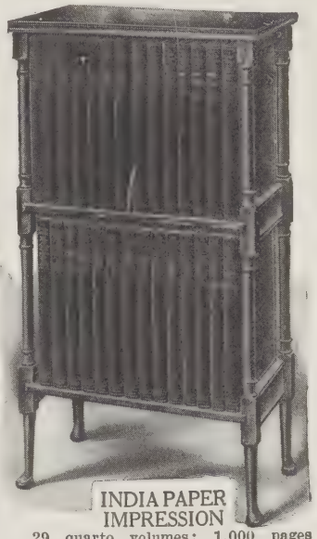
3. An Advantage Peculiar to this Edition

These and other improvements — which may all be included in the general statement that the 11th edition is more *systematic* than its predecessors—are the result of a circumstance peculiar to the preparation of the 11th edition. For the first time in the making of an extensive work, the whole book was planned and executed as one consistent whole, and no part of it was printed and published until the whole material from A to Z was assembled.

4. More Useful Because More Systematic

The 11th edition, therefore, is no mere revision but *a new work founded upon a fresh survey.* It is singularly *easy of reference* because, in every case, a separate article is accorded to the topic upon which the inquirer seeks information, whereas previously it was too often lost in an "omnibus" article of inordinate length. It is extraordinarily *exhaustive,* because these separate articles were not written independently and at haphazard, according to the exigencies of the alphabet and the particular volume in preparation, but in pursuance of a well considered scheme planned to meet the demands of the whole subject.

Whether he turn to its pages for the answer to a specific question or for enlightenment upon the whole of a great subject, the reader will find the 11th edition of the Encyclopaedia Britannica *more useful, more thorough, more interesting,* than he could have imagined possible in a work of such immense scope, or than he could have expected from his acquaintance with any other encyclopaedia whatever.



INDIA PAPER IMPRESSION

29 quarto volumes; 1,000 pages each; 44,000,000 words; 400 plates; 7,000 other illustrations; 300 maps. Occupying a cubic space of only 2 ft.

5. A Revolution in Form

The immense growth of knowledge renders an encyclopaedia more of a necessity to-day than ever before. For the same reason, a book which to-day affords a thorough answer to any question that can reasonably be asked must inevitably be voluminous.

The contents of the 11th edition of the Encyclopaedia Britannica would fill between 400 and 500 ordinary octavo books. Printed, as previous editions were printed, on ordinary paper, the 29 quarto volumes make a row 7 feet long. The ever-increasing bulk of the Encyclopaedia Britannica promised to become a serious menace to its usefulness. The present edition was already far advanced towards completion when a member of the editorial staff, rebelling at the thought that all the precious material passing through his hands was destined to be buried in volumes too cumbersome for easy reading, urged the employment of India paper. The idea was unheard of. Nothing larger than an octavo Bible had ever been printed on India paper. Seldom, however, has a revolutionary change found more complete justification in the event.

The use of India paper has resulted in light, slender, elegant volumes, inviting for reference, a pleasure to read; and the whole 44 million words go into a cubic space of only 2 feet. The greater need of the day for an encyclopaedia has been met by a work which surpasses in usefulness all earlier editions, not only by reason of the more exhaustive and systematic character of its contents, but also in virtue of its compact and infinitely more usable form.

The Encyclopaedia Britannica, 11th Edition, is copyright in all countries subscribing to the Bern Convention by the Chancellor, Masters and Scholars of the University of Cambridge

INDIA PAPER AND ORDINARY PAPER

The extraordinary compactness, flexibility, and lightness of the India paper edition, in its various bindings (occupying a cubic space of but 2 feet), immediately appealed to the general public. Of the 51,000 sets already bought, 91½ per cent. have been on India paper, and only 8½ per cent. on ordinary paper, the same as that used for the old 9th edition, and those are chiefly for public institutions.

THE BINDINGS Of the bindings, the **dark red full morocco** edition forms the handsomest addition to any library, worthy a collection of the most expensively bound books; the **dark green sheepskin,** by its extreme flexibility, the ease with which it is handled, and its comely appearance, has proved by far the most popular with the general public; the **cloth binding** has been regarded as entirely satisfactory by those who had to choose the cheapest form.

There is also a beautiful binding (India paper) in **full limp velvet suede,** Prayer Book style, round corners, gilt edges. Having extreme flexibility, being lined with leather, the backs may be folded back against each other and the volume may be doubled up and slipped into a coat pocket.

AN ORDER FORM

is printed opposite. It should be cut off and mailed at once. The reader, unless he wishes to deny himself and, it may be, his children, the possession of the most wonderful book in the world, has before him a simple alternative:

He can purchase the new Encyclopaedia Britannica NOW for $4.75 a volume, while the option of making monthly payments is still open to him,

OR,

he can obtain the Work LATER, from an agent or bookseller, for $166.75 cash, and proportionately higher prices in the better bindings.

Form of Subscription for the LAST SALE on the Instalment System and Before the Price is Increased

THE ENCYCLOPAEDIA BRITANNICA CO.,
120 West 32nd Street, New York.

Please send me the new Encyclopaedia Britannica, 11th edition, 29 volumes, published by The Cambridge University Press, of England. I enclose $———— being (first payment / payment in full) and I agree to send the second and all subsequent payments on the corresponding day of each following month until payment is complete, in accordance with the style of binding and the terms of payment indicated by the X I have placed in one of the squares below, showing my selection. It is agreed that I shall keep the books, but the title does not pass to me until the total amount has been paid. Terms, F. O. B. New York.

Do You Own a Dog?

What do you know of the traits of his type? Of the famous things done by dogs of his calibre? Of the possibilities he himself might have in the way of SHOW POINTS? Or perhaps of unsuspected talents peculiar to his breed which you might find much pleasure in developing?

More dogs are kept in this country now than ever there formerly were, and they are more skilfully bred, more kindly treated, and cared for with a more solicitous pride than was the case in earlier generations.

How to Know—How to Judge—How to Keep—How to Breed—How to Doctor Every Type of Dog

These Two Superb Volumes Cover Every Possible Phase of the Subject

How to Breed—discrimination, out-breeding, in-breeding, treatment of puppies, etc.

Canine Medicine and Surgery—rules for prescribing, how to recognize symptoms, proper time to administer medicine, instructions for simple surgical operations, etc.

Selling, feeding, exercising, training, management, etc.

Methods of judging dogs at Shows, with full detailed diagrams of principal points, etc.

Origin and history of the various strains, and famous ancestors of present breeds.

How to handle and train hunting dogs.

Treatment of pet and house dogs.

The law in relation to dog keeping, stolen dogs, dog licenses, etc.

(The above is not by any means a detailed table of contents, but merely a general outline of some of the things covered in the work.)

The Book for All Dog Lovers

It is the result of years of study and research—at once the most practical guide in every phase of dog judging, breeding, feeding, training, treating, keeping, etc.—and a most elaborate, interesting, and superb art gallery of the famous dogs of all breeds and all ages. It is by long odds the most authoritative, beautiful and interesting book ever compiled on the subject of dogs.

A Beautiful Pictorial History

Every quarter of the globe has been scoured in order to collect for this great work a picture of practically every dog of unusual note that the world has known. Nowhere can be found such a gallery of beautiful and perfect animals. Some of the full-page plates in many colors have been reproduced directly from oil paintings loaned by the owners. For the pictures alone this work is absolutely unique, even did it not have the invaluable text features which accompany them.

FUNK & WAGNALLS COMPANY
354-60 Fourth Avenue
New York, N. Y.

Magnificently Illustrated, Printed, and Bound

The work is illustrated with 600 superb photographs of famous dogs, and 25 full-page plates in beautiful colors. The paper is a special super coated stock; the binding is genuine half morocco, hand stamped in gold, with sides of elegant maroon silk cloth.

Special "On-Approval" Offer

Merely Send $1.00 Sign and send us the coupon herewith with $1.00 and we will forward the two volumes for your approval, carriage paid by us. Useful Books for Everybody

SOME books are designed for entertainment, others for information. This series combines both features. The information is not only complete and reliable, it is condensed and readable. These volumes are replete with valuable material, compact in form and unequalled in point of merit and cheapness. They are the latest as well as the best books on the subjects of which they treat. No one who wishes to have a fund of general information or who has the desire for self-improvement can afford to be without them. They are 6 x 4½ inches in size, well printed on good paper, handsomely bound in green cloth; with a heavy paper wrapper to match.

EACH 50 CENTS

ETIQUETTE. By Agnes H. Morton. Success in life is often marred by bad manners. A perusal of this work will prevent such blunders.

LETTER WRITING. By Agnes H. Morton. This admirable book shows by numerous examples just what kind of letters to write for all occasions.

BUSINESS LETTERS. By Calvin O. Althouse. An expert here shows by numerous complete examples from real business, how to write business letters effectively. Every letter and form a business man needs.

QUOTATIONS. By Agnes H. Morton. A clever compilation of pithy quotations, from a great variety of sources, alphabetically arranged according to the sentiment.

SHAKESPEAREAN QUOTATIONS. By C. S. Rex. Here are more than one thousand subjects, arranged alphabetically. It is Shakespeare condensed, in a form for practical and universal use.

BIBLICAL QUOTATIONS. By John H. Bechtel. Thousands of quotations arranged alphabetically by subjects, providing an apt illustration for any phase of experience.

ENGLISH WRITERS. By R. V. Gilbert. All the writers that anyone needs to know about are described here.

EPITAPHS. By Frederick W. Unger. This volume is full of quaint pieces of obituary fancy, with a touch of the gruesome here and there for a relish. It is the most carefully made collection of the kind.

PROVERBS. By John H. Bechtel. A representative collection of proverbs, old and new; and the indexes, topical and alphabetical, enable one to find what he needs.

THINGS WORTH KNOWING. By John H. Bechtel. Here is information for everybody, whether it pertains to health, household, business, affairs of state, foreign countries, or the planets, all conveniently indexed.

A DICTIONARY OF MYTHOLOGY. By John H. Bechtel. The average person won't take the time to look up mythological subjects. This book tells at a glance just what is wanted.

SLIPS OF SPEECH. By John H. Bechtel. No necessity for studying rules of rhetoric or grammar, when this book teaches both without the study of either.

PRONUNCIATION. By John H. Bechtel. Over 5,000 words pronounced in the clearest and simplest manner, and according to the best authority.

PRACTICAL SYNONYMS. By John H. Bechtel. Any one with the least desire to add to his vocabulary should have a copy of this book.

READY MADE SPEECHES. By George Hapgood, Esq. A book of carefully planned model speeches to aid those who, without some slight help, must remain silent.

AFTER-DINNER STORIES. By John Harrison. Nothing adds so much zest to a dinner as a good story well told. Here are hundreds of them, short and pithy.

TOASTS. By William Pittenger. What would you not give for the ability to respond to them? No need to give much when this book will teach you so easily.

THE DEBATER'S TREASURY. By William Pittenger. Here are directions for organizing debating societies, and suggestions for all who desire to discuss questions in public.

PUNCTUATION. By Paul Allardyce. Few persons can punctuate properly. A perusal of this book will remove all difficulties and make all points clear.

ORATORY. By Henry Ward Beecher. This volume contains a famous address of Mr. Beecher giving a masterly exposition of the principles of true oratory.

CONVERSATION. By J. P. Mahaffy. Some people are accused of talking too much. What to say, just how and when to say it, is the general aim of this work.

STORIES WORTH TELLING. By Herbert Leonard Coggins. Illustrated by Claire Victor Dwiggins. Here is the cream of all the funny stories, none objectionable. Mr. Dwiggins' pictures add to the fun.

READING AS A FINE ART. By Ernest Legouve. The directions and suggestions contained in this work will go far toward the attainment of this delightful and valuable accomplishment.

SOCIALISM. By Charles H. Olin. Socialism is "in the air." This book gives in a clear and interesting manner a complete idea of the economic doctrines taught by the leading socialists.

JOURNALISM. By Charles H. Olin. What is news, how is it obtained, how handled, and how can one become a journalist? These questions are all answered.

VENTRILOQUISM. By Charles H. Olin. This book exposes the secrets of the art completely and shows how almost anyone may learn to "throw the voice" both near and far. Fully illustrated.

CONUNDRUMS. By Dean Rivers. An excellent collection of over a thousand of the latest and brightest conundrums, to which are added many Biblical, poetical, and French conundrums.

MAGIC. By Ellis Stanyon. This complete volume contains full and intelligible descriptions of all the well known tricks with coins, handkerchiefs, hats, cards, flowers, etc. Illustrated.

HYPNOTISM. By Edward H. Eldridge, A.M. By following the simple instructions given, anyone can readily learn how to exercise this unique and strange power.

PARLOR GAMES. By Helen E. Hollister. This volume contains an excellent collection of all kinds of games for amusement, entertainment and instruction.

HOME GAMES. By George Hapgood, Esq. A splendid collection of conveniently indexed games with cards, pencil and paper, charades, action games, games of memory, and many novel suggestions for "forfeits."

BRIDGE, AND HOW TO PLAY IT. By Boston. An expert here explains how to play a game and win it, with every principle and play fully illustrated. The book gives also the complete Laws of Bridge.

WHIST. By Cavendish. Twenty-third edition. No whist player, whether a novice or an expert, can afford to be without the aid and support of Cavendish.

SOLITAIRE AND PATIENCE. By George Hapgood, Esq. With this book and two decks of cards anyone, anywhere, can make a lonely hour pass quickly.

ASTRONOMY: THE SUN AND HIS FAMILY. By Julia MacNair Wright. What causes day and night, seasons and years, tides and eclipses? These, and a thousand other questions, are here answered. Illustrated.

BOTANY: THE STORY OF PLANT LIFE. By Julia MacNair Wright. The scientific subject of Botany is here made as interesting as a fairy tale. Illustrated.

FLOWERS; HOW TO GROW THEM. By Eben E. Rexford. This volume treats mainly of indoor plants and flowers, those for window gardening, all about their selection, care, light, air, warmth, etc.

DANCING. By Marguerite Wilson. A complete instructor for all dances. A full list of calls for square dances and 100 figures for the german. Illustrated.

FORTUNE TELLING. By Madame Xanto. All the approved ways of piercing the future, by cards, dominoes, dice, palmistry, tea or coffee grounds.

ASTROLOGY. By M. M. Macgregor. If you wish to know in what business you will succeed, or whom you should marry, you will find these and many other vital questions solved in this book.

DREAM BOOK. By Madame Xanto. This book presents the old traditions proved by time and the experience of famous Oriental, Celtic and early English observers.

PHRENOLOGY. By Charles H. Olin. With a little study of this fascinating science you can analyze your friend's character, give useful advice, and find a way to success for yourself and others.

PHYSIOGNOMY. By Leila Lomax. Physiognomy as here explained shows how to read character, with every point explained by illustrations and photographs.

GRAPHOLOGY. By Clifford Howard. Anyone who understands graphology can tell by simply examining your handwriting just what kind of a person you are.

CURIOUS FACTS. By Clifford Howard. Why do you raise your hat to a lady? Why do you always offer the right hand? These and many other questions find answers here.

PRACTICAL PALMISTRY. By Henry Frith. This volume furnishes full and trustworthy information on the subject, and by means of it anyone will be able to read character. Illustrated.

CIVICS: WHAT EVERY CITIZEN SHOULD KNOW. By George Lewis. Contains complete information on such topics as the Monroe Doctrine, Behring Sea Controversy, Extradition Treaties, etc.

LAW, AND HOW TO KEEP OUT OF IT. By Paschal H. Coggins, Esq. This book furnishes to the busy man and woman information on just such points as are likely to arise in everyday affairs.

PARLIAMENTARY LAW. By Paschal H. Coggins, Esq. This is parliamentary law in a nutshell for people who need plain rules, and the reasons for them, arranged for quick use.

STORIES OF THE OPERAS. By Ethel Shubert. The story of every opera usually performed in America, and biographical sketches of the composers.

CLASSICAL DICTIONARY. By Edward S. Ellis, A.M. All the classical allusions worth knowing, arranged so as to require little or no time in looking up.

PLUTARCH'S LIVES. By Edward S. Ellis, A.M. The lives of the leading Greeks and Romans of ancient times in concise and condensed form.

THE DOG. By John Maxtee. All the essentials of dog keeping are here, from kennel to showbench, and from biscuits to fleabane. Illustrated.

CHICKENS. By A. T. Johnson. Illustrated. A book all about chickens, how to combat disease and vermin, how to feed and otherwise care for the growing brood.

THE HORSE. By C. T. Davies. This book, based on the latest researches of veterinary science, and fully illustrated, gives complete information relative to choosing and raising horses or anything pertaining to them.

DAIRY FARMING. By D. S. Burch, State Dairy Commissioner of Kansas. A practical and indispensable book for beginners. It contains full information on all phases of the subject.

GOLF. By Horace Hutchinson. A complete history of the game, together with instructions for the selection of implements, and full directions for playing.

RECEIPTS AND REMEDIES. By Louis A. Fleming. A thousand and one "best ways" to preserve health, comfort and appearance. It has something for every member of the family.

HEALTH: HOW TO GET AND KEEP IT. By Walter V. Woods, M.D. This book tells what Health is, what makes it, what hurts it, and how to get it.

DEATH DEFERRED. By Hereward Carrington. A practical, scientific discussion of human life and the means for prolonging it.

FIRST AID TO THE INJURED. By F. J. Warwick. What to do in all kinds of accidents as well as in the first stages of illness, with a brief and simple statement of the human anatomy. Illustrated.

NURSING. By S. Virginia Levis. The fullest particulars are given for the care of the sick, not only in the simple, but also in the more serious ailments.

ELECTRICITY. By George L. Fowler. If you wish to install an electric door bell, construct a telephone, or wire a house, this volume will furnish the required information. Illustrated.

The following titles are published in full red morocco leather, flexible, with the title in gold, and each book in a box. In this form they make very handsome gift books. Price, 90 cents each.

Handbooks of Useful Information

SYNONYMS AND ANTONYMS. By Edith B. Ordway. A genuine dictionary of words in ordinary use, with all of the important words of like or similar meaning, followed by the chief words of opposite meaning. It is a standard volume, based upon the standard and up-to-date authorities, and without it no desk in home or office is complete. Those who know most, know its value best. The book contains thousands of words with their opposites which will not be found in any other volume.

THE ART OF STORY WRITING. By Nathaniel C. Fowler, Jr. It would seem that the author has covered everything which the story writer or would-be writer of stories needs to know.

It covers both the financial as well as the technical side of writing, and presents to the reader everything which he should be familiar with before he attempts to enter a literary career.

Bound in cloth. 12mo. Net $1.00 each. Postpaid $1.10 each.

THE ETIQUETTE OF TO-DAY. By Edith B. Ordway. A thoroughly practical, complete authoritative and up-to-date manual of social forms and customs, affording the reader that knowledge of social duties which grace society, and add much to happiness and friendship.

THE HANDBOOK OF QUOTATIONS. By Edith B. Ordway. A treasure-book of gems of thought. The cream of English literature, in terse, pithy expressions, and clear, striking fancies, is here given under a form of reference which makes each quotation readily available.

THE ART OF LETTER WRITING. By Nathaniel C. Fowler, Jr. Practically all the information needed by the letter writer is given in this book, and everything in it is in the plainest of intelligible English. It is probably the only work of its kind ever prepared by one who has had both business and literary experience.

THE HANDBOOK OF CONUNDRUMS. By Edith B. Ordway. The conundrums contained in this book are culled from the best of the old collections and the best of the new, and from historical and mythological sources.

1000 THINGS WORTH KNOWING. By Nathaniel C. Fowler, Jr. The book covers a thousand subjects which should be known, and which are not generally known, to the average reader.

Bound in cloth. 16mo. Net 50c each. Postpaid 56c each.

For sale everywhere where books are sold, or will be mailed upon receipt of price.

WHY The American Standard Bible

(Edited by the American Revision Committee)

Is Best for the Sunday School

The exact thought of the sacred writers is given in readily understandable language in this version, thereby making its sacred teachings not only clearer to the young folks, but infinitely more interesting—every reading makes more Bible students.

The American Standard Version is used by the International Lesson Committee in the preparation of the Uniform and Graded Lessons, and by the leading Bible Scholars of the United States.

Even the English scholars say it is the best—Read what *The London Quarterly Review* says: "It is a noble work, destined to become the accepted Bible of the majority of the Anglo-Saxon race; and we are tempted to wish that it might be adopted as the one final revision of the English-speaking world."

Because of the great demand the publishers have issued it in over 200 different styles to meet every need. Prices from 35 cents to $50.00.

What Would You Give For a Vigorous Healthy Body?

WOULD you spend ten minutes a day using this wonderful strength-giving stimulator to help you obtain a vigorous, healthy body? Isn't it worth your while to investigate our guarantee?

The moment you use the NEW-LIFE VIBRATOR to massage your body, you stimulate and increase the circulation of your blood, re-vitalize and strengthen every nerve in your entire body. Physicians recommend this wonderful little re-energizer.

You don't have to wait in doubt for results, for the very instant you massage your body, you feel the soothing, strengthening and invigorating effect of increased blood circulation, which transforms your entire system into one that glows with health and energy.

You will be astounded to see how quickly Nature responds to New-Life vibratory massage in giving relief from rheumatism, headache, neuralgia, nervousness, etc.

You can easily learn how to use this wonderful little stimulator, for it is so safe and simple that even a child can use it. Simply attach it to any electric light socket and massage yourself. If you have no electricity in your home, we furnish a storage battery.

The NEW-LIFE VIBRATORS must not be confused with the old medical shock-giving battery, as with this instrument no electricity comes into contact with the body.

With the NEW-LIFE VIBRATOR you get that deep, penetrating, rotary vibration, which is so very popular with the physician, because it is 100 times more efficient than hand massage.

Please do not compare any other Vibrator with the only original genuine NEW-LIFE VIBRATOR, which is the very best in the world and costs no more than others.

We manufacture those very popular Electric Drink Mixers you see on all the leading soda fountains, and we use this same guaranteed motor in the construction of NEW-LIFE VIBRATORS.

HAMILTON BEACH MFG. CO., 105 A Street RACINE, WIS.

THE LITERARY DIGEST

PUBLIC OPINION (New York) combined with THE LITERARY DIGEST

Published by Funk & Wagnalls Company (Adam W. Wagnalls, Pres.; Benj. F. Funk, Vice-Pres.; Robert J. Cuddihy, Treas.; W. J. Funk, Sec'y), 354–360 Fourth Ave., New York

VOL. XLVII., NO. 19 NEW YORK, NOVEMBER 8, 1913 WHOLE NUMBER 1229

TOPICS OF THE DAY

IDEALISM AS A MEXICAN POLICY

THE WORKABILITY OF IDEALISM is the problem that President Wilson faces in his Mexican dealings, as the newspaper editors see it, and some of them have serious doubts of his solving it on that basis. His virtual declaration, in his recent speeches in Mobile and Swarthmore, that an uncompromising political idealism is the controlling factor in his much-discust Mexican policy, clarifies the situation for both the friends and the foes of that policy, and largely reduces editorial discussion to the question, "Will it work?" "Morality, not expediency, is the thing that must guide us," insists the President. That will be all very well when we have achieved the millennium, retort the newspaper skeptics, who hold that in the meantime a policy hewn grimly to the lines of abstract right is an ineffectual substitute for a policy of common sense and compromise that is free to adjust itself to the hard facts in the case. President Wilson is "dreaming a beautiful dream," remarks the Philadelphia *Inquirer* (Rep.), but unfortunately "his ideas of governing Mexico do not conform with those of the Mexicans themselves." And another Republican paper, the Hartford *Courant*, does not hesitate to say that the Administration's policy of sacrificing expediency to morality in its dealings with the unhappy situation in Mexico has caused "an increasing disruption of order in that State," and has "cost hundreds of Mexican lives."

On the other hand, the New York *Times* (Ind. Dem.), a very recent convert, declares that the Wilson policy in Mexico "must be admitted to be justified, in view of the obvious fact that the recognition of Huerta by our Government could scarcely have averted the fresh calamities that have befallen our sister Republic in the last month." The same paper goes on to say:

"General Huerta has suppress the legislative department of the Mexican Government and constituted himself Dictator. All pretense of constitutional authority has been abandoned. The promised election, conducted under conditions which indicated that the will of the people, or any part of them, could not possibly prevail, has turned out to be ineffective, and the iron rule of the old soldier in the National Palace has been indefinitely prolonged. No fewer than nine distinct revolutions against the Provisional Government are now in progress, and since Mr. Gamboa, as Foreign Minister, asserted, in replying to the suggestions of Mr. Lind, that Huerta had 80,000 soldiers in the field and would soon restore peace, the danger of anarchy has greatly increased. It has often been said that with recognition by the United States General Huerta might have been enabled to hire more soldiers and end the warfare sooner. But on Sunday he issued an order increasing his army to 150,000 men. He must have money to feed and equip them.

"Obviously Huerta's ambition has not been to establish a government of the people in Mexico, or to permit any interference with his own Dictatorship. As that most outspoken of Mexican statesmen, Manuel Calero, the Liberals' candidate in the farcical elections, remarked the other day, 'the situation is damnable,' and there is no evidence that recognition of Huerta as a matter of expediency would have helped to make it any better. A policy of morality has therefore triumphed over a policy of expediency, and the nations of the world must come in time to approval of President Wilson's method of treating the Mexican situation."

Altho in his speech before the Southern Commercial Congress in Mobile, Ala., the President avoided specific mention of Mexico, undoubtedly that country was uppermost in the minds of his hearers as he defined the attitude of the United States toward Latin America in general, reiterating his earlier declarations of disinterested friendship, and plainly indicating that the European nations were expected to maintain a policy of "hands off." A score of Latin-American diplomats were on the platform with the President as he spoke. Referring to the burden of foreign concessions under which the Latin-American countries labor, he said in part:

"There is one peculiarity about the history of the Latin-American States which, I am sure, they are keenly aware of. You hear of concessions to foreign capitalists in Latin America. You do not hear of concessions to foreign capitalists in the United States. They are not granted concessions. They are invited to make investments. The work is ours, tho they are welcome to invest in it. We do not ask them to supply the capital and do the work. It is an invitation, not a privilege; and States that are obliged, because their territory does not lie within the main field of modern enterprise and action, to grant concessions are in this condition, that foreign interests are apt to dominate their domestic affairs—a condition of affairs always dangerous and apt to become intolerable!

"What these States are going to seek, therefore, is an emancipation from the subordination which has been inevitable to foreign enterprise and an assertion of the splendid character which, in spite of these difficulties, they have again and again been able to demonstrate.

"The dignity, the courage, the self-possession, the respect of the Latin-American States, their achievements in the face of all these adverse circumstances, deserve nothing but the admiration and applause of the world. They have had harder bargains driven with them in the matter of loans than any other

TERMS: $3 a year, in advance; four months, $1; single copy, 10 cents; postage to Canada 85 cents a year, other foreign postage $1.50 a year. **RECEIPT** of payment is shown in about two weeks by date on address label; subscription including the month named. **CAUTION:** If date is not properly extended after each payment, notify publishers promptly. Instructions for **RENEWAL, DISCONTINUANCE,** or **CHANGE OF ADDRESS** should be sent *two weeks* before the date they are to go into effect. *Both old and new addresses* must always be given. **DISCONTINUANCE:** We find that many of our subscribers prefer not to have their subscriptions interrupted and their files broken in case they fail to remit before expiration. Nevertheless it is not assumed that continuous service is desired, but subscribers are expected to notify us with reasonable promptness to stop if the paper is no longer required. **PRESENTATION COPIES:** Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

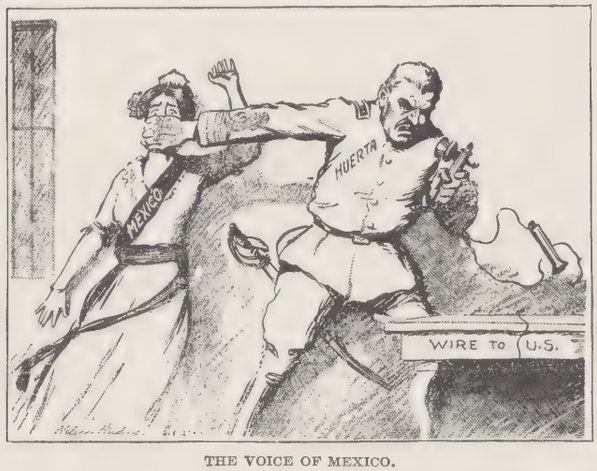
Entered at the New York Post-office as Second-class Matter.

UNITED STATES CAVALRY PREPARED FOR EVENTUALITIES ALONG THE MEXICAN BORDER.

people in the world. Interest has been exacted of them that was not exacted of anybody else, because the risk was said to be greater, and then securities were taken that destroyed the risks. An admirable arrangement, for those who were forcing the terms!

"I rejoice in nothing so much as in the prospect that they will now be emancipated from these conditions, and we ought to be the first to take part in assisting in that emancipation. I think some of these gentlemen have already had occasion to bear witness that the Department of State in recent months has tried to serve them in that wise. In the future they will draw closer and closer to us, because of circumstances of which I wish to speak with moderation and, I hope, without indiscretion."

We must prove ourselves, he continued, "their friends and champions, upon terms of equality and honor." More than this, "we must show ourselves friends by comprehending their interest, whether it squares with our interest or not," for "it is a very perilous thing to determine the foreign policy of a nation in terms of material interest." After defining "the issue we



THE VOICE OF MEXICO.

—Harding in the Brooklyn *Eagle*.

now have to face" as "human rights, national integrity and opportunity as against material interests," the President said:

"I want to take this occasion to say that the United States will never again seek one additional foot of territory by conquest. She will devote herself to showing that she knows how to make honorable and fruitful use of the territory she has; and she must regard it as one of the duties of friendship to see that from no quarter are material interests made superior to human liberty and national opportunity. I say this, not with a single thought that any one will gainsay it, but merely to fix in our consciences what our relationship with the rest of America is. It is the relationship of a family of mankind devoted to the development of true constitutional liberty. . . . . .

"America is a name which sounds in the ears of men everywhere as a synonym of individual opportunity, as a synonym of individual liberty. I would rather belong to a poor nation that was free than to a rich nation that had ceased to be in love with liberty. But we shall not be poor if we love liberty, because the nation that loves liberty truly sets every man free to do his best and be his best, and that means the release of all the splendid energies of a great people who think for themselves. A nation of employees can not be free any more than a nation of employers can be.

"So, in emphasizing the points which must unite us in sympathy and in spiritual interest with the Latin-American people we are only emphasizing the points of our own life, and we should prove ourselves untrue to our own traditions if we proved ourselves untrue friends to-day. Do not think, therefore, gentlemen, that questions of the day are mere questions of policy and diplomacy. They are shot through with the principles of life. We dare not turn from the principle that morality and not expediency is the thing that must guide us, and that we will never condone iniquity because it is most convenient to do so."

In his speech at Swarthmore, Pa., the President said he would like to believe that the whole Western Hemisphere is devoted to "the same sacred purpose," and that "nowhere can any Government endure which is stained by blood or supported by anything but the consent of the governed."

As still further illuminating his position, the New York *World* (Dem.) reminds us that in a message to Congress on the 11th of March he said:

"We can have no sympathy with those who seek to seize the power of government to advance their own personal interests and ambition. We are the friends of peace, but we know that there can be no lasting or stable peace in such circumstances."

Contrasting this policy with the attitude of the interested European nations, the Baltimore *Sun* (Ind.) remarks that it is an open secret that "none of them cares how Mexico's troubles are settled, provided order is restored and commerce and business are freed from the disturbing influences of revolution." And in this country also, it adds, there are scores of selfish and powerful interests which would like to use the United States as a catspaw to pull their financial chestnuts out of the fire—a fact which makes it "all-important that the American people should not permit their minds to be inflamed by those cunning war propagandists." Returning to President Wilson's attitude, *The Sun* goes on to say:

"It is impossible for the people of the United States to take a view which ignores the spirit in which this government was founded and the principles on which its safety and progress depend. It is not only hostile to our conception of higher national life, but is repugnant to the teachings of common sense and experience. Government by force does not make for stability and order, but breeds lawlessness and perpetual revolution. The foreign Powers, which are considering the subject solely from the standpoint of dollars and cents, might well ponder the point whether, even as a financial investment,

ARTILLERY CORPS OF THE MEXICAN FEDERAL ARMY, THE POWER BEHIND HUERTA.

such a régime as Huerta's will pay them in the end. Merely as a business proposition the only way to settle the Mexican question is to settle it right—to settle it on a basis of justice and ultimate popular freedom. The Mexican masses have yet sore need of political and educational training, but they have among them, as was shown by the Madero revolution, a saving minority of intellectual and unselfish patriots who are capable of leading their people to the light.

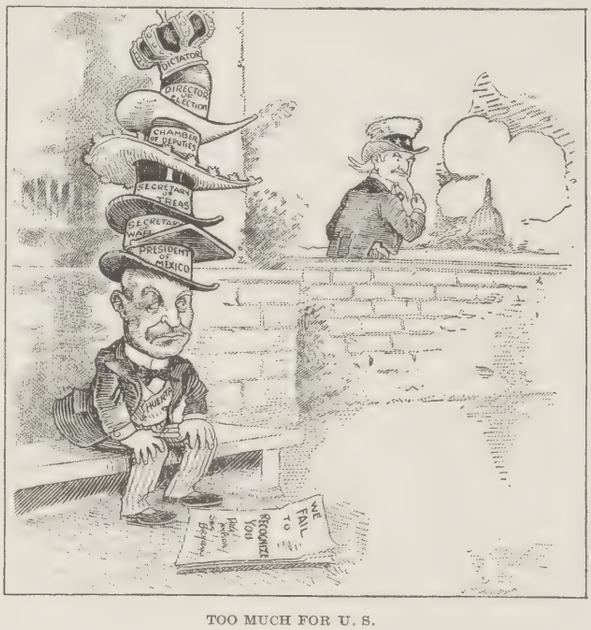
"Whether it is our business to interfere in Mexican affairs under any circumstances, except some act of direct aggression against ourselves, is another question and one which will be answered in the negative by the common sense of the country as well as by its sense of justice. We have no right to interfere merely to overthrow a government which seems to us cruel and repulsive. Such a policy would carry us far afield indeed, and would involve a career of national knight-errantry that would bring ruin on ourselves as well as others. Nor is there any moral or international obligation upon us to interfere merely in the interests of foreign promoters and business enterprises. Why should we spend millions of dollars and sacrifice thousands of lives in order to allow British and French and German investors to make money without let or hindrance in Mexico?"

At the same time the Washington Administration has made it clear to the European Powers that this country is determined to retain its traditional leadership in the present situation. As a Washington dispatch to the New York *Sun* (Ind.) puts it, "the United States Government is not consulting with the other Powers regarding Mexico, but is merely keeping them informed." And in the meantime we have sent four more battle-ships into Mexican waters. Our attitude is thus tersely defined by the Indianapolis *News* (Ind.): "The United States desires a free hand in dealing with Mexico, and it is earnestly hoping that circumstances will not compel the use of it in the form of a fist." And the New York *Globe* (Ind.) notes that "altho the President pledges his country against conquest, he does not say that it will be indifferent to chronically anarchic conditions."

As to the chances of success for President Wilson's idealistic policy, the Charleston *News and Courier* (Dem.) reminds us that "Mr. Wilson showed in the first few weeks of his Administration that a man may be the purest of idealists and yet not be helpless in the midst of practical men who are anything but idealists." "We have yet to see that, in practise, the ideal which underlies the President's policy necessarily involves the unattainable," remarks the Springfield *Republican* (Ind.), and the Chicago *News* (Ind.) thinks that "the great nations of Europe, when they recover from the shock of the President's golden-rule diplomacy will hardly stand out against it."

On the other hand, an English paper predicts that President Wilson will soon find himself in a position similar to that of Gladstone, who "after innumerable philippics on the wickedness of a spirited foreign policy, was driven to the bombardment of Alexandria and the addition of the Nile Valley to British responsibilities." And the New York *Evening Mail* (Prog.) still holds that the President will have to choose "between Huerta and a war of intervention." The Baltimore *News*, another Progressive organ, points out that we have yet to receive any evidence that the Wilson policy finds favor with the Mexican public. The outlook is ominous indeed, in the opinion of the Boston *Transcript* (Ind. Rep.), which pictures special emissary Lind and the Administration he represents as "following the example of Micawber while they sit on the edge of a volcano."

More than one paper expresses amazement at the definiteness of the President's declaration that the United States will never again "seek one additional foot of territory by conquest." "Many people in the United States will resent his



TOO MUCH FOR U. S.
—Bartholomew in the Minneapolis *Journal*.

assumption of authority to bind this nation to a course of action at a date far in the future, when the present Administration will have passed off the stage," remarks the Washington *Post* (Ind.), and in the Detroit *Free Press* (Ind.) we read:

"Who of us can say that the United States will never again embark on a war of conquest? Who knows? . . . . . .

"If the disturbance below the Rio Grande continues, it is within present foresight that the day will come when our people will assuredly seek to gain territory by conquest, for there will not be long endurance of such conditions when the Panama Canal is open and its safety is menaced by neighboring uprisings."

A PLAN FOR A "PEOPLE'S BANK"

SUSPICION appears to exist in the mind of more than one hostile editor that Mr. Vanderlip's plan for a central bank is merely a clever scheme to delay all currency legislation. A central bank run by the Government would be a "People's Bank," say some, and they favor the idea; but others think we have dallied long enough over this and that currency

THAT BLOODTHIRSTY, MAN-EATING MOUSE.
—Collier in the Chicago *Journal.*

suggestion and should proceed to action. Old metaphors are brought into play. There are those who suspect the president of the National City Bank of New York "of throwing a monkey-wrench into the Congressional machinery," notes the Indianapolis *News* (Ind.). And Mr. Carter Glass himself finds in the "fact that the Vanderlip scheme is projected at the eleventh hour of Congressional consideration with the hope of indefinite postponement of currency legislation should the scheme be given serious attention" a reminder "of the fox-chase and the red herring" drawn across the trail. Mr. Glass, indeed, reaches the conclusion in a statement to the press that "this newest currency scheme" is "intended to confuse the question of banking and currency reform, or else it is hoped that, by the adoption of some such scheme of absolute centralization it will be far easier hereafter for certain gentlemen to get control of it for certain purposes than would be possible under the proposed regional-bank system." But over against these alarming words from one of the authors of the Administration Currency Bill must be set the explanation that Mr. Vanderlip's plan was drawn up at the request of the Senate Committee for his "ideal" scheme of currency reform after he had previously referred to the Glass-Owen Bill as "80% good." Furthermore, several members of the Committee—representing both parties—favor the central-bank idea. Many bankers are quoted as approving it, tho there are those who prefer the Administration's plan, and a press dispatch speaks of "the prevalent impression about the Capital" being

"That the banking community of the United States would prefer without much delay currency legislation that did not wholly meet its view of what such legislation should be, rather than have an indefinite postponement of action."

But this very postponement which alarms some is welcome to others. "If Mr. Vanderlip's scheme for the creation outright of a new Federal bank delays action and broadens discussion it will," in the New York *Globe's* (Ind.) opinion, "be doing a valuable work." And the New York *Herald* (Ind.) assures us that "if the injection of this project into the controversy should result in putting the whole question over until the regular session of Congress no harm will be done."

But Mr. Vanderlip declares emphatically that the presentation of his plan "does not indicate that I am opposed to legislation or that I am trying to confuse the political situation." He believes his solution to be wiser than that devised by the framers of the Glass Bill, and he offers it because, as he says,

"Every one who has studied this subject knows that we must have one central-reserve reservoir. The regional-bank scheme only disguises this under a name, but gives to a political board the power to make twelve banks one through forced loans.

"I believe we should have one bank; the stock of this bank should be owned by the people, and not by the banks. The control should be in the hands of public officers; the bank should issue the circulation, but in doing so it will violate the principle held by the Bryan wing of the party that the Government should control the issue and supply the currency.

"A bank owned by the people, fully controlled by long-termed government issues, can be formed which will meet every economic principle and violate no part of the Democratic creed."

From the main outlines of Mr. Vanderlip's central-bank plan as read before the Senate Committee on Banking and Currency, we summarize the following more essential provisions:

"The Government is to grant a charter to the Federal Reserve Bank of the United States with capital stock of $100,000,000, the charter to extend for a period of fifty years. The bank is to be located in Washington, with twelve branches in other cities. The stock of the Federal Reserve Bank may either be subscribed for entirely by the Government with funds raised by the sale of bonds, or offered for public subscription, the success of such subscription to be insured by requiring all national banks to be liable for the purchase of their pro rata proportion of any stock not taken by the public. The stock shall have no voting power, and no rights of any kind shall attach to it except to receive dividends.

"The Federal Reserve Bank shall be governed by a board of seven directors appointed by the President for fourteen-year terms. After the accumulation of a surplus and the payment of 6 per cent. dividends in case the public subscribes to the

NO HELP WANTED.
—Hanny in the St. Joseph *News-Press.*

stock, its earnings shall go to the Government for the purpose of the retirement of the national debt. The Government shall deposit all of its general funds with the bank, and the bank shall be its fiscal agent. The bank shall issue circulating notes having the same qualities as the present National Bank notes, which

shall be redeemable at any branch on demand in gold and shall be an obligation of the bank."

The Vanderlip plan seems to the Philadelphia *Public Ledger* (Ind.) "a decidedly better bill than the Glass-Owen measure." And the New York *American* (Ind. Dem.), which is glad that Congress now has two distinct schemes for consideration, looks upon the Vanderlip plan as the "most practical and progress-

POINTING OUT THE MENACE.
—Bartholomew in the Minneapolis *Journal*.

ive." In Washington *The Times* speaks of Senators Bristow (Prog. Rep.), Cummins (Prog. Rep.), Reed (Dem.), O'Gorman (Dem.), and Hitchcock (Dem.), of the Banking and Currency Committee, as having had decided bearings toward the central-bank idea even "before the first appearance of Mr. Vanderlip." The New York *Evening Post's* Washington correspondent reports their general opinion to be that "the Vanderlip plan not only incorporates the main features of the Administration bill, excepting only the issue of notes by the Government, but excels it in the matter of unifying the banking system of the country, while, at the same time, strengthening the hold of the Government upon it." Mr. Bristow has been heard to declare openly that he favors "a people's reserve bank, rather than the privately owned regional reserve banks of the bill as it passed the House." And *The Times* remarks editorially that

"Not much will be gained by the assumption that such a bank would be the 'Money Power's' instrument. A bank owned by the people, its stock widely distributed among them, would hardly be closer to the 'Money Power' than a chain of twelve banks, each owned by the banks of its vicinage. The Vanderlip plan of control by a government board named for very long terms would certainly not get closer to the 'Money Power' than the Glass-Owen plan does."

This plan of government control is the one thing that the New York *Sun* (Ind.) objects to, yet it can not but recognize "that if this country is to have the superior advantages of a central bank there must be quite as much control of the institution as Mr. Vanderlip provides." He has, thinks *The Sun*, "taken over as many of the features of the Glass-Owen Bill as he could adapt to the central-bank scheme, and political approval of the project may not be so difficult to gain as one might imagine."

But it will be difficult enough, to judge from the tone of the Democratic press. We are reminded of the "blunt affirmation of the Baltimore platform": "We oppose the so-called Aldrich Bill, or the establishment of a central bank." Such Democratic dailies as the New York *World*, St. Louis *Republic*, Philadelphia *Record*, and Nashville *Banner* have no patience with the central-bank theory or Mr. Vanderlip's project for realizing it.

Papers, too, like the New York *Commercial*, Chicago *Inter Ocean* (Rep.), and Springfield *Republican* (Ind.), feel obliged to set aside any predilections they may have entertained for a central bank because the "people are not ready for it." *The Republican* reverts to ex-Senator Aldrich's condemnation of the Glass-Owen measure as "Socialistic." But in Mr. Vanderlip's "plan for a central bank, capital $100,000,000, with twelve branches, under absolute Government control—here is enough 'Socialism' to sink a ship." *The Republican* sees two main objections to this plan: "that this country is too large territorially for such an institution having the power to fix a uniform discount rate for all sections; second, that the plan is calculated to cause a long delay in securing any legislation whatever." And here the Massachusetts paper hits upon the one great argument that the press make against the consideration of the Vanderlip plan at the present time. As Mr. Vanderlip's distinguished fellow banker, Mr. Jacob H. Schiff puts it, in words echoed by the New York *Times* and *Journal of Commerce*, the introduction of the Vanderlip plan "may, it can not be doubted, prove a serious menace to currency legislation at this time and to the final reaching of the goal which is now in sight and almost attained." For the prevailing opinion in the press seems to be that whatever Senators may think or propose, the House will never accept any central-bank scheme, while the Administration will stand firm for "all the main features of the Glass-Owen Bill." Hence, concludes one Washington correspondent, even those Senators who favor the Vanderlip proposal are likely "to subordinate their individual preferences for the sake of early legislation." It is believed, however, that some of Mr. Vanderlip's ideas may be incorporated in the measure, for instance, there may be an effort to secure more complete Government control of the regional banks. Some of the other modifications which Senators have in mind are thus enumerated by one watchful newspaper man at the capital:

"Reduction of the number of regional banks from twelve to four or five; elimination of the savings-bank provision; removing

"WATCH PAPA TAKE SOME. PAPA LIKES IT."
—Darling in the Des Moines *Register and Leader*.

from the Federal Reserve Board the Secretary of Agriculture, Controller of the Currency, and, possibly, the Secretary of the Treasury; reduction from 20 to 10 per cent. in the amount of capital of the Federal reserve banks to be contributed by the national banks."

FINDING FLAWS IN THE SEAMEN'S BILL

SHIP-OWNING INTERESTS may "pick holes" in the La Follette "Seamen's Bill," and faults may actually "develop in the working out of the law," observes the Milwaukee *Sentinel*, but in so far as Mr. La Follette's measure "stands for manhood treatment for the seaman, and tends to equalize him with other workers before the law, he is to be heartily congratulated on its passage" by the Senate. Ship-owning interests have been "picking holes," and there are editors who think they can see clearly what faults are going to develop when the law goes into operation. The Brooklyn *Eagle* contemplates the prospect with "consternation" and warns the public against the bill as "a measure to kill the coastwise and passenger-steamboat interests, a bill to turn over to vessels under the British flag the business on the Great Lakes, a bill that in the long run can only injure instead of benefiting the men for whom it is advocated." Three provisions of the "Seamen's Bill" which, in *The Eagle's* opinion, will have a particularly undesirable effect are stated as follows:

"Sixty-five per cent. of the seamen on any ship must be 'able seaman,' qualified by three years' experience on the high seas, or four years on the Lakes.

"Three-quarters of all employees on board must speak the language spoken by the officers.

"Each ship must carry life-boats to accommodate all on board, and two able seamen for each life-boat."

And the Brooklyn paper thus objects:

"The effect of the first provision is to bar out the Maine and Long Island and other harbor men who have been drawn on for American service on American ships and steamboats. The effect of the second might be to compel all Pacific Ocean ships to take the Chinese flag or some other flag instead of ours. The effect of the third would be paralyzing to all passenger steamboats. For example, the *Christopher Columbus*, giving an all-day service from Chicago to Milwaukee for a 100-day season, and having a capacity of four thousand, would have to carry eighty life-boats with accommodations for fifty persons each, making her dangerously top-heavy, and would have to employ 160 seamen instead of the present deck force of thirty men, conditions not different in kind from those which every other river and lake boat would have to encounter. . . . . .

"*The Eagle*, of course, recognizes the fact that seamen should be fairly treated. They are so treated now on every vessel flying our flag. That is the reason why so few ocean-going vessels do fly the flag. The owners can not compete with other ships which have a lower cost of maintenance, lower food standards, lower wages. We are to-day at the head of the list of nations in protecting seamen. We do not want to go backward. But we do want to prevent the Labor Trust from making competitive running of ships under our flag wholly impossible."

In the opinion of Mr. T. F. Newman, general manager of the Cleveland and Buffalo Line, "the bill, as it passed the Senate, will absolutely suppress most, if not all, of the passenger lines on the Great Lakes." Mr. W. M. Brittain, secretary of the American Steamship Association, declares that the provision that 75 per cent. of the crew of a vessel speak the language used by its officers would mean "the killing of the Pacific trade under the American flag." For, as he explains, our ships in that ocean have to carry Chinese firemen "in order to meet the competition of the Japanese- and Chinese-manned Japanese and British carriers." At present,

"The plan is to have enough of the Chinese fire-room force English-speaking to transmit the orders of the officers. To require that all speak English would mean no more Chinese crews in the fire-room, and that would mean that American ships on the Pacific could no longer compete with their rivals."

This steamship man also objects to the "able-seaman" clause, which would repel "the very kind of young men we would gladly see in the service," while the requirement of two able seamen for each of the life-boats required practically means "the doubling of every deck crew, and it will mean that on the Great Lakes and many coastwise lines vessels will have to carry, feed, and pay a large number of useless men." President George A. White, of the Association of Passenger Steamboat Lines, told a New York *Sun* reporter that if "this revolutionary and anarchistic bill" were enacted it would be "the hardest blow that our merchant marine has ever received." And, according to *The Sun*, it is the universal opinion among steamship men that "since the United States had arranged for a conference of nations to be held in London on November 12 to consider many of the very matters taken up by the bill, its passage before the conference would be, to say the least, discourteous."

The only objection that the New York *Tribune* can find to the bill is that its relation to existing treaty obligations would seem "to be open to serious challenge." But this very point is to another daily in the great seaport city, *The American*, a cause for congratulation. It says:

"The passage of the Seamen's Bill involves the abrogation of all treaties wherein the United States, something after the style of the Fugitive Slave Law, is now obligated to arrest deserting seamen and restore them to their ships. This is but another evidence of the growing disposition of the United States to emancipate itself from the hurtful bondage of unwise and restraining treaties, as well as its determination to emancipate seamen from involuntary servitude. . . . . .

"If the Seamen's Bill were passed for no other reason than to secure reforms needed in the handling of life-boats at sea, it would effect a wholesome restraint upon the employment of inefficient seamen, as well as compel vessel owners and the officers who command their ships to establish a far higher grade of seaman efficiency, in which the development of experts in the handling of life-boats will be a most welcome result. Those whom business or pleasure compels to go down to the sea in ships, such reforms as the Seamen's Bill will accomplish will greatly reassure as to their safety.

"If, as owners fear, the bill when enacted will put them to greater expense than they now are in the manning of their vessels and in the accommodations afforded the men who perform the hazardous and exhausting labor required on shipboard, they should be able to extract some consolation from the thought that the better housed, the more comfortably cared for, the seamen are, the more efficient they are likely to be—a result making for greater safety of life and property at sea, in which owners, passengers, shippers, consignees, and underwriters will all substantially benefit."

AUTOMOBILE AND RAILWAY FATALITIES—Despite all we hear about the death-toll of our railways, it seems that as instruments of destruction they are hopelessly outclassed by the automobile. This fact is demonstrated by statistics compiled by Frederic Rex, municipal reference librarian of Chicago, who finds that in 1912 the number of persons killed by automobiles in 22 American cities having 100,000 or more population was 691. These figures move *The Railway Age Gazette* (New York) to point to the railway fatalities of the same year—the number of passengers killed in all ways on all the railways of the United States during that period being only 270. Says the railway organ:

"In other words, the number of persons killed by automobiles in only 22 cities was 64 per cent. greater than the total number of railway passengers killed. It was likewise five times as great as the number of passengers killed in train accidents alone, which was 139; and it was greater than the number of passengers, railway employees, and all other persons, excepting trespassers, killed in all railway collisions and derailments, the total killed in collisions and derailments, excepting trespassers, being 685. The largest number of passengers ever killed in all ways in one year on the railways of the United States was 647, and yet this worst of all records, which was made in 1907, was 44 less than the number killed in automobile accidents in 1912 in the 22 cities.

"The accident record of the railways is being used by some writers as an argument for their acquisition by the public. It is assumed that if the public owned them it would operate them safely. The public already owns the streets and highways, and these figures regarding automobile accidents indicate how safe it makes them."

SANE CHARITY IN KANSAS CITY

BOARD OF PUBLIC WELFARE is a vague-sounding title for a department of municipal government. In some cities it might possibly suggest a sinecure created at the behest of a political boss with friends to supply with motor-cars. But to the people of Kansas City it stands for a commission with a definite humane enterprise, a department under which the work of controlling vice and guarding the interests of the poor is thoroughly organized, if we are to believe Alfred Pittman, who writes about it in the Chicago *Tribune*. The Kansas City Board of Public Welfare is not doing anything that has not been attempted elsewhere; its mission is not unusual; but, according to Mr. Pittman, it is better organized, has a more systematic program, and is obtaining more definite results than any other enterprise of its kind in the country. The idea originated in the brain of Frank P. Walsh, a lawyer, and its success is due largely to his work before he was recently appointed chairman of President Wilson's new Industrial Relations Commission. Mr. Pittman begins his article with a summary of the Board's important achievements:

"The municipal pawnshop, which is putting the extortionate pawnbrokers out of business.

"The welfare loan-agency, which is ruining the loan-sharks.

"The free legal-aid bureau, where the poor man can go to get protection in his legal rights.

"The municipal employment bureau, which got 27,000 jobs for men last year.

"The municipal rock quarry, which furnishes employment for men in the winter until they can find permanent situations.

"The municipal farm, on which prisoners are given wholesome work and where many of them are reclaimed.

"The parole department, under which men have earned for their families $200,000 in a period when otherwise they would have been a charge on the community.

"The inquiry into women's wages, which has thrown a sane and wholesome light where such a light was needed.

"The dance-hall inspection, under which scores of young people are saved each week from coming under evil influences.

"The housing investigation, which has presented facts that are bound to result in a general cleaning up of insanitary conditions."

Copyrighted by the International News Service.

HE FIGHTS FOR THE LOWLY.

Frank P. Walsh's work for unfortunates in Kansas City led to his appointment to the chairmanship of the Federal Industrial Relations Commission.

This group of enterprises, which, in the opinion of Mr. Pittman, have made Kansas City a leader in social betterment work, had its beginning in the Board of Pardons and Paroles, created by ordinance in 1908. The plan had been presented to T. T. Crittenden, Jr., then mayor, by Mr. Walsh. Mr. Walsh had been fighting poverty and its unwholesome results ever since he was a boy, and he hated it as an unnecessary evil. Of thirty boys he remembered in his neighborhood in St. Louis, where he was born and reared, "only three had come through to normal, useful manhood." One of the causes of just such things, he thought, was the harm that was being done in the name of the law in the police courts. The writer goes on:

"The new commission constituted itself a board of second trial. It sat as often as necessary to keep up with all the police-court convictions. It was given ample authority to inquire into all cases in the municipal court and in the house of correction, and it had arbitrary power of parole or pardon.

"It was the Board's conviction in the beginning, as it had been Mr. Walsh's, that too many men were in the workhouse. One of the earliest conclusions of the Board was that there should be no men at all in the workhouse.

"The municipal farm was the result. It is a large place, 150 acres, ten miles or so into the country, where recreative outdoor work is given to such delinquent men as it is believed inadvisable to parole. The earnings of prisoners with destitute families are turned over to the wives and children who are in need. The city paid for the farm and erected suitable buildings. The workhouse as such ceased to exist.

"One of the farm's 'alumni' wrote back recently with such affection for the farm as a man might show for his college. His course there had straightened him up and he had gone West and made good. It is a typical case.

"The pardon and parole work of the Board disclosed a huge opportunity for social service which the ordinance that created the Board did not permit it to perform. After a little more than a year in its restricted field a new ordinance reorganized the board under the name of the Board of Public Welfare. Its membership was increased from three to five, and, besides its parole and pardon power, it was given complete control of all the city penal institutions and full supervision of all public charities and social work."

The Board's success, says Mr. Pittman, is largely due to financial aid from William Volker, a merchant, who was its president during the first three years of its existence. There is, of course, a public appropriation; the private aid is supplementary. No member of the Board is permitted to say where the private money comes from, but it is generally understood that Mr. Volker gives it. Mr. Walsh was counselor and attorney for the Board until he went to Washington, and Jacob Billikopf, superintendent of the United Jewish Charities, has been its expert sociologist since its foundation. Our informant goes on to review the work:

"The Board's welfare loan-agency started about two and a half years ago. Up to April it had lent $120,000 at a nominal interest rate—about one-fifth that charged by the usual loan-agencies and pawnshops—and paid a dividend of 4 per cent. Loan-sharks are the only persons who lose by the innovation.

"The free legal-aid bureau gives free legal aid to those who can not afford to pay for it. In the last year the agency has collected about $10,000 in sums ranging from 50 cents to $5, mostly owed for wages. These small sums never would have been paid, for the washerwomen, hired girls, and others who are often cheated out of their money would have had no way to collect it. This bureau also has brought back more than a hundred wife-deserters, who have resumed the support of their families with a little help.

"A set of rules is imposed by the Board on every public dance-hall, and inspectors are present to see that they are obeyed. If a dance-hall keeper does not cooperate, his place is closed. Agents of the Board personally visited in a year the homes of 276 young girls who have been found in dance-halls unchaperoned and without proper escorts. Only about a dozen of the parents of such girls, it was found, knew that their daughters frequented such places.

"The research bureau of the board is engaged in the investigation of general community problems. Surveys of housing, of

unemployment, of the industrial conditions of men and women in factories and mercantile establishments, and of the social evil have been completed in the last two years.

"One of the results of this investigation has been a new and much improved housing code, and an event which doubtless was hastened by it was the definite and apparently final closing less than two weeks ago of every 'red-light' house in Kansas City. . . . . .

"The parole system, it is believed, has saved the city more than all the work of the Board has cost. The free legal-aid bureau has collected for needy families many thousand dollars more than its cost. The free employment bureau likewise has got positions for men whose wages and salaries have aggregated annually several times what the bureau costs."

WHAT OUR NEW TARIFF DOES TO CUBA

OUR NEAREST NEIGHBORS are not likely to delay long in letting us know what they think of the effects of our new national tariff policy. From Cuba we are already hearing what a difference the new schedules of the Underwood Act will make. In the opinion of the editor of the Havana *Cuba News*, for instance, the whole face of Cuban-American economic and political relations will be changed. This is a sweeping statement, but the writer backs it up with figures and carefully worded statements. American trade with Cuba, we are reminded, has been fostered by the Reciprocity Treaty whereby Cuba grants a tariff reduction of 20 per cent. on American merchandise, and Cuban sugar imported into the United States is favored with a corresponding preferential. Now, with sugar on the free list, the island Republic is looking for some new favor to balance the 20 per cent. preferential "still granted American goods here." The Havana paper, which circulates largely among English-speaking residents in Cuba, continues:

"The Cuban legation at Washington is asking a special interpretation of her relation to the new sugar tariff between March 1, 1914, and May 1, 1916, when that commodity becomes wholly 'free.' Under the old tariff all sugars entering the American market paid 1.68 cents approximately per hundred weight, excepting Cuban sugar, which paid 20 per cent. less—*i.e.*, 1.34. After March 1, now, all sugars are to pay 25 per cent. less than the old tariff, or 1.26 cents, excepting Cuban sugar; the difference of opinion is as to what it should pay. Washington seems inclined to think it should pay as usual, 20 per cent. less than the regular tariff, or 1.008 under the 25 per cent. reduction. Cuba, on the other hand, says that when she entered into the Reciprocity Treaty she got definite privileges, among them a gross preferential of .34 cent below the tariff on sugar. The tariff has been changed, but she desires to retain that gross preferential, and to pay now, that is, 1.26 minus .34 or .92 cent, only."

This is "a question of mills," but, we are told, "it may involve the fate of sixty million dollars' worth of American business with Cuba." For, unless Cuba gets the concessions which "make continuance of the Reciprocity Treaty look worth while," what, "she will ask herself in plain Spanish," is its use to her?

"Spanish, French, German, and British business interests, against which it is a very real discrimination, will become very busy to persuade her that 'there ain't any.' If she should denounce that treaty American trade in this market would be wiped out by the pen-stroke.

"The other concessions Cuba will ask, perhaps now and perhaps not until after 1916, if she secures her interpretation of her treaty privileges under the new tariff, are lower duties on her tobacco, benefited not at all by present changes, and still lower duties on her fruits (pineapples and citrus-fruits)."

Passing from the consideration of these economic changes which the new tariff is bringing about, the editor of *The Cuba News* asks us to observe the ultimate effect on the political relations between Cuba and the United States:

"All agitation there has ever been here for annexation had its root in the desire of Cuban producers (regardless of their individual nationality) and of Cuban consumers as well to get inside the American tariff wall. . . . Now, President Wilson in Washington, enacting his new radical Tariff Bill, and President Menocal, in Havana, busily revising the Cuban tariff downward on necessities of life—food and clothing imported from the American market especially—and on agricultural and industrial machinery, implements, and combustibles—are showing them another way to attain what was their true object—free trade with the United States, which is truly Cuba's only market."
